FAMILY COLONISATION LOAN SOCIETY.—This excellent institution, which was on the last ultimo existence by the benevolent exertions of the poor grant's friend, Mrs. Chisholm, and which only requires to be generally known in order to receive from a charitable pub le that efficient support to which its meritorious objects and progress so justly entitle it, has resumed its active operations for the season. On Tuesday evening, a family group meeting of the emigrants who are about to sail in the *Blundell* early next month, took place at the Royal British Institution, Suffolk-street, pursuant to usual, for the purpose of being introduced to each other, and arranging all the preliminaries for their voyage. It appears from proceedings on the occasion, that 230 persons are going out by the *Blundell*, 64 of whom are married couples returning to the colonies to join their parents, who have been sent for by their children, who in most cases have forwarded £5 towards the expenses of their voyage. The expense of each adult was £12, and this society lent £4, on the payment of which the party repaying it nominates a relative, to whom £4 is again lent, with an additional pound, so that the debt from the family became increased as they became more known to the society. The payments from the working classes amounted to between £150 and £200, and the society could send out five ships by September next, if they could advance a sufficient number of £4 loans to each adult. The sum of £1242 9s. had been paid by the parties now about to sail, and every attention would be paid to their comfort and accommodation. The number of children going out on the voyage had risen to 60, and a surgeon with a full medicine chest to fit him up for them on board, so that the time passed on the voyage may not be thrown away. A sort of friendly compact was established amongst the intending emigrants at the meeting, and various arrangements were agreed upon with a view to their comfort on the voyage.

CITY OF LONDON PENSION SOCIETY.—A general meeting of this society took place on Monday at the London Tavern, Bishopsgate-street, for the election of four additional pensioners from a list of thirty-five candidates; Jas. Harmer, Esq., in the chair. The report stated the great pleasure it afforded the directors to be again enabled to present to the benevolent supporters of this charity an opportunity of exercising their privilege of voting in the election of an additional number of pensioners. Since the foundation of this charity it had been the humane and charitable object of the society to add to the extent of the 8½ poor pensioners, thereby distributing in monthly pensions the sum of £56,214.

EQUALISATION OF THE LAND TAX.—The Land Tax Commissioners for Westminster, assembled on Tuesday, at the Guildhall, Westminster Hall, to assess the land tax for 1851. Mr. Cafe was voted into the chair, which he reluctantly took, as he thought the meeting a very unusual one, and, indeed, scarcely legal. Mr. Coppock, M.P., solicitor to the corporation, and clerk, and Mr. Coppock, amid much interruption, explained the authority under which the meeting was convened, and advocated an equalisation of the land tax in the manner that the collection of the land tax in the City is managed, by a repeal of the sum of £53,093 1s. 3d., which by the act 38 Geo. 3, c. 5, is stated as the quota for the city of Westminster and liberty thereof, and offers accounted to Westminster, be raised, charged, and assessed by an equal pound rate upon all property liable to the land tax within the city and liberty of Westminster." Mr. Wood objected to the resolution proposed by Mr. Coppock, on the ground that, however desirable an equalisation of the land tax might be, they (the commissioners) were not capable of re-adjusting it, and because he believed that any attempt on their part so to do would involve them in endless litigation, without leading to any profitable result. Mr. Wood ultimately moved an amendment, declaring the meeting illegal. On a division, the numbers were equal, 19 to each; but the chairman gave the casting vote in favour of Mr. Wood, and the meeting, thus declared illegal, was dissolved.

SHOE-BLACK SOCIETY.—On Tuesday evening a meeting of the friends and promoters of this society was held at the Grotto-passage Ragged Schools, High-street, Marylebone, to receive the first report of the commit.ee Mr. W. J. Maxwell took the chair, and observed that great advantages were likely to arise from the praiseworthy efforts of the society, and thanked the superintendents of the ragged schools found considerab e difficulty in finding employment for the boys under their control. The great end and aim of some of the ragged schools was to afford to boys the means of employment; and the occupation which was offered to them by this society would afford them an opportunity of discovering their merits, and of deciding how far they were entitled to encouragement. By this society the boys would be enabled to support their homes with the design of supplying employment to boys from the schools in connexion with the Ragged School Union. They had, therefore, sought the co-operation of the managers of these schools, and the result had been that candidates had been furnished them from those schools, the number of boys sent being 34. These candidates were received by the committee at the depository, a room near Charing-cross, and those who were approved by the inspector and committee were sent out to their duty in the streets. Of the 34 mentioned, 19 had been under instruction; the rest had only been under it for 40 days, while nine were still in training. On the 31st of March four boys only were employed, and on that day they earned on an average 1s. each. The amount of earnings had since been considerably increased, and now averaged 2s. 6d. a week for each boy; and their stations were regularly interchanged, so that their earnings might be as far as possible equalised. The mode of appropriating the money was as follows:—Each boy received 6d. out of his earnings to provide his meals, and the amount earned in the day beyond 8d. was divided into the parts, of which one was retained to defray current expenses, another was given to the boy, and the third was paid into the bank. Of 40 boys

FINE ARTS.

"FRUIT," AND "FLOWERS," PAINTED BY VIDAL.

The charming impersonations upon the preceding pages are from a pair of crayon paintings by M. Vidal, a pupil of Delaroche, and who ranks for his portraits as the Lawrence of Paris. These, together with other of M. Vidal's pictures, have been engraved in a very nice manner, and are published by Vibert and Goupil, of Paris, who have done so much towards the establishment of the Art-Union of France and America.

The figures here illustrated are very characteristic. "Fruit," who bears a basket of luxuriant fruit, is forming the luscious peach to her lips: her hair is dressed with fruit; and the overflowing basket beside her, with the distant fruit-tree, are fitting accessories.

"Flowers" is a very fine Queen, magnificently attired with floral beauties, and wears a crown, or turban, most fantastically wrought. Her path is strewed with flowers; and the background is composed of the same natural wealth. The flaunting gaiety of the maiden is delightful.

MARTYR PAINTING AT THE PANTHEON.

A picture by Messrs. James and George Zogge is now exhibiting at the above gallery, manifestly intended for the public taste running against the Papal Aggression, by a pictoria. appeal to the eye. Its subject is the martyrdom of William Tyrsworth, which took place at Amersham, Buckinghamshire, in 1506, and the distinguishing point of it is the circumstance that the daughter of the martyr was herself compelled to kindle the pile. A group in the foreground describes this act. The poor girl is in the custody of two friars, who force her to apply the torch to the faggots on which her father is bound. Behind them a Doctor of Canon Law is declaiming against the heretic; while above, on a platform, the Sheriff of the county, with the Bishop's chancellor, presides over the terrible scene, evidently compassionating the sufferings, but without the power to prevent it. The figures are highly characteristic, and very artistically grouped. Altogether, it is a powerful picture.

THE THEATRES, &c.

HER MAJESTY'S.

After four highly successful performances of Auber's "Gustave," Bellini's "Sonnambula" was represented last Tuesday night, for the first appearance of Mdlle. Caroline Dupree in the interesting character of *Amina*, and for the return of Costa as Count *Rodolfo*.

An *Amina* of eighteen, with considerable personal attractions, and with a thoroughly accomplished style as a vocalist, could not not fail to win the enthusiastic applause of an audience; even if the reading of the young and gifted *artiste* did not develop the histrionic genius of her more practised predecessors. Like her *Lucia*, the *Amina* of Mdlle. Dupree was remarkable for its simple and earnest grace, and for its certain attention to the dramatic details of the passing action. In the first act, *Amina* was rendered more retiring than obtrusive, the coquetry was more childish than artful, the sentiment for the lover more subdued than vehement. This quiet interpretation had its charm, as well as the buoyancy and vehemence of other versions have had their attendant excitement. The vocalisation of Mdlle. Dupree was exquisitely beautiful Her ornaments in the "Come per me sereno" were sparkling and highly graceful she prudently reserved her powers for the outbreak of joy, "Ah! non giunge," in the finale; and hence she revelled in elegant embellishments of such captivating influence, as to exact the universal demand for its repetition. The neatness, finish, and precision of her cadenzas could not be surpassed.

It was delightful to listen to the musically-toned organ of Coletti again. In a flowing and melodious cantabile he has now no equal; his method is perfect, his accent is so pure, the sentiment so chase and intense, that there is but one feeling of unalloyed gratification inspired by him; and as an actor he forgets not rises into sublimity, as in the last scene of the aged *Evacuru*, at the moment when the deposed *Doge* hears the fatal knell, proclaiming his successor.

Carlotta Grisi danced the Trvandaise, from the ballet of "Esmeralda," to the ecstatic delight of the audience, so fascinating is her style, and so piquant is her pantomime in this *pas*.

On Tuesday night, Auber's five-act opera, "La Muette de Portici," known in this country under the title of "Masaniello," was produced. The characters were thus distributed:—*Elvira* (betrothed to *Alfonso*), Madame Fiorentini: *Fenella* (a dumb girl,) Mdlle. Monti: *Masaniello* (her brother), Signor Fraschini: *Pietro* (his friend), M. Massol; *Borella*, signor Lorenzo; *Selva*, M. Balanchi; *Alfonso*, Signor Scotti; *Lorenzo*, Signor Mercoriale. With the libretto and music of this masterpiece of Auber the musical public are now perfectly well acquainted. Containing so much beautiful dance music, it is not surprising that the direction of Her Majesty's Theatre should include such a work in the *repertoire*, unrivalled as are the choreographic combinations of the establishment; and as Mr. Lumley has secured M. Massol, the original *Pietro*, besides the services of one of the most celebrated dancers of modern days, Mdlle. Monti, there was also the additional inducement of presenting her in the part of *Fenella*, with which the name of the once popular *danseuse*, Pauline Leroux, was associated with such glory. The new acquisition was sparkling and highly graceful. She prudently reserved her powers for the outbreak of joy, "Ah! non giunge," in the finale; and hence she revelled in elegant embellishments of such captivating influence, as to exact the universal demand for its repetition. The neatness, finish, and precision of her cadenzas could not be surpassed.

It was delightful to listen to the musically-toned organ of Coletti again. In a flowing and melodious cantabile he has now no equal; his method is perfect, his accent is so pure, the sentiment so chase and intense, that there is but one feeling of unalloyed gratification inspired by him; and as an actor he forgets not rises into sublimity, as in the last scene of the aged *Foscari

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

On Tuesday, Mr. Geach, of Birmingham, was elected M.P. for Coventry, in the room of Mr. Turner, appointed to the office of Vice-Chancellor. Mr Geach had a majority of 686 votes over his opponent, Mr. Scrutt, late M.P. for Derby, the numbers being—For Mr Geach, 1669; for Mr Scrutt, 1104. Mr. Geach expressed his intention to support Sir James Graham's views on the subject of Papal aggression

Levi Harwood and Jones, the two men sentenced to death by Baron Parke at the Kingston Assizes, on Tuesday week, for the murder of the Rev. Mr. Holmes, at Frimley, are to be executed at Horsemonger-lane Gaol, on Tuesday, the 15th instant, at nine o'clock. A petition signed by the whole of the jury has been forwarded to Mr. Locke King, M.P. for East Surrey, for presentation through the Home Secretary, praying for a commutation of the sentence of death. It is based upon the strong conviction of the jury that neither of the men, Levi Harwood nor Samuel Jones, fired the shot, but that it was fired by the approver, Hiram Smith. No results yet been announced as to the result of the memorial.

On Monday the parish of St. Martin's-in-the-Fields, in the metropolis, in order to afford every facility to the numerous strangers who will shortly visit the Great Exhibition, commenced re-writing the names of all the streets within that parish. St. James's, Westminster, and St. Georges, Hanover-square, are understood to be about to follow the example. In the City it has been found that nearly 150 places therein are without any visible designation at the west of each street: index-hands will be painted, and the letter N, S, E, or W., according to the point of the compass it may lead towards.

The directors of the Universal Screw Steam Shipping Company, encouraged by the success which has attended the opening of the postal service between this country and the Cape of Good Hope by their screw ship, have determined upon the establishment of the line to the Mauritius, Ceylon, Madras, and Calcutta, which will be carried out without delay by ships of 1700 tons burden and 300 horse-power (by Maudslay), now in the course of construction by Mare and Co., of Blackwall, for this service.

Monday last being the first day of the official year, the arrangement for the annual supply of the several dock establishments, quays, and warehouses, and embarcadero with the Thames, with landing officers of the Customs department for the ensuing year, took place. By this arrangement, a certain sufficient number of searchers and other landing officers are stationed at each of the great dock establishments for the general landing purposes, and also at the Custom house for the shipping of the quays and wharfs on either side of the river. Omnibuses being retained to meet the general requirements of the trade of this vast port.

Arrangements are far advanced for the erection of an extensive range of Assembly rooms in Edinburgh. They are to be driven by steam, and will be provided with the most recent improvements in the art of lighting. The site chosen for the buildings is on the western outskirt of the city.

The London and North-Western Railway directors have determined to accommodate the densely thronged district of Euston-square with railway accommodation. The people of Kilburn have long coveted this boon.

We understand that Mr. Hodges, M.P. for Kent, purposes to bring in a bill to relieve the hop growers; it is to be optional to the farmer, by giving proper notice according to rule laid down, whether he pays an acreage duty of £3 per acre, or 1d. per lb., as may suit.

The deliveries of tea last week in London were rather smaller, being 541,588 lb. There has been a fair business doing in the article.

Several respectable persons, who had obtained admission into the Great Exhibition building by using exhibitors' and workmen's passes, found themselves, during the past week, in the somewhat disagreeable position of the custody of the police, and were conducted by them to the Executive Committee, the members of which, being disposed to deal leniently with their first offence, ordered them immediately to leave the building. The most rigorous measures will now be adopted to prevent the admission of any person who is not actually an exhibitor or person employed in the building.

The third monthly soiree of the National Reform Association was held at the London Tavern on Monday night (Sir Joseph Walmsley, M.P., in the chair), when Mr. Edward Miall delivered a lecture on the extension of the franchise as the means of training the people to a better understanding of their political rights, and appreciation of the constitution under which they were governed. The proceedings of the evening were, as usual, diversified with music.

A society is about to be formed in Paris under the patronage of the Archbishop, the object of which is to supply bread to the poor at the lowest possible cost, under the regular price.

On Saturday last, a woman, named Esther Curtis, was killed near Gloucester, by her husband, under circumstances of great brutality. The unfortunate woman called upon the fellow at a public-house, where he was carousing, and attacked her with such ferocity that she died in half an hour from the injuries which he inflicted. He is now in custody, awaiting the result of a coroner's inquest.

We regret to state that little doubt now remains as to the fate of the splendid New York liner *Independence*, and her officers and crew, respecting whose less grave apprehensions have recently been entertained. Accounts have been received in Liverpool from Savannah, stating that the ship *John Diamond*, whilst on her passage from Boston to that port, on the 12th inst., in lat. 30-34, long 71, a quantity of wreck, and picked up a broken oar, upon the blade of which the word *Jeanbee* was stamped. Bales of cotton and casks, with the private marks thereon, had also been picked up. The *Jeanbee* was a fine ship, of about 1300 tons register.

From the Sandwich Islands we learn that her Majesty's ship *Juno*, on which left home islands in June last, in search of Sir John Franklin, returned from the polar regions to Honolulu, Kauai, on the 10th of December; and having refreshed there, was, on the 26th, only waiting a fair wind to proceed to Hong-kong, thence to return to the Arctic seas, in April.

The following secessions of clergy and laity connected with Deeds, to the Roman Catholic Church, late York peace; viz those of the Rev. Mr. Ward, formerly vicar of St. Saviour's, Leeds; the Rev. Thomas Allies, late vicar; the Rev. J. C. L. Crawley, late curate; the Rev. Mr. Rooke; the Rev. Mr. Coombes, late curate, all of St. Saviour's; and the Rev. W. Lewthwaite, incumbent of Clifford, near Tadcaster. These secessions and conversions were formally received into the communion of the Church on Sunday evening.

It is said that the greater portion of the shellfish standing in Hainault, Epping, and Waltham Forests will be cut down during the ensuing year, and the land will be enclosed, and other beneficial the cultivation or disposed of, as the interests arising from still some other Crown lands are hardly sufficient to meet the expenses incidental to their management

Mr. Alderman Salomons has expressed to the rector of Ashburst his intention to build, at his own own expense, in that parish, a schoolhouse and teacher's residence, similar to those erected at Kordzombe-green, in the parish of Penshurst. This benefient work you accomplish an important service, for the poor of the parish of Ashburst, which has hitherto been without a school of any kind.

The Master King Leopold has issued his authorisation for the institution of a National Collection of Works of Art, to be held at Brussels in the autumn of the present year. The day fixed for the opening is the 19th of August.

On Sunday evening, about nine o'clock, a man of respectable appearance suddenly mounted the parapet of Blackfriars-bridge, and plunged into the water. In his descent the unfortunate man's head struck against the third abutment from the Surrey shore. An alarm of fire was raised, but after that nothing was to be seen of him. The persons who were close to him describe him as about forty, dressed in black, with white cravat.

It appears by the abstract of accounts of loan societies in England and Wales to 31st December, 1850, that the total number of societies of this description in active operation in England and Wales is 220. These societies circulated during the year sums varying from £10,000 to £20,000.

On the 26th of January, a severe shock of an earthquake was felt at Guerrero, in Mexico. It continued about three seconds, and immediately afterwards a tremendous noise of thunder was heard, resembling the heavens, illuminating brilliantly the whole valley. It was observed to fall on a neighbouring mountain, and on its coming in contact with the earth, a loud explosion ensued.

Mr. Mullings has brought in a bill in the House of Commons, to authorise the service by post of all notices relative to the proceedings of charitable institutions. The preamble of the bill declares that great inconvenience has been occasioned, and may be occasioned, to hospitals and other charitable institutions in England, by reason that courts, boards, and meetings of members or shareholders, and directors, presidents, patrons, treasurers, auditors, physicians, surgeons, and other officers have taken place, of which notices have been issued through the post, the service of which it is difficult to prove

A bill in the House of Commons has been introduced to improve the law of landlord and tenant, in relation to emblements, or growing crops seized in execution, and to agricultural tenants' fixtures. The tenant may remove fixtures seized by him, unless the landlord tenders to him the proper move.

The situation of stipendiary magistrate at Liverpool is vacant by the death of Mr. Edward Rushton, who has filled that office since 1838. Mr. Rushton's salary was £1600 a year, but it is understood that the borough council of Liverpool, which possesses by the act the power of retiring the number of justices, as well as the salaries paid to those officers, will recommend the appointment of two justices instead of one, whose united salaries will be £2000 a year.

The splendid estate of Closeburn has just been purchased by Douglas Baird, Esq., Gartsherrie, for the sum of £460,000. This, with his previous purchase of the Shaws estate, at £45,000 (being originally part of Closeburn), will form one of the most princely estates in Scotland.

One of the collectors under the Census Act, in the neighbourhood of Holme, received a blank return from one man; and, his was asked why it was not filled up? The reply was, that nobody had slept in the house the preceding night. "Was the house empty, then?" he inquired. "No," was the rejoinder; "but my wife was confined of twins for the third time, about ten o'clock, and nobody has ever slept since!"

CIVIC BANQUET TO HER MAJESTY'S MINISTERS.

On Wednesday the Right Hon. the Lord Mayor entertained at a grand banquet at the Mansion-house, the members and friends of the Government, the Foreign Ambassadors and Ministers at present in London, &c.

Amongst the company present were Lord John Russell, the Hon. Elizabeth Lyndon, Countess of Minto, Sir George and Lady Grey, Marquis and Marchioness of Clanricarde, Sir Charles and Lady Mary Wood, Marquis of Breadalbane, Viscount and Viscountess Palmerston, Earl and Countess Mulgrave, Marquis of Abercorn and Viscountess Melgrund, Earl and Countess Effingham, Lord Broughton and Miss Hobhouse, Lord Overstone, Chevalier Bunsen, the American Minister and Mrs. Laurence, Count and Countess Schimmelpenninck, Count a Beverwaar, M. De Marcscalchi, *French Chargé d' Affaires*; Right Hon. F. Maule, Lord Robert Grosvenor, Lady Heslop and Miss Elliott, Admiral Berkeley and Lady Charlotte Berkeley, &c.

Upwards of fifty distinguished guests, expected at the banquet, were prevented from being present from illness and other unavoidable causes

There was a sp endid display of plate; and many remarkable, from its beauty of form, was the celebrated cup and cover presented to the Goldsmiths' Company in the reign of Charles II., by sir Samuel Pepys, then master, and of which company the Lord Mayor is a member.

The usual loyal and patriotic toasts were duly honoured,

The Lord Mayor gave "Her Majesty's Ministers," coupling therewith the name of Lord John Russell.

Lord John Russell (who, on rising with his right hon. and noble colleagues present, was received with prolonged cheers) having acknowledged the compliment, proceeded to contrast the prospects of April, 1848, with those of the present month of April. He observed:—We can all recollect the doubts and misgivings which were entertained on the evening previous to the 10th of April. The question then was, how might be some violation of the public peace—fears even that there might be loss of life on the ensuing day; but on the evening of that ensuing day we found ourselves perfectly safe; and safe, not, I will venture to say, because of the armed force—although the small armed force which was then in London would, no doubt, have done its duty, had there been occasion for it—not on account of the armed force within the metropolis, but because the people themselves were averse to any such violation of the public peace and disturbance. They rose to maintain, not to subvert, the institutions of the country; and I trust that on any similar occasion the same spirit will be manifested by that great body, knowing the benefits we enjoy under our free institutions, we shall be ready to defend those institutions, and transmit them intact and unimpaired to our posterity. (Loud cheers.) We are about to see large numbers of foreigners assembled in this country, at what, I trust, will be one of the most interesting sights the world ever witnessed. (Hear.) It has been remonstrated and the rumour has been mentioned elsewhere—that advantage will be taken of that event by some of those who will come to visit this country to disturb our internal peace; but I feel confident that that peace will be preserved, and by the strong arm of the law and of justice, but because I feel that any persons who, on such an occasion, being our guests in this country, would attempt to disturb that peace, would be condemned by the universal voice of mankind as guilty of the basest ingratitude, and that when they look upon our thriving population, they will see reason to be convinced that there must be something excellent in the laws, something excellent in the spirit, something radiant in the tradition of the people who can exhibit such a spectacle. (Loud cheers.) In this city I am sure they will meet with a cordial reception; and I have no doubt they will have reason to be grateful for the splendid hospitality which has ever been a characteristic of the City of London. (Cheers.) I trust, also, when the event to which allusion has been made is terminated, that we may all congratulate ourselves, not only on the exhibition of the productions of art and industry, but upon the fact that so many persons of so many different nations, whether from Europe and the Eastern hemisphere, or from amongst our brethren on the other side of the Atlantic, meeting in this grand metropolis, have been enabled by the interchange of friendly sentiments to place upon a still more secure foundation that that upon which it now rests, that greatest of human blessings—the peace of the world. (Vehement cheering.) The Lord Mayor having expressed his regret at the absence of several representatives of foreign nations, gave "The Foreign Ministers, and the Health of their esteemed and excellent friend, Mr. Laurence, Minister from the United States of America." (Loud cheers.)

Mr. Laurence (the American Minister) returned thanks.

The Lord Mayor then gave "The House of Lords, and the Health of the Marquis of Abercorn."

Lord Palmerston, who was received with marked applause, responded to the toast of "The House of Commons," observing, as he addressed the Lord Mayor, "It is indeed natural, that, upon an occasion like the present, when you have assembled at your hospitable board so many distinguished men of the country—distinguished by services of every kind, both civil and military—at a time too, when we are honoured by the presence of that most distinguished re resentative of (as he has called himself) the world—the foreign world—but who, from the sentiments which he expresses, and from the cordial interest which he takes in everything that concerns the welfare of this country, as well as of his own, we can equally call the representative of foreign Ministers, though we may claim him almost as one of ourselves—it is natural, I say, that on such an occasion your Lordship should call to the remembrance of this assembled company that branch of our Legislature, the House of Commons. For, my Lord, you, who are at the head of this great commercial metropolis of the world—you who, at this moment, represent to us the "merchant princes" of England—cheers—must feel the value of that legislation of which the House of Commons has so long been the advocate. For in what other country be possessed of inexhaustible resources—in vain would it boast of the intelligence of its people, and the skill, and the capital of its merchants, if the laws of the country did not give freedom at home, and security for the enjoyment of the fruits of industry. (Hear, hear.) It is the dispensation of Providence that mankind should be divided into rich and poor—that the rich should be comparatively few, and the poor comparatively many. But, thanks to human legislation can alter that arrangement, it is in the power of law—given so to enact that the poor shall be protected from oppression by the rich, and that the rich shall be defended against violences from the poor. (Cheers.) From day to day the Parliament of England has amply and successfully performed. (Cheers.) Hence it is, that while we have seen all the nations of Europe convulsed with disorder—whilst we have seen industry dispersed—whilst we have paralysed institutions, civil and political, overthrown —whilst we have seen fields, that ought to have been trodden only by the peaceful husbandman, beaten down by the tramp of the iron heel of armed legions—whilst we have seen the pavements of cities with the blood of kindred through conflicting armies, the people of this country have exhibited an example of tranquility, of order, and of obedience to the laws, which as long as the history of these times shall endure, will command the admiration of mankind (Cheers.) I say, therefore, my Lord, that it is natural you should pay to the House of Commons the compliment you have bestowed upon them, and I am sure that House will respond to the sentiment which has animated your Lordship in proposing this toast. (Cheers.)

The remaining toasts were, the "Health of the Lady Mayoress," "The English Fleet and the Attorney-General," "The Members for the City of London," "The Magistrates of the City."

Walter D. Jones, Esq., who possesses considerable property in the purlieus of Norton-street, will offer himself on Conservative and Protectionist principles for the representation of Rochester, in opposition to Mr. Weston Hodges, and every prospect of success appears secured to the Protectionist cause in his person.

The Swiss journals announce that on Saturday last the French refugees residing at Lausanne were summoned to the Prefecture, and to d that the federal Government had given orders that they should be sent into Eng and, or, if they preferred it, that they might go to America.

BALLOON ASCENT AT HASTINGS.

THE recent aérial voyage of the Duke of Brunswick with Mr. Green, in his Vauxhall balloon, has been already noticed in our columns. The Duke and his more experienced companion do not, it will be remembered, a short time since, ascended in the above balloon, from the West-End of London; but, owing to adverse winds, alighted at Gravesend, whence they journeyed to Hastings, where they arrived on the 22nd ult., and remained until the 31st, the wind in the meantime blowing hard from the south-west. On the latter day it shifted to the north-west, right point; and at a quarter to eight in the morning, the process of inflating the balloon was commenced, in a space adjacent to the Hastings Gas-works. Meanwhile the ascent was announced through the town to take place at ten o'clock. This brought many persons to the vicinity of the Gas-works and the West-hill, from whence a fine view was obtained.

Mr. Green had provided his apparatus for sea voyages. It consisted of a gutta percha line, rather more than 200 feet in length. A log of wood was secured to the extremity of the line, and two others higher up, each log being a few feet from the next. The section of this apparatus was to be as follows:—After getting clear of the land, gas was to be let off till the balloon came down to a short distance from the water. The gutta percha line was to depend from the car, and during the logs as above described. It is obvious that immediately a log became immersed in the water, it would cease to be a weight to the balloon. Were the balloon to descend low enough, a second log would be immersed, and the balloon would be further relieved. On sinking still lower, the third log would float, and the weight would be still less. Thus the weight of the balloon would be lessened without loss of ballast. When the right weight was obtained, so as for the balloon to sink no lower, it would have attained a stationary height, and would glide onwards, drawing the logs after it, at an uniform level. This plan was designed to be still further carried out by means of the grapnel, which was attached to the usual rope. Two ins vessels, sailed, were secured to the grapnel, and

ASCENT OF THE VICTORIA BALLOON, AT HASTINGS.

sundry skin bladders were to be tied to the rope. Thus the grapnel, when depending from its line, would float upon the surface of the water, and act after the same manner as the logs. If, with all this apparatus floating upon the sea, Mr. Green should wish to have a still lower level, he would only have to pull one of his ropes, and raise some portion of the floating material, when the balloon would at once fall from the increased weight. Thus a descent would be obtained without loss of gas. The stores placed in the car consisted of a few biscuits, and five or six cwt. of ballast, consisting of oil-skin bags filled with sand.

By midday there could not have been less than 5000 out-of-door spectators of the scene, to say nothing of the great numbers who were able to view the spectacle from the windows of the houses which commanded a view of the Gas-works. The Castle-hill was studded with a line of eager spectators.

At about ten minutes to one the inflation was complete, and the car was attached; and forthwith came the Duke of Brunswick, accompanied by Mr. T. G. Smith, the Baron Andlau, and Mr. Pereda. The Duke was clad in a suit of oil-skin from head to foot. Without a moment's delay he jumped into the car, in which were then placed a speaking-trumpet and a walking-stick (so simple an article as the latter having once saved Mr. Green's balloon from destruction); the word was then given, and the balloon was released. His Highness sat firmly in his seat, while Mr. Green kept his legs, waving his hat, and returning the huzzas of the assembled multitude. The machine rose steadily and majestically from the earth, and cleared the Castle-hill with a beautiful sweep: it then stood off in a south-eastern direction, entering some distance into a watery cloud in a few minutes. It afterwards appeared more distinct, and remained in sight for nearly three-quarters of an hour.

On leaving Hastings, the balloon took a course to the south-east for a distance of about twelve miles. The current then set to the south, and prevailed in that direction till the balloon reached mid-channel, when it became becalmed, and took a low level. Several fishing-boats got nearly under it, and the aeronaut could converse with the crews.

While in the mid-channel, after floating becalmed for some time, a current to the south-east was again obtained. By this period the balloon had changed her level, and she attained the highest elevation arrived at during the voyage, namely, 4000 feet. This ascent was occasioned by the action of the sun's rays, which expanded the gas in the balloon. On reaching this elevation, the rarity of the atmosphere at so great a height caused the gas to expand still more, and it commenced escaping through the safety-valve at the bottom of the balloon. The balloon then gradually descended, till the guide-line and logs again touched the water, when a fixed level was obtained, and the aeronauts went sailing majestically over the water.

On gaining a distance of about twenty miles from the land of France, the coast was visible towards the west, trending out into the sea, and terminating in a point, which Mr. Green believed to be in the neighbourhood of Cherbourg.

At length, while bearing upon the south-eastern course, the voyagers approached the land. The tide was low, and the sands were of great width. The grapnel was lowered, and drew after the balloon together with the guide-line. At this juncture, two men were observed walking on the sands; and, as the trailing ropes emerged from the sea and passed over the sand, they caught at them. The result was that the first man was dashed to the ground with fearful violence, and the second performed a complete somersault in the air; but they soon recovered themselves.

The land beneath the balloon, after the shore was crossed, was observed to be of a very undulatory character, resembling a number of lime-kilns. In the distance appeared a lofty hill, which Mr. Green cleared by an altitude of about fifty feet; and then rapidly descended on the other side, the grapnel tumbling heavily down the steep, and almost getting ahead of the car. A village was observed close at hand, and the peasantry were perceived to be on the alert. On approaching the bottom of the valley, the Duke shouted directions to the crowd through the speaking-trumpet. The balloon presently touched the earth, but the shock was so slight as to be almost imperceptible. It immediately shot up again about thirty feet, but was soon so secured that the Duke was enabled to alight in a field of fallow land; after which the balloon took another short flight, and Mr. Green descended at a few minutes after six.

The voyage so successfully completed was then found to have terminated in the neighbourhood of Neufchatel, about 12 kilometres, or 7½ English miles, south of Boulogne.

A railway-station was close at hand, on the Boulogne and Amiens railroad. Hither the Duke proceeded, and almost immediately entered a train *en route* to Paris.

Mr. Green, having discharged all his gas, packed up his balloon, and proceeded with it in a cart to Boulogne, where he arrived at ten o'clock that night, and took up his quarters at the Hotel des Bains. Between eight and nine on the following morning he went by the steamer to Folkestone, and thence to Hastings by railway; where, however, by mistake, he did not arrive till eight in the evening, when he was gladly welcomed.

FIRE IN THE THAMES BANK DEPOSITORY.

It is well known to most of our readers, that, for some time past, an immense range of buildings has been in the builder's hands, to be fitted up as a sort of barracks, or sleeping *depôt*, for the accommodation of some hundreds of persons who intend to locate themselves in the metropolis during the ensuing Great National Exhibition. The establishment is named "The Mechanics' Home for 1851," and is situated in Ranelagh-road, near Vauxhall-bridge, on the Middlesex bank of the Thames. The premises occupy an area of two acres, is surrounded by roads on three sides, and is in a perfectly airy situation, and admirably ventilated. The plan has been recommended by the Executive Committee of the Exhibition; and the arrangements were approaching completion, when, on Monday morning, we regret to state, the premises were greatly injured by fire.

It appears that, at the time of the disaster, a few minutes after seven o'clock, the Depositary was filled with valuable property of nearly every description. In order to keep the articles in the place free from damp or mildew, a hot-air pipe passed along the ceiling of each floor, and it is generally understood that the heat of this pipe caused the great destruction of property.

At the time above stated, some of the men who were at work in the yard perceived smoke issuing from one of the windows in the Depositary, facing the model sleeping-rooms; and, upon entering the first-named building, flames were found raging, and portions of the burning materials were falling among the many hundred packages in the premises. Messengers were dispatched for the fire-engines, during which time Mr. Smith (the chief clerk to Mr. Harrison, the proprietor), with Messrs. Smart, Iced, Atkinson, Thompson, and a body of the B police, did all they possibly could in endeavouring to stop the flames and rescue some of the property. Unfortunately, the furniture was packed so closely on either side of the premises, that barely sufficient room existed for two men to pass up the centre, so that their exertions were greatly retarded.

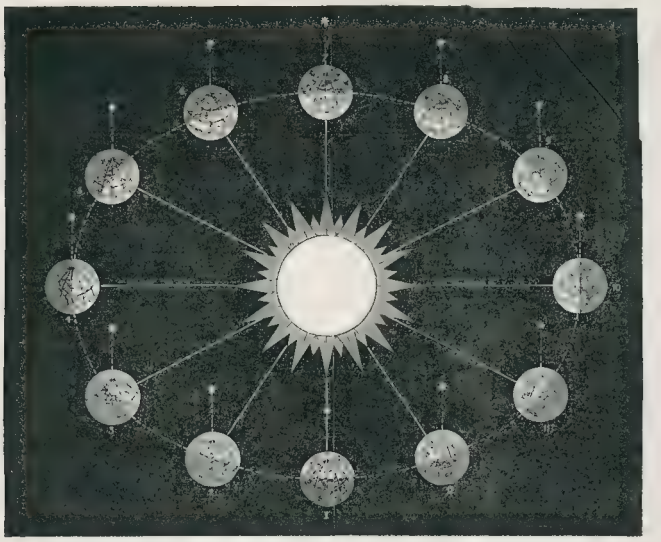
In a very brief period, numerous engines of the London brigade, with that of the West of England Insurance-office, and a powerful body of firemen, reached the scene, but, unfortunately, 15 minutes elapsed before water could be procured from the Chelsea mains, which run through the district. During that interval two of the engines were taken round to Bramah's Dock and set to work; but the flames had previously rushed through a loop-hole in the ceiling, and were doing great havoc among the valuable articles in the upper floor.

By noon, however, the firemen succeeded in extinguishing the fire, when it was found that scarcely an article of furniture in the Depositary where the flames had entered had escaped damage of some sort, and many of the costly goods were entirely destroyed. The premises (a brick building, 130 feet long, being termed fireproof), and their contents, were not insured.

A great crowd congregated on the spot throughout the day, and it required a strong body of the B police to keep them out of the way of the firemen.

As the Mechanics' Home promises to be a most serviceable establishment, we hope the above damage will be speedily repaired. The accommodation will be good provision for sleeping, and security of luggage; a culinary department, from which the visitors will be supplied with breakfasts, dinners, &c., in a large and well-ventilated eating-room; and there will be a news-room and smoking-room—the latter provided with music.

THE THAMES BANK DEPOSITORY, RANELAGH-ROAD, PIMLICO.

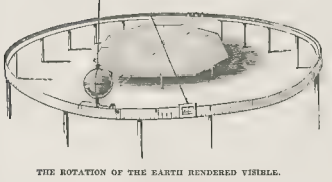


MR. C. H. ADAMS'S ORRERY.

THE ROTATION OF THE EARTH RENDERED VISIBLE

Although the demonstration by which the rotation of the earth has been established be such as to carry conviction of all who are versed in the principles of natural philosophy, to the masses the physical phenomena by which this great truth has been established admit of simplification. This has been accomplished by an experiment now being exhibited in Paris, by which the diurnal rotation of the earth is rendered palpable to the senses. The arrangement for this purpose is briefly as follows:—

To the centre of the dome of the Pantheon, a fine wire is attached, from which a sphere of metal, four or five inches in diameter, is suspended so as to hang near the floor of the building. This apparatus is put in vibration after the manner of a pendulum. Under, and concentrical with it, is placed a circular table, some twenty feet in diameter,



THE ROTATION OF THE EARTH RENDERED VISIBLE.

the circumference of which is divided into degrees, minutes, &c., and the divisions numbered. Now, it can be shown by the most elementary principles of mechanics, that, supposing the earth to have the diurnal motion upon its axis which is imputed to it, and which explains the phenomena of day and night, &c., the plane in which this pendulum vibrates will not be affected by the diurnal motion, but will maintain strictly the same direction during twenty four hours. In this interval, however, the table over which the pendulum is suspended will continually change its position in virtue of the diurnal motion, so as to make a complete revolution round its centre. Since, then, the table thus revolves, and the pendulum which vibrates over it does not revolve, the consequence is, that a line traced upon the table by a point projecting from the bottom of the ball will change its direction relatively to the table from minute to minute, and from hour to hour; so that, if such point were a pencil, and paper were spread upon the table, the course formed by this pencil during 24 hours would form a system of lines radiating from the centre of the table; and the two lines formed after the interval of one hour would always form an angle with each other of 15°, being the 24th part of the circumference. Now, this is rendered actually visible to the crowds which daily flock to the Pantheon to witness this remarkable experiment. The practised eye of a correct observer, especially if aided by a proper optical instrument, may actually see the motion which the table has in common with the earth under the pendulum between two successive vibrations. It is, in fact, apparent that the ball, or, rather, the point attached to the bottom of the ball, does not return precisely to the same point of the circumference of the table after two successive vibrations.

Thus is rendered visible the motion which the table has in common with the earth. It is true that, correctly speaking, the table does not turn round its own centre, but turns round the axis of the earth; nevertheless, the effect of the motion relatively to the pendulum suspended over the centre of the table is precisely the same as it would be if the table moved once in 24 hours round its own centre; for although the table be turned in common with the surface of the earth round the earth's axis, the point of suspension of the pendulum is turned also in the same time round the same axis, being continually maintained vertical above the centre of the table. The plane in which the pendulum vibrates does not, however, partake of this motion, and consequently has the appearance of revolving once in 24 hours over the table, while, in reality, it is the table which revolves once in 24 hours under it.

(To the Editor)

The interesting experiment now in operation in the Pantheon, at Paris, by which the motion of the earth is rendered tangible to the senses, suggests to me the possibility of converting it into a perpetual clock, by the aid of galvanism. It appears, all that would be necessary would be to construct a circle of magnets, adopting the same arrangement as for the single magnet used at present in Bain's and Shepherd's voltaic clocks; and the experiment itself, I think, is not unworthy of the noble site that may be found under the dome of St. Paul's.

I am, &c.,

W. LITTLE.

NOOKS AND CORNERS OF OLD ENGLAND.

THE "MONMOUTH TREE."

MANY are the memorials which exist to this day of the "unfortunate" Duke of Monmouth, the natural son of Charles II., and whose popularity with the nation, still more than the presumed partiality of his father, made him a somewhat formidable competitor for the succession, in the actual circumstances of the legitimate heir.

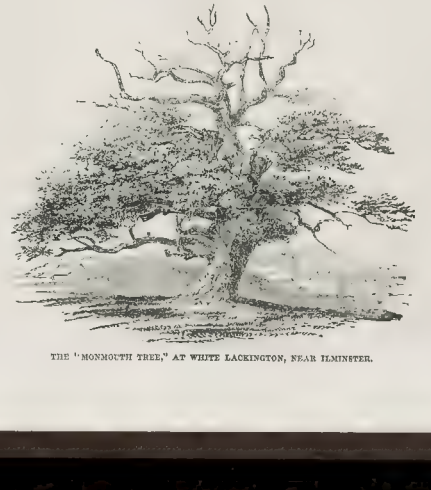
The present relic, a noble Spanish chesnut-tree, in the park of White Lackington House, one mile distant from Ilminster, is associated with the Duke of Monmouth's memorable progress into the West of England, in the summer of 1680. His Grace journeyed as a man of pleasure, who accepted the hospitality of his distinguished friends, but never expressly assumed the political character. His visits were exclusively to the estates of the country party, who, if in Parliament, owed their seats to their provincial importance, as distinguished from courtiers, lawyers, and dependants on the nobility. The gentlemen of the Court party shrank from contact with one whose connexion with the opposition and democratic members was so notorious.

In August, 1680, the Duke of Monmouth went into the country to divert himself, visiting several gentlemen in the West of England, by whom he was received and entertained with a gallantry suitable to the greatness of his birth, and the relation in which he stood with his Majesty; incredible numbers flocking from all the adjacent parts to see this great champion of the English nation, who had been so successful against the Dutch, French, and Scots. He first went into Wiltshire, and honoured the worthy Squire Thynne, of Longleate House, with his company for some days.

From Longleate, Monmouth went to White Lackington House, the seat of George Speke, Esq., in which progress he was caressed with the joyful acclamations of the country-people, who cried "God bless King Charles and the Protestant Duke!" In some towns and parishes through which he passed they strewed the streets and highways with herbs and flowers especially at Ilchester and South Petherton, others presenting him with bottles of wine.

We have abridged these interesting details of the progress from Mr. George Roberts's "Life, Progress, and Rebellion of James Duke of Monmouth," &c., wherein the precise locality of the annexed Illustration is thus described:—

"When the Duke came within ten miles of White Lackington House, which is one mile distant from Ilminster, he was met by two thousand persons on horseback, whose number still increased as they drew nearer to Mr. Speke's. When the company arrived there, they were computed to amount to twenty thousand. To admit so large a multitude, several perches of the park paling were taken down. His Grace, his party, and attendants, took refreshment under the famed sweet Spanish chesnut-tree, now standing, which measures at three feet from the ground upwards of twenty-six feet in circumference. The old branches have been mostly removed by the ravages of time; but there are others attached to the stock which produce large timber, as well as a quantity of fruit every year. White Lackington House is now a farm, the property of Lee Lee, Esq., late M.P. for Wells. A great part of the house has been pulled down."



THE "MONMOUTH TREE," AT WHITE LACKINGTON, NEAR ILMINSTER.

ADAMS'S ORRERY.

DURING the ensuing (Passion) week, Mr. C. H. Adams will deliver his customary annual lecture on Astronomy, at the Haymarket Theatre, which deserves to be well attended. This is the lecturer's twenty-first year in London; and his merits as an expositor of the sublime science are too well known to need our eulogium. We have, however, illustrated one of his diagrams.

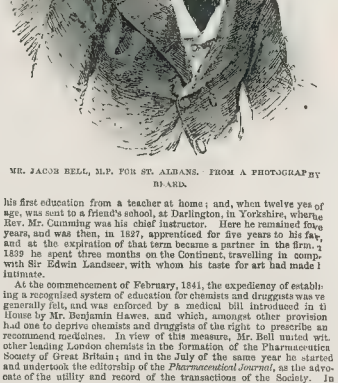
The elliptic orbit of the Earth is exaggerated merely, we believe, to occupy all the available space afforded in the theatre, of the proscenium of which this, as well as several other scenes, occupy almost the entire area in this diagram the Sun is seen, surrounded by the Earth in twelve parts of its orbit: each globe is represented as having its north pole inclined upwards to the amount of twenty-three degrees and a half. One hemisphere being shaded, the phenomena of the seasons are readily explained, thus:—Suppose the globe (No. 3) most removed, on the left hand, from the Sun, to represent the vernal equinox, it is obvious that, as the line separating the illumined from the darkened hemisphere now intersects either pole, night and day are equal. On or about the 21st of April, the Earth will have arrived at that part of its orbit represented by the globe No. 2; about the 20th of the following month, May, the globe No. 1 marks our position; and on the 20th or 21st of June the Earth has arrived at that part of its orbit where the north pole is most turned towards the Sun, when to all inhabitants north of the Equator the days are of the longest duration. This position is shown by the globe lowest in the scene, or at No. 12. Our situation at the latter end of the months of July and August is shown by the globes Nos. 11 and 10; and the autumnal equinox is represented by the globe (No. 9) most removed on the right hand. The globes Nos. 8 and 7 show the position of the Earth towards the end of October and November; and No. 6 represents the winter solstice, where we have the north pole most turned from the Sun, when to the northern inhabitants the days are at the shortest.

The principal object, however, which Mr. Adams has in introducing this scene, is to show the enormous distance at which the nearest fixed star must be, and this he illustrates in the most popular manner by merely asking his auditory to imagine that a line drawn from the globe No. 3 shews the direction in which a fixed star is viewed through a telescope carefully adjusted, say, as in this case, on the 21st of March. As the observer is carried onward in his annual course about the sun, these observations are to be repeated until he arrive at that part of his orbit diametrically opposed to that at which he commenced his observations, namely, at No. 9, the autumnal equinox, when, on or about the 23d of September, to the manifest astonishment of those who are not already aware of the immense distance at which the star is placed, he finds the same star, certain corrections having been laid aside, occupying precisely the same situation in the field of his telescope, having ascertained previously, from an ingenious and very clear problem introduced in the early part of the lecture, that the observer is now 190 millions of miles distant from the position he occupied on the 20th or 21st of March; and yet, "with line stretched out so far," no sensible difference in the line of direction of the fixed star, the conclusion at once is, that, as the instrument used gives no visible angle, the stars are by his means seen to be immeasurably distant. Allusion is then made to be more happy discoveries of the lamented Bessel, with his delicate instrument, the Fraunhofer Heliometer, which set the question at rest by determining, with what may be called, in no vast a distance, something like precision. The lecturer then proceeds to relate the particulars respecting the double star, 61 Cygni.

PARLIAMENTARY PORTRAITS.

JACOB BELL, M.P. FOR ST. ALBANS.

THE recently elected member, eldest son of the late John Bell, chemist, of Oxford-street, by the eldest daughter of the late Frederick Smith, chemist and druggist in the Haymarket, was born in London, in 1810; received



MR. JACOB BELL, M.P. FOR ST. ALBANS. FROM A PHOTOGRAPH BY BEARD.

his first education from a teacher at home; and, when twelve years of age, was sent to a friend's school, at Darlington, in Yorkshire, where Rev. Mr. Cumming was his chief instructor. Here he remained four years, and was then, in 1827, apprenticed for five years to his father, and at the expiration of that term became a partner in the firm. In 1839 he spent three months on the Continent, travelling in company with Sir Edwin Landseer, with whom his taste for art had made him intimate.

At the commencement of February, 1841, the expediency of establishing a recognised system of education for chemists and druggists was very generally felt, and was enforced by a medical bill introduced in the House by Mr. Benjamin Hawes, and which, amongst other provisions had one to deprive chemists and druggists of the right to prescribe and recommend medicines. In view of this measure, Mr. Bell united with other leading London chemists in the formation of the Pharmaceutical Society of Great Britain; and in the July of the same year he started and undertook the editorship of the *Pharmaceutical Journal*, as the advocate of the utility and record of the transactions of the Society. In 1843 the Society was incorporated by Royal Charter, but with the intention, from the first, of obtaining an act of Parliament (not yet had) obliging all chemists and druggists to pass an examination before the Society; and with the purpose of establishing the importance of such a measure, he published in the same year a history of pharmacy in Great Britain, from the first medical act of Parliament (3rd Henry 8, c. 9), passed in 1511, to the incorporation of the Pharmaceutical Society, in 1843.

In 1845 Mr. Bell was elected to the Marylebone Vestry and Board of Guardians, and selected as one of the parochial Commissioners of Public Baths and Wash-houses. There several public pursuits, and especially the agitation of the question of Medical Reform, drew his attention to Parliament. Last year, it was intimated to him that he could be returned for St. Albans, if he would allow himself to be looked to as a candidate on the next vacancy; and accordingly, on the death of Mr. Raphael, in December last, Mr. Bell came forward as a Liberal in favour of prompt measures against the recent Papal Aggression, general reduc-

tion of taxation, immediate abolition of the Window-duty, extension of education among the people, and progress ive reform. For some time Mr. Bell was unopposed, and seemed in a fair w ay to have a walk over. St. Albans, however, for reasons of its own, must have a contest Alderman Cardon was brought forward, and the numbers polled were — Bell, 276; Cardon, 147. A petition was threatened, but has not been presented

Our Portrait is from a photograph by Beard.

CHURCH, UNIVERSITIES, &c.

SIR GEORGE GREY AND THE ARCHBISHOP OF CANTERBURY.—The following letter has been addressed by the Home Secretary to the Archbishop of Canterbury

Whitehall April 1

My Lord Archbishop,—I have received the Queen's commands to transmit to your Grace the accompanying address, which has been presented to her Majesty signed by a very large number of the members of the united church of England and Ireland, including many members of both houses of Parliament.

Her Majesty places full confidence in your Grace s desire to use each means of your power or influence to maintain the purity of the doctrines taught by the clergy of the Church, and to discourage and prevent innovations in the modes of conducting the services of the Church not sanctioned by law or general usage, and calculated to create dissatisfaction and even among a numerous body of its members.

I am therefore, commanded to place this address in your grace's hands and to request that it may be communicated to the Archbishop of York and to the suffragan Bishops in England and Wales, who, her Majesty does not doubt, will concur with your Grace in the endeavour by a judicious exercise of their authority and influence, to uphold the purity and simplicity of the faith and worship of our Reformed Church

I have the honour to be, my Lord Archbishop, your Grace's obedient servant,

G GREY

CHURCH EXTENSION IN THE METROPOLIS.—The Bishop of London has addressed the following letter to the clergy and laity of his diocese:—

[illegible] appointed [illegible] of our Church for the means [illegible] its application [illegible] provisions made for their proportion settled between the numbers of [illegible] with feelings of great thankfulness that I acknowledge the large measure of success which [illegible] to the Lord, both our Head and Master, who, I may add, has [illegible] Since the first appeal was made in July to members and friends, when I ventured to hope [illegible] building, or existing to build, 38 the sum of £240 000 has been collected and [illegible] of £415,000. Six additional sites have [illegible] most of which have been [illegible] built upon them as soon as the requisite [illegible] for purchase and church [illegible] which was subscribed for the erection of ten new churches in the parish of Bethnal-green was raised for schools as well as churches. The remainder of the general fund has been expended in churches parsonage-houses, and endowments, and the above-named sum includes the cost of twelve parsonage-houses, twelve sets of schools, and five small endowments. In addition to the churches which have been already specified, two others have been erected by the pecuniary assistance of individuals; one in Westminster, with an endowment, parsonage-house, and schools; the other in the parish of St. George in the-East. Another church is building in Westminster, at the sole charge of one of the persons just named. But these additions will not fully meet the deficiency which existed when the fund was first set on foot, and alone that time the population of the metropolis has been increasing at the rate of 30,000 a year. In thirteen of the most destitute parishes, containing, according to the census of 1841, a population of about 270 of not fewer than one hundred additional churches would be required to carry out with full effect the parochial system of two hundred of persons are required for a vigorous effort is required to provide our Church. It is therefore, manifest that a renewed and vigorous effort is required to provide with the means of grace for the spiritual wants of the people who are now living beyond the reach of the Church's teaching and are in by the providence of God. In the course of passing events, unpredictable as it is made up from the liberality of [illegible] and we have our brethren to look to ourselves on the side of the [illegible] and we to have our brethren to look to ourselves on the side of truth, or the one hand, or to socialism and infidelity on the other [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] those results, what has taken place in one parish [illegible] In an address presented to me last year by the churchwardens of Bethnal-green upon the occasion of the completion of the last of the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

COUNTRY NEWS.

THE PAPAL AGGRESSION RIOT AT BIRKENHEAD.

The trial of the prisoners, who were committed last winter, for riot, and resists ing the police in their attempts to preserve order on the occasion of a "Papal Aggression Meeting," at Birkenhead, on the 5th of November last, was brought on at quarter, before Mr Justice Williams, on Saturday last, and occupied the whole of that day, and Monday and Tuesday.

The affair was passed so prominently before the public at the time, that it is unnecessary now to repeat the details.

The prisoners were principally labourers, or persons in an humble condition of life. Their names are Peter Fitzsimons, Matthew Griffin, William Haggarty, John Feehan, E. ward Smith, and John Brown. Brown, Griffin, and Feehan had been out on bail, and surrendered; the other prisoners were brought up from the gaol.

Mr. Evans, Q.C., Mr. Davidson, and Mr. M'Intyre, conducted the prosecution. Mr Roscoes, Q.C., defended Brown, Haggarty, Feehan, and Smith. Mr. Wrangh appeared for Griffin and Fitzsimons. Sir George Stephen also appeared for the prisoners. (Mr. Serjeant Wilkins, who had been retained for the defence, was detained by business at Liverpool Assizes.) A neatly constructed model, in wood, of the scene of the riot was produced and "admitted" by both sides

Evidence was given at great length, and on Tuesday evening the jury retired to consider their verdict. After an hour's deliberation, they found Fitzsimons, Griffin, Haggarty, Feehan, and Smith guilty, and Brown not guilty. The foreman added that the jury recommended the prisoners to mercy

Mr. Justice Williams: On what grounds, gentlemen?

The Foreman: It was the wish of the body of the jury, and I can only say that the conduct of the prisoners was "called upon" by the clerk of arraigns, reminded the Court that the defendants Fitzsimons, Haggarty, and Smith had been in prison since November, and prayed the Court to take that circumstance into consideration in passing sentence.

Mr. Justice Williams then briefly addressed the prisoners previous to sentence. His Lordship took occasion to say that the conduct of the police at the first disturbance was not only unreasonable, but unjustifiable: they had gone beyond their duty; and, by so doing, had, in a degree, exasperated the mob. But, though the Court took that circumstance into consideration, it could not regard the conduct of those who pursued the mob in the rio as other than most reprehensible. Two men had been beaten almost to death; and if they had died, the position of the parties concerned would be very different from what it now was. His Lordship then sentenced Griffin and Feehan to one year's imprisonment, and Fitzsimons, Haggarty, and Smith (who had been in prison since November) to nine months' imprisonment.

There were no other indictments against the defendants for common assaults; but Mr. Davidson said, that, after the result of the trial, it was not intended they should be proceeded with.

AYLESBURY ELECTION.—The nomination of candidates to represent

this borough in Parliament took place on Thursday, in the County Hall. Mr. Roughton having retired, Mr. Ferrand and Mr. Bethell were the only competitors. After having been duly proposed and seconded, both gentlemen addressed the electors, amidst a scene of great uproar. The show of hands was in favour of Mr. Bethell, who was proclaimed on behalf of Mr. Ferrand. The contest is expected to be a close one

THE OPERATION OF THE PATENT-LAWS.—A meeting was held on

Tuesday evening, at the Town-hall, Manchester, of the members of an association recently formed in that town for the purpose of procuring an alteration of the law regulating the grant of patents. Mr. William Fairbairn, the gentleman mentioned by the prosecuting counsel on the trial of Newton and Pellatt on the application (asking Parliament for a sufficient alteration in the Patent-laws), which is to be placed in the hands of Lord Brougham for presentation in the Lords, and of Mr. M. Gibson for presentation in the Commons; the local members being requested to support its prayer. The chairman objected to the sum of £140, named in Lord Brougham's bill, as being so large that it would prevent many inventors among the artisan class from bringing out valuable inventions; and the decided feeling of the meeting was that £10 would be quite sufficient as a first charge.

THE NATIONAL PUBLIC SCHOOL ASSOCIATION. — On Tuesday

evening, one of a series of ward meetings in advocacy of the National Public School Association was held in the Odd Fellows' Orphan School-room, Falkner-street, Manchester, Mr. Councillor Goadsby in the chair, to hear and discuss on the advantages offered by the secular system. He believed it to be the best, the most tolerable, and the most practicable system of instruction to the public. He would meet parties who doubted the efficiency of the secular plan to pay a visit to the school-room in which they were assembled, where about ninety children of all denominations were seated, Roman Catholics, and received the greatest diversity of creed. Dr. J. Watts, who spoke at some length, considered that one reason why education was not more common was the difficulty of getting children together in consequence of the expense. The full mental development of the youthful part of the population was necessary, in order to enable them to earn their own living, and to become useful members of society. Dr. Watts pointed out the propriety of the ratepayers having a control over the management, and showed that this was an advantage peculiar to the National Public School Association, and was the case in the proposed Manchester school, but denied at present. He regarded the National Public School Association as being the most practical scheme ever brought forward, and proceeded to detail the mode of electing the school committee, the county board, &c. The schools would be free of expense, and the doors would be open for all who might choose to come. The chairman read the copy of a petition to the House of Commons, praying that an act might be passed for the establishment of a general system of secular instruction, to be supported by local rates, and managed by local authorities, elected by the ratepayers specially for the purpose. Its adoption was unanimously carried.

VACANCY IN THE REPRESENTATION OF THE LEITH BURGHS.—

These burghs are now without a representative, the Lord Advocate to the Bench. The electors have been bestirring themselves for some time past, and a keen contest is expected.

The Court of Sessions for Surrey has elected, as governor of

the new county prison, Mr. Richard Onslow, late deputy clerk of the peace. He is to enter upon the duties of the situation

CHATHAM v. BURGLARY.—On the report of the new prison committee of

magistrates of the county of Surrey recommended that, for the prisoners, instead of being employed on the tread-wheel, hard labour should be substituted by the employment of a handicraft, for such prisoner—the plan being better adapted for carrying out the intended separate system, it being impossible to prevent prisoners from communicating with each other on the tread-wheel. The committee propose to erect six large revolving yards on the same pan as the model prison at Pentonville; but the idea had never abandoned, as they were of opinion that it would be better to form a large circular walk, the cost of which would not exceed more than £600, and a saving would be thereby effected of £900, the original estimate. The prison will be ready for the reception of male prisoners before Michaelmas next.

The Cheshire magistrates have voted a sum of £10,000 for the pur-

pose of extending and altering the House of Correction at Knutsford, and building a new prison for females.

NOCTURNAL BURGLARY.—On Wednesday night a lady was discovered

walking along St. Anne-street, Liverpool, in her night-dress. She was fast asleep. Some gentlemen passing got a car and conveyed her home.

CHARGE OF BURGLARY.—On Tuesday, Samuel Harwood, one of the

persons who had been charged with the murder of Mr. Thomas Hall, a farmer, who was acquitted on Tuesday, the 1st inst., at Kingston, was brought before the magistrates, at Horsham, Sussex, charged, with James Hamilton, one of the Uckland burglars, by Mr. Biddlecombe, the gaoler of the county gaol and house of sessions, with having broken and entered the dwelling-house of Mrs Harriet Skinner, of Cuckfield, Sussex, on the 4th of June last, together with James Jones, Lewi Harwood (now under sentence of death in Horsham gaol for the murder of Frimley murder), John Sloness, *alias* Smith (transported for life for the Uckfield burglary), and Thomas Smith, *alias* Sloness, the magistrates might consider whether they would accept Hamilton, who has made a confession of his guilt, as an approver against Harwood, the inquiry was adjourned.

ANOTHER BURGLARY WITH VIOLENCE.—On Tuesday information

was received by the Commissioners of the Metropolitan Police, that the private residence of Mr. Charles Pickup, of Birken, near Pontefract, a farmer, was lately, during the temporary absence of himself and Mrs. Pickup, broken into by five men, all wearing long smock-frocks and masks. They forced the inmates, consisting of two servant girls and a lad, into the cellar, and, after maltreating them, the man added a gag and threatened to shoot the parties if they made any further alarm. The three servants, for fear of being shot, were obliged to remain in the cellar with a man standing over them, with a gun in his hand, whi st the other four men ransacked the house, taking and carrying away with them six silver tab e-spoons, ten silver tea-spoons, al. marked "P," a silver dessert spoon, marked "M. P.," £7 in cash, consisting of sovereigns, half-sovereigns, and silver, and several articles of wearing apparel, which cannot, at present, be described. No accurate description of the burglars can be given.

THE NITSHILL COLLIERY EXPLOSION.—The sum of £1926 has been

subscribed for the families of the men recently killed, and £187 for the workmen in a separate pit, making in the latter M cheerful contrast to the sordid conduct of the owners of the colliery now partially burned in that town for the purpose of procuring an alteration of the law regulating the grant of patents. Mr. William Fairbairn, the gentlemen mentioned by prosecuting counsel on the trial of Newton and Pellatt on the application (asking Parliament for a sufficient alteration in the Patent-laws), which is to be placed in the hands of Lord Brougham for presentation in the Lords, and of Mr. M. Gibson for presentation in the Commons; the local members being requested to support its prayer. The chairman objected to the sum of £140, named in Lord Brougham's bill, as being so large that it would prevent many inventors among the artisan class from bringing out valuable inventions; and the decided feeling of the meeting was that £10 would be quite sufficient as a first charge.

THE NATIONAL PUBLIC SCHOOL ASSOCIATION. — On Tuesday

evening, one of a series of ward meetings in advocacy of the National Public School Association was held in the Odd Fellows' Orphan School-room, Falkner-street, Manchester, Mr. Councillor Goadsby in the chair, to hear and discuss on the advantages offered by the secular system. He believed it to be the best, the most tolerable, and the most practicable system of instruction to the public. He would meet parties who doubted the efficiency of the secular plan to pay a visit to the school-room in which they were assembled, where about ninety children of all denominations were seated, Roman Catholics, and received the greatest diversity of creed. Dr. J. Watts, who spoke at some length, considered that one reason why education was not more common was the difficulty of getting children together in consequence of the expense. The full mental development of the youthful part of the population was necessary, in order to enable them to earn their own living, and to become useful members of society. Dr. Watts pointed out the propriety of the ratepayers having a control over the management, and showed that this was an advantage peculiar to the National Public School Association, and was the case in the proposed Manchester school, but denied at present. He regarded the National Public School Association as being the most practical scheme ever brought forward, and proceeded to detail the mode of electing the school committee, the county board, &c. The schools would be free of expense, and the doors would be open for all who might choose to come. The chairman read the copy of a petition to the House of Commons, praying that an act might be passed for the establishment of a general system of secular instruction, to be supported by local rates, and managed by local authorities, elected by the ratepayers specially for the purpose. Its adoption was unanimously carried.

VACANCY IN THE REPRESENTATION OF THE LEITH BURGHS.—

Rich Fancy Bonnets, 25s 6d to 31s 6d; new shape Dunstable Straws, 2s 6d to 4s 6d., fine Rice Straws, 2s 6d to 5s 6d; White Chip Hats, 1s 6d to 2s 6d Children's Leghorn Hats in every shape, from 1s 6d to 4s 6d and the largest stock in London to select from, at CHANSOURE'S, BONNET, No. 20, Cranbourne-street, Leicester-square.—Perfumery by ROWLEY and Co.

SEWELL and Co., FOREIGN and BRITISH SILK MERCERS, HOSIERS, GLOVERS, and LINEN DRAPERS to her MAJESTY, in anticipation of the great influx of visitors to London during the present season, have laid in a large and superior Stock of SILKS, SHAWLS, LACE, DRAPERY, CARPETS, and CURTAINS, which, having been purchased on very advantageous terms, will be offered at prices generally under the usual rates. The terms will be offered at prices generally under the usual rates. The terms will be offered at prices generally under the usual rates. The terms

THE ILLUSTRATED LONDON NEWS.

VOL. XVIII.] SUPPLEMENT, SATURDAY, APRIL 12, 1851. [GRATIS.

THE "JAMES BOOTH," ABERDEEN CLIPPER.

THE "JAMES BOOTH" ABERDEEN CLIPPER

This splendid ship has been recently launched at the port of Aberdeen, and is remarkable fine specimen of the clipper built vessels, now considered in the mercantile world to combine great carrying capacity with speed fully equal to the American clipper of the *Oriental* class, to which so much public attention has been directed of late, and a portrait of which appeared in this Journal some few weeks back.

The *James Booth* is 636 tons register, and is calculated to carry 1,000 tons of Calcutta cargo. Her extreme length is 155 feet; breadth, 30 feet 9 inches; depth, 20 feet. She has been built expressly for the East India trade by the old established firm of Alexander Duthie and Co., distinguished for their models of beauty, symmetry, and strength.

Amongst the vessels built by this firm belonging to the port of Aberdeen, may be mentioned the *Reliance*, of 551 tons register, and the *Jane Pirie*, of 427 tons register. The former vessel, was on her first voyage, made, in her outward passage from London to Port Philip in the short space of eighty-seven days, and the latter vessel, the *Jane Pirie*, has, since she was built, in 1847, regularly performed her voyages from London to Calcutta and back in eight months and a half, a considerable detention necessarily occurring at Calcutta in the discharge of the outward, and loading the return cargo, the ordinary time occupied over the voyage being ten to eleven months. This vessel was commanded up to the last voyage by Captain James Booth, one of the most experienced navigators out of the port of Aberdeen; and, to evince the estimation in which his valuable services and high character are held by his co-owners, the fine ship here represented has been named after him.

There are also other ships built in, and belonging to, the port of Aberdeen, that have acquired a public reputation for the invariable speed with which they perform their voyages; two of them, the *John Bungate* and *Countess of Seafield*, are engaged in the China trade, and were mentioned in the discussions occurring at the time the *Oriental* was brought so much under notice. It would be well if our merchants in India would afford similar encouragement to British built ships of this class, by making their shipments in them at increased rates where it is an object to ensure the arrival of their merchandize speedily at a market. This distinction would create an increased competition in the art of naval architecture, now rendered so essential to the maintenance of our mercantile naval supremacy, by the throwing open of our carrying trade to the shipping of all nations.

The Aberdeen clippers possess this advantage over their American rivals, viz. a combination of great carrying capacity with speed: the *Oriental*, being 1654 tons register Aberdeen measurement (1,775 tons register English measurement), delivered 1115 tons of cargo from China, making the voyage from Hong-kong to London in 97 days.

The *John Bungate*, 466 tons register new measurement, delivers about 720 tons of cargo; making the voyage from Shanghae (three days' sail further than Canton) in 99 days.

The *Countess of Seafield*, 541 tons register new measurement, delivers about 760 tons of cargo, making the voyage in 102 days from Woosung to London, about 1000 miles further up the country than Canton.

The *Jane Pirie*, 427 tons register new measurement, delivered from Calcutta 397 tons of cargo. But, as yet, we have no opportunity of contrasting the speed and carrying capacity of these vessels and the American clippers from this port, the cargo being one of a much more trying nature to the ship than from China, which, being chiefly composed of teas and silk, is of the most favorable nature.

THE CROXTON PARK RACE PLATE.

CROXTON PARK RACE PLATE

This superb Prize was contested for on Wednesday week. It is a shield 26 inches diameter, the outer border composed of a rich Grecian fret. The centre group, which is gilt, represents the "Chariot of Aurora," after Flaxman, R.A. This classic work has been designed and manufactured by Messrs. Smith, Nicholson, and Co., successors to the late B. Smith, Dyke-street, Lincoln's-inn-fields.

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—FRIDAY, APRIL 1.

THE RITUAL OF THE RUBRIC.

Sir B. HALL asked Lord J. Russell whether, during the last six weeks, he had had any communications with the archbishops and bishops of the Established Church in reference to the continuance of certain forms introduced into our churches by different clergymen, and against which certain of the bishops have charged their clergy; and whether it is the intention of the archbishops and bishops to take any effectual steps for the purpose of suppressing such practices, which the Bishop of London, in a recent charge, has denounced as illegitimate performances?

Sir R. H. INGLIS protested against making that House the arena for such theological discussions as these questions would force upon it. He moved that the House, at its rising, should adjourn until Monday, as no matter had been mentioned without being out of order, might express their opinion upon the subject.

Sir B. HALL said that public opinion had been pronounced against Puseyite practices in the Church, and yet no steps had been taken by the right reverend prelates of the Church to put an end to such practices.

Lord J. RUSSELL was sorry that this case should have been brought before the House by his hon. friend. He had spoken to the Archbishop of Canterbury with respect to the practices complained of, and since then he had had no communication from his Grace. An address to the Crown had been recently presented by the bishops, praying that these Puseyite practices might be abolished, and an answer had been returned stating that her Majesty disapproved of any practices in the Church not in conformity with the law; and he had no doubt that the Archbishop would act upon that letter, and he would not therefore at present interfere on the subject. He deprecated bringing such subjects at all under the consideration of the House of Commons.

It was then agreed that the House, at its rising, should adjourn until Monday next.

THE AMENDED BUDGET.

The House having gone into Committee of Ways and Means,

The CHANCELLOR of the EXCHEQUER proceeded to state his amended financial scheme. He observed, that time having been afforded him to reconsider the proposals he had made to the House, he took advantage of the opportunity to make such alterations in the plan of financial policy which Lord Stanley was prepared to pursue. The two proposals were before the country, which could decide which was more conducive to the welfare of this great empire. He adm ted that his proposals had not created general satisfaction, but he had been surprised at the manner in which they had been received in some quarters. The main demand made upon him had been for a remission of taxation to which he felt it impossible to accede consistently with the maintenance of public credit, and the establishments which were necessary for the welfare of the country. The all-prevading objection to his proposals was, that he had thought it necessary to retain some margin of the surplus to meet sudden emergencies—a policy the wisdom of which had the first experience—and to maintain the public credit, the only available sinking fund at present a surplus of revenue. Mr. Hume had suggested the conversion of the debt into terminable annuities; but there was no essential difference between terminable annuities and permanent annuities accompanied by a sinking fund for their extinction. Were the circumstances of the country such as to justify a complaint of the pressure of taxation? He believed he very reverse. Whatever the amount might be which the changes in our commercial policy had put into the pockets of the people, to that extent the community had become richer, and it was demonstrable that the pressure of taxation must be infinitely less than it was ten years ago. He had seen no reason to vary the estimates he had given of the probable income and the probable expenditure for the ensuing year, which showed a probable surplus of 1,892,700*l*. He had been told, that, with this surplus, he ought to have done something which would have produced an effect upon the country, but he had considered what were the cases which were most objectionable. The large duty he was blamed for not dealing with namely, the duty upon tea; but this, though a high, was not a protecting duty; and besides that the malt duty connected with the tea duty, he thought there were other cases which had a prior claim; and, if large sums were selected, a remission of minor duties must be postponed. The principle of his Budget, and of all his financial proposals, was to do that which was most beneficial to the mass of the people to the many, and not the few. The Legislature had cheapened food and clothes; there remained another source of comfort to those cases their dwellings. For their sakes he had last year repealed the duty upon bricks, and he now proposed to reduce the duty on foreign timber, and to improve their sanitary condition by affording them air and light. Observing that he was unwilling to force the relief in respect to paper duties, and the question of the duty on seeds, upon those who were indisposed to receive them, Sir Charles justified the other reductions of duty he had proposed, on coffee and timber, on the ground that they were in accordance with the entire commercial policy which had been approved by the House and the country. A land demand, he said, had been made for the unconditional repeal of the window duty, amounting to 1,406,000*l*., and if in assenting to it he should leave himself without a surplus of 40,000*l*. to meet any demand for the Kaffir war, and he must disregard other claims of far more pressing importance to the community. It was not the amount of the tax, but the mode in which it was levied, that rendered it so obnoxious, and he had thought that if he substituted a tax on the value of houses he should obviate this objection. After considering, also, many minor considerations. His proposal would likewise afford a material relief, since no person would have to pay more than two-thirds of what he paid before. He admitted that the principle of imposing the same duty upon houses and old houses and new, was the most just, though it would not afford equal relief; he, therefore, now proposed, excluding all reference to the number of windows, to charge a uniform duty of 9*d*. in the pound upon houses of 20*l*. rental, 10*s*., and 6*d*. upon shops, victuallers' houses, and houses used in the occupation of land, whether old or new, exempting houses under 20*l*. The result would be this: He got rid of all reference to windows, and included the number of houses paying the tax from 500 000 to 400,000, he gave a benefit to shops and other tenements, and he removed a large number of houses from tax altogether. The loss of revenue would be 1,136,000*l*., which, added to the other reductions, amounting to 400,000*l*., made an aggregate loss of 1,536,000*l*., leaving a permanent margin of 356,000*l*. surplus for the ensuing year. In the present year half the window duty would be receivable—namely, 668,000*l*.—making a total surplus of 1,024,000*l*. Those were the proposals he now made to the House, if it assented to the renewal of the income-tax for a time to be limited. Mr. Herries, he remarked, had given notice of a proposition to renew only such a part of the tax as would suffice to provide for the expenditure and maintain public credit, which was the first step to Lord Stanley's policy, and which he (Sir C. Wood) thought wrong. He admitted that the tax was, in the first instance, imposed for temporary purposes and to meet an existing deficiency of revenue, but in 1845 it was renewed for different objects—to improve our financial legislation, repeal impolitic restrictions, and to remove duties which checked the development of the national industry. That experiment had been to a certain extent successful; but its partial success reproduced upon the continuance of this tax; and he believed we might confidently look to an augmentation of the revenue, by the elasticity of trade, which would permit the repeal or the reduction of the income-tax. (The right hon. gentleman, after moving the resolution respecting the income-tax, resumed his seat amidst loud cheers.)

The CHAIRMAN read the resolution, as follows: "That, towards raising the supply granted to her Majesty, the respective duties in Great Britain on profits arising from property, professions, trades, and offices, and the stamp duties in Ireland granted by the acts passed in the sixth year of her present Majesty, and which have been continued and amended by several subsequent acts, shall be further continued for a time to be limited."

Mr. HERRIES complained that Sir C. Wood had departed from the understanding of the preceding night, that his proposition should be reserved for discussion on Monday; and he contended that his Budget was an announcement to the country that the income-tax was to be perpetual.

After a short discussion, in which Lord R. GROSVENOR, Mr. HUME, and other hon. gentlemen took part,

Mr. T. BARING said that he should fear for the national fundholder if he had no better security than direct taxation, which in time of distress would be thrown off. The Treasury would retain an ample surplus to meet only such exigences; but the present Government were weak, and sacrificed the principles they recognised to pressure from without.

Lord J. RUSSELL said, Sir C. Wood had calculated upon a surplus of 900,000*l*. at present, and 350,000*l*. in future; but, besides this, a reduction of duties gave an impulse to the revenue, which became thereby more productive. Mr. Baring had indulged in invective against the Government, forgetting that the administration under which he acted in 1846 had a surplus of only 90,000*l*.

Mr. DISRAELI charged the speech of the Chancellor of the Exchequer with holding out a delusive prospect of our finances, and complained of his withdrawing the small relief he had in his former plan proposed for the agricultural interest, and of bringing a financial scheme to England in which not the slightest relief was afforded to the acknowledged sufferings of the owners and occupiers of land.

Lord ERSKINE spoke in commendation of the Chancellor of the Exchequer's most able and most courageous speech.

Mr. FREWEN described the distress of the landed interest

Mr. WAWN objected to the mode in which the timber duty was proposed to be dealt with

Mr. LABOUCHERE defended this part of the Budget, and observed, that, whilst only 10,000 tons of foreign shipping had been registered in England, in London alone more than 10,000 tons of iron steamers had been built on foreign account during the past year.

Colonel THOMPSON opposed the renewal of the Income-tax.

Colonel DUNNE and Mr. ALCOCK spoke generally in favour of the new financial plan

Mr. HUDSON denied that the ship-building interest was prospering, and claimed the repeal of the whole duty on timber

Mr. HEYWOOD advocated direct taxation, which would equalise the burdens upon rich and poor

The resolution was then agreed to, and reported to the House.

The Acts of Parliament Abbreviation Act Repeal Bill was committed.

Adjourned at a quarter past twelve.

HOUSE OF LORDS.—MONDAY.

CHURCH BUILDING ACT.

The Earl of CARLISLE brought in a bill to amend the Church Building Act which was read a first time and ordered to be read a second

PARISH SERVANTS AND APPRENTICES

The Earl of CARLISLE moved the second reading of the Servants and Apprentices Bill. In doing so he reminded their Lordships of the recent cases of Sloane and Bird, and stated that the measure had been devised to provide against their recurrence. The bill made it compulsory upon poor-law guardians to visit parish servants and apprentices, and to institute summary and immediate prosecutions for infringement of its provisions. It proposed to punish ill-treatment and criminal neglect of such servants and apprentices with a maximum of three years' imprisonment, and to levy a penalty of £20 upon any person in the service of guardians of the poor the power of removing children or servants subjected to neglect or ill-treatment.

Lord BEAUMONT did not object to the principle of the bill; but he believed that masters and employers would be dissatisfied with the constant visitation on the part of the guardians of the poor to which it proposed to subject them; and that they would therefore seek their servants and apprentices anywhere but in the union workhouse

The Earl of CARLISLE would willingly adopt in committee any suggestion that would tend to better the bill; but he should, he confessed, be very loth to give up the power of inspection.

The bill was then read a second time, and ordered to be committed.

MUTINY BILLS

On the motion of the Duke of WELLINGTON, the Mutiny Bill and the Marine Mutiny Bill were severally read a second time, and ordered to be committed

CITY OF LONDON CORPORATION REFORM

Lord BROUGHAM presented a petition, numerously signed, from the ward of Farringdon Without. The petitioners represented that the City of London had been excepted from the operation of the Municipal Act, and that no reform had since been proposed in that corporation, although the petitioners alleged that it required reform as much as any other corporation in the country. He (Lord Brougham) thought the petitioners had understated their case when they said that the corporation of London required reform "as much" as any other corporation dealt with by the Municipal Act. These were certainly not the words he should have used in speaking of that corporation. The petitioners, moreover, said that the corporation had remained unreformed up to the present time, although they had expected that some measure of reform would have originated with the corporation itself. The petitioners applied to the unexpired franchise had dwindled to a number hardly greater than that of the municipal constituency of a fourth-rate city. The petitioners prayed that the basis of the franchise might be extended, and generally for reform in the corporation. Adjourned.

HOUSE OF COMMONS.—MONDAY.

NEW WRIT

In the House of Commons, on the motion of Mr. HAYTER, a new writ was ordered for the Louth Burghs, in the room of Mr. Rutherford, who has accepted the office of one of the Judges of the Sheriff Courts in Scotland.

ST. ALBANS ELECTION COMMITTEE

The Sergeant-at-Arms appeared at the Bar, and informed the House that he had on Saturday received into his custody the body of William Lynes, charged with prevarication before the committee on St. Albans election. He had since then received a writ of *habeas corpus*, returnable at three o'clock that day; but he had made no return to the writ, deeming it advisable to consult the House before replying to it.

Mr. ELLICE brought up the report of the committee on the St. Albans election, stating that the committee had determined that William Lynes should be committed for prevarication. He had, however, answered the questions asked of him, and he therefore moved that he be discharged from custody

The motion for the discharge of Lynes was then agreed to.

Mr. ELLICE then stated that George Seeley Waggett had awaited every attempt to be served with notice to attend before the committee, and that two other persons had supplied him with money to enable him to do so. He had, therefore, to apply for warrants against George Seeley Waggett, Henry Edwards, and John Hayward, for breach of privilege.

Sir G. GREY suggested that the report should be printed, and taken into consideration to-morrow.

Mr. GREENE said the fact of giving money to keep away witnesses from giving evidence before a committee was manifestly a breach of privilege, that delay was unnecessary.

After some observations from Sir B. Hall and Mr. H. Adair, Mr. SOTHERON moved that the parties so keeping witnesses away were guilty of a breach of privileges.

Mr. G. CLERK seconded the motion

Lord J. RUSSELL said there could be no doubt about the fact that such parties were guilty of a breach of privilege.

Sir R. BOLDERO said they were guilty of a breach of privilege, but also of a breach of the law of the land.

The motion of Mr. Sotheron was then agreed to, and orders were issued for their apprehension.

Sir G. GREY then moved that in the case of William Lynes, the Sergeant-at-arms should make a return to the writ of *habeas corpus*, and appeal to the writ a copy of the warrant under which he had been apprehended Agreed to

THE WINDOW DUTY.

Lord DUNCAN postponed *sine die* his motion for the repeal of the window-tax, which stood for to-morrow, in consequence of the alteration in the Budget of the Chancellor of the Exchequer.

THE WOODS AND FORESTS.

Lord DUNCAN asked the First Commissioner of Woods, Forests, &c., whether it was the intention of the Government to propose any terms of the present session, to bring in a bill to make better provision for the management of the woods, forests, and land revenues of the Crown, and for the direction of public works and buildings; and if so, at what period of the session it was likely the bill would be introduced?

Lord J. RUSSELL said it was the intention of the Government to bring in a bill upon the subject as soon as the state of the public business would permit

In reply to a question from Sir T. DYKE,

The CHANCELLOR of the EXCHEQUER said, that if warehouses and other buildings not inhabited would be exempt from the new house duty

MANAGEMENT OF CHURCH LANDS

Mr. E. DENISON wished to know whether the Bill for the better management of church lands, and when it would be laid on the table of the House?

Sir G. GREY said a bill had been prepared by the commission which had been appointed; but it had subsequently undergone considerable alterations. However, it was now in a state to be presented to the House, and he believed it would be presented before Easter.

THE INCOME-TAX

Upon the question that the report of the Committee of Ways and Means on the following resolution be received: "That, towards raising the supply granted to her Majesty, the respective duties in Great Britain on profits arising from property, professions, trades, and offices, and the stamp duties in Ireland, granted by two acts passed in the sixth year of her present Majesty, and which have been continued and amended by several subsequent acts, shall be further continued for a time to be limited,"

Mr. HERRIES rose to move by way of amendment, "That it is the opinion of this House, that 'the progressive duties in Great Britain on profits arising from property, professions, trades, and offices, and the stamp duties in Ireland, granted by two acts passed in the sixth year of her present Majesty, and which have been continued and amended by several subsequent acts,' were granted or limited upon the ground of a distinct declaration by Parliament, and that it is highly expedient to adhere to the declared intentions of Parliament when these duties were granted and continued; and, in order to secure their speediest practicable cessation, to limit the renewal of any portion of them to such an amount as may be sufficient, in the existing state of the public revenue and expenditure ascertained by experience, to meet only such of the due maintenance of public credit." The right hon. gentleman proceeded to say that he had observed with the greatest satisfaction the announcement in the public papers that the revenue for the quarter just ended had exceeded the expectations of the Chancellor of the Exchequer as expressed when he last addressed the House. Mr. Herries rejoiced at the circumstance as an indication of the prosperous state of the country. It added weight to the course which he was about to recommend the House to adopt. It was the prosperous state of the country which afforded the House the means of doing an act of justice to the public by not urging the opposition as a question of free-trade or protection. It had nothing to do with either. In one sense it was a question of pure economy, but involving points of good faith and of sound policy. He would exclude from his own share in the discussion, at least, all inquiry into details. He would not involve himself with the Chancellor of the Exchequer in a controversy of figures; and, in order the more effectually to accomplish this end, he would accept as perfectly correct all the statements that had been made by the Chancellor of the Exchequer, his estimates as to expenditure, and his conclusion as to the surplus, with this one difference, that, according to the announcement to which he had just referred, he would venture to put the surplus of the current year, not at 1,892 000*l*. with the Chancellor of the Exchequer in his last statement, but rather at 2,300,000*l*. (Hear, hear.) He would premise, that, in the observations he was about to make, he assumed that the property and income-tax which the House was invited to continue, as to three years, was the property and income-tax with which the House had been acquainted since 1842. He assumed that, because he was perfectly sure that, had there been any intention of proposing an amended or altered tax, the Chancellor of the Exchequer would have made such a proposition a part of his statement to the House. (Hear, hear.) In any other case, he should accuse the right hon. gentleman of that which was most improbable to him a want of frankness in dealing with the House. He assumed, then, that the property and income-tax with which he had to deal was that tax with which the country had been acquainted since 1842. ("Hear, hear," from the Chancellor of the Exchequer.) He was glad to have this information from the right hon. baronet, that the income-tax, with all that was objected to in it, was the tax upon which the House had now to deal. In order that he might make his arrangements as clear as possible, and put them in the most compact practicable shape, he would briefly review the history of the existing property and income-tax, in order to show that the present was, in point of fact, the first legitimate occasion which the House had had, since the imposition of the tax, of really considering the question whether or not it was to be adopted as a permanent tax. The original commencement, the necessity of this tax, was in the ma administration of the finances during the five or six years preceding the fall of the Whig Ministry in 1841; but for that misfortunate circumstance, there would, he believed, have been an income-tax. During that period there had been this extraordinary picture of financial government exhibited to the country:—There was an almost yearly increase of expenditure; there was a very large proportion of indirect taxation; towards the end of the period an effort was made to repair the losses created by the abandonment of taxes; but, upon the whole, taxes to the extent of three millions some hundreds of thousands of pounds had been abandoned; while, on the other hand, there was an increase of expenditure to an almost equal amount. The result of all this was, that the finances of the country were handed over to abler hands. Sir R. Peel, on accepting office, found himself under the necessity of repairing the mischief which had been occasioned by the mismanagement of the Whigs, of remedying deficiencies which amounted, in the aggregate, to not less than 10,000,000*l*.; and for this purpose he, with great wisdom, great sagacity, proposed a 7*d*. per cent income tax, and the House had no alternative but to adopt the proposition. Sir R. Peel accompanied that proposition with plans for the future improvement of the revenue, for freeing commerce from unnecessary restrictions, for taking off duties which pressed on the springs of trade; and he was perfectly wise in thus developing that policy which he had then pursued for freeing commerce and trade from restrictions, always with a due regard to existing interests. (Protectionist cheers.) Sir R. Peel, then, proposed the income-tax as a temporary measure—a special measure, to meet a special emergency. He then stated that a period of less than five years would not, he believed, answer the purpose he had in view, but he said he would take the tax for three years only, in the hope that perhaps three years might be found sufficient, trusting, that, if at the end of that shorter period it should be necessary to take the extended term he had originally intimated, Parliament would not oppose its doing so. In 1845, Sir R. Peel came down to the House, and stating that the three years had not been found sufficient, applied for the extension of time which he had in the former occasion intimated as possibly to be required for the great object in view. The House assented, though not without considerable opposition, especially from gentlemen who now sat on the Treasury benches. (Hear, hear.) The tax was then no breach of faith on the part of the Government of the country towards the House or the country, as to the duration of the tax. In 1848 there occurred another extension of this tax. But that was a year of such peculiar character that those who proposed the renewal of the tax then were justified in seeking that prolongation on account of the great distress which then prevailed, a distress sufficiently oppressive and difficult to create an emergency for the sake of which no one could deny. In 1848, however, not content with seeking the prolongation of the tax, the noble Lord opposite, with some levity, proposed also its augmentation to five per cent. That augmentation the House at once most peremptorily refused, and the Government found means to do without it. This brought him to that period to which the extension of the tax was on that occasion limited. Before he stated his reasons for asking the House not to accede to the proposition of the Chancellor of the Exchequer, he would take the liberty of reading some brief extracts from the speeches of persons of great weight and authority, now supporting an income-tax as Ministers, who, in 1845, resisted in opposition the extension of the tax. (Hear, hear.) He did not desire to quote these speeches merely as *arguments ad hominem*, but as containing in themselves sound, true judgment, on the subject. It would not be necessary for him to read—for those would be in the recollection of the House—the terms in which Sir R. Peel first introduced the income-tax, nor those in which he proposed its extension. Suffice it to say, that those terms would be taken, by any impartial meeting the revenue, to effect the cessation of the tax. Sir R. Peel did not, when he made that proposition, receive unqualified support. Those who now sat on the treasury benches, being at that time in opposition, expressed themselves very strongly upon the subject, not so much upon the renewal of the tax, because that rested upon obvious grounds, but upon the character of the tax. They agreed to the renewal, but the language and sentiments which fell from such expressions of opinion as should induce them to hesitate before, in the present circumstances of the country, they proposed its extinguishment. The witnesses he should call upon this occasion would be, not Mr. Hume, not Mr. Cobden, not Lord Howick, Sir F. Baring, and last, not least, the Chancellor of the Exchequer, Sir C. Wood. The words used by the First Minister of the Crown, when speaking upon this solemn question in 1842, were deserving of all attention. The noble Lord said—

> The evil of a tax such as the income-tax was not confined to the sum drawn from the ... mately from every objection in the shape of direct taxation. It was the same thing with ... was a better argument against it than the most refined that could be used in that House viz. ... ways been of opinion that ... vexation, and fraud were inherent in it.

(Hear, hear.) And the noble Lord went on to say—

> But the strongest objection of all was, that it had always been considered everywhere as a tax to be resorted to only in a case of extremity.

In 1845 the noble Lord's opinion was not at all changed, except that, if anything, it was rather stronger The noble Lord then said

> ... consequences which ... necessary, indeed in times ... at the same time it ... tax subjects us to ... and ... [illegible] ... ways been of opinion that it ... vexation, and fraud were inherent in it.

In 1845 the noble Lord asked for the continuance of that tax in the midst of the great distress which had prevailed throughout the country throughout the country, and he said modestly that he did not think he was asking too much when he proposed a temporary increase and a continuance of the present tax, in the face of the remembrances of almost unparalleled difficulty and distress which the previous year. That was the only ground the noble Lord could give for the renewal of that tax, and it was a period of unparalleled distress. But such was not the case now. (Hear, hear.) The right hon. gentleman then left President of the Board of Trade, whose judgment in matters of this kind was naturally looked to with great confidence, was one of the most strenuous opponents of this tax on account of its character. The right hon. gentleman said—

> God forbid that under the present circumstances the financial difficulties of the country when it appeared to be right to resort to the property-tax, should induce any minister to resort to almost any other means before I adopted a scheme of taxation which was alien to the habits of the people of this country, would excite in an inquisitorial manner, and therefore which must be attended with vexatious prosecutions, and would be annoying then the most serious taxes from their pockets.

He hoped the right hon. gentleman was of the same mind; but present circumstances were different indeed from those under which he uttered those sentiments. We were now prosperous—we had a surplus—we were not under the pressure of any difficulties as the Chancellor of the Exchequer; and surely, those arguments would apply with tenfold force at the present time. (Hear.) A noble Lord now in the other House, whose opinion must have weight with a Cabinet of which he was so distinguished a member, also took an opportunity not long since of expressing his opinion of the character of this tax. In 1849 the then Lord Howick said,

> I think that upon every principle of justice, and of good policy, we ought to resist the imposition of any new burdens, and more especially that of a tax in its very nature so exceedingly odious as that proposed to us.

And again he said:—

> We are told taxation ought to be equal: can anything be more monstrously unequal than the tax recommended to us?

That was the same tax that the House was now called upon to continue. In 1845 the noble Lord expressed similar sentiments. The First Lord of the Admiralty had always been a consistent and strenuous opponent of this tax; and in 1845 and 1849 he said, that he felt the grave objections to it, and that if he stood alone he would record his dissent from it. (Hear, hear.) He (Mr. Herries) did hope, notwithstanding that right hon. gentleman's change in position, that nothing would be heard in the House or out of it to cast a doubt upon the honesty and integrity with which he had always conducted himself in that house, that he might safely challenge his vote upon the present question. (Hear, hear.) He would not read the opinion of the Chancellor of the Exchequer, because he had referred to it on Friday night; he put it fearlessly to the noble Lord as the head of the Government, and he hoped that he should receive a distinct answer to it. The Chancellor of the Exchequer now sought, in this tax, in times of no emergency, but with such a surplus in the Treasury, to the House to continue this same unequal, vexatious, and fraudulent income-tax? He asked, also, of those opposite, the Chancellor of the Exchequer he had read who had changed their sentiments, and believed now that it was a tax in which there was not inherent vexation and fraud, because, if not, why did they propose to remove the tax from off the articles of which it created the greatest pressure by removing it? It was too true that it was a tax full of vexation, injustice, and fraud. The landlord who paid upon his supposed rental more than he received, felt it to be unjust. The tenant-farmer who was called upon to pay the income-tax, not upon his gains, but he might almost say upon his losses, felt it to be vexatious and unequal. The manufacturer, the merchant, and those engaged in trade who had an occasional exceptional income, upon them felt it to be irksome, vexatious, and injurious; and the professional man who earned a moderate income by great exertions and great talent, who was unable to accumulate money, and to whose ill deposited confidence the exercise of talents that he might be deprived of at any instant, felt it to be a monstrous injustice and inequality. (Hear, hear.) Sir R. Peel proposed was strictly consistent with that which the Chancellor of the Exchequer had moved on a former night respecting the maintenance of the public credit, which depended, as the right hon. gentleman said, very much indeed upon a good surplus. At the same time, however, by yielding to pressure from without, the right hon. gentleman had conceded the means of obtaining that surplus, and reduced that credit. If he were to mix up the question of Free Trade with this for one moment, he should say that the Budget of the right hon. gentleman did not fulfil any of the purposes of Free Trade. If by no means proposed to reduce duties which pressed upon commerce, or to create cheapness, it only proposed to deal with a direct tax—the window-tax; and the right hon. gentleman had entirely failed to show, that, of the direct taxes that were competing for reduction, the window-tax had any prior claim over the property-tax. (Hear, hear.)

Certainly, it was not merely on the ground of policy, but on the much higher ground of the obligation which the House had contracted with the country when it imposed the income-tax, that, so soon as it had the power, it would remove that burden, that he proposed the amendment of which there was any value in good faith on the part of a Parliament—if there were any importance in securing the respect and confidence of the people by a faithful adherence to the declarations made in Parliament, then no said it was of the utmost importance that [illegible] should be consequence of passing this act for an indefinite period, and making the tax a permanent one? In such an event, he asked them if they did not themselves see the fairness and indisputable necessity of extending the property of the same description in every part of the United Kingdom? (Hear, hear.) The income-tax was a tax on property, and why property in Ireland should not be subjected to the same taxation as similar property in England was what no man had yet discovered. (Hear, hear.) Sir R. Peel exempted Ireland on account of the peculiar condition of that country at the time, and he supported that exemption as an equivalent for it. Those duties being found inapplicable, however, were removed in the following session, but Ireland still remained free from the income-tax. He must frankly say that, if it were not intended to extend it now, with all its inequalities, frauds, and injustice, to Ireland, he should say "No"; but for the same reason he said that he would not endure it in England. It must be altered and amended, and then, if at all, it ought to be applied equally to all parts of the United Kingdom. (Hear, hear.) He turned to those friends of his who were the followers of the late Sir R. Peel, and he must say that he expected from them, in respect to his memory, in consequence with his intentions, in fulfilment of his promises, in execut on of his engagements, concurrence in the measures which he now proposed to the House; for he believed that if that great man were now among them (and he spoke on the most sincere knowledge, having been consulted by Sir R. Peel upon this measure), he would have been the first to have supported, if not to have made the motion for, the extension of a tax which he for temporary and special purposes alone had induced the House to grant. He was unwilling to insist upon that which appeared to be so perfectly clear and manifest to admit hardly of enforcement, for there were considerations to the case that could be urged on the other side to justify the imposition of that tax under circumstances of prosperity and a surplus revenue. He trusted that he should have the satisfaction before last night ceased of finding the House more attentive to the calls of justice and honour than to any agitation which could be pressed upon the Government from without, and of fulfil the expectations of the people, and commence the reduction of a tax which, at the best (and these ought never to exist. But he must state shortly what would be the effect or the res on which he now proposed. It was to declare that no more of the property that should at any time be contributed to the income-tax ought to be preserving the establishments of the country and the due maintenance of the public credit. He supposed he might take the surplus at about 2,000,000l. (Dissent from the Chancellor of the Exchequer.) The right hon. gentleman shook his head. He had himself stated it at 1,900,000l., and the produce of the year had exceeded its expectations by 300,000l. or 400,000l. However, he would make a compromise, and would take 2,000,000l. as an undoubtedly fair surplus estimate for the next year. The property-tax at present levied was at the rate of sevenpence in the pound upon all incomes. The amount of money that produced about 780,000l., and he contended that there was room, therefore, with the present surplus, and having a due regard to the maintenance of the public credit, for a reduction of at least two-pence of the property-tax. If his proposition was accepted, therefore, the country would be relieved from property-tax to the amount of 1,560,000l. The window-tax was an old tax, to which the country had been pretty well reconciled, but still it was one which he would be glad to see reduced. The abolition of that tax had been recommended upon sanitary grounds, and he thought the case might easily be met by passing an act allowing all persons to open what new windows they pleased without being subjected to any additional duty. If such a boon were accompanied by the removal of 1,560,000l. of income-tax, it would, he was sure, give the utmost satisfaction to the country. The House had now to decide between the right hon. the Chancellor of the Exchequer, and that which he (Mr. Herries) had submitted to them. The latter he had offered to the notice of the House as a reduction of the income-tax with a little effects. On the other hand, he (Mr. Herries) proposed that they should afford relief from direct taxation by abstraction of the property-tax instead of adhering to the income-tax. He remembered that when the House assented to the resolution of the Chancellor of the Exchequer the country was doomed to bear the income-tax for an indefinite period; but, if they determined to adopt the course he would ask the noble Lord opposite to act consistently with his duty, at a period when there was no danger of foreign war or of internal disaffection, with a surplus in hand which afforded the means of materially reducing the property-tax, he could propose the continuance of an impost which had been so generally and so justly stigmatised. (Cheers.)

The question having been put,

The Right Hon. Sir G. Clerk rose to address the House. He did not know, therefore, how he could be accused of inconsistency, for he had stated in the first instance that he was prepared to support the income-tax if it were imposed for a given purpose. How could he be accused of inconsistency, when, in 1845, he announced in the imposition of the income-tax for the purpose of trying the great experiment of the reduction of other taxes? It is not necessary to justify his own conduct; and that of his colleagues, he (the Chancellor of the Exchequer) would ask permission to quote the language he used in 1845, and which he was prepared to repeat, because he thought it was a perfect answer to the charge of inconsistency brought against him. In proposing the renewal of the income-tax in 1845, he said:—

"In general, while I have been a most strong opposition, that the income-tax was the last a [illegible] to pay for the benefit which we were to receive from the abrogation which was then proposed. But I said in 1842, as I repeat to-day, that it was a necessary [illegible] to the duties on corn, timber, and other articles of consumption. I should be ready to vote for direct taxation, and vote for the income-tax. Now, the question arose then, and must arise now, as to the conduct which I, and those who acted with me, would ratify the imposition of an income-tax have contained, and, therefore, with perfect consistency with the principles I maintained in 1842, I have acted in the renewal of that tax."

On the same principles, he now proposed the renewal of the tax, and he contended that the principles on which he proposed its continuance were in full conformity with those of the right hon. Baronet (Sir R. Peel), who proposed the income-tax in order to carry out a change of taxation, hoping that, when that change was accomplished, it might be in the power of the House to dispense with the tax. The right hon. gentleman opposite (Mr Herries) had said that this was the first legitimate opportunity that had occurred for the repeal of the income-tax, because now they had prosperity and a surplus; but in 1845 that tax might have been entirely swept away. He agreed with the right hon. gentleman that the objections to the inequality and injustice of an income-tax applied as strongly to a small as to a large income-tax, but those objections might have been got rid of in 1845 by sweeping away the income-tax altogether. A few nights ago an honourable gentleman opposite (Mr. T. Baring) seemed to think that they would destroy the credit of the country if there were no better security than direct taxation. Lord Stanley had stated most frankly and openly (and the Chancellor of the Exchequer considered the frankness and openness of the declaration most creditable to the noble Lord—that he proposed to reduce the income-tax to Ireland—he (Sir J. Graham) did not understand the amount. The right hon. gentleman opposite (Mr. Herries) now proposed to reduce it not quite one-third—about 2d. in the pound. That right hon. gentleman would reserve the taxation to the amount of 1,560,000l. He (the Chancellor of the Exchequer) proposed to surrender taxation to the amount of 1,560,000l. He would ask the right hon. gentleman how his conduct would assail the Government on the ground of inhumanity, when he—the leader, upon financial matters, of a large body of hon. gentlemen opposite, and the confidential friend of Lord Stanley—came down to propose a repeal of taxation greater than that proposed by the Government himself? He (the Chancellor of the Exchequer) thought it must be admitted, that the dishonesty was at least as great on one side of the House as on the other. He had been charged with risking the national faith because he proposed to rest it upon direct taxation, and this, too, when, of the reduction of 1,500 000l. which he proposed to make, no less than 1,100,000l. would be effected upon direct taxation. There was, indeed, some discrepancy of opinion between the two hon. gentlemen to whom the party opposite were most ready to appeal upon financial and commercial matters, and those gentlemen had confounded his policy in their respective arguments. The argument of the right hon. gentleman (Mr. Herries) was founded mainly on the supposition that the proposal which he (the Chancellor of the Exchequer) had made was one of temporary expedience. He (the Chancellor of the Exchequer) had never said a syllable which bore out that supposition; but he had invariably spoken of the tax as one imposed in order to meet certain alterations and modifications of duties. He now proposed to renew the income tax, as it stood, for a limited period of three years He was quite aware of the difficulty, he might also say of the impossibility, of modifying that tax; and if that tax was to be renewed, for a limited period, it would be unwise and inexpedient to attempt any modification. He thought the opinions of the late Sir R. Peel on this point had been somewhat misrepresented, because he distinctly remembered that that right hon. friend said, in the House that he thought it would be a most dangerous precedent to endeavour to modify the rate of taxation upon the different schedules. The propositions which had been made of it were most widely different. The right hon. gentleman (Mr. Herries) had complained of the injustice of schedules A, B, and D, and the gallant member for Lincoln (Colonel Sibthorp) had given notice of a motion which would make a material alteration in Schedule E. If a certain reduction were effected in all the schedules, the result would be very much what it was at present; and he would recommend hon. gentlemen, before they made up their minds that one schedule should be reduced, to consider what effect would be produced upon other schedules when might have an equal, or perhaps a better, claim to exemption. Upon the point he thought it better to postpone the discussion until they came to the consideration of the schedules in committee. He might say, however, that no one who had ever attempted to deal with this tax had ever found it possible to modify the schedules. Mr. Pitt originally carried that tax. (Oh, oh, hon. member: "In time of war.") Yes, but its justice or injustice did not depend upon that circumstance. When Mr. Addington suggested a modification of the tax, it was strongly opposed by Mr. Pitt; and it was, indeed, carried by the force of the debates, they would find that he defended the general justice of the measure [illegible] (Chancellor of the Exchequer) proposed that this tax should be [illegible] years, because he thought it would be most expedient and unsafe that a large an amount of taxation should depend upon an annual vote of the House. If, however, the right hon. gentleman (Mr. Herries) should ever happen to fill the office (the Chancellor of the Exchequer) now occupied, the imposition of the tax for three years would not prevent the right hon. gentleman from then proposing the reduction or the repeal of the tax, if he thought fit to do so.—("Hear, hear," and a laugh) —for he considered that any gentleman occupying such an office should not be fettered in the exercise of his discretion. With respect to imposing the tax upon Ireland, the right hon. gentleman observed that it had been said that, if continued for three years, this tax must necessarily be extended to Ireland. He would say directly the reverse. He did not at the moment remember the grounds the right hon. Baronet (Sir R. Peel) stated for exempting Ireland from the tax when he proposed it; but certainly the grounds now were as strong as then. Ireland had not then gone through the fearful calamities which had since befallen that country; there was a great depreciated in value, and the main part of the proprietors barely recovering from a depression unexampled in recent times. Whatever grounds of exemption existed in 1842, existed in a two-or-three fold greater degree in 1851; and how unjust to impose that tax upon Ireland now. (Hear.) The right honourable gentleman then entered into details as to the [illegible] which he had in reducing duties upon articles of consumption and upon industry, observing that the more popular, a tax was, the more productive it would prove. Under the income-tax the country had never been so first step in the policy of Lord Stanley, who had therein shadowed forth a duty upon corn; and he called upon the House to vote, not a permanent measure, but merely a tax for three years, for objects connected with the interests of the country.

Mr. Fraser observed that the Government, whether there was a surplus or a deficiency, was always at liberty, according to the right hon. Baronet, to say that but not any fixed principles, they were like a ship at sea without compass. He denied that the Budget was founded upon the principle professed by the Government, the benefit of which was to be confined to one class only. He disputed the economical theory of the Chancellor of the Exchequer, which was not, he contended, fairly carried into practice. He condemned upon principle a tax for three years, and should answer to the proposals of the Government, he should vote for the motion of Mr. Herries.

Mr. F. Peel said the conclusion to which he had brought his mind obliged him to dissent from the amendment of Mr. Herries, and to support the motion of his unqualified approval of the financial policy of her Majesty's Government. The statement of the Chancellor of the Exchequer showed a net deficiency, laying aside the income-tax, of about 1,877,000l. The expenditure was about 3,650,000l. in future years, and it was to cover this deficiency he invited the House to re-impose the income-tax for three years. He was favourable to the principle of an income-tax, which combined the principle of indirect and direct taxation, making the wealthy classes pay their due proportion towards the public expenditure. He was aware of the immense advantages which the flourishing classes had derived from our late commercial and financial system, and of the changes given to industry by the removal of duties which weighed upon the sources of employment. In nine years, taken upon the average, the raw materials, and food, to the amount of 3,500,000l., had been remitted, while the great branches of the revenue remained as large as in 1842, and the declared value of British exports, which had been nearly stationary from 1838 to 1842, had rapidly increased from 52,250,000l. in 1843, to more than 71,000,000l. in 1850. There still remained a large amount of indirect taxation which pressed upon the productive classes; and the inference was, that, if 9,000,000l. was not raised by direct taxation, the Legislature must in effect revert to the system of protection which had so long obstructed the development of our resources. Mr. Herries had alleged that the Government, in proposing to discontinue this tax after a limited period; but he (Mr. Peel) took a preliminary objection to Parliament entering into a compact for the future. The policy of 1841, under which the income-tax was imposed, was to remove duties more vexatious than that tax. this policy had not been brought to a conclusion, and the country was not prepared to repeal the tax. The inducements which the Government held out for its continuance were, that it would enable them to repair a deficit, retain a surplus, and remove taxation. Mr. Peel concurred in the observations of Mr. Fraser, and thought the proposed window-tax, which would not directly benefit the working-classes, he could not, he said, approve the abandonment of that duty, which was a direct tax, paid in the proportion of expenditure to property, and brought to be levied by a collection of the income-tax. Regarding the income-tax as a great lever to elevate the moral and social condition of the country, he should be most reluctant to relinquish it as unpleasant by which so much good had been, and might be effectuated.

Mr. T. Baring expressed his belief that the reduction of the income-tax would be better even for the classes than the proposed window duty [illegible] dence of the returns under Schedule D showed that it was the honest men who paid the tax while the dishonest escaped. Considering the partial character of the tax, he should vote for the amendment. He believed of the two it was better to reduce the income-tax than to remove the window duty.

Mr. Wilson declared that the resolution now before them brought into antagonism two great parties, one wishing to rempose protective duties, the other desirous of following out the policy that had actuated the Governments of sometimes of Sir R. Peel, and of Lord John Russell, and commended the history of the country since the prevalence of free-trade principles, showing how rapidly the public revenue had filled up the chasms occasioned by reduction, and how vain had been the hopes in many quarters of a return to the system which was known to British commerce. Denying the validity of the doctrine that any tax, if public in itself, was to be repudiated merely because it had been collected wastefully, the hon. member complained that the agriculturists were most unjustly [illegible] with their share in the general advantages from a diminution of burdens, but required some exclusive boons devised for their benefit as a class. The census tables proved that the increase of the population for the last ten years had not been perpetually decreasing; he enlarged upon the necessity of throwing open the channels of industry in other directions.

Mr. Brooks regretted, on the House the deep responsibility it would incur by giving to the Government the means of pursuing a suicidal policy, in the imposition of an iniquitous tax, which bore with peculiar severity upon the middle classes. He protested against the doctrine that the greatness of England depended solely upon her commerce. While emigration was going on to a vast extent, pauperism was increasing, which must not be put down in human labour, but in the enormous increase of mechanical power.

Mr. Shaner, on the other hand, was deeply convinced that it was for the benefit of agriculture that the present liberal system of policy should be upheld, which had relieved the masses of many millions of taxes, and had, in thirty-five years, doubled the value of the property of the country.

Mr. [illegible] Bankes [illegible] present Ministers, when not in office, had declared the income-tax unjust, unequal, and fraudulent.

Mr. Reynolds, intending to oppose the renewal of the income-tax, which he had supported on a previous occasion, explained the considerations wherein he had arrived at his new opinion.

Lord C. Hamilton found that the vote for three years was equivalent to a renewal of the income tax to perpetuity, and called on the House to refuse it, unless some attempt were made to smooth away its injustice and inequality.

Mr. S. Crawford also declined to vote for the tax in all its oppressiveness, which the Chancellor of the Exchequer could not be persuaded to modify.

Sir R. H. Inglis urged various objections to the details of the income-tax, but confessed that the proposition of Mr. Herries left all the evils it contained uncorrected. Believing that the finance scheme of the Government offered much relief to the industrial classes, he reluctantly consented to support them.

The House divided on Mr. Herries' Amendment.

For the original motion	[illegible]
Against it	[illegible]
Majority	44

The amendment was consequently lost.

Mr. Disraeli's amendment stood next on the paper; but after some conversation it was agreed to take the debate upon that amendment on Friday. The purport of it is, the necessity of devoting the surplus to the relief of the owners and occupiers of land.

Mr. Hume repeated the notice he had given of an amendment for restricting the renewal of the income-tax to one year

Mr. Cobden wished for some opportunity of taking the sense of the House upon the question whether the assessment of the tax could not be improved

The report was then brought up and agreed to.

The Sergeant-at-Arms appeared at the Bar, and intimated that he had executed the Speaker's warrant in the case of Henry Edwards, a witness required to be in attendance before the St. Alban's Election Committee

On the motion of Sir G. Grey, it was ordered that the Sergeant-at-Arms should retain Henry Edwards in custody, and produce him before the committee sitting on the St. Alban's election whenever required.

Adjourned at a quarter past one o'clock

[The report of the Parliamentary proceedings is continued on page 238 of the Number with which this Supplement is published.]

THE SAVINGS OF THE POOR.

In the whole range of experience, there is nothing more worthy of commendation, more deserving honour, than the poor hard-working man, with a bare sufficiency of food to keep him in health, and of clothing to keep him in comfort, resisting daily and hourly the demands of nature and society, in order to save something for a time of sickness [illegible] that he may be independent of his richer neighbour, and save behind him some little provision for his decent interment, and for [illegible] assistance, however temporary, of his family. Few persons are aware, because our working population are continually censured in the mass for the excesses of a very small number, how largely this virtue is practised by them. From a little pamphlet just published,* we can state that the total number of so ieties to which the working classes contribute with this object is not less than 33,282, and the number of contributors not less than 3,982,000. They have a capital of no less than £21,380,000, and an annual income derived from these contributions, and interest on them, of no less than £4,380,000. It is of immense social advantage, and productive of great comfort to individuals, that this heroic disposition of the mass of the people should be encouraged by [illegible] ard, [illegible] [illegible] [illegible] great regret that we have to state that the [illegible] [illegible] [illegible] obtained. Between 1795 and 1[illegible] [illegible] rules with clerks of the peace. On the expectation of life at eighteen years, not one of these societies ought, in thirty-seven years, to have died a natural death; yet, in 1836, only 1640 of them were in existence, the others having become defunct, or bankrupt. The lodges of the "Odd Fellows," a great society which began in the early part of the present century, have not had an average duration of fifteen years a period obviously insufficient to fulfil the purposes of such a society. In 1848, 226 lodges closed for want of funds, and many more applied for help. In 1847, 81 lodges, and in 1848, 138 lodges—on an average more than 100 a year—were broken up, from the funds being insufficient.

The Manchester Unity of Oddfellows, which is the most flourishing, and having a committee in almost every parish, with a clergyman at its head, consists of 7000 members, and has accumulated a fund of £70,000. About a year ago its affairs were submitted to an actuary, and he pronounced it insolvent; and another party, who at first denied the insolvency, was compelled to admit that it would require £40,000 to enable it to fulfil its covenants. Is would require, [illegible] Mr Nelson, a well-known actuary, £10,000,000 to bring the Manchester Unity of Odd Fellows out of their difficulties, and if they went on at their present rates of contribution, £10,000,000 would be required to fulfil all their engagements. In Manchester itself, he has paid, that there are no lodges, established on an average now for years, containing 590 members, and possessing just £91 13s. 6d.—less than one-twelfth of the entrance-money which must have been paid into the lodges. Again, there are twelve other lodges, established for an average period of four and a quarter years only, and containing 623 members, and their total amount of funds is only £313 15s. And, further, out of 100 lodges, containing 1039 members, the whole of their accumulated capital does not amount to 15s. per member. At all these societies, a member must have paid some guinea, or more, for entrance; so that all the funds for purposes of relief have been exhausted, though their duration has been so short. In what state are the lodges generally? I know that in every district there will be found one or two popular, favourite, or, what are sometimes called, 'shirt-neck' lodges, in which honorary members are made, where respectable tradesmen enter, and which, from their popularity, attract a large number of young members, thus securing for a while longer time a healthy, or rather less diseased appearance; but I know, also, that these are rare exceptions—' few and far between.' The rule is insolvency, and the great mass of the lodges are not in a condition to meet the full demands coming upon them. Truly,' he concludes, 'these so-called Friendly Societies are more lotteries, where those who sick the soonest, or die the youngest, have all the prizes, while the blanks are reserved for those who contribute the longest, and have therefore the most powerful claim upon their full share of the funds.'

The great cause of all these failures is not actual extravagance of management, though some societies indulge in carved chairs and furred gowns, like the Peers on the opening of Parliament; of dishonest defalcation, though some secretaries have been swindlers; but ignorance of the conditions on which alone such societies can flourish. They all covenant to pay more than they receive. Exclusive of the little and low augmentations of the sum paid in, by the interest it bears, a part of which must in all cases be absorbed by management, it is clear, that to insure 1s. a contributor must pay 12s.; but these societies have gone on the rule of promising to pay 1s. for 6d. received. They have now come, or fast fall sick, get the promised shilling, and those who are the most healthy and some last lose their 9d. In most cases the loss falls on the young, for these societies, as the rule, admit members at eighteen years of age and subsequent to that age, merely a difference of a few shillings entrance-money. The more aged fall soonest sick, and the young have to pay for them. The young are deserved, and often, by such a misfortune, are made careless and improvident, till they become paupers. All the rules of payment in these societies are based on imperfect data, or vague hopes, while the promises made on these data are required by inexorable facts to be fulfilled. The managers underrate past sickness and past disasters, and overrate future health and future prosperity. Hope guides their conduct, and the facts of the material world after a season convince them that the indulgence of hope is more dangerous in money matters than in love. The numerous bankruptcies of such societies has led to the creation of the errand, [illegible] [illegible] [illegible]

FINE ARTS.

EXHIBITION OF THE BRITISH INSTITUTION.

"SHADE."—PAINTED BY J. SANT.

THIS is an effective impersonation of that dark phase of privation which is not unaptly termed by the painter, in the Catalogue, "Shade." In that emphatic monosyllable, how great an amount of human suffering is expressed; how many blighted hopes and dreary prospects—the canker-worm of care, and the touching plaint of hunger, and wretchedness, and woe. The painter has personified the sufferer with considerable power: she is clinging to the bar for that support which, perchance, the thoughtless crowd have refused her; for she is one of that vast number whom the poet has so vividly apostrophised—

> How many drink the cup
> Of baleful grief, or eat the bitter bread
> Of misery. Sore pierced by wintry winds
> How many shrink into the sordid hut
> Of cheerless poverty?

"THE ELEMENTS."—BY CLARKSON STANFIELD, R.A.

THIS highly poetic composition is from the collection of drawings by the Sketching Society, now on view at Mr. Hogarth's, in the Haymarket. It represents a terrific scene of the warring elements; a magnificent city has its superb temples consumed by fire and overtoppled by earthquake; the black storm rages in fearful contrast with the vivid conflagration; and the despairing people are tossed upon the tempestuous sea: altogether forming a picture of desolating fury, and abounding with masterly touches of the painter's art.

HARVEY DEMONSTRATING TO CHARLES I. HIS THEORY OF THE CIRCULATION OF THE BLOOD. Painted by R. HANNAH. Engraved by HENRY LEMON. Published by Lloyd Brothers and Co.

This impressive picture has just been completed, in the highest style of line engraving, and presents a striking pictorial record of an incident in the life of a great man: it will serve to extend a knowledge of one of the most important discoveries in science, as well as to preserve in grateful memory one of the greatest benefactors of mankind.

Harvey, it will be recollected, was physician to Charles I., and was treated with regard and favour by his unfortunate Royal master; and the King's attachment to the arts and sciences contributed to promote and encourage the pursuits of the philosopher. Charles's passion for stag-hunting enabled him to supply the physician with animals for dissection; and the King and his [illegible] are stated to have been frequent witnesses of Harvey's demonstrations.

The scene of the picture is Harvey's apartment in the palace. The King is seated in the front; the courtier who stands behind him, with his hand familiarly resting on the back of his chair, indicates the attachment and devotion of the cavaliers in those times of danger to the King. Behind the group are the skull and the nearly spent hour-glass. The Prince has suspended the perusal of Harvey's favourite author, for the greater excitement of his friend and tutor's demonstration. The courtier behind is *permitting* himself to be entertained by some of Harvey's opponents.

"SHADE." PAINTED BY J. SANT. EXHIBITION OF THE BRITISH INSTITUTION.

The Artist has taken great pains to preserve the likeness of Harvey, and was guided by his excellent portrait by Cornelius Janssen, in the College of Physicians.

The picture is the property of Joseph Hodgson, Esq., F.R.C.S., of Westbourne-terrace, Hyde-Park, who has most kindly and liberally lent it to the publishers for the purpose of engraving.

PRINTING IN OIL.

Mr. Kronheim, of Paternoster-row, has invented a new adaptation of lithography, which is designed for the Great Exposition, by which the *chefs d'œuvre* of art may be transferred to engravings with their original colours. Each description of tint is transferred to its separate stone, and the requisite filling-in is effected by means of a chemical ink, and the desired shading accomplished. By the application of aqua-fortis a raised surface is caused, and then all colours are made to pass over the stone by rollers, arrested, however, by the ink, which secures the needful amount of shading to the utmost nicety. The colours from the stones being then printed off upon paper, the exact tints are produced by printing one colour over the other; and thus an exact copy of the original picture is obtained. It may be added, that the invention is reduced to a certainty.

More than one copy of Rubens' "Descent from the Cross" is exhibited at Paternoster-row, as examples of the process, and the result is indisputable. The expense to the public of such a coloured engraving will, too, we understand, be cheap: while it serves almost the purpose of an original, the cost will scarcely exceed that of a common co[illegible].

ENGLAND TO PARIS.

This route forms the subject of an extensive panorama, partly consisting of dissolving views, in which we have successively presented representations of the Russian fleet, Eddystone Lighthouse, Bay of Biscay, Bordeaux, city of Auch, Toulouse, Marseilles, St. Barb, Paris, the Place de la Concorde, and the Louvre. The pictures served for illustrations to a lecture delivered by Mr. John J. Clarke, who, in addition, introduced a series of experiments illustrative of the harmony of colours, and exemplified his theory by some dissolving views of pictures by the old masters.

LONDON TO AUSTRALIA.

A series of dioramic views at the Hall of Illustration, High-street, Whitechapel, is on a new principle, having a foreground moving at the same time as the canvas on which the pictures are painted. It describes the proposed Government route for emigrants from London to Australia; commencing at the railway station, Waterloo-bridge-road, and ending at the town and harbour of Sydney; and a fifteen feet high, and two thousand feet long. Among the most fine views that are exhibited we may particularly notice that of Southampton Docks and water [illegible] view of Lisbon, Cape Trafalgar, Mal[illegible], Boulac, Ceylon, Hobart [illegible], and Sydney. It is pleasant to see these means of instruction becoming as popular at the east end of the town as at the west. With such information held out to all classes the education of the million proceeds at a rapid rate; and the spread of intelligence will tend to the moral improvement both of society and the individual.

The estates of the following nobility, clergy, and gentry lately deceased have paid stamp duty on the amount of their personal property:—Dowager Countess of Charleville, £12,000; Countess of Athlone, £12,000; A. M. Middleton, £40,000; W. Berrall, 30,000; Rev. J. Penrose, £30,000; Lord Stanley, £7000; W. Malten, £50,000; T. Guy, £30,000; Rev. J. T. Robinson, £20,000. The estates of Lord Nugent, the Hon. C. Vansittart, and the Hon. S. M. John have been administered to.

"THE ELEMENTS."—BY C. STANFIELD, R.A.

SKETCHES IN KAFFRARIA.

THE BUFFALO MOUTH.

We have been favoured with the accompanying Sketches of the *Buffalo Mouth*, or *East London*, and *Waterloo Bay*, on the coast of Kaffraria, by Commander C. Codrington Forsyth, R.N., who served on shore with the army during the late war in that country. By his means, these places were surveyed previous to a landing being effected. The whole of the stores had to be brought round by land from Algoa Bay, a distance of nearly two hundred miles (by waggons, at an enormous expense, each waggon costing Government at the rate of £1 per diem), through a most rugged country invested by large bodies of Kaffirs, who not unfrequently succeeded in cutting off the supplies.

The *Buffalo Mouth*, or *East London*, is within less than forty-five miles of King William's Town, and close to the scene of the present line of operations against the Kaffirs. No doubt, all the troops and stores will be landed there, which at times can be effected with ease; but it has happened that nothing could be got on shore for nearly a month. The entrance to the river is generally very shallow; a sand bank extends from the eastern to within a few yards of the western shore. The country around is at present occupied by the Kaffirs of "Pato's" tribe, who, Sir Harry Smith says, "have promised to assist us in the war." The road to King William's Town is, in many places, very dangerous, the kloofs running close up to it giving good shelter to the Kaffirs lying in ambush, which they have been keen enough to take advantage of on several occasions: even at the Buffalo Mouth the landing was not effected without some sacrifice of life. The schooner *Gaika* parted from her anchors and was wrecked in the entrance of the river, and every soul perished; several boats were also swamped in the surf, during eight or nine months thirty men were drowned. The great advantage of this landing place is, that it allows us to throw at once our troops, &c. into the very heart of the enemy's country.

Waterloo Bay (if bay it can be called) is on the eastern side of the Great Fish River, forty-five miles from Graham's Town, and twenty-three from Fort Peddie: it can scarcely be called an anchorage. In August, 1846, her Majesty's ship *Apollo*, Captain Ratcliff, was nearly lost here in attempting to land the 73d Regiment. The rollers set in during a calm. The ground being very foul, she parted all her cables. At this critical moment a light breeze sprang up, which enabled her to claw off the land. The 73d Regiment and their gallant colonel, Vandermalen, were thanked by his Grace the Duke of Wellington for their valuable services in assisting the crew in working the ship in her perilous situation.

FORT ARMSTRONG.

This Fort, engraved in the Illustrated London News for the 15th ult., and prominent in the news just received from the seat of war, stands at the base of lofty mountains, on a natural rampart, formed by an indent of the Kat River, which flows in a serpentine course through a valley of much beauty, surrounded by stupendous mountains, whose outlines present the most grotesque forms, the most conspicuous being the Didima Berg. Such is the altitude of the Didima Berg, that it is distinctly visible from the top of Boother's-hill, a distance of upwards of eighty miles.

On attaining the summit of the rock upon which Fort Armstrong is erected, you discover a comfortable brick house—the only one at the post: this is the commandant's quarters, the other officers occupying wattle and daub huts. The position of this post is well chosen; for though it is commanded by the adjacent hills, it is in other respects free from any danger from assault, and its proximity to the river protects it from the danger of being reduced from want of water. It was said by Sir Benjamin D'Urban, that "the finger of God was upon Major Armstrong (whose name it bears), of the Cape Mounted Rifles, when he selected this site for a fort."

ZULU WARRIOR.

The Fort consists of a brick-walled enclosure. It is entered by a wooden gate, where a sentry is always posted. It contains a magazine, gun-shed, and guard-room. The armament consists of a 9-pounder iron gun and a 12 pounder howitzer. At the back of the Fort stands a martello tower upon a slight eminence. The garrison consists of a captain and 20 men of a line regiment, with a subaltern and twelve rank and file of the Cape Rifles, a bombardier and gunner of the Royal Artillery, a small detachment of Sappers, together with an officer of commissariat, and a staff assistant-surgeon and medical charge, this being an hospital station for sick soldiers. The stables for the horses of the Cape Mounted Rifles are well constructed: indeed, throughout all the stations in South Africa much greater care is bestowed upon the horses in this respect than upon the soldiers of all arms. A good waggon-road, of ten miles in length, winds along the most level portions of the country to the nearest port, called Eland's River Fort. Outside the village are kraals for their cattle, which graze upon the adjacent hills during the day, and are confined within enclosures of dried bushes at night, when a fire is always kept up to scare away the numerous varieties of wild beasts that usually take that period to prowl in the vicinity of the village in search of their food.

THE KAFFIR WAR.

Cape journals to the 9th of February have come to hand; but they add little information to that last received. No mention whatever is made of the movements and determinations of his Excellency Sir Harry Smith, or of Major-General Somerset. No engagement appears to have taken place between the colonial troops and the Kaffirs since our previous advices. Orders had been issued for a column of 2200 men, under Colonel Mackinnon, to move on Forts White and Cox on the 30th of January—the main object being to throw supplies into those places. Letters from Graaf-Reinet, to the 31st of January, speak of the alarming aspect of affairs in the divisions of Cradock and Somerset; but about 300 or 400 men would proceed immediately to the relief of the former, under Mr. S. Meintjes. News had come from Fort Armstrong, that the rebels had got possession of the buildings, except the tower, to which place all the loyal people had fled for refuge. These were hemmed in. Their sufferings had been great, and report said that they had been without provisions during three days. Measures were in train by the people of Fort Beaufort, assisted by the Fingoes, to effect their deliverance. Further accounts from Fort Hare state that the Fingoes were much exasperated at the atrocities of the Hottentot rebels. It was said that many of the latter had expressed a wish to return to their allegiance, and that Colonel Sutton had given them a few days to present themselves in Beaufort and deliver up their arms. It was further said that Jan Hermanus, eldest son of the late rebel chief, had requested to be permitted to come in; but whether the request had been complied with or not, was not known. It was stated, on what was considered good authority, that the Hottentots were very short of ammunition.

Cape Town papers of the 10th of February announce the relief of Forts Cox and White, which had been effected by the column commanded by Colonel Mackinnon. Just before the post left Graham's Town, an express arrived from Gen. Somerset, stating that a combined attack on Fort Beaufort was expected the following morning.

The *Zuid Afrikaan* of February 10 states, "The intelligence by yesterday's frontier post announces the relief of Forts Cox and White."

WATERLOO BAY.—GREAT FISH RIVER.

A STORY OF THE PRESENT DAY.

BY AUGUSTUS MAYHEW.

(*Continued from page 232.*)

CHAPTER VI

SOMETHING BETTER THAN SILK-WEAVING

If a few hours had worked their evil in the weaver's home, they were also doomed to work their good. On the bed of suffering, with the lips close pressed in pain, lay the crippled parent. By his side stood the sorrowing daughter, her breast inspired with a devotion that was ready for the struggles that should prove the greatness of her love. It was now that the miserable garret was to become the school of virtue; when the sick father should forget his pain in gazing on the heroism of his child; when he should bless Heaven for visiting him with an affliction that had brought into play virtues so patient and ennobling, that the heart should swell with admiration rather than sympathy, and feel itself to pity so noble an act were to insult the magnanimity that prompted it.

Poor old man! it was now that all the noble principles that had made a hard toilsome life pleasant, came flocking to his aid, to soothe him in this bitter trial. As he saw his girl kneel, weeping, by his side, he would try to comfort her, forgetting his own sufferings in the sorrow they occasioned in her he loved; and even when the muscles of his face would grow fixed with agony, he would still, between his gasps, endeavour to point out to his child the future blessings that would outweigh their present miseries.

As in the stillness of the night she watched by her father's pillow, she busied herself in forming the plans that were, for weeks to come, to enable her to support the old man in his sickness. It would be a hard struggle; but then, those that love much can endure much. In nothing for his sorrows, she would learn to bear her own; and in her trials she would be buoyed up with the delight of knowing that each day would decrease her hardships whilst it increased and strengthened her virtue.

The room that had lately been so cheerful, was now silent with grief. A curtain had been fastened over the window, to shut out the strong light, and nothing was heard but the ticking of the clock and the cracking of the fire. The little children, as if frightened with what they had seen, crept close to their father, who, deep in thought, sat nursing the baby by the fire. The loom was deserted, for fear lest the noise should distress the sufferer; and, when any one moved about the room, it was done stealthily, stopping even if a board creaked, and listening in fear, lest the sick man was disturbed by it. Sometimes a gentle rap would come to the door, and Kitty, on tiptoe, would creep to open it an inch or two, and whisper to the kind neighbour how the patient fared. If the old man spoke a word, every one was instantly on the alert; and directly Kitty shoved herself from behind the curtain, she was anxiously questioned as to what he had said. Then when the doctor came, how they would all creep to the bedside, and watch him as he examined the broken thigh. As he questioned the sufferer, they would hold their breath, for fear of losing a syllable of what was spoken. And when he, at last, told them the encouraging news, every face would brighten up, and they would attend him to the very bottom-most stair, as if in gratitude for the relief he had given them.

Tim Bradley had been basking up his mind as to what sacrifice he could make to show his fondness for the old weaver. At length, one day, he beckoned Kitty to him

"We've got enough to go on for two days more," he said, in a whisper, "and I've been thinking that, if I was to muffle the batten, the noise wouldn't shake him at all. You see, as we shall want every penny we can get hold on, it won't do to go taking another room. So you see, miss," he continued nervously, "this is what has struck me—if my little ones ant in the way" (and he looked at her inquiringly)—"why, with his chance of work and mine too, I could keep the loom a-going all the week round, and it 'ud be pretty near the same thing as if he were at his post. Do you see, miss?"

She could scarcely answer him, for her lip quivered with emotion What had she done to reserve so much kindness? People that she had scarce spoken to were now offering her kindnesses that only a long friendship could have expected. One had given her old linen for bandages; another had brought their only pillow; some had sent their children with offerings of tea and sugar; and now there was a friend beseeching her by looks, even more than words, to share his earnings with him. Oh! it was too much goodness, it was; and the tears filled her eyes as they sparkled with thankfulness

The old man was right when he said that suffering was the creator of virtue

But sickness soon empties a purse; and, although Tim's plan of muffling the heavy batten was successful, still, work and save as they would, the drugget took nearly all their time.

Kitty, who long since had finished the work that had been given her on trial, was anxiously waiting for an opportunity when the patient's health would permit her absence. At length, one day, after having stupefied Tim with directions as to what he was to do when the old man awoke, she ventured on the journey

She found Mrs. Lucas and her room in just the same state as on her last visit. The lady herself, to be sure, was not in quite such a good humour

"Why, ma'tarling," said the Jewess, in answer to an inquiry as to her health, "pat padly, pat padly. Ma poor legs is dreadful pad about de calf. Ah! mornin' won't pay poor lame people for their sarvicements. Constitushuns aint like tradesfolk; ven vonce dey are proke, all de monish and compoishuns in de vorld von't set dem up again."

She looked into the fire with an air of patient suffering, and slowly shook her head for a second or two.

"Have te brought te coat, ma tear. If te dont vork quicker, ma pet, you vont earn te tripping you cats on yer pread pon ma vord you vont, ma tarling." As she was putting on her spectacles, to look at the coat Kitty handed to her, she said coquettishly, "Ma eyes aint as fine as they used to pe, ma pet. Dey's at least dirty per cent. vorse, ma tear; and even ten, I take half te amount in spectacle."

Kitty stood tremblingly watching her face as she examined the work. She had taken such pains with it, that she felt almost certain that no fault could be found with it.

"Oh! dis vill never to; never, ma pet!" said the lady, still poring over the coat. "It's too good—much too good! You vould run te bushiness. Tey vould never vear out. Ah! yer must vork quicker, ma pet."

The girl assured her that she would. The next should be made so badly, that Mrs. Lucas should be delighted with it; but the lady only shook her head.

"I shouldn't have te face to take it in," she said, "only tey might keep it as a shample. It's pit for a ghast case, it is. Fear, tear! you vill ruin me, you vill."

Kitty again tried to quiet her fears. She would even make another one on trial. This pacified Mrs. Lucas, who lost no time in taking advantage of the offer.

Then came the old question of the security. This seemed to be the most difficult matter to arrange of all. The fact was, that Mrs. Lucas did a little business in the money-lending line, and by exacting a security from each of "her dear lambs" she had been able to enrich the hand she traded upon. She shook her head, until her earrings looked as if they would fly from her ears. Kitty was in despair. She told the tale of her father's illness, and pleaded her case as pathetically as she could. But the earrings only swung about more violently than before. As last the lady appeared to be melting under the warmth of the girl's manner, and in the end the matter was arranged by Kitty consenting to be docked one third her earnings, to make up for Mrs. Lucas's loss in not boarding with her

"It makes ma heart bleed, ma tear, to do it," said the old hag in a whining voice, "pat I must live, ma pet. Vom of ma gals has left me, and I could find blenty of vone pleace. Put as you say your father is so pad, yy I must give way. Put you must make me another coat, yer know, for nothing. I shall lose py it, put I shupposes I must give vay!"

Every day the old man seemed to be gaining strength. His daughter had told him of the work she had obtained, and now she would sit at the foot of the bed, plying her needle, and chatting with her father, whilst Tim was hard at work, velvet weaving. He as yet had not been far out in his conjectures. Between the two houses they worked for, the loom had not been idle a single day. Kitty found, too, that after a month's practice, she had become such a clever seamstress, that by working early and late she could make as much as four shillings a week. It wasn't much, to be sure, but then housekeeping was not much either; and the help, small as it might be, was not to be despised.

But it seemed as if they were doomed to be unfortunate. The work Tim had until now been so successful in obtaining, ceased suddenly. There was a stand-still in the trade, and upwards of three hundred weavers were thrown out of employment.

"It's a sad thing," said Tim, after he had told her the bitter news, "it's a sad thing; and, though I am promised the very first work there is, there's no tellin' when it may come. May be to-morrow, may be in a month or two."

However, fortunately, Kitty did not lose courage. She rose with the difficulty—it only spurred her on to greater exertion. Let her work as hard as she would, there would still be a vast difference in the weekly revenue; but, if the day was not long enough, she must take from the night—that was all.

Every morning Tim walked to the warehouse, "to try his luck," as he called it, and every morning he would come back with empty hands and a careworn look on his face, that, smile as he would, was always uppermost. Then his only employment was to help Kitty as well as he could—get her thread ready, wax it, and bungle at the window for ten minutes trying to thread the next needle. Then Kitty's laugh, like the rich jerks of a canary, would set the old man laughing, making a curious compound of faces as his leg gave him twinge after twinge; and the children would point at their father, as he rolled the thread in a long black point and tilted at the poor needle's eye with the vigour of a prize-fighter.

To mend matters, Tim, having nothing to do, fell head over ears in love with Kitty. After he had got some half-dozen needles ready, with knots in the thread as big as cricket-balls, he would sit opposite to her without speaking a word, looking at the girl as she jerked the needle through her work. He could scarcely keep himself, and yet he was thinking of supporting a wife. This is often the case among the poor. Many a bride-groom has had to borrow the coat he was married in, his own having been pledged to obtain enough to pay the wedding fees. Poor things! they find a comfort in having some one to struggle with them—their sorrows grow lighter for being shared. The rough road is easier to travel over in company; it is when you are alone that you begin to flag and feel footsore.

There was something that appealed to the heart in seeing the poor seamstress as she sat singing over her work, her long curling hair swinging at every stitch she took, her face so joyful, that to look in it was to feel encouraged. Not a sigh, not a murmur would escape her, but she would talk and laugh with the children that followed her about the room, clinging to her gown with fondness. To think, too, that it was her thin hand that earned the bread that nourished a sick father, and still preserved the home, poor and miserable as it might be!

"It will never do," thought Tim to himself, after a week had passed, "for me to remain idle. Our savings will not last the longer for it; so, without saying a word, he took his hat and went out in search of any work that would bring in a penny or two

He had scarcely gone, when there came a low rap at the door. It was Joe, the pigeon-fancier, who crept in, holding a... his hand a couple of plucked birds.

"I have brought 'em to you, miss, for the old gentleman," he said, holding them up by the legs; "they're as fat as prize 'uns if I hadn't a killed 'em, they'd a died. I've dried the bread they would a had. If you put 'em in about a gallin of liquor, they makes slap up broth; as strengthening as a cross-beam, they is? Tim got into work yet, miss?"

"Not yet, Joe," she answered, as she took the plump birds. "They are fat! I'm sure, Joe, I don't know——"

"Never a word, miss; never a word. Why don't Tim try the Docks? he might get a bit o' portering. Will you tell him of it, miss? Thank... so, without saying a word, he took his hat and went out in search of any work that would bring in a penny or two

TOWN TALK AND TABLE TALK.

THE political atmosphere still continues murky and uncertain, and the impression increases in strength that we shall require one good storm at the ver. least to clear the air. Those vague spheres called "political circles" are consequently in a great state of restless motion as so many jugglers' rings; and, like jugglers' rings, they are every now and then to be found mysteriously interlacing and inter twisting themselves, so as to form apparent bunches and chains, which, however, a single shake and a single jangle suffice to fling out of all connection, rolling in different directions upon the floor. The fact is that we are still passing through a modified crisis, a sort of chronic political fever. The acute disease lasted for more than a week, when we had an absolute interregnum; but the disorder still lingers in the body politic, and another tight brush, perhaps more than one, will have to be encountered before it regains its normal state of wholesome energy. Meanwhile, the Exhibition, going ahead with gigantic strides, will fairly take the shine out of the Parliament. It is strange to contrast the progress of the two, or rather the progress of the one with the immoveability of the other. In St. Stephen's, nothing done to-day that can be put off till to-morrow In Hyde Park, nothing put off till to-morrow that can be done to-day. In St. Stephen's, all talk and no work; in Hyde Park, all work and no talk. The political machine is indeed strangely disjointed. It has to be stopped every night or two for repairs. Such oiling, and greasing, and patching, such hammering, and clouting, and tinkering, are here remembered by the oldest engineer. And with all this botching, the mechanism is still hardly fit for work. It creaks, and wheezes, and totters, and jingles along, amid general derision and as general surprise that no less crazy piece of machinery can be got hold of and set vigorously to work in its stead.

The creakers about the Crystal Palace have had a Godsend in the late remarkably long and rainy weather, which has never been found to stop way into the interior of the glass. It is curious to note how a certain small class of small-minded people pull long and dismal faces, and hoot, and moan, and gibber like so many birds of ill omen, over anything bold, or daring, or new. These are the gentlemen who are always on the look out for species about unheard-of plagues and pestilences which are to ravage London during the summer. To such people we owe the establishment of certain strangely lunatic journals, which demonstrate how it is perfectly possible for 100,000 French soldiers to be sent over in plain clothes, with their uniforms in their carpet-bags, to be simultaneously assumed at a concerted signal—half an hour after which the tricolor would be flying from Buckingham Palace, the Tower, the Bank, and the Mint. The partial sprinkling of some of the packages during the last fortnight has therefore been "nuts" to these people. They can't understand how anything should be done which has not been done before. They agree with the Quarterly, when that far-seeing journal informed the world that people would as soon travel astride of congreve-rockets as trust themselves to a locomotive going twelve miles an hour. They perfectly coincided with Dr. Lardner, when that *savant* proved by arguments declared to be perfectly unanswerable, that no steamer could or would ever cross the Atlantic. And now they are quite as certain that Mr. Paxton is a humbug that Messrs. Fox and Henderson are deluders that the rain has beaten them—and that, as soon as the rattle of the falling water is heard upon the acres of roof, the Crystal Palace becomes a synonyme for a shower-bath. It must have been one of the most practically-minded of these gentry who tried the other day to accomplish their predictions by choking up the drainage pipes. He must have been their disappointment when they were informed that the water which had found access came through 12,000 broken panes, that these would be speedily repaired, and that the Palace of the Park would be rendered as sound, comfortable, and water-tight as the most conventional brick and mortar palaces could have made it.

So, among the many ancient novelties which of late years have become fashionable, among the many revivals of mediæval decorations, usages, and doctrines which have gained ground in certain fanciful classes of society, we are to have a resurrection of the ancient art of hawking. The office held by the Duke of St. Albans, of "Hereditary Grand Falconer," is perhaps the sole existing relic we have of the good old times, when it "was thought sufficient for noblemenne to winde their horne and carry their hawk fair, and leave study and learning to the children of mean people." It is to be hoped, however, that the ingenious revivalists of the notable sport of "falconrie" will not attempt also to revive the laws by which it was protected. Our excellent ancestors had strange notions about the sacredness of a country gentleman's diversion. In Edward III.'s time it was felony to steal a hawk; and any person taking eggs from the wild eyrie was to have the good old times, when it "was thought sufficient for noblemenne to winde their horne and carry their hawk fair, and leave study and learning to the children of mean people." It is to be hoped, however, that the ingenious revivalists of the notable sport of "falconrie" will not attempt also to revive the laws by which it was protected. Our excellent ancestors had strange notions about the sacredness of a country gentleman's diversion. In Edward III.'s time it was felony to steal a hawk; and any person taking eggs from the wild eyrie was to have the right eye pulled out, and to be imprisoned for a year and a day, besides a fine at the king's pleasure. In Queen Elizabeth's reign the offender was to suffer two months, but imposed upon the unlucky amateur of falcons' eggs the necessity of finding security against a repetition of his bird-nesting exploits for no less than seven years. Stealing hawks, as I have been saying the ancient parliament of the new Hawking Club, to the ancient authorities upon the science, the course of study which the neophytes must (if they would become proficient in the art) undergo, appears to be somewhat of a light one. Hawking, in fact, had a strange lingo of its own. Not that a considerable technical science is furnished with a longer and tougher technical vocabulary. Not a limb, feather, or claw of the bird, not a cry, swoop, or flutter, but is duly translated in the orthodox *patois* of the transmogrified gentlemen curiously perverse as when, for instance, we are told that the legs of a hawk are "arms," the long wing feathers "beams," and the shorter "flags." Do the members of the new Club intend to become initiated into all these mysteries? Hawking, it is to be supposed, will be nothing without them; so that we may expect the speedy renewal of such controversies as that between Roland Graeme and Adam Woodcock, as to whether an "Eyass ought to be fed with washed or unwashed flesh." The decline and downfall of hawking may be traced to tolerably obvious causes There must have been an enormity of trouble taken and expense to get a partridge were struck by a soaring peregrine. Pure mathematics has been defined as going ten miles to market to purchase an axe to chip an egg; and certainly the notion of rearing up hawks, taming them, teaching them, becoming a skilled bird-fancier, in fact, learning a new language and becoming initiated in a new science—all this was terrific preparation for the chance of seeing the bird of prey strike down a harmless bird of peace. The pedantry of hawking in the old days was wonderful Dame Juliana Berners, whose medieval shade will it is to be presumed, henceforth hover over the fires of the new Club, informs us that every rank of man had its own particular hawk, from the Emperor down to the "holy water clerk." The question whether so many varieties of the bird could be got from, but elaborately preserved, and which were probably produced an infinite number of sagathy differing species, now most likely become extinct. The greater number of the sporting hawks anciently in use are now, I believe, rarely to be found out of the mountains of Wales, Scotland, or the Lake country. Many a barn-door feathered with their gay and graceful plumage, has borne testimony to the change in the fortunes of the hawk tribe since the days when, in the reign of James I., upwards of a thousand pounds were given for a "cast of birds." However, the race is to be brought into fashion again; and certainly the vision of a gaily galloping hawking party, bugles at their belts, dogs at their heels and falcons on their wrists, hallooing to the graceful bird as she wheeled circling in the sunny air, is a picture, and a far less painful spectacle, than a coarse, murderous *battue*, where pheasants are shot by the hundred their own lengths from the muzzle of the gun.

Whether the following story be credible, is nothing to the purpose. It is too good not to be able to command appreciating belief. Most readers, now-a-days—thanks to Thackeray's portraits—understand the class of shaky old dandies, elaborately got up by their tailors and valets, who go prading grizzled dyed heads along the sunny side of Pall-Mall, or bask in the biggest bow-windows of the clubs, and totter about in the lobbies or the *coulisses* of the Opera at night, looking dashing young fellows of the last generation. Such people only are meant, when it is said that every rank of man had its own particular hawk, from the Emperor down to the "holy water clerk." The question whether so many varieties of the bird could be got from, but elaborately preserved, and which were probably produced an infinite number of sagathy differing species, now most likely become extinct. The greater number of the sporting hawks anciently in use are now, I believe, rarely to be found out of the mountains of Wales, Scotland, or the Lake country. Many a barn-door,

NEW BOOKS, &c.

A NARRATIVE of a SINGULAR ESCAPE from CONFINEMENT. With a Preface by the Rev. W. CARUS WILSON, M.A. Imprs. Second edition, in 1s cloth.
SEELEY, 54, Fleet-street, and 3, Hanover-street, Hanover-square.

THE JESUITS as THEY WERE and ARE. From the German of Dollier. Translated by Mrs STANLEY CARR. With a Preface by Sir CULLING E. SMITH, Bart. Foolscap 8vo, price 3s 6d cloth
SEELEY, 54, Fleet-street, and 3, Hanover-street, Hanover-square.

ROMANISM as it EXISTS in ROME; exhibited in various Inscriptions and other Documents in the Churches and other Ecclesiastical Edifices in that City. Collected by the Hon J. W PERCY Crown 8vo, price 5s cloth.
SEELEY, 54, Fleet-street, and 3, Hanover-street, Hanover-square.

LETTERS to a WARWICK on the ROMISH CONTROVERSY. By the Rev SAMUEL HOBSON, B.B, Perpetual Curate of Bushey, Suffolk. In 1 vol., 18mo, price 2s cloth.
SEELEY, 54, Fleet-street, and 3, Hanover-street, Hanover-square.

PASSAGES from the LIFE of a DAUGHTER at HOME. Third Edition. Foolscap 8vo, price 3s 6d cloth.
SEELEY, 54, Fleet-street, and 3, Hanover-street, Hanover-square.

THE CHURCH of CHRIST in the MIDDLE AGES. An Historical Sketch. By the Author of "Essays on the Church" Foolscap 8vo, price 6s cloth.
SEELEY, 54, Fleet-street, and 3, Hanover-street, Hanover-square.

THE ILLUSTRATED LONDON NEWS

No. 479.—Vol. xviii.] FOR THE WEEK ENDING SATURDAY, APRIL 19, 1851. [Sixpence.

THE MINISTRY AND THE INCOME-TAX.

When the Property and Income-tax was originally imposed by the late Sir Robert Peel, the opposition was loud and general, both in and out of Parliament. It was represented by one party as a war tax, that ought not to be resorted to except in time of great emergency or national peril, and by another as liable to so many serious objections, from its vexatious and inquisitorial character, as to be intolerable, except to avoid a deficit in the public revenue still more intolerable than itself. Sir Robert Peel, having a great object to carry, endeavoured to obviate some of these objections by stating that the imposition of the tax was experimental and temporary; and that the classes upon whom it appeared to press most heavily would benefit by the reduction in the price of articles of comfort or necessity, to a larger extent than the amount of the tax. In order to catch popularity and to coax the support of the great bulk of the people, for the series of measures of which the Income-tax was one, he exempted from its operation all those whose incomes did not reach the sum of £150 per annum. The politic Minister knew what he was about. The patient swallowed the pill. The disagreeable impost was submitted to—not without murmurs, but certainly not without hope, on the part of those affected by it, that at the end of three years the burden would be removed. The hope was groundless. The tax was again imposed, and the same equivalents as before were promised to the hard-working and struggling people who had to pay it. Extension of trade and commerce—the liberation of industry from Excise and other fiscal fetters—and the continued reduction of the cost of living—these were the advantages the country was to purchase by submission to a war tax in time of peace. To a considerable extent, it must be admitted that these promises were verified. But a change in the fiscal policy of the Government has taken place. The tax having expired on the 5th of April last, it is to be renewed, not altogether on the same pleas as before, but as if it were a matter of course. It has been imposed so often—the Government holds so firmly by it—and the current of opinion among statesmen and financiers runs so strongly in favour of the direct mode of taxation, that there seems every reason to believe that the Property and Income-tax must be considered for the future a permanent, and not a temporary mode of raising the public revenue. It is true that the Protectionists promise to free the country from the nuisance whenever they shall have a chance; but, as one of the clauses in their agreement is to supply the possible deficiency by a duty upon foreign corn, it is likely that their good intention in the first respect will be so poisoned by their bad intention in the second, as to make the country submit with more patience to the disease of the Property-tax than to the remedy of taxed bread. Sindbad may, therefore, be considered to have got the old man on his shoulders; but, if Sindbad is not to be strangled by the old man's legs, he must perforce make the tormentor sit a little more easily. If he do not, there is danger of a stopper to Sindbad's breath. If the necessities of the State are such that we are to be always afflicted with this tax, so much the worse; but, in this case, the sooner it is converted from an oppressive into an equitable one, the better for all classes of the people.

Sir Robert Peel continually refused to listen to any suggestions for the better levying and fairer adjustment of the impost. Those who were aggrieved by it did not think it worth while to quarrel with a powerful Minister for a temporary tax, by means of which he was doing so much good. But the case is widely different at the present time; and the Russell Administration, which imitates Sir Robert Peel in stubborn refusal to do justice to the professional and trading classes, should learn to imitate the good as well as the bad policy of that illustrious Minister, and should remember that his plea of the temporary duration of the tax is not one which they can now urge with any show of reason. To allege, as the Chancellor of the Exchequer does, that it is impossible to make a distinction between realised property and precarious income, is either tyranny, obstinacy, or stupidity: tyranny, that imposes its will on the country in spite of reason and justice; obstinacy, that will not investigate: or stupidity, that, having investigated, is unable to see that which is perfectly obvious to every tax-payer in the country. There are five hundred actuaries and accountants in the City of London, who could show the Government how to assess precarious incomes in an equitable manner; and the alleged difficulty and impossibility of making the tax a just one, exists only in the easy insolence of the Ministerial mind, and has no other *locus*.

The principle of the tax is not unpopular. Even those who pay it concede that it is a just thing that people should contribute, directly as well as indirectly, according to their means. But to submit patiently to it, these classes require two things: first, that it should be fairly levied on all property and all income; and, secondly, that the surplus of revenue over expenditure which it is the means of putting annually into the Exchequer should be expended in the reduction of other taxes that interfere with the health, the comfort, the industry, or the subsistence of the people. The present Government refuses on the first point to make any alteration. This refusal is highly impolitic and unjust. It is impolitic because it estranges an influential class of men, whose opinions and feelings no Government can long set safely at defiance. It is impolitic, also, because, by a fair re-adjustment, and the extension of the tax to all incomes, a larger amount of revenue might be raised than at present; and it is unjust for a thousand reasons which the Ministers

GOOD FRIDAY CROSS BUNS.—(SEE NEXT PAGE)

themselves were at one time as ready as other people to confess. Were the tax fair, few, if any, would seek to evade it. As at present levied, it is felt to be so iniquitous, that men think it no sin to deceive a Government that obstinately refuses to remedy a glaring injustice. Until the tax includes all incomes, whether under or above £150 per annum, and levies a higher percentage upon realised property than upon the income dependent on health, sanity, and life, so long will the tax be evaded, so long will complaints be raised, and so long will the Government be exposed to the danger of a downfall.

The day for botching and patching up the national finances is gone by. The whole system of taxation calls loudly for revision and reform; and, although the members of a stop-gap Ministry like the present may refuse to lend themselves to the great work, their refusal is a sacrifice of the best interests of the country to their own ease and convenience, for which—stop-gaps as they are—they will be called upon sooner or later to render an account. The Income-tax is demoralising the country, and exasperating, at the same time, the classes amongst whom the greatest industry and the greatest intelligence exist. History should teach a wise Government that subjects like this are not to be trifled with.

GOOD FRIDAY CROSS BUNS.

THE pleasing domestic picture upon the preceding page is a seasonable Engraving which tells its own story with truth approaching homely pathos, but may be accompanied by a few illustrative notes.

The popular observance of the most solemn fast of our Christian year, by the eating of "hot cross buns," has received comparatively little illustration from the chroniclers of our national customs. The appellation of *Good* to the day appears to be peculiar to the Church of England, and so was long thought to be its commemoration by the eating of buns characterised by impressed the sign of the Cross; and this evident mark of union with the day attributed to early Catholic times satisfied inquiry. With the increased means of elucidation placed within our reach by the researches of antiquaries of late years, however, a new light has been shed upon the Good Friday custom; and its buns have been traced to the very cradle of the world's civilisation. The Cross has been used as a sacred symbol from the earliest times of the ancient Egyptians, and the word *Bun* is derived from the early Grecians; it was a sacred cake, marked with the cross, and offered to their gods, all which is fully confirmed by representations of these cakes in Greek sculptures and paintings. The early existence of these cakes (says Mr. Fairholt, F.S.A.) is placed beyond a doubt by the remarkable fact related by Wieckelmann, of the discovery of two perfect cakes at Herculaneum (destroyed A.D. 79). He describes them as both of one size, a span and a half or five inches, in diameter. They were marked by a cross, within which were four other lines, according to the usual style of the Greeks from the earliest period. Sometimes they had only four lines, when they were called *quadra*. This bread had rarely any other mark than a cross, which was on purpose to divide it and break it more easily.

In Bryant's "Analysis" we obtain a little more information on the subject, particularly as regards the name. He says,

The offerings which people in ancient times used to present to the gods, were generally purchased at the entrance to the Temple, especially every species of consecrated bread, which was denominated accordingly. One species of sacred cake, which was offered to the gods was of great antiquity, and called *Boun*. The Greeks, who changed the u in final into o agreeably, expressed it in the nominative Boos, but in the accusative, more truly *Boun Boun*. Hesychius speaks of the *boun*, and describes it a kind of cake, with a representation of two horns. Julius Pollux mentions it after the same manner, a sort of cake with horns. Diogenes Laertius, speaking of the same offering made by Empedocles, observes that the chief ingredients of which it is composed "He offered one of the sacred Libu, called a *Boun*, which was made of flour and honey." To all of these characters that he first offered up this sort of sweet bread. Hence we may judge of the antiquity of the custom, from the time in which Homer is referred (1040 B.C.) The proper name of these cakes was that of the time in which when he is speaking of the Jewish women at Pathros in Egypt, and of the worship which they in all which their husbands had ordained to them. The women, in their supplication upon his rebuke, tell him, "Did we not make these cakes to worship her, and pour out drink offerings unto her, to make us cakes to worship her, and to pour out drink offerings unto her, without our men?" Jer. xliv. 19. We only mention the name and form of the *Boun*; the sacred uses are no more.

Descending to the earlier Catholic times, Fosbroke, in his *British Monachism*, describes "Eulogiæ, or consecrated loaves, bestowed in the church as alms, and to those who, from any impediment, could not receive the Host. They were made from the dough when the Host itself was taken, and given by the priest to the people after mass just before the congregation were dismissed, and were kissed before they were eaten. They were marked with the cross, as our Good Friday Buns are."

The Good Friday trade at the Chelsea Bun-house was formerly so great as to create occasional disturbance. It was opened at one o'clock, and before eight it was not unusual for the crowd to amount to 80,000 persons at length it became necessary partially to close the Bun-house, to prevent tumult, as well as to print cautions and station constables around the premises. The old Bun-house was taken down in 1839, and its collection of curiosities dispersed, but the shop, &c. were rebuilt, and the Good Friday sale of buns is still very considerable

WATER SUPPLY BY PUBLIC AGENCY OR PRIVATE COMPANIES.—A memorial recently addressed by the Metropolitan Sanitary Association to Lord John Russell and Sir George Grey, just published, contains a correspondence between the association and Mr. John Stuart Mill, the eminent writer on political economy, on the question, "To what authority should be entrusted the water supply of the metropolis?" Mr. Mill's opinion is, that whilst generally in favour of municipal government in the abstract, yet in the case of the metropolis he is of opinion that it would be wholly ineffectual; that the parties who at present compose parish vestries are not the parties to whom should be given the management of difficult, expensive, and elaborate works. He does, indeed, suggest that if such a body existed as the Municipal Commission of Paris, men of superior qualifications would be candidates for the honour of having seats at the board; but, if that were the case, it does not appear by any means certain that beneficial results would ensue, for if the condition of Paris, under the direction of this commission, be compared with that of London under the present imperfect system, the former will be found to be infinitely worse than the latter. On the question that central government Mr Mill shows that all matters concerning local administration should not be taken as separate parts, but be treated as a whole; to ensure efficient works, they should be carried out under one system and under one management. "This would," he concludes, "be in itself the best mode of providing for questions of local administration, similar to that of water supply; and when a local body, such as I have described, shall exist in London, I am of opinion that the water arrangements should, under some such securities as I have suggested, be delivered up to its charge. For the present, it seems to me that the authority to which the work may most fittingly be entrusted is a commissioner, appointed by the Government and responsible to Parliament, like the Commissioners of Poor-laws. Whether this officer should reform the water system of London by the formation of new arrangements, or by employing under a rigid system of control, the existing water companies, is a question, not of principle, but of practical expediency, which can only be decided by those who are accurately acquainted with the matters of fact on which it depends."

THE CELEBRATED MONTES, the greatest *matador* Spain ever saw, died in the beginning of this month at Cadiz. An unfortunate *pensionat* for the bulls hastened his death; and it will be a long time before his place in the ring will be filled again, uniting, as he did, consummate skill, great energy, and wonderful presence of mind.—[From a Correspondent.]

THE WAVERLEY COVINGHTS.—The whole copyrights, stock, &c of Sir Walter Scott's works, which were offered for public competition in London a few days ago, have now been transferred to the hands of an eminent publishing firm in Edinburgh—Messr. Adam and Charles Black, who, it is understood, for the sum of £27,000, or £10,000 under what Mr. Cadell paid for copyrights alone. The highest offer last month for copyrights and stock was £24,000.

FIRE AT THE THAMES BANK DEPOSITORY.—In the account of this catastrophe, in our Journal of last week, it was erroneously stated that the "Woolmans' Home" had been considerably damaged, whereas that building is separated by a road from the premises in which the fire broke out, and to which it was entirely confined; the loss, we are glad to add, is small compared with the valuable property saved. The "Seamen's Home," which thus escaped uninjured, will soon be ready for the reception of visitors, and the applications from most parts of England have already been very numerous.

NORWEGIAN GAME.—Within the past week or ten days, considerable quantities of game have been imported by the numerous vessels which have arrived from the Norwegian ports, of a peculiar description indigenous to that northern state of Europe. There were some years since some trifling importations of game from Norway, but they have lately been very few in number and small in quantity, and these numerous simultaneous arrivals of white game from that part of Europe at the present time are remarkable, and of a considerable interest.

CURIOUS AND COSTLY WORK OF ART.—The *Brussels Herald* has the following:—A rich landholder of the Walloon Provinces has just ordered from MM. Depaepe Brothers, of Bruges, an artistic work which will take them 20 years to execute. They have received instructions to copy in Gothic letters "L'Imitation de Jésus-Christ," by the Abbé d'Assance. This work will fill 670 pages, each of which will be of about three-quarters of a yard in height by eighteen inches wide. They will have to execute 114 engravings, forming copies of the most masters of the Flemish school, viz. Van Eyck, Memling, Porbus, Claeswerg, &c., for the purpose of which which will be displayed the "Imitation of Jesus Christ" will be encircled with garlands and other ornaments, in blue and gold. MM. Depaepe have already begun their immense undertaking, and the first year of their contract has commenced. The title-page alone requires several columns for the descri, tion.

FOREIGN AND COLONIAL NEWS.

FRANCE

At length the difficult problem of the formation of a Parliamentary Administration has been solved by the following gentlemen, undertaking the functions of the various offices attached to their names respectively; viz. Foreign Affairs, M. Baroche; Justice, M. Rouher; Finances, M. Fould; Interior, M. Léon Faucher; Commerce and Agriculture, M. Buffet: Marine, M. Chasseloup-Laubat; Public Instruction, M. de Crouseilles; War, General Randon. Public Works, M. Magne. The latter two belonged to the "Transition Ministry" which has just gone out. Of the other members of the new Cabinet four, namely, M. Baroche, Fould, Rouher, and Buffet, held office in the Administration which was broken up in consequence of the vote of the Assembly blaming the policy of the Government in dismissing General Changarnier, and of encouraging the cries of "Vive l'Empereur!"

M. Léon Faucher was Minister of the Interior in 1849, from January to June, when he resigned, in consequence of the vote of censure passed upon him by the Assembly, for the use which he made of the telegraph at the period of the elections in May of that year. The remaining two, namely, M. Frosper de Chasseloup-Laubat and M. de Crouseilles, have never been members of any Cabinet, but the former was for many years a member of the Chamber of Deputies, in the time of Louis Philippe, and was considered a Liberal; while the latter was a Peer of France, and considered a Legitimist

The programme or profession of political faith and purposes which all new ministries in France make on their accession to office, was read to the Assembly by M. Léon Faucher.

The document, however, was not very explicit. It merely stated that the new Cabinet would be the energetic defender of order, and that it would endeavour to remain all the functions of the majority; and to obtain by its acts the confidence and sympathies of that party. It further stated that the new Cabinet would show as much vigilance as firmness, and that, feeling that its strength depended on the support of the Assembly and the sympathy of the country, it hoped to succeed in calming the public mind, in restoring commerce and manufactures, and in giving to the country all the benefit of order and of peace.

At its conclusion, M. de Sainte Beuve proposed a vote of want of confidence in the new Ministry, the composition of which, as being chiefly formed of men whose conduct and tendency the Assembly had already blamed, he termed an insult to the Assembly

M. Léon Faucher briefly defended the Ministry. The Assembly then, amidst great agitation, proceeded to a division, the result of which was a majority of 52 in favour of Ministers, the numbers being 397 and 378

Notwithstanding this vote, the general feeling amongst the party of order is one of coldness, or at least of indifference, to the new Cabinet

M. Brennier, late Minister for Foreign Affairs, has been appointed Minister Plenipotentiary for the first class.

An official denial has been given to a statement which appeared in the *Bulletin de Paris*, that M. Faucher had sent a circular to the prefects to convoke the municipal councils, in order to ascertain their feelings regarding a revision of the Constitution.

The quarter's indirect revenue shows an increase of 7,423,000f. over the same quarter of last year.

The *Assemblée Nationale* has become the property, by purchase, of M. Guizot and other distinguished members of the late Louis Philippe's Administration. The object in view is said to be to bring about a fusion of the two expulsed Royal families.

The accounts from the manufacturing districts are most gloomy, and serious fears are entertained that, if this state of things continue, the public tranquility will be disturbed

According to the *Siècle*, M. Barocbe has placed in the hands of Lord Normanby certain documents respecting the evil designs contemplated by the French refugees in London during the forthcoming Exhibition.

It is reported that the exiled Socialists in London have selected a mechanic, of the name of Anthony, by trade a cabinet-maker, as a candidate for the Presidency of the Republic in 1852.

The opening of the ceremonies of Holy Week took place on Sunday last at the Cathedral of Notre Dame. Before the morning service the Archbishop of Paris walked in procession, and placed on the high altar the various relics which are preserved in the treasury of the cathedral, and which consist, according to old writers, of several large pieces of the true cross; the crown of thorns; and two considerable portions of the nails which were used at the Crucifixion. The crown of thorns was given in 1238, to Saint Louis, by Baudouin II., Emperor of Constantinople. It was brought to France with great pomp, and placed in the Sainte Chapelle which had been built for its reception. The two fragments of the nails now possessed by the Cathedral Church of Paris came, one from the treasury of the old Abbey of St. Denis, and the other from that of St. Germain-des-Près. These different relics remained open to public view during the week.

A dinner was given on Sunday, at the Hôtel de Pozzo di Borgo, to Generals Dembinski and Chrzyanowski, the former recently returned from Turkey, and the latter from Italy, by a number of Polish emigrants. Prince Adam Czartoryski was in the chair. Toasts were given to the distinguished guests, and to the fraternity of Schaves. Count Teleki, the only Hungarian who was present, proposed a toast to the health of the Sultan and the speedy return of General Bem. The whole of the company present loudly expressed their gratitude to the Sultan Abdul Medjid, and wishes for his long reign. They considered that it was owing to the firmness shown by the grand vizier in the case of the refugees that they had the pleasure of again seeing General Dembinski among them, instead of his being now undergoing captivity.

The journals announce that the Count de Paris of the Duke de Levis, the confidential adviser of the Count de Chambord; it is supposed on a mission to negotiate with the fusionists, who have still hopes of effecting their object, and of inducing Louis Napoleon to become a party to their scheme.

PORTUGAL

Accounts from Lisbon, to the 10th inst., furnish intelligence of startling interest. The Marquis of Saldanha and the Count das Antas were at the head of a revolutionary movement, having for its object the overthrow of the Government of Count Cabral. Count Thomar. Saldanha was very popular with the army, and had succeeded in bringing over to his views the whole corps, except a regiment which was obstinate in her support of Cabral; and both were so unpopular, that it was feared if the movement succeeded she would have to abdicate. The Duke's first step was to proceed through Cintra to Mafra, on the 7th inst., and thence it was supposed he had gone to Santarem. Some men had been killed in a skirmish at Mafra and Da Ulos.

The King had taken command of the forces to oppose the insurrection, and preparations had already been made to occupy Santarem, which, however, would, it was supposed, have been reached first by Saldanha

The British squadron, which was about to sail, had been detained, at the urgent request of the Portuguese Government

UNITED STATES

According to the advices this week from New York, which are to the 2nd inst., a reaction against the Fugitive Slave Bill had strongly set in. The Ohio legislature had passed resolutions by a large majority in favour of a repeal of the obnoxious law, or, at least, a modification of it. The denial of juries to slaves put upon their trial was condemned in a very emphatic manner. In addition to this expression of feeling from one of the most important states of the Union, a state convention for the whole northern portion of the party had been called, to assemble in Boston on the 8th of April, to express the feelings of that State in favour of the repeal of the Fugitive Bill.

The legislature of New Jersey had enacted a law prohibiting the employment of children under ten years of age in factories, and providing that ten hours shall be considered a legal day's labour in all manufacturing establishments

Another collision between the citizens and the police of New York had occurred, below Wheeling, by which fifteen lives were lost, and one of the boats completely destroyed.

Generals Scott and Cass had been nominated for the presidency—the former by the Whig Convention, in Michigan, subject to the decision of the National Convention

The advices from Texas principally to the Indian difficulties, but give no news of importance

The number of passengers to the Crystal Palace were about to leave New York; few berths were vacant in the steamship *Canada* from Boston, on the 9th, and the *Baltic*, from New York, on the 10th inst.

CANADA

From Canada there are rumours that the Government intend closing Welland's canal against American or United States vessels, as a measure of retaliation for the refusal of the American Congress to practise reciprocity.

The "free-school" principle had at length been adopted at Toronto, and the high church party promised to keep clergy and religion out in amongst all denominations of professing Christians in proportion to their numbers.

A special arrangement has been effected between the United States and Canada, which is to be carried into effect without delay. Sealed bags are to be made up for the principal offices on each side of the line, with the same rate of postage; that is, five cents from any part of the United States to the line, and five cents to any place within the province.

INDIA.

We have accounts this week from India, dated Bombay, March 17th, and Calcutta, March 8th, from which we learn that the Marquis of Dalhousie, who was at Calcutta on the 8th of January, had left Barrackpour, and Simlah in May, was suffering from ill health. He issued a general order on the 15th of February, regulating the pay of officers and men in the Punjaub, and reforming the military organisation of them. The army of the Punjaub is to be placed under the orders of a Brigadier, at a fixed salary of 2000 rupees a month

Captain Grant, aide-de-camp of her Majesty's 86th, had been severely wounded by some robbers, who attacked him whilst out riding in the neighbourhood of Peshawur in company with a young lady. He was left for dead on the ground, but hopes were entertained of his recovery. The outrages of the robbers on that frontier were of the most audacious character and of frequent occurrence

A skirmish had taken place at Burrow, in the mountains near Kohat, between some robber hordes and a Punjaub regiment, in which the former were defeated and driven back. These are the only matters of a warlike character mentioned in the present advices

An order was shortly expected from the Governor-General, prohibiting military officers from holding situations as directors, secretaries, and auditors of the Indian bank

The ship *Buckinghamshire*, Captain Macgregor, was burnt in the Hooghly on the 3rd of March, whilst sailing down the river to start for England. She was insured for £18,000, and cargo for £70,000 in London insurances. Two passengers, invalids, perished

A conspiracy had been discovered in Nepaul, the object of which was to murder Jung Bahadoor, and the young minister lately in England. The conspirators were his own cousin and brother. The general was a favourite with the army, whom the conspirators had in vain endeavoured to gain over.

Lord Ravensworth, the Hon. Laverne Gower, and Mr. Egerton had been received on a visit by the King of Oude, who had given a tiger and buffalo fight in their honour.

Admiral Austen, in command of the naval forces in the Indian waters, had arrived at Calcutta

General Sir Dudley Hill, commanding the Sirhim Division of the Bengal Cavalry, died of apoplexy, at Umballa, on the 21st of February

The obituary also mentions the death of Captain J. D. Cunningham, of the Engineers, the son of Allan Cunningham, and author of "History of the Sikhs," published two years ago.

A heavy thunder-storm burst over the Presidency of Bombay on the 8th of March.

CHINA

The latest intelligence from Hong-Kong is dated Feb. 27, and according to it the insurrection in the provinces of Kwangtung and Kwangsi, about 60 miles from Canton, the object of which was to get rid of the present dynasty, was spreading fast, and began to threaten the deposition of his Imperial Majesty. Some embarrassment between the Chinese and British Governments was expected, from its having been discovered that the Chinese authorities had rewarded natives in the Chinese Chut-Apoo, denounced by our Government to that of China, as the murderer, in February, 1849, of Captain Da Costa and Lieutenant Dwyer. The culprit was in custody.

COURT OF COMMON COUNCIL.—SMITHFIELD.

On Monday, Mr. H. L. Taylor brought up the report of the Markets Improvement Committee, which had considered that subject since the close of the session on the 12th of last month, the committee had taken measures to inform the public and members of the House of Commons of the advantages of the plan agreed to by the court for improving and rebuilding Smithfield Market, and that it would obviate any objections which could be made to the present market. That the Metropolitan Cattle Market Bill, the Smithfield Enlargement Bill, and the Smithfield Market Removal Bill, came on for second reading in the House of Commons on Wednesday the 7th inst.; that the Metropolitan Cattle Market Bill was unopposed without a division; the Smithfield Enlargement Bill, always supported by numerous petitions, and by several influential members of Parliament, including ten of the metropolitan members, was lost on the motion for the second reading, and the Smithfield Market Removal Bill was also lost carried. That the Smithfield Market Removal Bill is referred to a committee of members to be nominated by the committee of selection. The committee being of opinion that the Smithfield Market Removal Bill should be opposed in every stage, have directed the Remembrancer to prepare the draft of a petition to the House of Commons, to be heard before the committees to whom that bill is referred, and having approved the form thereof, we submit the same to this honourable court

The petition, which was very long, urged the antiquity of the City's rights in Smithfield Market; the charter of Edward III., and the supplementary charters and acts of parliament by which it had been confirmed; the opinions expressed by the judges at the instance of the House of Lords, and the large sums expended on Smithfield by the corporation, in favour of the right of duty to retain the control of the market. It then impugns the correctness of the statements set forth in the preamble of the Government measure, and points to the irresponsibility of the proposed commission, and the magnitude of its powers. The great injury to be apprehended to the interests of the citizens and the public is then enumerated on, and the petitioners pray that the bill may not pass into a law, and that they may be heard by counsel against its preamble.

Mr. Taylor moved the adoption of the report of the petition.

Mr. Anderson seconded the motion. He contended that the course proposed by the Government could not be sustained, as it was contrary to the act of Magna Charta, upon which all their liberties and customs were based

Mr. Deputy Harrison moved an amendment to the effect that the Markets Improvement Committee be instructed to watch the New Markets Bill, and to use their best endeavours to secure equitable compensation to all parties who may be injured by its establishment.

Mr. W. A. Rose seconded the amendment.

Mr. James Duke supported the motion of Mr. Taylor, claiming for the public residing in the neighbourhood of Smithfield the compensation in the event of the market being removed. In conclusion, Sir James called upon all parties members for the metropolis Government proposal, promising to do all in his power to assist them in their efforts to maintain their rights and privileges

Deputy Harrison, Mr Dakin, Mr de Gex, Mr Jones, and other gentlemen, warmly supported the motion. Mr. Deputy Benham, Mr. Elliott, Mr. Clark, Mr. Brook, and others, opposing it, amidst a scene of confusion seldom witnessed within the walls of the Council Chamber. At length, after the Lord Mayor had been repeatedly called upon to declare the numbers,

Mr. Taylor replied very briefly, seeing the lateness of the hour, when a division was called for, and the numbers proved as follows:—

For the motion	..	..	..	.. 74
For the amendment	..	..	..	.. 70
Majority in favour of petitioning against the bill				.. 4

The Court very shortly afterwards adjourned.

EASTER TERM

The opening of Easter Term this year, on Tuesday last, was signalised by the formal entrance upon the discharge of their high functions of the two new Equity Judges, Sir J. Romilly, the Master of the Rolls, and Sir George Turner, the Vice-Chancellor, who succeeds Sir James Wigram, lately retired, in consequence of ill-health

In the morning, Sir J. Romilly entertained the Masters in Chancery, the Registrars, and other gentlemen usually invited on such occasions, at his residence in Gordon-square, where they partook of an elegant *déjeûner*, and afterwards in Master of the Rolls' carriages, with the Judges, proceeded to Eaton-square, the residence of the Lord Chancellor, who had given reception to the Judges, law officers, &c.

The whole party then formed a procession to Westminster Hall.

The Lord Chancellor was accompanied to the Court of Chancery by the Master of the Rolls, the Vice-Chancellor Lord Cranworth, the Vice-Chancellor Turner, and Masters Sir George Rose, Kindersley, Bunn, and Hemmpy. The Master of the Rolls and the Vice-Chancellor Turner made the customary declaration on being appointed Privy Councillors, and retired to their respective courts.

Vice-Chancellor Turner sat in the Court of Chancery, and Sir J. Knight Bruce, and was attended by Master Kindersley and Master Humphry

THE LORD CHANCELLOR AND THE LONDON SOLICITORS.—An address has been presented to the Lord Chancellor, at his residence, in Eaton-square, by Mr. Clarke, the Solicitor of the Ordnance, late President of the Incorporated Law Society, and Mr. Lawrence, Mr. Rose, of Messrs. Oliverson, Lavie, and Co., on the part of the attorneys and solicitors of the superior Courts, practising in London and Westminster, for the purpose of offering to his Lordship their congratulations on his elevation to the woolsack, to the office of Lord High Chancel or of Great Britain, and the deputation at the same time requested his Lordship to sit for his portrait, to be placed in the hall of the Incorporated Law Society. His Lordship replied in the most courteous terms, and expressed the great pleasure he felt in according to the desire to have his portrait placed in the Society's hall.

DEATH OF THE JACKSONIAN PRIZE OF THE ROYAL COLLEGE OF SURGEONS.—Mr Samuel Jackson, surgeon, of St George's-in-the-East, having married a second lady, retired from practice in the year 1840, when he addeddiver to the College £300, the interest of which every year was to be given as the best essay upon a practical subject, to be settled upon and decided by the council. The subject determined upon in this year was "Neuralgia, or Tic Douloureux," and in his last will he intimated that the annual prize for reading the surface of the daguerreotype with a kind of transparent enamel, which effectually excludes the air, renders a glass unnecessary, and permits, moreover, the application of colour more effectually than by any mode previously attempted. We may, indeed, now regard these sun-pictures as capable of the high and elaborate finish attained by the old, whilst they enjoy the indestructible adjuncts of a metal plate, with a vitreous facing—the likeness sanly lodged between the two, undimmed and undamageable by time.

On Friday week (last week), as a railway guard or servant was engaged in moving some trucks into a siding on the North British Railway, to the east of the North Bridge, in order to prepare for the arrival of the London train, he accidentally stepped in front of an engine in motion, the buffer of which threw him down, and the wheels passing over him, his head was instantly severed from his body. The accident was the work of a moment, and seemed to have arisen from want of due precaution on the part of the unfortunate man

Lord Bury (son of the Earl of Albemarle) is about to discharge the functions of private secretary, without salary, to Lord J Russell, in the place of Mr. W. B. Grey, M.P. for Tynemouth, lately appointed one of the secretaries of the Poor-law Board.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—Monday.

THE CRIMINAL LAW.

Lord Brougham took occasion of a motion for certain returns relative to the salaries of the judges and officers of the County Courts to complain of the delay in the preparation of the Criminal Law Digest. He regretted that the Government had allowed the Criminal Law Commission to expire. Every one was aware that the labours of the Commissioners were very great; and even if it was not renewed, he hoped advantage would be taken of what it had already done. He wished to ask his noble and learned friend whether the Commission was to be renewed?

The Lord Chancellor stated that the Government were of opinion that it was not necessary to renew the Commission.

CHURCH BUILDING ACT.

On the motion of the Earl of Carlisle, the Church Building Act Amendment Bill passed the second reading

BRITISH GUIANA.

Lord Stanley presented a petition from British Guiana, signed by 5000 persons, praying for the introduction of a more liberal system of representative government into that colony. The noble Lord strongly supported the prayer of the petition.

Earl Grey said that the petition did not contain the sentiments and wishes of the most respectable portion of the inhabitants. He was of opinion that the condition of the great mass of the people did not make it safe to extend to them a large share of political power. He would, however, recommend to the governor of the colony to promote some measure for the extension of the franchise.

After some conversation, the petition was ordered to lie on the table.

Their Lordships then adjourned over from Thursday, the 1st of May.

HOUSE OF COMMONS.—Monday.

NEW MEMBER.

Mr. Bethell, the new member for Aylesbury, took the oaths and his seat. He was introduced by Mr Rounsell Palmer and Mr. Hutt.

HAINAULT FOREST BILL.

This bill was read a second time.

In answer to an hon. member, Lord Seymour stated that the part of the forest which the public were accustomed to frequent for purposes of recreation was not proposed to be enclosed.

ST. ALBANS ELECTION

Mr. Ellice brought up a special report from the St. Albans Election Committee, declaring Mr. Bell duly elected, but suspending a petition to the effect that extensive bribery had evidently existed during the election, but the testimony by which it could be proved had been kept out of the reach of the committee, and recommending the appointment of a committee of inquiry to investigate the subject

The adjourned debate on the consideration of the minutes of proceedings of the St. Albans Election Committee was then resumed by Mr. Aglionby, who moved that Mr. Edwards, who was in custody on a charge of being implicated in the suppression of evidence, be discharged from the custody of the Serjeant-at-Arms, without payment of fees

Mr. G. Hankey supported the amendment for calling him to the bar of the House.

The Attorney-General thought justice would be satisfied by allowing Edwards to be discharged, but not without the payment of fees.

Mr. Rounsell Palmer said the case was a serious one. The contempt of Mr. Edwards had not only been a great one, but it had been successful in defeating the ends of justice. and he thought, therefore, he should be called to the bar and questioned as to any explanation he might be able to offer of his conduct.

Sir F. Thesiger said, if Edwards was guilty of so serious an offence, he ought not to be discharged; and if innocent, he ought not to be compelled to pay his fees

After considerable discussion, in which several hon. members took part, the House divided upon a motion by which Lord J. Russell concurred, for adjourning the question until next evening. The adjournment was carried by 108 votes to 87

In reply to Mr. G. A. Hamilton, the Chancellor of the Exchequer stated that he would propose the second reading of the Income-Tax Bill upon the first Thursday after Easter.

BEER-HOUSES.

Sir J. Pakington gave notice that he should, on Thursday, the 15th of May, move for leave to bring in a bill to amend the laws relating to houses for the sale of beer.

NEW RIDE IN HYDE-PARK.

Mr. B. Denison wished to ask a question of the noble Lord the Chief Commissioner of Woods and Forests relating to certain arrangements which had been made in the parks with regard to the large increase of visitors to the Great Exhibition. He understood that it would be necessary to give up that portion of the park which had hitherto been allotted to persons taking horse exercise, for the purpose of forming a road for carriages and foot-people. While he concurred in many of the arrangements, however, he thought it would be only fair to the equestrians that other drives should be formed; and he wished to ask the noble Lord if any arrangements had been made to afford this facility to the public.

Lord Seymour stated, in reply, that some time since he had received commands from her Majesty to set out a ride in Kensington-gardens; but a great difficulty arose from the admission of the public. He had not yet formed any plan, but he hoped before long that he should be able to do so. (Hear, hear.)

ACCOMMODATION FOR INVENTORS AT THE EXHIBITION

Sir De Lacy Evans, pursuant to notice, asked the President of the Board of Trade whether any facilities would be afforded in appropriating unoccupied space in the Great Exhibition to inventors who had hitherto been prevented from making any application in consequence of the delay in passing the Designs Act Extension Bill.?

Mr. Labouchere said, every one who required space for exhibiting works in the Great Exhibition had sent in their claims before the 31st of October last, and all the space at the disposal of the Commissioners had been duly allotted to such locality. Whenever any inadvertent space had since occurred, in consequence of the non-arrival of the articles intended for it, or from other causes, the Commissioners had endeavoured to distribute it in such a manner as would be most just to those who had any claim to consideration. With respect to the extension of the Act to any other exhibition, the Board of Trade did not at present think they would be justified in doing so, although they did not mean to preclude themselves from considering any fair claim which might hereafter arise

WESTMINSTER BRIDGE.

Sir R. Inglis wished to know what Government intended doing with respect to this bridge, which a committee of the House had recommended to be pulled down five years ago.

The Chancellor of the Exchequer said, after the discussion which had taken place on the subject of the existing bridge, an unpaid commission had been appointed to examine the matter. They had as yet come to no conclusion on the question, and, therefore, no distinct reply could be given to the hon. Baronet.

FOREIGNERS IN LONDON

Mr. B. Cochrane wished to know whether any communications had been received by the Government from the four great powers, complaining of the political conduct of foreigners resident in London?

Lord J. Russell said, if the hon. member gave notice of his question, he would be prepared to answer him

Mr. Cochrane.—Then I give notice I shall ask the question to-morrow.

Mr. Cochrane said, as he then saw the noble Lord the Secretary for Foreign Affairs (Viscount Palmerston) in his place, he would beg to ask him whether any complaint had been received from the four great powers of the conduct of the foreigners here?

Viscount Palmerston.—No such note has been received. (Hear.)

METROPOLITAN COMMISSION OF SEWERS

Sir B. Hall wished to ask whether any hope could be held out that a reduction would take place in the management of the above commission? He saw by returns that the receipts were £91,000, and the expenditure £67,000, while the cost of management alone amounted to £21,000 annually.

Viscount Ebrington said it ought to be remembered that the Commission of Sewers was not only an expending body, but also, necessarily, a collecting one, in order to supply the funds necessary to carry on its operations. The double function made the expense of management greater than it would otherwise be. He had looked over the last year's accounts, and he saw that the expense of collection alone exceeded £2000.

ASSESSED TAXES.

The House then went into committee on the Assessed Taxes Bill.

The Chancellor of the Exchequer moved the resolution for changing the mode of assessment, as based upon the number of windows into a poundage calculated upon the annual value of houses, when above £20.

After a short discussion upon details, the resolution was agreed to.

COFFEE AND TIMBER DUTIES.

The House then resolved itself into committee on the Coffee and Timber Duties.

The Chancellor of the Exchequer moved the preliminary resolutions necessary to the bringing in a bill enacting the changes in the above-mentioned duties, which he had indicated when explaining his finance scheme for the year.

The resolution for reducing the duties from 6d. on foreign, and 4d. on colonial coffee, to 3d. per lb. in each case, was then put.

Mr. T. Baring opposed the motion so far as the removal of the differential duties on coffee was concerned.

Mr. Fininsay coincided in believing that the change would seriously prejudice the interests of the coffee planters in Ceylon.

The Chancellor of the Exchequer defended his proposition, arguing that the differential duties hampered the trade and impeded the importation of superior qualities of the article. He did not believe that their removal would injure our colonists

Mr. Stanley declared that differential duties were necessary to enable our planters to compete with the slave-holding growers in Cuba and Brazil.

Mr. Labouchere vindicated the change, as forming part of a commercial policy which had been fully recognised, and ought not to be reversed.

Mr. Warley denounced the practice of adulteration which so extensively prevailed in the coffee trade He quoted medical opinions as to the injurious qualities of chicory, and called upon the Chancellor of the Exchequer to protect the fair dealer.

Other members having taken the same view of the question,

The Chancellor of the Exchequer relied upon the very strong professional opinions on the other side to support him in the belief that chicory was not deleterious; and he therefore persisted in pressing the resolution, which was agreed to.

Mr. Bernal then read the resolution on the timber duties, which was passed without a discussion

The House resumed.

THE NEW HOUSE OF COMMONS.

The motion for going into committee of supply on the army estimates having been put,

Sir De Lacy Evans referred to the decorations of the new chamber for the Commons, which, he said were executed under the orders of the architect, in complete opposition to a resolution which had been passed by the members of that House.

Mr. Scholefield explained the interpretations which Mr. Barry had put upon the instructions received from the House. He had not conceived them to convey an absolute prohibition from all coloured ornaments.

The Chancellor of the Exchequer stated that he had sent orders to the architect to stop his ornamental works as soon as he discovered that they were still proceeding.

A miscellaneous discussion occupied some time, in the course of which Colonel Rawdon read the following explanation, which he had received from Mr. Barry:—

"Mr. Barry has not been made acquainted with any declared wishes on the part of the members of the House as to the decorations of the new House of Commons, and knows nothing of the existence of such a declaration collectively or individually. Mr. Barry is not partaking in carrying into effect the "so called" internal decoration of the House, which was suspended at its being objected to by the Chancellor of the Exchequer. Heraldry is absolutely essential to the character and the full expression of the Tudor style of the design adopted by Parliament, and it is the only means of giving historic interest to it which, in a great national edifice devoted to the purposes of the new palace at Westminster, is most desirable for many reasons A display of heraldry and suitable historic decorations has always formed an essential feature of the design and ornaments of the building sanctioned by Parliament; and I have never received any intimation, either written or verbal, to forego the use of it.

After the above letter he (Colonel Rawdon) thought he was justified in complaining of the terms of the gallant Colonel's motion.

The House then went into Committee of Supply, when several votes on the Army Estimates were agreed to.

The Expenses of Prosecutions Bill was read a third time and passed.

The Audit of Railway Accounts Bill was postponed till the 7th May.

The Stamp Duties Assimilation Bill passed through committee, and was reported.

THE PROPERTY-TAX BILL.

Second reading postponed to Monday, the 28th instant.

The Sale of Arsenic Bill was read a second time.

The Exchequer Bills bill passed through committee.

The Indemnity Bill passed through committee, and was reported.

Adjourned at one o'clock.

HOUSE OF COMMONS.—Tuesday.

NEW WRITS.

On the motion of Mr. Hayter, a new writ was ordered for Boston, in the room of Capt. Dudley Pelham, deceased; and for the city of Cork, vacant by the acceptance by Mr. Fagan of the stewardship of the Chiltern Hundreds.

MORTALITY IN WORKHOUSES—IRELAND.

Mr. Monsell drew attention to the mortality in the Kilrush and Ennistymon Unions, in the latter of which, in two weeks, there had been 253 deaths out of 3893 persons—a proportion unexampled, he said, in the history of charitable institutions in this country.

Lord J. Russell said, the Government had heard of the great mortality prevailing in some of the unions in Ireland; but, although the facts seemed very painful, he was sorry there did not seem to be any immediate mode of preventing those evils.

Mr. F. Scrope wished to know whether any inquiry had been set on foot with respect to the state of the poor in Kilrush? The complaint was, that the law was not enforced.

Colonel Dunne said, the reason the poor were not supported in those districts was because the country was wasted and the property in it distributed. And, moreover, the means at their disposal had been badly administered by those who had to lay them out. He wished to ask the noble Lord whether the complaint made by the ratepayers of the Ennistymon union against the assistant-commissioner for having made an improper report was well founded; and whether the statement made by Sir Lucius O'Brien was true or not?

Lord J. Russell said, not having had notice that the question of the Kilrush Union would be discussed that day, he had not yet had to the papers connected with it; but it seemed to him that the duty of the Poor-law Commissioners was to see that poor and destitute persons should receive relief sufficient for their support. Their statement was, that relief had been given in such a manner as referred to, according to the ordinary rules of workhouses. He would be disposed to inquire into the immediate subject referred to. (Hear.)

Sir L. O'Brien said the famine had been unexpectedly into the limits of a few distressed unions; and, though he readily allowed that the House had been liberal in the extent of the assistance which it had afforded, he thought it was the duty of Government to do something for these still suffering districts.

Mr. Moore said, the poor—which meant the whole population of some districts—were at the mercy of the guardians, and he was glad to hear stated that was, that, according to the rate of mortality now going on, the whole of the population was liable to be swept off in less than a year, and yet at the hope that the Government had held out to the people, it would be seen that it was made into the facts, but that he saw no means by which the evil could be met Such an answer was unworthy of the Minister.

Lord J. Russell had heard no such statement as that referred to by the hon. member, and therefore, he could have made no reply to it.

Mr. F. Scrope rose to address the House; but, having been met by loud cries of "Spoke," resumed again his seat in silence.

GOVERNMENT SALE OF SCHOOL BOOKS.

Lord Mahon wished to ask the noble Lord a question, also having reference to Ireland. He wanted to know why school-books were issued in Ireland at the public expense, thereby interfering much to the detriment of the private and resident publishers in London—Messrs. Longman and Murray—had written three times since the beginning of last year to the noble Lord at the head of the Government on this subject, but the only answer they received was an acknowledgment of their letters

Lord J. Russell said that was a subject which he had thought came properly under the consideration of the Committee of Council on Education, and he had referred the publishers' first letter to that body on its first meeting after his receipt of it. He found, by the arrangement entered into by the Committee of Council, that it was not desirable to print books, but to enter into treaty with the different publishers respecting school-books, in order to have them as cheaply as possible. They had accordingly entered into correspondence with a great number, about twenty-seven publishers, and the result was that they had obtained books 43 per cent. lower than they had ever before got them. With respect to Ireland, the Commissioners of Education had published books there, and any one who remembered the character of the school-books formerly issued could not but feel grateful to them for the different class of books which they now put forth.

Sir R. H. Inglis said, it was admitted that a great monopoly for the manufacture of school-books had been created by the Government in Ireland. Now, although he was not a Free-trader, he should like to see that monopoly broken in upon. (Hear.) The question, then, was not whether they had had school-books twenty years ago, but had they good ones now? (Hear.)

Mr. Hume was gratified to find the hon. Baronet took part in the ranks of the Free-traders, although he seemed to forget that he had a monopoly of the printing of the Bible in his own University. It was a shame in the age in which the hon. Baronet could object to a monopoly of school-books, when his own University had the monopoly of the most important of all school-books—the Bible

Sir R. Inglis reminded the hon. member that he had distinctly stated that he was not a Free-trader

Mr. Hume thanked the First Minister for having obtained the free opening of Westminster Abbey and St. Paul's, and expressed a hope to continue his efforts to have all our great national buildings opened free to the public. Seeing that we were about to be visited by strangers from all countries, it was most desirable that the occasion should be taken to render access to our national monuments perfectly free.

Lord J. Russell said, he would consider whether anything further could be done.

BUSINESS OF THE HOUSE.

In reply to a question by Mr. G. Clerk, Lord J. Russell said that the course which he should propose for public business after the Easter recess was the following:—On Monday, the 28th of April, he would move the second reading of the Income-tax Bill. On Thursday, the 1st of May, he would move the second reading of the Jews Bill; and on the same night he would, if possible, proceed with the navy estimates. On Friday he would move the committee on the Income-tax, and on the following Monday he would move the committee on the Ecclesiastical Titles Assumption Bill.

ST. ALBANS ELECTION.

Mr. Aglionby then moved that Mr. Edwards (who is in custody of the Serjeant-at-Arms for giving money to witnesses to induce them not to give testimony before examined before the St. Albans Election Committee) be called to the bar, reprimanded by the Speaker, and discharged on the payment of his fees.

Sir F. Thesiger said there was no motion for the punishment for so grave an offence, and moved as an amendment that Mr. Edwards be committed to Newgate.

The Attorney-General seconded the amendment, agreeing entirely with Sir F. Thesiger

Mr. Aglionby, seeing the feeling of the House, said he would not divide on his motion.

After some conversation the amendment was agreed to, and the Speaker was directed to issue his warrant to commit him to Newgate.

CAPE OF GOOD HOPE.—THE KAFFIRS.

Mr. Adderley moved that a humble address be presented to her Majesty praying that she will be graciously pleased to appoint one or more commissioners with instructions to proceed to South Africa, to inquire and report as to the best mode of adjusting the relations between this country and the Kaffir tribes; and also of determining the engagements entered into by her Majesty's High Commissioner in his settlement of the extended territory. The hon. gentleman contended that for two years there had been no such thing as a government at the Cape of Good Hope. The Governor was compelled to act on his own responsibility, and it appeared that the policy pursued towards the natives had altogether failed. He thought, under the circumstances, that the commission which he proposed to be sent out to make inquiries on the spot was more likely to be attended with beneficial results than that which the noble Lord at the head of the Government suggested—namely, the appointment of a committee of that House. He looked upon the war which had broken out in consequence of the improper course of proceeding adopted by Sir H. Smith towards the natives as one of a very serious and alarming character, for, although with a force of 9000 men, he was a prisoner in William Town. He was the only channel of information which the Government possessed with the colony, and it was therefore the more necessary that a commission should be appointed instead of a committee.

Lord J. Russell defended the conduct of Sir H. Smith, and, sketching the history of the colony, showed that Sir Harry was only following up a policy which had been previously entertained and acted upon by former governors. The war which had recently broken out was similar in character to former wars, and could not, therefore, be attributed to any changes of policy on the part of Sir Harry Smith, who was charged by some parties with having acted tyrannically towards the natives, while by others he was blamed for being too lenient. The point upon which they required to have an inquiry was as to the proper policy to be pursued in the colony, which could be best considered by a select committee; and he therefore moved, as an amendment to the motion of Mr. Adderley, that a select committee be appointed to inquire into the relations between this country and the Kaffir and other tribes on our South African frontier.

Mr. V. Smith objected both to the motion and the amendment, being of opinion that the matter was one which should be left entirely in the hands of the Executive.

Mr. F. Scrope, in supporting the amendment of Lord John Russell, said he regarded it in the light of a censure upon the Colonial Office.

Mr. Mackinnon argued that no blame was to be attributed to Sir H. Smith or his subordinates for the recent events at the Cape. They were incidents always attendant upon intercourse between civilised and savage nations, and not the result of bad government.

Mr. Gladstone said there might doubtless be evils attending the commerce between civilised and barbarous communities, but they might be obviated or removed altogether by prudent management. He thought there were strong objections to the appointment of a Parliamentary committee, one of which was, that it went to shift the responsibility from the Executive, to which it properly belonged. The objection pressed with more than ordinary force in the present case; and there was yet another evil that the appointment of a committee would hang the subject up for a period of one or two years, and would come on for discussion when the emergency had wholly passed away. It was a step in a wrong direction, for whatever was to be done must be done on the spot, and experience proved that select committees were bad instruments for disentangling colonial embarrassments.

After some observations from Lord Mandeville, Colonel Thompson, and Sir E. N. Buxton,

Mr. Roebuck said, it was folly to talk of justice to the natives when the first thing they did was to take their country away from them, and when they were now about to exterminate them altogether. It was a hypocritical pretence to say that there was any other object than that of extermination of the natives. It had been the case wherever the white man placed his foot by the side of that of the brown man; and it was well. It should be so, for he admitted the validity of the excuse—that they were about to plant in those savage settlements a superior intelligence. But there was an absurdity in pretending to blame the savages for protecting their rights, or to talk of treating them with justice and humanity, when we commenced with a violation of justice, and proceeded onward in violation of both justice and humanity. He could not understand the policy of the noble Lord in abdicating his functions by throwing on a committee the responsibility of what was to be done at that time. If his Government was too weak to enable him to resist a motion which encroached upon the proper business of the Executive, he should at once resign the reins of Government, instead of transferring them to a committee of that House.

Mr. Labouchere said the Government was justified in the course it pursued by former precedents almost numberless, many of which he enumerated, and proceeded to contend that it was the duty of the Government to watch over and protect the aborigines from the aggressions of the colonists. He opposed the sending out of a commission, as calculated to weaken the authority of the Governor at the very time when it was requisite to strengthen and sustain it. The object of the committee would be not so much to inquire into the disputes which led to the war, as to consider and report upon the best policy to be adopted with respect to the proper line of frontier to be maintained at the Cape. He hoped, therefore, the House would aid the Government by the appointment of the committee which had been moved for by the noble Lord at the head of the Government.

Mr. Hume contended that the Cape colonists should be allowed to manage their own affairs, which they would do without asking for assistance from this country

Mr. J. Bell condemned the sentiments expressed by Mr. Roebuck as unchristian and heathenish, and insisted that the principles laid down by the hon. and learned gentleman should be reprobated by every man possessed of kind, humane, just, and proper feeling.

Mr. S. Herbert said the precedents quoted by Mr. Labouchere were not cases at all in point; but, without reference at all to precedents, he denied that the present case was one which should be sent to a committee. Of the two courses, a commission was the better, but he was opposed to both, as tending to cripple the authority and proceedings of the Governor.

Mr. Hawes said he could not but think that in this instance shown sufficient energy in dealing with this emergency, and he would therefore give them his vote with great pleasure

Mr. Lucas supported the necessity of appointing a committee; and, in reference to what had fallen from Mr. Roebuck, said he believed it was quite possible to colonise without such confusion leading to the extermination of the natives.

Mr. Adderley shortly replied.

The House then divided, and the numbers were:—

For the original motion	.. ..	59
Against it	.. ..	129
Majority	.. ..	—70

The House again divided on the amendment of Lord J. Russell, which now became the original motion, and the numbers were—

For the motion	.. ..	128
Against it	.. ..	60
Majority	.. ..	—68

Lord J. Russell's motion was consequently agreed to

LAW OF MORTMAIN.

On the motion of Mr. Headlam, a select committee was appointed to consider the policy of extending the Law of Mortmain, so as to inhibit personal estate, and generally to consider whether any alteration should be made in the law as it affects testamentary or other dispositions in favour of religious, charitable, or permanent objects

Lord H. Vane obtained leave to bring in a bill to abolish the fees paid to county and other coroners, and for providing for the payment of such coroners by salaries.

SMALL TENEMENTS RATING ACT AMENDMENT BILL.

The House went into committee on this bill, and several clauses, moved by Mr Ellis, Mr. Geary, and Mr. Hume, were brought up and added to the bill.

The House then resumed, and the Chairman reported progress.

COLONIES.

The adjourned debate on the estimates was postponed.

ASSESSED TAXES ACT

The report of the committee on this act was brought up and agreed to, as was also the report on the Coffee and Timber Duties Act.

The report of the resolutions passed in committee of supply were brought up and agreed to.

The Exchequer Bills Bill and the Indemnity Bill were each reported.

The House, at one o'clock, adjourned for the Easter recess, to Monday, the 28th instant.

LAYING THE FOUNDATION STONE OF VICTORIA BRIDGE, GLASGOW.

On Wednesday, the 9th instant, the interesting ceremony of laying the foundation-stone of Victoria Bridge, which is to occupy the site of the old wooden bridge, and is already somewhat advanced in erection, took place in presence of a vast assemblage of the citizens of Glasgow, and numerous parties from adjacent localities, and came off with great *éclat*

About mid-day the principal streets presented a scene of unusual gaiety and bustle, and those leading to the Bridge became densely thronged by well-dressed people. At the Bridge large platforms were erected, for the accommodation of those engaged in the ceremony

From large stalls were attached to the works now going on was gaily enwreathed from top to bottom with a spiral belt of evergreens, and was surmounted by a flagstaff fixed on its summit, from which waved the ample folds of an immense union-jack.

The various civic bodies and the lodges having heard an eloquent sermon in the Cathedral, then formed in procession to the Bridge site. The foundation stone was then laid by the Duke of Athol, with full Masonic ceremonies, which were concluded amidst enthusiastic cheers.

In the evening the event was celebrated by a grand banquet in the City Hall, at which there were 350 guests; the Lord Provost in the chair. There were present not less than 300 ladies, for whom refreshments were provided. A grand Masonic festival was also held in the Trades Hall

At the City-hall banquet, Mr. Walker, the engineer, stated that the Victoria Bridge would be 40 feet, or a few inches wider than the Glasgow Bridge, and 6 feet wider than New London Bridge; so that Glasgow would, he believed, have the two widest arched bridges of any city or town in Britain. He might state that the number and spans of arches must be controlled by the height of the banks of the river. If these were low, arches of great span would either, by their lowness at the point of springing, or their height in the middle of the span, make the river near the sides inconvenient for navigation, or the approach too steep for land traffic. Mr. Walker explained this by reference to the drawing that was exhibited in the room. The centre arch of Victoria Bridge would be 80 feet, the arches on each side 76 feet, and the two land arches 67 feet, being a clear water-way of 366 feet.

THE BRASSEY TESTIMONIAL.

THIS magnificent and perfectly original gift (the presentation of which was briefly noticed in our Journal of last week) consists of a silver-gilt shield, 36 inches diameter, weighing nearly 500 ounces, its ornamentation being in the style of Louis XIV., or a period somewhat more recent. The centre of the shield, surrounded with an elaborate wreath of oak leaves, contains the inscription, and the arms of Brassey, as derived from an uninterrupted line of ancestry dating from the Brasseys, of Bulkeley, in county Chester, 1340. The next portion of the circle, which is concave in form, is divided into twelve arch-headed niches, richly sculptured, from the key-stone of which are suspended medallions containing miniatures of the engineers under whom Mr. Brassey has executed railway works. Above these arches, on the flat margin of the shield, and immediately over the portraits, are twelve other oval tablets, each one being a miniature picture of some great work of the respective engineers before mentioned. Beyond these views, and forming the outer edge of the shield, is a beautiful chaplet of laurel leaves, divided by thirty-six bands, or ribbons, each bearing the name of one of Mr. Brassey's agents, also enamelled on gold. The whole, therefore, forming a perfect epitome of characters and events connected with Mr. Brassey's career as a contractor. The embellishments are as follows; viz.—

Portraits (all enamelled on gold): 1. G. Stephenson, 2. R. Stephenson, 3. Locke, 4. W. Cubitt, 5. Brunel,* 6. Bidder, 7. Rendel, 8. Robertson, 9. Errington, 10. J. Cubitt, 11. Dockray, 12. Bruff.

Views (all enamelled on gold) in connexion with each of the foregoing; viz. 1. Grand Junction (Mr. Brassey's first contract), 2. Chester Station (Chester and Holyhead), 3. South-Western (Windsor), 4. Great Northern (Welwyn Viaduct, 5.* (Not yet completed), 6. North Staffordshire (Harecastle Tunnel), 7. Cheshire Junction (Frodsham Bridge), 8. Chester and Shrewsbury (Dee Viaduct), 9. Caledonian (Eden Viaduct, Carlisle), 10. Great Northern (Ouse Bridge), 11. Buckinghamshire (Brockley Bridge), 12. Eastern Union (Manningtree Viaduct)

The whole was designed by Mr. H. P. Burt, Mr. Brassey's London agent; modeled by Mr. W. F. Spencer; and executed by Messrs. Garrard, of the Haymarket.

* Mr. Brunel's portrait is completed, but the view which should have accompanied it is not yet finished.

THE BRASSEY TESTIMONIAL.

The Portraits were enamelled on gold by Mr. Simpson, miniature painter to her Majesty.

The Views were executed by Mr. Auld, under the management of Mr. Newenham, and enamelled on gold by Mr. Simpson.

In addition to the above, the Testimonials consisted of portraits, full length, of Mr. and Mrs. Brassey, by Newenham, and an Engraving of the former by Zobel; and also a Ruby Goblet, properly emblazoned and ornamented, being similar to his Royal Highness Prince Albert's cup at York. The entire cost of the Testimonial is nearly £2000.

The presentation of this superb testimonial took place at the London Coffee-house, on the 2d inst., after an excellent dinner; Mr. H. P. Burt, Mr. Brassey's London agent, in the chair; supported on the right by Mr. Brassey, Mr. Brunel, Mr. R. Rendell, Mr. Bidder, Mr. R. Stephenson, M.P.; and on the left by Mr. Cubitt, President of the Institution of Civil Engineers, Mr. Locke, M.P., Mr. Jackson, M.P., &c.; together with nearly 200 of Mr. Brassey's agents, superintendents, friends, and workmen.

The cloth having been removed, and the usual loyal toasts having been disposed of,

The Chairman said, that, in requesting Mr. Brassey to accept the testimonial which they were about to offer him, he might be permitted to say that that gentleman had engaged in works of enormous magnitude, of the greatest extent in money value, and of the highest importance in a national point of view, that probably any one man had been engaged in. If he were to speak of what he had done in railways alone, he would have to enumerate about a thousand miles of road, and the number of men who had been employed on these works would far exceed any estimate he could then make. One great thing in connexion with all Mr Brassey's contracts was, that all the men he had employed had been duly paid. He would not speak of those men of science who were there to do honour to their guest, for his duty was to call attention to the claims of Mr. Brassey in the various classes who had been dependent upon him, and who were desirous of expressing their sense of the tangible advantages which that connexion had conferred upon them. But he might add that Mr. Brassey had obtained the confidence of the principal engineers of the kingdom, and all of them were satisfied when they had him to carry out their works. In the ledger of the merchant, too, no man had more wages at his command than Mr. Brassey; and at the Bank his paper was always good. The agents, the sub-contractors, and all who were engaged under him, were always confident, for they knew he had the greatest consideration for them. And the "navvies" invariably said, "We have worked for many a master, but Brassey is the man for us." He called upon them, in return for the benefits they had derived from their connexion with Mr. Brassey, who for twenty years had devoted his attention to their interests, to join him in drinking to that gentleman's health.

Mr. G. Meakin, as the senior agent, was then called upon to make the presentation in due form; which was accompanied by an appropriate address in confirmation of all that the chairman had expressed in behalf of Mr. Brassey's claims to the grateful consideration of his numerous staff.

Mr. Brassey's health having been drunk with due honours, that gentleman, in returning thanks, said that the greatest pleasure the success he had achieved gave him was that it had been the means of raising others to a higher position than that in which they had been when he first met them. He felt highly honoured on the occasion, that those who had contributed to his welfare, and happily to their own, should be combining with some of the highest professional talent of which the country could boast to pay him so high a compliment.

Mr Jackson, M.P., proposed the next toast, "The Railway Engineers present." He alluded to the great genius which characterised the engineers of this country; and, referring to the position of many of high station, spoke of the advantages which this country presented over most others in the opportunities it afforded for men to rise from the lowest ranks to the middle, and even the highest. It should be a subject of pride to this country, that not only Europe, but all the world, acknowledged our superiority in railway enterprise. Within the last month the Pacha of Egypt had thought fit to give Mr. Stephenson a *carte blanche* to execute a railway in his territory. He had refused it to the company who had proposed it; but that he had confided the work to a British engineer, was a just tribute to the genius of this country. Again, Belgium, France, Spain, Italy, and Africa—all were indebted to English engineers for their great railway works. The hon. gentleman concluded by proposing "The health of those Engineers who had honoured Mr. Brassey with their presence."

Mr Cubitt returned thanks.

Several other appropriate toasts were given, and the company separated at a late hour.

LAYING THE FIRST STONE OF THE VICTORIA BRIDGE, GLASGOW.

CONSECRATION OF THE JEWISH SYNAGOGUE, ST. ALBANS-PLACE, ST. JAMES'S.

CONSECRATION OF THE WESTERN SYNAGOGUE.

On Saturday afternoon, the Western Synagogue, St. Albans-place, St. James's, was consecrated, in consequence of its having undergone complete repair and internal decoration. The building, which was originally erected in 1837, is of an oblong form, with a gallery across the lower end, and two narrow side galleries running throughout the whole length of the edifice. Inside, the ark stands on a kind of dais, approached by steps, at the further end of the building fronting the entrance, and is surmounted by two tablets inscribed, in Hebrew, with the initiatory words of each of the Commandments: on this occasion, was added a curtain of crimson velvet and gold, bearing an inscription, in Hebrew, stating it to have been presented by the ladies of the congregation. The reading-desk and the choir are situate midway between the ark and the entrance. The interior was brilliantly illuminated with wax lights from richly-gilt chandeliers. The whole effect was exceedingly striking. The galleries were exclusively occupied by elegantly dressed ladies, whilst the floor of the building was appropriated to the male portion of the congregation. Amongst the audience we noticed Sir Moses Montefiore; the Rev. the Rabbi Abraham Belais, one of the ecclesiastical conclave of the Spanish and Portuguese congregation; the Rev. W. D. Marks, chief minister of the West London Synagogue of British Jews, the Rev. Mr. Barnet, of St. Helen's Synagogue, City (who officiated as reader), and Messrs Aaron Goldsmid, S. L. De Symons, S. A. Hart, R. A. J. Barnett, Solomon, of Poland-street; J. Dyte, Z. Jewell, J. P. Salomons, S. A. Nisch &c. The choir from St. Helen's Synagogue attended, and at intervals sang several beautiful chants in a highly creditable manner, under the leadership of Mr. M. Moss, master of the choir of the New Synagogue.

The Consecration service, conducted by the Rev. the Chief Rabbi, Dr. Adler, assisted by the Rev. Mr. L. Levy, commenced shortly after four o'clock. The Chief Rabbi, followed by the wardens and other honorary officers of the congregation, among whom were Sir Moses Montefiore and

"HALT—SMUGGLERS"—PAINTED BY H. P. PARKER.—EXHIBITION OF THE NATIONAL INSTITUTION.—(SEE NEXT PAGE)

the Venerable Rabbi Belais (upwards of ninety years of age), brought the Rolls of the Law to the door of the Synagogue, where, standing under a canopy, the Rabbi exclaimed, "Open unto me the gates of righteousness; I will enter them, and praise the Lord!" The doors being opened, the Rabbi and the rest entered in procession, with the rolls in their arms, saying, "How goodly are thy tents, O Jacob! thy tabernacles, O Israel!" O Lord! I have ever loved the habitation of thy house, and the dwelling-place of thy glory. We will come into thy tabernacle, and worship at thy footstool." The procession, followed by the boys and girls from the charity-schools connected with the congregation, then returned unto their seats, the choir chanting the psalm beginning "The earth is the Lord's and the fulness thereof; the world, and they that dwell therein." The offerings towards the repairs and decorations were then announced, among which was the sum of £50 given by Sir Moses Montefiore

The afternoon service followed, and after that an eloquent sermon by the Chief Rabbi. The service terminated at seven o'clock.

The repairs, &c., have been executed under the direction of Mr. C. F. Maltby, architect, Leadenhall-street

THE NATIONAL INSTITUTION, PORTLAND GALLERY

EVERY season appears to increase the number of exhibitions of contemporary art, and the means which the artist possesses of bringing his works before the public. Extending downwards from the Royal Academy, there now stretches a long series of minor expositions, some of them devoted to departments of art, others owing their origin to the not very uncommon splits and quarrels which prevail in the artistic world; the nucleus of others formed of the rejected by exhibitions of previous standing; the principal contributors to others, again, being young artists, often of talent and promise, who have not yet climbed up the long staircase of minor exhibitions, to, perhaps, the honour of the "line" in the Academy. The National Institution is one of the most recent of the formations in question, this being, we believe, only the second year of its existence; while so far as regards quantity, the progress of the association has been rapid. The amount, indeed, if not of artistic talent, at least of artistic taste and turn, in the metropolis, must be something marvellous. The number and the variety of exhibitions which each season brings round, and the real merit which here and there lurks even in the humblest of them, prove an immense existing mass of the raw material of which artists are made, and frequently develop a really cheering prospect of future excellence. The National Institution, for instance, boasts of no less than 440 pictures. Their average merit is certainly not high; and there are a mass of crude landscape attempts which never ought to have found their way into the humblest gallery; but there are here and there a clever hand and a promising picture, indicating, at all events, what in future days the painter may do. Landscape, as usual, forms the staple of the gallery, the subjects selected being the ordinary class of soft English scenery, as developed in rural lanes arched over with spreading trees, or snug and wooded farm-yard glimpses. The pictures of high pretensions are very few, and their pretensions are very far above their performance. Sea pieces abound, but show no great merit; and very few of the *genre* pictures are successful.

So much for the general character of the Exhibition: it occupies three good-sized rooms, a fourth, small, being devoted to water-colour sketches. We reserve our details of the pictures for next week. Meanwhile, we engrave one of the best works—Mr. H. P. Parker's "Hall—Smugglers." The drawing is good, and the grouping of the figures natural and effective; while the background of Kentish and Sussex coast scenery is painted with great truth, and a nice feeling for air and distance

SECOND EDITION OF THE VOLUMES OF THE

NATIONAL ILLUSTRATED LIBRARY.

The First Issue now being all sold, ANOTHER EDITION is IN THE PRESS, and will be ready in a few days.

Orders received by all Booksellers. 2s. 6d. per Vol.; post free, 3s.

Office, 198, Strand.

CALENDAR FOR THE WEEK

SUNDAY, April 13—Easter Sunday.
MONDAY, 21—Easter Monday.
TUESDAY, 22—Easter Tuesday. Duke of Sussex died, 1843
WEDNESDAY, 23—St. George. Shakespeare born, 1564; died, 1616.
THURSDAY, 24—Old Christmas Day.
FRIDAY, 25—St. Mark. Princess Alice born, 1843.
SATURDAY, 26—Jeremy Collier died, 1726.

Season tickets for admission to the new Soyer's Universal Symposium will be issued in a few days. Single season ticket, one guinea; double ticket, two guineas and a half; family ticket, admitting four, three guineas, none of which are transferable.—The season tickets will be procurable at Mr. MITCHELL'S Bond-street; Mr. SAMS'S, Pall-mall; and at all the principal libraries and music-sellers.

DEPARTURE of the MAIN BODY of CANTERBURY COLONISTS for 1851. The COMMITTEE of MANAGEMENT of the CANTERBURY ASSOCIATION HEREBY GIVE NOTICE that all SHIPS forming the Main Expedition for 1851 will SAIL from the Port of LONDON between the 8th of MAY and 15th of JUNE next, inclusive; and that intending Colonists desirous of availing themselves of the privileges with regard to cabin and steerage passage of land, which have been granted to persons emigrating with the aforesaid Main Body, should make immediate application for passage, stating about the time at which they wish to sail between the days above mentioned inclusive, so that their convenience may be consulted in the engagement of ships and distribution of cabins

By order of the Committee,
H. F. ALSTON, Secretary.

Office of the Canterbury Association, Adelphi-terrace, April 7.

FOR PORT LYTTELTON, CANTERBURY SETTLEMENT, with liberty to land passengers and goods at the undermentioned ports in New Zealand, the first class passenger ship, the ANSON, 1,200 tons register, CANTERBURY and WELLINGTON, and NEW PLYMOUTH, and will sail on the 8th of MAY. Lying in the East India Docks, chartered and provisioned by the Canterbury Association. Rates of passage—Chief Cabin, a whole Cabin between one and three decks, 45l; second Cabin, 21l; Children under fourteen one-half. Each ship carries an experienced Surgeon. For eligible passage or other information, apply to Duffy and Co., 12l, Fenchurch-street. Steyner, 1, Fenchurch-street; or to Frederick Young, Manager of the Shipping Office of the Canterbury Association, 74, Cornhill.

PUBLIC BREAKFAST AND DINNER.

THE COMMITTEE of MANAGEMENT of the CANTERBURY ASSOCIATION HEREBY GIVE NOTICE that on WEDNESDAY, the 7th of MAY, a Banquet of English fare will be given to the Colonists and the Working Classes who are to sail for New Zealand on the following day, in the first expedition, of ships of the entire body of Canterbury Colonists for 1851. At the same time and place, the Cabin-passenger Colonists of the main body will meet at a PUBLIC BREAKFAST, which their friends, and the friends of the Canterbury Association, at a Public meeting at the Mansion House on Friday last, decided upon, and which Committee are invited to attend. The place of meeting is a building adjoining the ships in the East India Import Dock, close to the Poplar Gate, and near the Poplar Station of the Blackwall Railway. All the ships of the expedition ready for sea will be open for inspection during the morning and the chair at the Breakfast, which will be taken by Lord Lyttelton, at Two o'Clock. Tickets for the Breakfast, prices half-a-guinea, and five shillings for children under fourteen years of age, may be obtained at the Office of the Associated Adelphi Banks, and the Shipping Office, 74, Cornhill, from Messrs. Baillie and Broach, of the London Tavern, and at Saunders' Colonial Library, 3, Charing-cross.

As the accommodation of room is limited, it is particularly requested that early application should be made for tickets By order of the Committee,
Office of the Canterbury Association, Adelphi Terrace, April 10, 1851. H. F. ALSTON, Secretary.

WIMBLEDON PARK.—FREEHOLD BUILDING-GROUND.—A SALE of several plots of Building Ground within this charming property will take place in the month of MAY, of which full particulars will shortly be announced. There is no spot within many miles of the metropolis which possesses so many attractive qualities as Wimbledon Park. Its commanding situation, its beautiful undulations of surface, its spacious lake, its oaks, and, above all, the proverbial salubrity of the air, render it a most desirable spot for the residence of gentlemen engaged in business. The estate is within twenty minutes' ride from London, by the South-Western and Richmond Railways, several gates of the Park forming within a few yards of the Wimbledon, Putney, and Wandsworth Stations. It is supplied with the purest Water, by an Artesian Well, which has been sunk to a depth of 600 feet. Further particulars may be obtained upon application at Tilpott's Lodge, Putney Heath, and of Mr. WOOD, at the County Fire-Office, 50, Regent-street.

OF SATURDAY next, APRIL 26, will be published
A SUPPLEMENT, GRATIS;
With several Illustrations; the continuation of "A Tale of the Present Day;" the Obituary; Replies to Correspondents, Advertisements, &c., unavoidably deferred.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 19, 1851.

LITTLE or no light has been thrown on the state of affairs at the Cape by the discussions which took place on Tuesday night, on the motion of Mr. Adderley. The country knows that it will have to pay a long bill for defending the colonists against the Kaffirs, and that is all the real knowledge which it is at present likely to gain. It has, it is true, acquired an additional proof of the weakness and irresolution of the present Government; but this was a piece of knowledge that was clearly neither necessary in itself nor agreeable to the present and constant occasion. Mr. Adderley moved an address to her Majesty, praying the appointment of commissioners to proceed to the Cape to inquire and report as to the best mode of adjusting the differences between the colonists and their troublesome neighbours. Lord John Russell, after a very luminous and interesting sketch of the history of the colony, from the days of Sir Benjamin D'Urban to those of the present Governor, Sir Harry Smith, proposed an amendment that a select committee of the House of Commons should be appointed to inquire into the whole matter. This amendment was carried by the large, and, for the present Ministry, stupendous majority of 68. Every one asks what can be the use of this committee? It will be at least two years before it can report to the House; long before which time, we imagine, the present Parliament will be numbered among the things that were, by the election of a new Parliament, having, possibly, very different views on colonial policy from those which prevail in the existing assembly. It is probable that the war in Caffraria will have been concluded before that time; or the financial surplus of 1851—52—53, if we are to be blessed with such good fortune, will be expended in the construction or carrying out the enlightened commercial policy for which we are to sacrifice the profits of Property and Income-tax. In the meantime, the appointment of a committee is a farce; or, as Mr. Roebuck characterises it, "a miserable subterfuge" on the part of the Government. It is even more than this; it amounts to a shirking of responsibility, and an addition of duty.

Mr. Roebuck's speech contained some home truths well put upon the subject of colonisation generally, which it would be well it all parties would consider. To assure the colonists at the Cape that Great Britain would protect them from all hostile aggressions of the great nations of the earth seward, but to leave them to protect themselves against the Kaffirs and all the other native tribes, would be unjust and impolitic. The Indian army fact of their occupation of it, is the true policy which the country ought to pursue Great Britain has no business to wage war with savages; nor would such a war have been necessary if the colonists had been treated like men competent to manage their own affairs, instead of being held in the tutelage of the Colonial-Office, and treated like children. The sturdy Anglo-Saxons who colonised North America defended themselves against the Red Indians; and if the Cape colonists would imitate the example, if they were told, once for all, that the security of their landward frontier was their business, and not ours. But, as long as the present war continues, there is no hope of such a consummation. Great Britain must fight—and *pay*. The country, nevertheless, should not shut its eyes against the fact that, however successful the present Kaffir war may be brought to a termination, it will not be the last. Between the Kaffirs and the colonists there may be a truce, of greater or less duration; but there never will, in reality, be peace. It may shock our feelings, it may outrage our religious faith and principles, to admit the fact; but, whenever we take forcible possession of, and resolve to hold, a country possessed by an inferior race, of savages or of semi-savages, we commence a war of extermination. Mr. Roebuck eloquently reminded the

House of this fact. The question of colonization in every part of the world is neither more nor less than a history of a war to the knife, waged by superior against inferior races. The result in all cases is the same. There may be a temporary lull in the storm of hostility, but the war is sure to break out from time to time, until the inferior race—like the Red men of the North American continent—fade away from the face of the land which was the inheritance of their forefathers. As regards the Cape—which we are at all events bound to through no pressure difficulty—here is, in addition to this source of war, a constant inducement to the Colonists to encourage hostilities. The expenditure of two or three millions of British money in such a place is a bait which Colonial virtues—as existent among jobbers, contractors, suttlers, and all other traders who profit by the presence of an army—is not likely to resist; and little wars are marvellously soon fanned into great ones by the efforts of patriots who share the plunder, but not the expense of hostilities. But, with the right of self-government, and the assurance that Great Britain would only protect them against seaward aggression from the civilised nations of the world, the wars with the native tribes would soon cease. If they did not cease, they would, at all events, be less expensive and more decisive.

THE KAFFIR WAR.

The General Screw Steam Shipping Company's ship *Propontis*, which left the Cape on the 7th of March, and arrived at Plymouth on Thursday, brings intelligence of a successful attack made by Major-General Somerset, at the head of 1200 troops, and of the capture of a large number of Kaffirs

The general tenor of the information derived from the passengers is averse to any expectation of a speedy termination of the war—the skill and caution of the Kaffir Dissector, urged with natural cunning, having, in many recent instances, baffled the efforts of the regular troops.

Sir Harry Smith was at King William's Town, and has, in all, about 3000 troops under his immediate command. There are only seven artillerymen at Cape Town.

Major Somerset's attack was at Fort Armstrong, on the Kat River settlement, whence, with the aid of the burgher forces, the enemy was ejected with great slaughter

The colonists at Cape Town call the war a Government and not a Colonial war, and not one meeting of the inhabitants has as yet taken place, neither has any other public demonstration been made in approval of the movements of Sir Harry Smith

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE

The Queen and Prince Albert left town on Wednesday for Windsor Castle. Her Majesty and his Royal Highness quitted Buckingham Palace at twenty minutes before eight o'clock, accompanied by their Royal Highnesses the Prince of Wales, the Princess Royal, and the Princess Alice. Their Royal Highnesses Prince Alfred, Prince Arthur, and the Princesses Helena and Louise followed in another carriage. The royal suite occupied three carriages, and consisted of the Marchioness of Douro, Hon Miss Macdonald, Hon. Miss Seymour, Lord Byron, Lieut.-Colonel Hon. C. B. Phipps, Major-General Bowles, Captain Hon. F. Seymour, R.N., Colonel Wylde, Dr. Ashley, and Mr. Birch. A detachment of the 16th Lancers formed the escort from Buckingham Palace to the Paddington terminus of the Great Western Railway, where a special train was in readiness. Her Majesty and the Prince and the royal party arrived at Windsor shortly after four o'clock, and immediately proceeded in several of the Royal carriages to the Castle.

Her Royal Highness the Duchess of Kent dined with her Majesty on Wednesday evening

THE PRIVY COUNCIL.

The Queen had a Court and Privy Council at three o'clock on Monday afternoon, at Buckingham Palace. At the Court the Archbishop of Canterbury had an audience of the Queen, and presented an address to her Majesty on Church Extension

Mr. William Pare Wood, Solicitor-General, was presented to the Queen as an addition to the Duchy Hon. Mr. George Seymour, appointment, her Majesty's Principal Secretary of State for the Home Department, and had the honour of Knighthood conferred upon him by her Majesty. Mr. George James Turner was presented to her Majesty at an audience, on his appointment as Vice-Chancellor, by Secretary Sir George Grey. The Vice-Chancellor received from the Queen the honour of Knighthood

The Queen gave audiences to Sir George Grey and Lord John Russell.

The Court was attended by the Treasurer of the Household, the Vice-Chamberlain, the Marquess of Anglesea, Gold Stick in Waiting; the Earl of Listowel, Lord in Waiting; Lieutenant-General Sir Edward Bowater, Groom in Waiting; and Colonel Wylde, Groom in Waiting to Prince Albert.

Her Majesty and his Royal Highness Prince Albert honoured the Duke of Devonshire with a visit at Devonshire House, Piccadilly, on Saturday afternoon. The Royal suite consisted of the Marchioness of Douro, the Hon. Miss Seymour, the Earl of Listowel, Colonel Buckley, and Lieut.-Colonel the Hon. Alexander Gordon

The Lady Harriet Anson, daughter of the Earl and Countess of Lichfield, is about to be led to the hymeneal altar by the Hon. Augustus Vernon eldest son of Lord and Lady Vernon

CHURCH, UNIVERSITIES, &c.

OXFORD

ARNOLD PRIZE.—The Arnold Prize, for the encouragement of the study of history, ancient and modern, founded last year in honour of the late Dr. Arnold, has been awarded to Adam Storey Farrar, B.A., of St. Mary Hall

Congregations will be holden for the purpose of granting graces and conferring degrees, on the following days in the ensuing term; viz.—Wednesday, April 30; Thursday, May 15; Thursday, May 22; Friday, May 30; Saturday, June 1. No person will, on any account, be admitted [illegible] any degree, whose name is not entered in the book kept for that purpose at the Vice-Chancellor's house, on or before the day preceding the day of congregation.

TESTIMONIALS.—The following clergymen have recently received testimonials of affection and esteem:—The Rev. Charles John Way, from his friends at Isleworth, on his leaving the curacy of that parish. The Rev. H. H. Dembrain, incumbent of St. George's Chapel, Deal, from a numerous body of the congregation. The Rev. John Hughes, from the parishioners of Warkworth, resident in Amble, Warkworth, and neighbourhood, upon his departure. The Rev. Rees Jones, incumbent of Courtybella and Argoed, Monmouthshire, from his parishioners. The Rev. H. Carpenter, from the parishioners of Great Glemham, on his departure.

A very handsome brass chandelier has just been presented by Miss Ward, of Sa le Vue, Ulverston, for the use of the Dalton parish church.

ARCHDEACONRY OF CHICHESTER.—The Rev. J. Garbett, M.A., Professor of Poetry in the University of Oxford, and Rector of Clayton, Sussex, has been appointed to the archdeaconry of Chichester, vacant by the resignation of the Rev. H. E. Manning.

CHURCH EXTENSION.—A committee has been appointed in London for the purpose of receiving donations, which will be applied towards the assistance of any churches in course of erection or to be erected, or towards any special similar object which the donors may intimate. The subscriptions already announced are most munificent. We give a few of them. The Archbishop of Canterbury, £3000; Bishop of London, £1000; Lord Robert Grosvenor, £3000; the Misses Seymour, £1000; C Freake, Esq., Brompton, £5000 G. J. Bevan, £5000; A Friend, £5000, another Friend, £5000; W. Page Wood, Esq., £1000; H. Vallance, Esq., £.000; Rev. J. Fotcher, £1000; Barclay and Co. £2000, Truman, Hanbury, and Co., £1000; T. Baring, Esq., £500, Sir E. Sir Buxton, £500; R. C. Bevan, Esq., £500; J. Labouchere, Esq., £500; W. Coston, Esq., £500, and many others equally liberal

The Lord Bishop of Durham attained his eighty-first year on Saturday last. His Lordship is in excellent health, and will short y leave Auckland Castle for London

At a meeting of the Church Restoration Committee, held in the vestry of St. Martin's Church, Birmingham, on Tuesday last week, an offer of the munificent sum of £1000 was communicated by the rector from anonymous benefactors, on condition that the £6000 remaining to be raised in order to complete Mr. Hardwick's design should be previously obtained

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently been made:—*Rectories:* The Rev. Charles Evans, Great Melton, Norfolk; the Rev. William Hughes, to Bettws-Gwerfil-Goch, Merionethshire; the Rev. Henry George Hand, to Hepworth, Suffolk; the Rev. H. W. O. Polhill, to Hington, Norfolk; the Rev. John Hardy Raven, to Worlington, Suffolk; the Rev. Edward Sayers, to Cold-Ashton, Gloucestershire; the Rev. William Young, to Croxton, with Eltisley, Cambridgeshire; the Rev. Robert [illegible] Bathurst, to Birchanger, Essex. *Vicarages:* the Rev. George Beardsworth, to Selling, Kent; the Rev. Ryan Evans, to Bettws-yn-Rhos, Denbighshire; the Rev. Henry Pumble, to North Mundham and Runston, Sussex; the Rev. W. Smith, to Keddington, Lincolnshire; the Rev. D. Starpoole, to [illegible] Haxwell, Essex; the Rev. G. W. Holt, to Barton-upon-Humber, Lincolnshire.

METROPOLITAN NEWS.

INCORPORATED SOCIETY FOR PROMOTING THE [illegible] BUILDING, AND REPAIRING OF CHURCHES AND CHAPELS.—The committee of [illegible] [illegible] [illegible]

THE GREAT EXHIBITION BUILDING, IN HYDE-PARK.—SKETCHED FROM KENSINGTON-GARDENS BRIDGE.

EASTER AND THE GREAT EXHIBITION.

THE Easter holidays will be this year supplied with an additional lion in the mighty Building in Hyde-Park; not, indeed, that the mass of holiday-makers can hope to penetrate the portals, to all but the favoured few as impregnable as the guarded gates of the citadel of Badajoz, or that they will have the wildest chance of even a passing glance into that interior in which the ingenuity and the skill of the world is now rearing the great industrial trophy of the age; but, at all events, there is the Building itself, palpable not merely to the favoured few, or the lucky holders of season tickets, but patent to the investigation of the scores of thousands who, during the approaching holidays, will probably swarm round Mr. Paxton's transparent palace. The 1st of May will, no doubt, see a magnificent pageant. All the west of London will be one flutter of curiosity and admiration; but in the remoter districts of the north, the south, and the east, there will hardly be anything like a general holiday. It is not often that we can afford to fling the great social industrial machine out of gear. Our non-working days are few and far between, hallowed all of them by old use and wont, and forming one of the best legacies of our ancestors. The principal of the yearly eras in question is now at hand, and it will, no doubt, be taken advantage of by tens of thousands for the inspection—outside, at least—of the Crystal Palace. The far-spreading wastes of Islington and the north, the vast outlying district east of the City, known only to people of "the world" by the flying trips sometimes undertaken across the roofs and among the chimney-pots, when the summer time is bright, and whitebait in its glory at Blackwall; the not less important southern districts, spreading to the very foot of the Surrey hills—all these great metropolitan regions will, during the ensuing holidays, pour forth their masses, eager to behold, for the first time perhaps, the great modern marvel of iron and glass, now all but completed, and rapidly being stocked with the wonderful "plenishing" which will crowd it.

During the last few days immense progress has been made in every department, constructive and exhibitive. Mr. Owen Jones has all but completed his decorations. Stalls are rising as if by magic; many of them perfect industrial temples, got up with the most finished taste and the most liberal outlay, and, of course, to be correspondingly garnished. It has not been, however, until now, at the last moment, that the trees which formed so great an obstacle, and so complete an eyesore to the symmetry of the Building, have been got rid of. They were allowed to remain, our readers will recollect, at the outset, in consequence of the idea being generally entertained that the Crystal Palace would not be a permanent structure; but that, the Exhibition over, and the excitement burned out, it would vanish like the "exhalation of a vapour." This notion, however, soon weakened and died away. The more the merits of the Building were perceived—the more its singular and unwonted features were understood—the more its artistic symmetry and mathematical proportion and fitness were appreciated, the more rapidly the notion grew, that common sense would revolt at the idea of pulling down a structure showing such beauty and such skill, and affording such notable proof that at length the world was about to make a step in architecture. The trees then were universally felt and admitted to be nuisances. They cumbered not only the ground, but the space above the ground. Their intrusion was as impertinent as it was ungraceful, and loud was the cry raised for the application of axe and saw. We take our time, however—doing nothing quickly (unless it was to build the Crystal Palace)—and weeks and months elapsed, and the old elms stood firm amid their unwonted engirdling, very much surprised, as we may presume, at the scene of bustle and confusion around them, until at length the long-called-for mandate went forth, the woodman was instructed "not to spare that tree," and crash went the axe to the roots.

Saturday, the 19th, is announced as the last day upon which goods for exhibition will be allowed to remain unpacked. If the owners do not attend at or before that time to unwrap their contributions, the Commission and its agents will relieve them of the trouble, and proceed to take the task upon themselves. The last day for the reception of goods is past, and the illustration appended gives some idea of what a busy day it was. Along Piccadilly the procession of waggons clashed unwearedly on from morn till eve, disappearing in the all-absorbing jaws of the Labour Palace, where *employés* by the score, and porters and assistants by the hundred, hospitably received the never-ending consignments, and welcomed them to their place of destination. All fear of a postponement or of a premature rising of the curtain is now over. The 1st of May will be the day. The glories of a State procession, the arrangements for which will, no doubt, be of the most elaborate description, will inaugurate the festival. Her Majesty, attended by all the great officers of State, and girt with all the trappings and insignia of Royalty, will proceed personally to fling open the doors of the most marvellous Palace upon earth; and the bravery of the show will, no doubt, correspond with the grandeur and significance of the occasion.

THE GREAT EXHIBITION BUILDING.—CUTTING DOWN TREES IN THE NORTH TRANSEPT.

The transept is now rapidly filling with its magnificent decorations: sculptured stone and bronze; machines, so beautiful in their workmanship and so perfect in their finish, as almost to take rank among works of art; fountains and models; elaborate triumphs of carving and device. With such productions as these—semi-artistic, semi-industrial—the grand central corridor of the Palace will be appropriately set off. Meantime, the unpacking and arranging of the more subsidiary and individually less striking goods, the drawing up in battle array of what we may call the "rank and file" of the Exhibition, proceeds most prosperously. Russia, we believe, is a little behind hand, in consequence of the frost blockade still continuing round her coasts, but allowances will, we trust, be made for such exceptional cases. The show from America will, we hear, principally consist of agricultural implements and raw material. The fact is characteristic and significant of an empire the greatest proportion of which itself has yet hardly emerged from the condition of raw material. The American exhibitors have, until lately, been backward, but, now that they have got rid of their differences and fairly buckled to work, a notable specimen of the national quality of go-aheadism may reasonably be looked for.

In the Crystal Palace at Hyde Park, then, the Easter visitors will see the last wonder of the world. The expression is often used with sufficient carelessness and vagueness. But, certainly, if we recollect that the largest building forming one compact and symmetrical whole upon the earth, has been constructed of a material, hitherto upon a grand scale at all events absolutely untried, and in a space of time which is often exceeded by that required for the erection of a paltry group of common-place broken cottages—the enregistration of the Crystal Palace in the respectable old bead-roll of marvels in question appears to be anything but unreasonable or inappropriate. Mr. Disraeli, in one of his novels, when alluding to our architecture—if, indeed, we are impudent enough to describe as

THE GREAT EXHIBITION.—LAST DAY OF RECEIVING GOODS

architecture the feats of bricklaying and stone-cutting which we occasionally achieve—discusses the question, what hope there is for architectural progress. "Fear," he concludes, "fear has its inspiration as well as genius. None of our Admirals lost a battle after the death of Byng Why not apply the principle? why not hang an architect?" But no architect has been hung; and here we have made a grand forward step; achieved, with perfectly new materials, and in a perfectly new style, a building, the like of which, an especially rare thing now-a-days, has never before stood upon the earth!

THE Queen repeats her pleasant visits to the Great Industrial Palace, in Hyde Park, evidently with increasing satisfaction; and her subjects sympathise with this courteous encouragement of the great and active mass of the community by the loyal and hearty manifestations of respect with which they greet her on these occasions.

His Royal Highness Prince Albert presided at a full meeting of the Commissioners on the 15th, and it was then officially announced that her Majesty would go in state to open the Exhibition, on the 1st of May. It is believed that the Lord Chamberlain will direct the proper formalities, and that invitations will be issued from his office. This visit of her Majesty is a worthy, impartial and crowning act of grace: for, as Lord Carlisle eloquently said, "from the Throne of England downwards there is not a single class, order, or industry, and one whose life itself is not promoted, embellished, and sustained by the sweat of the brow, the strength of sinew, the skill of hand, and the resources of the brain, which go to constitute the wonder-working industry of Britain." The notice issued on the subject by the Commissioners has for its principal paragraph the following remarkable regulation: "Her Majesty having been pleased to signify her intention of visiting the Exhibition on the occasion of its opening, on the 1st of May, the doors of the Building *will not be opened to the public on that day but will be closed*, at which hour the holders of season tickets will be admitted." Subsequently the doors are to be opened at ten o'clock and close at six o'clock, except on Saturday, when the doors will not be opened until twelve o'clock. The Commissioners happily add, that, should they find any modifications of their notice necessary, they will specially signify their intention As to the prices, our readers will have been thoroughly made acquainted with them some time back.

We sincerely trust that the resumption of exclusively season ticket days, and keeping her Majesty, as it were, in official privacy, to our minds evidently proposed after the *precedent* (not at all analogous to the present occasion) of semi-state visits to the Royal Academy, &c., and similarly suggested and adopted by the Cabinet rather than the Royal Commission, will not be persevered in We can add nothing to the high-spirited and magnanimous remarks of the *Times*. We can only quote their language with cordial reciprocity of the *real* patriotism and loyalty which dictates them; impressing, however, the strong point on our readers, that the deprival of half the opening-day to the season ticket holders would be a personal affront to those purchasers of season tickets who had wished, by their presence, to mark their sense of her Majesty's consideration in opening the great festival:—"Queen Victoria receives every day the strongest evidence of the loyalty and affection of her subjects, without attempting to banish them from her presence upon an interesting and solemn occasion. As far as regards any isolated attempt at violence which might occur to the forcible ingestion of French or German Socialist, surely it is not necessary that a person with such intention should gain access to the body of the Building in order to carry out his purpose. Her Majesty would not be otherwise in danger inthe Crystal Palace on the 1st of May than she was yesterday, or will be to-morrow, whilst she drives out for an airing in the public streets. Is it seriously part would these nervous advisers cause the Queen of England to play! Surely Queen Victoria is not Tiberius or Louis XI., that she should be smuggled out of a great glass carriage into a great glass building, under the cover of the truncheons of the police and the broadswords of the Life Guards! Where most Englishmen are gathered together, there the Queen of England is most secure!

"Let a reasonable number of season ticket holders be admitted on the 1st of May, but let every one else be excluded. Let the Commissioners [illegible] Queen of all enjoyment in the spectacle by banishing her subjects from the But ding? What satisfaction can it afford her Majesty to be introduced into a monster upholstery warehouse, or entire-ironmongers, attended only by a few gold sticks and silver sticks? One thinks involuntarily of Wordsworth's famous description of

> A party in a parlour,
> All silent, and all damned!

But what is the silence of a parlour to the silence of the Great Exhibition, when not a sound, save perhaps a faint murmur of discontent, shall be heard from the thousands of excluded ticket-holders who are flattening their noses against the outside watscoting or canes? What does the number of 6000 or 7000 persons signify within the area of this vast building? They would scarcely be noticed, even by her Majesty a hearty cheer worthy of the Crystal Palace and the occasion. We trust most sincerely, on a l accounts, that her Majesty's advisers will consider this resolution. Better, far better would it be, to forego any public ceremonial whatsoever, than to carry it out in a form so offensive to the feelings of every Englishman. This is to turn Queen Victoria into a puppet, to mock her. The Building and immediately sold. It is hoped that during the Easter holidays workmen will attend to prepare for whatever may remain to be done.

It would be invidious to comment upon the advance to be observed on our side of the Building. The space apportioned to the Colonial contributions seems most backward. In the carriage department, for the making of which we have such immense locomotive from the London and North-Western was safely deposited on the 17th, being drawn up to the Building by no less than twenty-two horses); in the agricultural collection, comprising ploughs, reaping machines, mowing machines, threshing machines, grinding mills, straw cutters, &c., in the sections for decorative manufactures, for hardware, cutlery, philosophical instruments, naval architecture, musical instruments, drapery, silk-mercery, and general manufacturers' displays, the progress is simultaneously astonishing The Mediæval Court is thoroughly supplied, and there is a marked activity in the fine arts department: the trophies and wonders which occupy the nave are as forward as they need be in time for the opening.

In the Foreign half of the Building contributions still continue to arrive. Up to the 17th, the number of packages received amounted to 9850. Heavy machinery from Belgium and from France have been received since our last notice. Upwards of fifty waggon loads of French productions are reported to be waiting at Dunkirk for shipment. Several of the more valuable and costly goods from Russia will not arrive in time, from the navigation being closed. Great activity and alertness has been shewn during the week in fitting the stalls of France, the Zollverein, and Austria. the counters, &c., have a very light, fragile, and elegant appearance, contrasting with the solid mahogany built cases principally used on the British side. Specimens of the art of lace-making, from Valenciennes appear in a very interesting co lection. Carved works and mosaics from Rome have also been unpacked; and the splendid suite of rooms furnished by the Viceroy decorator are nearly perfected, the work having been dragged on in the midst of the articles being deposited. The Piedmont contributions have been all examined, the Sardinian Minister being perfectly ready for the inspection: raw materials, chemical productions, velvets, silken tissues, furniture, bronzes, &c., are mingled with fine wood carvings, and bronzes are noticeable. There is an extensive display of articles of German hardware. The great organ in the nave is nearly eased in. Various pieces of statuary have been placed, both in the nave and in the transept. Indeed, we think that, with few exceptions, the repeated promises from foreign commissioners, to keep their time for the opening day, will be realised. The contributions from Tunis are very select: silk dresses and rich Moorish costumes, including sirtups, stilettos, knives, &c.; gold and silver ornaments of the Bedouin Arabs; horse-furniture, Moorish cloaks, tents, and carpets, are in course of arrangement.

The whole of the jurors for the different classes of articles were elected on the 15th; their names will shortly be published. They comprise the most eminent men in science, machinery, manufactures, &c. In the course of the week suites of ladies will also be appointed to discriminate the merits of the branches of industry within their sphere, such as fancy and industrial needlework, lace, &c.

The specimens of sculpture which we perceive have been selected to adorn the transept are headed at the entrance by an Ippenrinnel bust upon her Majesty's equestrian exercise, in the shape of a young girl seated on an ill-formed horse; otherwise, several of the figures collected there will not shame us in the eyes of our foreign visitors. Baily's pirates occupy a good position, and Gibson's barberine elms, Osler's fountain, and the floral decorations, will agreeably catch the eye of the entering visitor.

The *Journal des Constantinople* states, on the 22d ult., "the Sultan went to the hotel of the Minister of Commerce, to inspect all the articles which were to be forwarded to the Great Exhibition in London. His highness commenced his examination by that of the cotton goods of Tchiaout, which have already made the rick silks spun by steam, brought from the Lebanon, as well as those from the manufactories of Brousse. He then proceeded to the Grand Council Chamber, where the richest productions of the empire were also sent. He was particularly struck with the magnificent carpets, the silks, the embroidered dresses, particularly a superb velvet cloak, embroidered in gold, the picturesque costumes of Albania, &c. The Sultan next proceeded with the greatest care the varied collection of natural productions, particularly the minerals. The Sultana Validé has also announced her intention to inspect the different articles, after which they will be immediately packed up and despatched to London by a Government steamer, which was in readiness to receive them.'

At the reception by his Royal Highness Prince Albert, on the 14th, of the Foreign Commissioners, M. Sa-androuze de la Mornaix was deputed to express the sentiments of the Governments severa ly there represented. In his energetic expression of their respect, the Commissary told the Prince, that, thanks to the influence of her Majesty and his Royal Highness, "the era of barbarous warfare might be considered as terminated; but new lists for combat were offered to the world, in the struggle of progress and civilisation, to overthrow, by their overwhelming moral force, the remains of former antipathies and prejudices". His Royal Highn s acknowledged, with his usual good taste, this spontaneous compliment from the Foreign Commissioners, and addressed a few remarks to each upon the nature of the contributions of their respective countries

There is a Madrid company for conveying visitors to and from London to the Great Exhibition; they will be allowed to stay in Paris: the time to be occupied is 33 days, and the first-class expenses will be 1950 francs. The directors of the line between Berlin and Cologne will start express trains, so that the journey from Berlin to London will occupy 34 hours. Besides various arrangements amongst the continental steam-boat companies, we find that extra boats are to be placed on the Indian station, by the Peninsular and Oriental Steam-packet Company.

GENERAL HOLIDAY ON THE FIRST OF MAY.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—Have the goodness to launch the idea of a general holiday. Holiday or no holiday, there will be no business done, so the employers may as well come forward with a grace in good time.

I perceive that the Queen intends to open the Exhibition; and, should her Majesty's customary good fortune attend her with respect to the weather, thousands of her loyal subjects will wend their way westward from this hive of industry, with the instinct of bees in search of their queen

Sympathising with you in loyalty to the crown, honour to the constitution, and love to the people, I am,

City, 14th April. A BEE-MASTER.

IRELAND.

EMIGRATION.—The *Cork Constitution*, referring to the extensive emigration at present going on from that part of Ireland, says:—"All the roads leading this city (Cork) are crowded daily with emigrants, with car loads of luggage, boxes, bags of potatoes, &c., for America. Many of them are comfortably clad, others look very poor, but with scarce an exception they are a healthy-looked, and appear to be agricultural labourers, servants, &c. Saturday, there was an unusual rush of emigrants for Liverpool by steamers, thence to take shipping for America. It was computed that on that day no fewer than 1100 persons, male and female, left this port. This week there is a similar rush, as the emigrants are leaving by sailing vessels. The barque *Royal Captain* Jones, left Queenstown with emigrants for New York, and that vessel was followed by the *John Frances*, Captain Deaves, with emigrants for Quebec. Again, on Wednesday, the *Berlina*, Captain Carthaus, left for Quebec. Several other vessels are preparing to follow, and owing to the means for emigration each will have its regulated number. From Limerick we learn that 2311 persons have sailed as emigrants since the opening of this season. From Galway 1600 have sailed From Waterford the rush of emigration far exceeds anything ever witnessed there. From the port of New Ross, in the county of Waterford, upwards of 1000 persons have recently left for America.

ENNISKILLEN ELECTION.—Mr. Whiteside, Q.C., has been returned for Enniskillen, the numbers polled being—for Mr. Whiteside, 89; for Mr. Collum, 64; majority, 25. He has thus turned a minority of 17. The gross number of electors is stated to be 172, while 153 only recorded their votes. There was no essential difference between the candidates as to their political views, and the great point involved in the contest was the question of the support by the supporters of Mr. Collum to the system of nomination on the part of Lord Enniskillen

REPRESENTATION OF CORK CITY.—The *Cork Examiner* announces that resignation of Mr W. Paren with one of the representatives of that city. The same journal contains an address to the electors from Mr. Serjeant Murphy, offering himself as a candidate, in which he says—"Whatever opinions I (in common with others of your community) may have entertained as to the question of Protection, events have considerably modified them. I am of opinion that any attempts to re-enact it now might, in the manufacturing districts of England, lead to no one consequence; but, however, I do not shut my eyes to the fact that there are many heavy burdens which press on the agricultural interest of Ireland, and I will readily join in any plan that may be devised for affording substantial relief. I therefore will offer myself to the consideration of the Government of the 'Ecclesiastical Titles Assumption Bill.' I need not say that the bill shall have my most strenuous opposition." There is a rumour that Mr. B. W. Q.C., will be in the field on the Conservative interest.

It is said that during the Easter recess arrangements are intended which will procure the resignation of Mr. Curran, one of the Inselvent Commissioners in Ireland, and that the Attorney-General, Mr. Blackall, will succeed him. Mr. Hughes will thus be made Attorney-General, and either Mr. Serjeant Howley or Mr. Keogh will have the office of Solicitor-General

MEDICAL RELIEF.—It appears from the Parliamentary return printed on Wednesday, at the instance of Sir W Somerville, that the total number of dispensaries, fever hospitals, and infirmaries, for which county presentments were made in 1850, was 723 dispensaries, 48 fever hospitals, and 34 infirmaries The sums presented for dispensaries amounted to £34,324, for fever hospitals, £8574; and for infirmaries, £...

DESTRUCTION BY FIRE OF AN EAST INDIAMAN. AND LOSS OF LIFE

On Wednesday it was announced at Lloyd's that the *Buckinghamshire* Indiaman, a splendid ship of 2000 tons burden, was burnt, on her homeward voyage from Calcutta, a few days after she set sail, on Thursday, the 1st of March last. Her crew amounted to nearly 100 hands, 30 being Englishmen, and 70 Lascars. She had on board, as steerage passengers, about 70 of the 80th Regiment of Foot, with their families, and a detachment of the 10th Regiment of Foot, Lieutenant Sealy and Lieutenant Wilkinson, who had command of the invalids; Lieutenant Turner, Lieutenant Mason, Dr. Pratt, Dr. Payne, Mrs. Macgregor, Mrs. Murray and son, Mrs. Maxwell and six children, Mrs. Church and one child, a lady's name unknown, Mrs. Hall and child, Mrs. Macfarlane and child, Mr. W. Murray, Mr. John Glenfal, Mr. Rich, Mr. Casey, and Mr. Chambers. The passage from Calcutta down the Hoogley passed agreeably, and on the evening of the following Monday, the pilot was taken on board, and the ship was all ready to discharge the pilot, off Canterbury Point, about ten miles below Diamond harbour. The wind came, and most of the passengers and soldiers were on deck, singing, dancing, and otherwise amusing themselves. Shortly after they retired to rest, about ten o'clock, the vessel was discovered to be on fire in the forehold, and in a short time the flames extended over the whole vessel

A steamer quickly arrived to their aid, and thus the greater portion of the crew and passengers were saved; but some of the unfortunate, in the night, on the first alarm being given, threw themselves overboard, were drowned. The noble ship continued burning the whole night and two following nights and days before she grifted into deep water and sank. None of the passengers saved even a change of clothing. Many of the families were reduced by the calamity to an absolute state of destitution

It is as yet impossible to say how the ship caught fire. But by many it is supposed that she was wilfully set on fire by some of the Lascars, but no evidence has been adduced to confirm this report

The ship was valued, with her valuable cargo, consisting of East India produce. The total loss is calculated to exceed £120,000.

A MAGNIFICENT BRIDE CAKE has been shown during the week to the City of Belgium. Richard Dunter's establishment, in Motcombe-street, Belgrave-square, preparatory to its being exhibited in the Crystal Palace. The cake itself, exclusive of its elaborate ornaments of refined sugar, weighs 2 cwt. The base is square, and there are four compartments being filled with bas-reliefs, allegorical of the marriage of Cupid and Psyche, the intervening three being devoted for the initials and cyphers of the bride and bridegroom. The ornamentation of the principal figures is highly relieved. At the artist weddings, each containing an allegory of the career of the God of Love; and also shields for the emblazoned heraldic arms of the contracting couple, and the arms of their respective houses. The top of the cake remains at rest, has several concentric circular grooves or furrows; the upper stone is of the same diameter as the lower, and is made to revolve by water or other power. Minute streams of water are directed into the grooves, and the machinery is put in motion. The runner on the, little pieces rolls them over in all directions, and in about a quarter of an hour the whole of the rough fragments are reduced into nearly accurate spheres

REMARKABLE CONVICTS.—Hobart Town papers of December notice the arrival of Lieutenant Pate, under sentence of transportation for seven years for the assault upon her Majesty. It is said he displayed no symptoms of insanity during the passage. Smith O'Brien had arrived at Hobart Town from Port Arthur. He was cheered by his countrymen, and escorted by a deputation to the Freemasons' Hotel New Norfolk was to be his future residence. O'Doherty, another of the men transported for the attempted insurrection in Ireland, had received permission to reside in Hobart Town, where he would practise his profession (medical).

AMERICAN MONSTER BALLOON.—The *Boston Transcript* states that Mr. the American aëronaut, is engaged in constructing another monster balloon, to be about three times as large as the "Hercules," used last summer, with which he intends "to prove the certainty of his ability to cross the Atlantic and circumnavigate the globe."

SIR E. BULWER LYTTON ON PROTECTION.

Sir Edward Bulwer Lytton, whose fame as a man of letters is widely spread, after dwelling for some ten or twelve years in the peaceful ways of literature, has again stepped into the troubled arena of politics. In the united characters of a labourer and a landlord, both of which he has honourably filled, he has published a Protectionist pamphlet.* He writes now in the later character, and vindicates the opinions he expressed and the vote he gave "ten years before he was a landlord," and when "his income was chiefly derived from labour." He then recorded the opinion he now professes, viz. "the total repeal of the Corn-laws would ultimately prove injurious to society." It is his case, though he writes in behalf of the community, that Free-Trade is in him a personal injury. No one can say he is inconsistent, or will quarrel with motives thus honestly avowed; though it may be doubted whether his have not, in his absence from politics, subjected to profit by the events and varied experience of the last ten years, and whether his continued adhere nce to opinions which all the leading statesmen—Whigs and Tories, Melbourne and Russe l, Peel and Graham—long ago deserted, be anything more than consistency in error

His pamphlet opens with a humourous attack on the Whigs, John Bull's servants, who are "intelligent and honest," and "only want a comfortable situation —wages no object." It is remarked throughout by great perspicacity and great moderation; it has several political economists very hard, by merely contrasting their statements with one another and with facts; it justly blames the Legislature for having, by various acts, created in the hands of the ex-lords of the soil the idea that protection from the foreigner is necessary for their existence, and suddenly removing all on which it had taught them to rely. Sir Edward quotes several great authorities, and the practices of several states, in defence of protection; ridicules with some success the idea that a "fiscal regulation," as he calls free-trade, cannot be easily altered; and he advocates as congenial to public opinion, as necessary to equalize the burdens on land and other property, and as an act of justice to the landowners and farmers, a imposition of a fixed duty on corn. He makes out, it must be admitted, a very strong case against the Legislature, which pampered and deluded the agriculturists, and then cruelly struck from under them the crutches on which it had taught them to lean; but he is not equally successful in showing that it would be just, safe, and practicable to return to Protection. Sir Edward seems to suppose they are identical; but they are as different as a wrong committed on one case, and a wrong proposed to be committed on another. The hybridity caused, as Sir Edward shows, by rearing up the farmers to rely on Protection, cannot be corrected by the vigour by returning to that medicine. It may be readily admitted that the Legislature, under the influence of landlords, has inflicted a deadly injury on the farmers, without the conclusion being necessary that the injury will be remedied by restrictive legislation, that inflicts an injury on all the other classes.

The leading idea of the first letter is, that society now requires a conciliator, and Sir Edward offers his mode of conciliation; and he goes back to Protection and a fixed duty. When he was in Parliament, and Lord Melbourne in office, a fixed duty would have been a great concession on the part of the landlords, and would have been accepted as conciliatory. But since they undeniably relied it, and resisted every concession. In 1841 they obtained a Parliament after their own hearts; but, nevertheless, they were compelled to yield more than their opponents had demanded. To free trade in cattle, free trade in corn and free trade in shipping were added The country gentlemen "refused all terms" with the other classes, and have lived to repent it. They fought stubbornly against justice, and were defeated. Now to give them what they would not formerly conceded, would not be a concession to stop an aggression, but a yielding up of the fruits of victory to a defeated party. What all the aggressive parties would have accepted as a conciliatory concession when Sir Edward was in Parliament, would, now that they are victorious, be only an outrageous recommencement of a terminated contest. Sir Edward's assumed character and his recommendations are in contradiction to each other; and, instead of being a practical conciliator, he is a short-sighted partisan of an exploded and ruinous policy.

He overrates five-fold the number of persons injuriously affected by the repeal of the Corn-laws. He includes in them all the agricultural labourers; but, since the laws were repealed, the price of their bread has been lowered much more than their wages, and their enjoyment has increased rather than diminished. They were never better off, nor more contented, within our recollection, than at present. Their condition under the Corn-laws was as bad as possible. A fixed duty would not restore employment, nor increase the openings in towns for the employment of their children. Nor have to interest in the restoration of Protection; and the landlords and farmers who clamour for it are, in point of numbers, an insufficient portion of the community. In the imagination of Sir Edward the interest favourable to Protection assumes a portentous magnitude, from including the labourers, who are the greatest sufferers by it, and its bitterest opponents.

From the sufferings of landlords and farmers, Sir Edward concludes that the whole community is in a sad condition. He sees "divisions between classes, inroads and hostile feelings between neighbours," an "universal reaction of the everlasting multitude," and "social questions discussed that no factory bill has settled, and no repeal of the Corn-laws, after its first novelty is passed, can lull into rest." We see no such symptoms. We will not say that discontents, and especially those of the farmers, are not peculiar to our age. What can Sir Edward say to the reign of terror—to the wars of the Roses against classes—that prevailed in England, as in France, though not with equal violence, at the first Revolution? "the first Revolution" was of 16 and 1819, and 1830, when all the southern counties were in a blaze? He remembers, for he took a part in it, the agitation for Parliamentary reform; and, if he will consult the records of the sixty years, he will find as much fear, and, notwithstanding the present religious dispute, to which the Prime Minister gave all the encouragement in his power, as much discontent and as great contentment in the community, than have prevailed since the Parliament began, in 1842, to put an end to Protection. There is certainly some discontent between landowners and their tenants; but the former, in spite of the clamour, returned a number to Parliament for South Notts, and turned to do the same for other counties. This is very alarming to the landlords, but not to the mass of the community. It is only more than now exists in the Church, in Parliament, in the public journals, and amongst a few landlords and farmers. All that, too, which is much more noisy than dangerous, is quietly passing away to an end. Even Ireland is dismayed by poring over the "tenants" accounts, with which his table is covered." He writes, too, rather from memory than observation, and as he might have spoken in 1840. Since then he has been returned, and since have relied away, and of all their mighty progeny he takes no notice. He glories in having stood still, while every other man of mark, particularly those who had responsibility cast on them, have yielded to necessity and gone forward with the tide of civilisation.

Lord Langdale, the late Master of the Rolls, has, we regret to state, been attacked with paralysis, and is seriously unwell.

WHITE'S PATENT TUBE-TUG HARNESS.—By this improvement the horses can be taken up or let out without large buckles; this is done by slipping each trace into a tube, the security it by a brass tongue or plug, when, by working in a straight direction, it does not creak in the holes in the hardest contrary work. There are avoided the objections to the old-fashioned hame ring, which must necessarily be made three inches wide, and the thickness of the trace, the large buckle of which frequently rubs the horse's sides, and cuts the shafts. Specimens of this improvement will be shown in navel tactics

ROYAL HENLEY REGATTA.—This great rowing meeting, which has been recently honoured with the august patronage of his Royal Highness Prince Albert, has been appointed for the 17th and 18th of June, and bids fair, by the character and variety of the entertainments, to surpass many that have preceded it. The time has been happily chosen to suit the convenience of both University and London crews; there will be no doubt, will dispute their claim to aquatic superiority on Henley's beautiful reach of water. Added to this and the ordinary attractions of this *recherché* gathering, the Champion prizes, of one hundred sovereigns each, will be contended for by four-oared boats, formerly the great feature of the Thames regatta, will form a portion of the sport at the Henley meeting, and add considerably to its aquatic celebrity, and the entertainment of the visitors

COLOSSEUM.—The alterations necessary for producing the two grand panoramas of "London by Day," as a morning, and "Paris by Night," for the exciting exhibition, in connection with this establishment, which has been so much celebrated, will open on Easter Monday.

MODEL DEBATE.—The *Prince of Wales* yacht, belonging to the Greenwich Hospital Schools, is now lying at Woolwich, and will be ready in a week or ten days, when she will proceed to Spithead in the wakes of the queen, the large buckle of which frequently rubs the horse's sides, and cuts the shafts. Specimens of this improvement will be shown in naval tactics

The case of Miss Augusta Talbot, which has excited so much attention lately, is likely, we understand, to receive a very happy and legitimate solution. It is confidently expected that the Archbishop of Canterbury, on Tuesday next, will consult the records of the Lambeth Palace, and, if not duly registered, will grant a dispensation, which has been already intimated, will open on Easter Monday.

* "Letter to John [illegible] Esq., on Affairs connected with the Landed Property and the Agricultural Interest." By Sir Edward Bulwer Lytton. Chapman and Hall, Piccadilly.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Mr. John Cowan has been appointed her Majesty's Solicitor-General for Scotland, in the room of Mr. Moncrieff, promoted to the office of Lord Advocate.

The death of the Hon. Dudley Pelham has created a vacancy in the representation of Boston, and Mr. Alderman Wire is again renewing his efforts to win the suffrages of the electors. It is believed that, at present, there will be no opposition to Mr. Wire's return.

On Monday, Mr. Moncrieff, the new Lord Advocate for Scotland, was elected for the Leith district of boroughs. Mr. Moncrieff thus succeeds to the seat just vacated by his predecessor, Mr. Rutherford.

During the sitting of the Liverpool Sessions Court, on Friday week, a thief entered the robing room and carried off the coat, waistcoat, and £4 in cash of the Recorder.

A letter has been received by Mr. W. R. Collett, stating that circumstances will prevent him from appearing at the next election to solicit the suffrages of the electors of Lincoln

On Monday afternoon a fire broke out in an extensive cotton-shed, situated in Beaconsfield, near the Nelson Dock, Liverpool, known as Hughes' sheds. The flames soon gained a frightful ascendancy; and before any effective check could be put to their fury, little short of £5,000 worth of cotton had been destroyed.

Very extensive alterations are at present being effected in the petites galeries of the Louvre, at Paris. One of the most important improvements is that by which the Long Gallery is lighted from above—a measure which has been long called for, and by which the noble paintings which it contains will gain considerably

At Gibraltar, some ten days ago, an action took place between a Spanish guarda costa and an Eng ish smuggler. The cap.ain of the former was killed, and two of the crew of the latter were wounded. An angry dispute has arisen in consequence

It is said, "Great preparations are being made at the West-end of the metropolis to receive 3600 of the French National Guards, who are expected to arrive in this country from Paris on the meeting of the Queen's Parliament on the 31st of next month. Application has been made to the Horse Guards to permit the state band of the Royal Horse Guards to escort them into the metropolis from the Kew and Richmond railway station."

On Saturday, by order of the Commissioners of Woods and Forests, the carriage-drive opposite Cumberland-gate, Hyde-park, was widened fifty feet, and a new footpath through the plantations. A number of the trees, in consequence of this alteration, will be removed. The alteration has given an open area similar to that at Hyde-park-corner, and removes the obstruction to the view of the Wellington triumphal arch.

Captain Matthews, of the steam-ships *Great Western* and *City of Glasgow*, has accepted the future command of the screw steam-ship *Great Britain*. She will resume her career on the ocean, it is anticipated, in the month of September.

The Duke and Duchess d'Aumale, and their son, the Prince of Condé, arrived at Cologne on the 9th instant, and alighted at the Royal Hotel. On the following day they embarked on board a steamer for Mentz, from whence they were to proceed to Turin by Berne, Geneva, and Mont Cenis, and arrive at Naples at Easter week. The Prince de Joinville, who accompanied them to Belgium and up the Rhine, left them at Bonn to return to England *vid* Arnheim and Rotterdam. The Prince will not again quit Claremont until the return of his brother.

A gentleman of Devonshire has just accomplished an arduous task. He has visited every church and episcopal chapel in the county of Devon, to the number, including the Cathedral, of 350, and has taken notes of the architectural features of the structures of all the monuments, with every inscription, and of all the armorial bearings, with their multiplied quarterings. The result of this labours is comprised in five quarto volumes of manuscript, with an index to every name

The following are the returns of the number of Coroners' Inquests held in the principal towns in England in the year 1849, according to a Parliamentary paper printed at the instance of Mr. Sotheron:—Birmingham, 357; population in 1841, 182,698. Kingston-upon-Hull, 108; population, 67,093. Liverpool, 302; population, 319,683. Manchester, 200; population, 242,982. Nottingham, 86; population, 52,164. Plymouth, 55; population, 26,527. Shrewsbury, 34; population, 14,680. Westminster, 346; population, 207,761. York, 33; population, 29,435.

From the amount already collected towards a fund for a testimonial to the late lamented Liverpool magistrate, Mr Rushton, whose family are left in rather straitened circumstances, it is fully expected that the sum will shortly reach £10,000.

An evening paper states that the tenant farmers of Oxfordshire are bent upon returning one of their own body at the next election. They are taking steps to secure the election of Mr. Joseph Roberts, of Waterperry, near Oxford. It is purposed to do this by subscription. It is stated that there are three hundred farmers willing to subscribe £10 each towards the election of Mr. Roberts, who is a strong Protectionist, and a tenant of Mr. Henley, one of the present members for the county

The total quantity of guano imported from 1841 to 1850 inclusive was as follows.—1841, 2881 tons; 1842, 20,998; 1843, 3002; 1844, 104,251; 1845 283,300; 1846, 89 233; 1847, 82,359; 1848, 71,414; 1849, 83,433; 1850, 119 993. The greatest quantity was imported from Peru; the Western coast of Africa; but a small quantity was impor ed from Norway, Prussia, and Belgium.

A Parliamentary return relating to the collection of poor-rates in the manufacturing districts, shows that the amount evied to the poor-rates in Bristol, in 1850, was £72,000; in Ashton, £8241; Bolton, £4,308; Liverpool, £123,450; Manchester, £111,948; Oldham, £9141; Preston, £17,987; Rochdale, £11,3.9; Salford, £26,373; Leicester, £23,163; Birming.am, £52,150; and Leeds, £51,090.

The number of actions in ejectment brought in the Irish courts, in 1849, was 4712; in 1848, 4027; and in 1847, 3294: total, in the three years, 11,963. The judgments in ejectment, in the three years, amounted to 9677. The total number of proceedings in ejectment by way of civil bill, entered at quarter sessions in the three years, was 32,531.

The total amount which has been advanced by the Treasury for arterial drainage and land improvement in Ireland, under Mr. Labouchere's letter, is £199,870; viz. £67,603 2s. 2d. to Ulster, £67,345 12s. to Leinster, £46,642 9s. 11d to Munster, and £18,279 8s. 1d to Connaught. The loans are repayable in twenty instalments, the outstanding principal carrying interest at the rate of ½ per cent., the proprietors having the option of paying off the amount in one sum.

The total number of advertisements inserted in the 159 London newspapers in the year 1850 was 891,650; and the duty at 1s. 6d. each amounted to £66,873 15s. In the 229 English newspapers there were 879,631 advertisements inserted, which produced £59,072. In the 103 Irish newspapers there were 236,128 advertisements, yielding a duty, at 1s. each, of £11,806, and in 110 Scotch newspapers the advertisements numbered 249,141, and the duty amounted to £18,680 11s. 6d.

We read in the *Statuto* of Florence, of the 4th, that Monsignor Arrigoni, Archbishop of Lucca, who has always manifested a violent aversion to the laws of Leopold I., which impose certain restrictions on the liberty of the clergy, lately waited on the Grand Duke, in the costume of a Franciscan, and declared to his Imperial Highness that he would not resume his cronier unless the introduction of the Leopoldine laws was prohibited in the duchy of Lucca. The Grand Duke has yielded to his energetic remonstrances, and the said laws are to be the subject of a negotiation with Rome

The total number of newspaper stamps issued in the year 1850, in England and Wales, was, of penny stamps, 85,741,271; and of halfpenny, 11,084,423. In Ireland, 6,302,728 penny, and 43,856 halfpenny; in Scotland, 7,643,643 penny, and 341,264 halfpenny

The import of foreign grain, &c., into Liverpool, for the fortnight ending 9th April, 1851, was 89,792 bushels of wheat, 2375 bags ditto, 49,494 bushels of Indian corn, 35,504 barrels flour, 2424 sacks ditto, 137 casks cheese, 194 cases ditto, 366 boxes ditto.

Mr. William Barrey, of Abney House, Little Marlow, killed, on Saturday last, a pike, in the river Thames, fronting his residence, which weighed nearly 25 lb. It was a female fish, and rather out of season. Had it been taken a little earlier in the season, it must have weighed upwards of 40 lb. Mr. Barry, after three-quarters of an hour's sport in an ineffectual attempt to land it, was compelled to shoot it. The fish has been stuffed by Mr. Fisher, of Eton, and inspected by hundreds of the Waltonian fraternity

On Saturday the Commissioners of the Inland Revenue issued no fewer than thirty-seven informations against different licensed victuallers, charging them with having adulterated their ales and beer.

At a meeting of the Lincoln magistrates, on Thursday morning, Mr. Thomas Nangon, residing at Dorking, in Surrey, was fined £5 for an assault on the Dean of Lincoln

The London Model Yacht Club intend having their first match on Monday, the first instant, on the Serpentine, Hyde Park.

The Junior United Service and the Army and Navy Club intend following, it is stated, the example of the Senior United Service, in allowing foreign officers of distinction to become honorary members during the continuance of the Exhibition.

A man who had earned the title from the police of being a "first-rate swindler," was tried this week at the Manchester Sessions, and transported for ten years. The man has had an experience of penal settlements which falls to the lot of but few, this being his third sentence of transportation. When taken by the police, he and two companions were starting on a new expedition, having a carpet-bag containing 27 skeleton keys, very ingeniously constructed, and other implements suggestive of the business on which they were intent. Silk handkerchiefs, value £3, were also found in the bag, which he had stolen. He had but recently returned from transportation

In consequence of the great number of letters directed to the crews of vessels on the sea-coast never reaching the proper parties, orders have been issued from the General Post-Office, that up such letters, for the future, shall be left at the residence of consular and shipping agents, unless they are specially addressed to those places; and that letters for ships' crews shall only be delivered to their respective captains or commanders, or to persons authorised by them.

CHESS.

TO CORRESPONDENTS.

W G—The proper course is to send the solutions to the authors themselves. You may readily suppose we have quite enough to do at this moment without being subject to unnecessary trouble

HEPPO—1. You may obtain a small treatise on "Double Chess" from Leuchars, of Piccadilly. 2. For the Chess Magazine, apply to Skeet, 32, King William-street, Charing Cross

ARDENT. A new edition of Mr Staunton's Chess celebrated "Handbook" has just made its appearance, we are informed, in 8vo

JUDY—Always most welcome. "La Favorite" shall have an early place

CLERICUS—They are not forgotten. The enigma referred to is being re-examined

W H D—White, we think, was justified in law, if not by courtesy, in taking the Pawn or Piece

SIMPLE SIMON—Your solution of July's beautiful Enigma 670 is the true one

CAPE TOWN—In Enigma 670, try 1. B to K 8th. The other we have not got at hand

PAX—Next week, if possible

R B W, Oxford—Look again at your Enigma, No 673

DERBYON—With such a multiplicity of correspondents, we cannot ensure receiving a given letter in due time. Your few communications only reached us this week

LETTER LETTERGOLDING—A smart little game

CIVIS, AMATEUR—Send us your name to the committee, without fail, *on or before the* 26th. Nothing of form is necessary. Mr Hampe puts his name down to the Managing Committee of the Chess Tournament, and being desirous to compete for the Generals (Provincial) Prizes requests that his name may be inserted in the list of combatants, will be quite sufficient

ARGALUS, M. D, Nap. 8th would be premature to publish a list of the competitors until after the 30th instant, by far receiving names. We are happy in being enabled to state that among the latest accessions are Major Jaenisch from St Petersburgh, and Messrs Anderssen and Meyet, from Berlin, who have signified their intention to take part in the joustes

E. S. Kennedy. Received, with thanks That with You our Golfic makes us desire more from the same quarter

P, of Streatham & Lewes—In Enigma 671, the first move is—R takes R (ch) The other shall be re-examined

VIDA—Try 1 d to K 8th for the first move

J C W—High Praise, indeed. It shall have an early place

S K, Reading—JUVENIS and W G, Waterbury—Now under consideration.

VOX O, Ber in; Major J, St Petersburgh; K——y, Paris—The names have been duly handed to the Committee

L N D—A list of the Subscribers shall be given the moment we can spare room for it. In the mean time, we are honoured by the assistance of the following solvers in details; but I cannot lose so much time in returning them the proofs. Robert Longbottom, Esq, 9, Cavendish-square

J C, Paris We can assure you that Mr Kieseritzky's meritorious exertions to promote the Congress are fully appreciated by all true friends to Chess in this country. An acknowledgment has been forwarded by post

NEOQUITE—Set the matter down to the Pool-game, just published, by Horwitz and Kling. No chess-play rules the winner

SOLUTIONS OF PROBLEM No 674 to W H D, Jack of Worcester, Warrington, Cubitt-son, R M of Greenwich Dorcas, Miss Edmund Stuttgard, F L S, M D, Sutters, Merlin, Finder, C T D, H T S, Argo, Pax, Pax Vobiscum, D D Rees S, T U, are correct

SOLUTIONS OF PROBLEM No 677, by S D D, Graham's Town, Pride-Chase, M P, L M, Miles, Sigma, M, How H A B, de Tavoy, Finder, Cape Town, are correct

SOLUTIONS OF ENIGMA by Jack of Worcester, Cubitteson, Cape Town, P of Grahams's Town, Vida, Dorcas, Miss Edmunds, Argo, E S, Mr Field, R S, of Ashford St Edmund, Judy, J W, Sigma, Miss Anderson

* * We are requested to acknowledge the receipt of £5 from E A M M, of India, as a contribution towards the Tournament fund

Problems suiting to compete for the prizes in the forthcoming Tournament, must bear to mind, that the 30th of June inst. is the last day on which the names of competitors can be received by the Managing Committee

SOLUTION OF PROBLEM No. 676.

WHITE.	BLACK.
1. Kt to K 4th (ch)	K moves
2. B checks (granted by Kt or Pawn)	K moves
3. R takes P	If Black "Queen"

his Pawn, White draws by perpetual Check, or is Stalemated. If he make any other Move, White will have the better game. It is, therefore, Black's interest to consent to "Draw."

PROBLEM No. 678.

By Mr. Horner.

BLACK.

WHITE.

White to move, and checkmate in five moves.

CHESS IN THE PROVINCES.

The following instructive game is one of a match recently won by Mr. Horwitz, of Mr. Hodges, the Hon Secretary of the Reading and Berkshire Chess Club. Mr Horwitz giving the odds of the "Pawn and two moves."

(Remove Black's K B's Pawn from the board.)

WHITE (Mr. Hodges).	BLACK (Mr. Horwitz).	WHITE (Mr. Hodges).	BLACK (Mr Horwitz).
1. P to K 4th	P to K 4th	20. R to K sq (ch)	K to Q sq
2. P to Q 4th	P to Q 4th	21. R to Q 4th	Q to her 3d
3. B to Q 3d	Q to K 3d	22. B takes Kt	Q takes B
4. P to K 5th	Kt to Q B 3d	23. Q to her B 2d	P to Q B 3d
5. P to Q B 3d	P to Q 3d	24. Q K t to Q 2d	B to Q Kt 7th
6. P to K B 4th	Kt to K R 3d	25. K t to Q B 3d	R to Q R 8th
7. P to K B 3d	Q to Q 2d	26. P to K B 5th	R takes R
8. P to Q Kt 4th	P to Q R 3d	27. Kt to Q R 3d	R to K sq
9. P to Q R 4th	P to K Kt 3d	28. P to K R 3d	Q to Q B 6th
10. Castles	Kt to K sq	29. Q to Q R 2d	R to Q Kt 7th
11. P to Q 5th	K P takes Q P	30. P takes P	B takes Q B P
12. P to Q Kt 5th	Q K P takes P	31. B to Q B 3d (c)	Q takes B
13. K P takes P	Q takes P	32. Q to her B 5th (ch)	K to B sq
14. B to Q R 3d	P to Q Kt 6th (a)	33. Kt to Q B 5th	Q to Q B 5th (ch)
15. P takes P	B takes Q B	34. K to R 2d	Q takes P (ch)
16. P to Q Kt 5th	Kt to Q R 5th	35. K to R sq	Q to Q B 8th (ch)
17. Q to K sq (ch)	Q to K 2d	36. K to R 2d	Q to her R 8th
18. Q to her 2d	Q to her B 4th (ch)	37. Q to her 1	B to K 4th (ch)
19. K to R sq	Q R takes P (b)	38. P to K R 4th	Q to Q Kt 7th

White resigned.

(a) The position is highly critical and interesting

(b) All the portion of the game is well played by Black.

(c) is the vain hope of drawing by perpetual check

CHESS ENIGMAS.

Black K at Q 4th.

White to play, and mate in four moves

LONGEVITY.—(From a Correspondent.)—Died, at Stagshawbank, near Hexham, on the 31st ult (the day on which the census was taken), Mrs. Jane Hardman, aged one hundred and six years. She was born at Bewshaugh, above Falstone, Northumberland. Her maiden name was Hedson. The writer saw her in February last, when she repeated to him the 23d Psalm in the Scottish version throughout, and several lengthy portions of Scripture. She looked quite as old as she said, and could not be much less, as she had a widowed daughter in the house with her in her eighty-fourth year, a hale and active woman. Mrs. Hardman's portrait was taken very recently, and hangs in Stagshaw-close-house. The subject of George II. was born at Candlemas, in the '45

THE NEW CLIPPER SHIP "CHRYSOLITE."—On Sunday this beautiful vessel arrived in the Mersey from Aberdeen, where she was built. She is intended for the China trade, and though of comparatively small tonnage, measuring only 440 n.m., she forms a splendid contrast with the American-built ship the *Typhoon*, lately arrived in Liverpool. On her arrival opposite the landing-stage the *Chrysolite* dropped anchor, and attracted the admiration of crowds of spectators, by the beauty of her form and her buoyant and man-of-war-like appearance. She is ship-rigged, her tall and tapering spars slightly raking aft, and is altogether a superior specimen of the skill of the Aberdeen ship-builders.

NAVAL AND MILITARY INTELLIGENCE.

ASSAULT OF ARMS.—A very distinguished company assembled on Monday in the Riding-school of the Regent's-park barracks, for the purpose of witnessing an assault of arms by the non-commissioned officers of the Life Guards. The display included the usual sword exercise and sabre feats, in addition to which the picked men of both regiments engaged in a variety of single combats, in which marvellous skill and dexterity were exhibited. The spirit with which the mimic warfare was carried on excited much applause on the part of the spectators, among whom were a great many leading members of the aristocracy. Colonel Hall, M P., the commanding officer of the first Life Guards, by whose permission the "assault" took place, was warmly congratulated, at its conclusion, on the extraordinary proficiency of the men belonging to his regiment.

LADY FRANKLIN is again fitting out, at Aberdeen, an expedition in search of her lost husband and his Arctic followers

PROPOSED REDUCTION OF THE MEDITERRANEAN FLEET.—It is in contemplation to reduce the naval forces in the Mediterranean from five to four sail of the line. Her Majesty's ship *Caledonia*, 120, is ordered to England to be paid off.

THE SENIOR UNITED SERVICE CLUB AND OUR FOREIGN VISITORS. The members of the Senior United Service Club have decided that all field officers, captains, and commanders, in the service of America or other foreign states, who may come to England on duty, or properly accredited to their own Minister or Ambassador, shall be admitted honorary members of the club, and entitled to all its privileges during their stay in England.

A new description of fuel for steam purposes, called consolidated coke, has been introduced to the Admiralty, the owners claiming for it superior properties for generating steam, and maintaining the necessary heat with less destruction to fire-bars, &c. The Admiralty have entertained the application of the projectors, and have ordered the authorities at Woolwich to report upon the qualities and applicability of the fuel.

THE ADJUTANT-GENERAL.—By the appointment of Major General Brown to the colonelcy of the 77th Regiment, a saving of £500 per annum has accrued to the public, being a personal allowance which was to cease on General Brown obtaining a regiment: a pension of 700 per diem is also extinguished.

AUGMENTATION OF TROOPS IN THE VICINITY OF THE METROPOLIS. —The strength of the cavalry force in the neighbourhood of London will soon be increased to three, viz. The 4th Queen's Own Light Dragoons, and the 17th Lancers are about to embark for England; the former will be stationed at Woolwich, the la ter at Windsor. The Horse Artillery will be moved nearer the metropolis during the Great Exhibition," but it is not known where they will be quartered. Further changes are in contemplation.

DRESS OF THE ARMY.—Great alterations will shortly take place in the dress of the army. It is in contemplation to supersede the scarlet shell jacket of the infantry by a frock coat of the same colour, and the "bobtail" coats of the heavy cavalry by a full-skirted one. An order has been received to supersede the red stripes of the undress of the dragoon guards and heavy dragoons by yellow ones; except in the case of the carabineers, who are to wear white.

PRIZE MONEY.—Tuesday night's *Gazette* gave notice to the late officers and crew of her Majesty's steam-vessel *Ardent*, the Hon. George Fowler Hastings, Captain, that an account of bounties, &c., received for the undermentioned captures, will be forthwith deposited in the Registry of the High Court of Admiralty; viz. *Rum Successo*, captured 25th December, 1848; *Esperanza*, captured 10th May, 1849

SIR W. PASSELIN.—A return to Parliament was printed on Tuesday, showing that on the 1st of January last there were registered 259 steam-vessels in the United Kingdom, about one-half of which are built of iron.

Major-General Henry Godwin, C.B., has been appointed to the staff of the army serving in the presidency of Bengal, vice Major-General Sir D. St. Leger Hill, K.C.B., deceased.

Brevet-Colonel William Turner has been placed upon the list of Lieutenant-Colonels receiving a special allowance of £100 a year, vice Colonel Falla, deceased.

THE GOVERNOR OF HONG-KONG.—The installation of Governor Bonham as Knight Commander of the most Hon Order of the Bath took place at the Government Office, Feb. 22, with all the usual ceremony. Major-General Staveley, under a warrant from Prince Albert, the head of the order, invested Sir George with the insignia.

THE BENGAL COMMAND.—Major-Gen. Godwin, C.B., is to succeed the late Major-General Sir Dudley Hill as one of the two general officers in command of the Queen's troops in the Bengal Presidency. The other general officer in command there is Major-Gen. Sir Joseph Thackwell, G C B.

PARLIAMENTARY PORTRAITS.

RICHARD BETHELL, ESQ., Q.C., M.P FOR THE BOROUGH AND HUNDRED OF AYLESBURY.

THE honourable member, eldest son of Dr. Bethel, of Bristol, by Jane, daughter of John Baverstock, Esq., of Bradford, Wilts, was born at Bradford, June 30, 1800, and, at eight years of age, was sent to the Grammar-school at Bristol, but was chiefly indebted for the exceptional rate of his education to the care and anxious superintendence of his father, under whose instruction he had learned to write by the time he was four-and-a-half years of age. At thirteen, he left school; and, after a year of preparation under his father, entered Wadham College, Oxford, at the age of fourteen. After some difficulty, on the score of his youth, he was permitted immediately to reside; and on his fifteenth birthday (as appears from the college books) was elected a scholar—a distinction, the pecuniary advantages of which enabled him to complete his education at the University, where he took his degree of B.A. in the May of 1818, before attaining eighteen years of age; and obtained a first class in classics, and a second in mathematics

In 1820 he was elected Vinerian Fellow, and in the following year Fellow of his College. In 1822 he came to London, and began his studies for the profession, having previously entered as a student at the Middle Temple, at which he was called to the Bar in 1824, and practised as a conveyancer and equity draughtsman in the Court of Chancery. One of the earliest cases, and a very important one, in which Mr Bethel was engaged, was the famous one, in 1827, of the Attorney-General *v.* Brasenose College, the entire conduct of which was placed in his hands through the present Bishop of Chichester, at that time principal of Brasenose, and who had been Examiner at the University when Mr. Bethel passed for his degree. The case involved the most important rights of Brasenose, and of all the Colleges in Oxford founded anterior to the Revolution; and it was generally considered at the Bar that Mr. Bethel's able preparation and lucid argument of the case, which resulted in a decision in favour of the College, led to his subsequent rapid professional success in the Court of Chancery, to which his practice was entirely confined. In January, 1840, Lord Cottenham conferred upon him the honour of a silk gown. He was immediately elected a Bencher of the Temple; and in that capacity strenuously exerted himself for the establishment of a sound system of legal education; and to his suggestions are due all that has of late been done by the Inns of Court in that direction

In 1846, upon the death of Sir Charles Wetherell, Mr Bethel was appointed counsel to the University of Oxford. At the general election in 1847 he contested Shaftesbury, and was defeated by a small majority; and, on the recent decision by the committee in the Aylesbury case, he was enabled, at the suggestion, we believe, of his friend Mr. Gurney, to become a candidate; and, after a sharp contest with Mr. Ferrand, was returned by a majority of 26, the numbers being—Bethel, 566; Ferrand, 540.

Mr Bethel's speech at the nomination, in defence of the principles of Free Trade, and advocating protection to the farmers, not by the now impossible plan of imposing a duty on food, but by relief from the burdens under which the land groaned, gained upon his hearers until their attention was completely riveted, and he carried the entire assemblage with him, so as to calm even his excited opponents, and win the show of hands in the proportion of eight to one.

The honourable member affords a remarkable instance of the advantage of early university education and entrance upon professional studies. At the time when most men are leaving school he had taken his degree, and was a rising man at the Bar at the usual age for leaving the University. At the Bar, Mr. Bethel is unsurpassed in knowledge of equity law, and brilliant clearness of arrangement in the statement of facts and argument of cases.

He could not have chosen a more fitting time for entering the House of Commons. He is known to entertain views in favour of an extended system of education at the Universities, and his practical knowledge will serve to ensure measures of real Chancery reform.

The hon. member married, in 1829, Elinor Mary, daughter of Robert Abraham, Esq, of London, and has by her a numerous family of sons and daughters.

Our Portrait is from a photograph by Kilburn.

ERRATUM.—In our last week's Number, p. 300, line 6 from the top (Memoir of J. Ball, Esq.), it is stated, "A petition was threatened, but has not been presented." It should be "A petition against the return has been presented, but has been decided in favour of the sitting member."

It is understood that the directors of the London and North-Western Railway Company decided, on saturday, at a meeting of the board, to reject the overtures made by Mr. Ricardo, as chairman of the Electric Telegraph Company, to secure a monopoly of that line for the wires of the company over which he presides.

MR. R. BETHELL, Q.C., M.P. FOR AYLESBURY.—FROM A PHOTOGRAPH BY KILBURN.—(SEE PRECEDING PAGE.)

UNIVERSITY OF DUBLIN.

PERFORMANCE OF ACTS FOR DEGREES IN MUSIC.

THE theatre of the Irish University presented, a few days ago, a scene of unusual interest. The Board of Trinity College having resolved, at the request of the University Choral Society, to confer the degrees of Bachelor and Doctor in Music on Mr. Robert Prescott Stewart, conductor to the society, and organist of Trinity College Chapel, and of the Cathedral of Christ Church, Wednesday, the 9th instant, was appointed as the day on which that gentleman was to publicly perform the Acts required for the Degrees. The University Choral Society was established in the year 1837, for the cultivation of vocal music in Trinity College, and for nearly five years Mr. Stewart has filled the office of conductor in the most efficient and satisfactory manner. During this period, also, at a concert promoted by that society for the relief of the poor of the city, he conducted a board and chorus of 200 performers, chiefly members of the different musical societies of Dublin. As a token of the gratitude felt by the Choral Society for the services Mr. Stewart had rendered them, and of their admiration for the genius he had displayed, the society memorialised the board to confer the above degrees on their conductor, with a remission of the University fees, all other expenses being defrayed by the Choral Society. The members also determined to assist in the performance of the exercise which Mr. Stewart had composed for the occasion. Many of the leading artists of Dublin at the same time volunteered their services, and preparations were accordingly made for performing the acts in a manner and style which had never been attempted before. Mr. Stewart is indeed well entitled to every honour or distinction of the kind. Brought up in the school of the ancient Cathedral of Christ Church, in which the celebrated Stevenson had also received his education, from an early period of his life he evinced most decided ability. His celebrity as an organist is not confined to the sister kingdom, and his compositions bid fair to give him a high position among the musical writers of the day. In the year 1846 he produced a full Cathedral service, written in the strict and severe style of the 16th and 17th centuries; and another, in the florid style of a later period, which, in the words of the *University Magazine* for this month, "has placed Mr. Stewart in a position second to none of his contemporaries," was last week performed as the act for his Bachelor's degree. In 1848 a glee of his composition obtained the St. Germans prize; and his part-songs, which gained the two Novello prizes in January and February last, were adjudged to him from among a host of competitors of different nations. But it is on the exercise for the Doctor's degree that his fame for the present may rest. It is an elaborate realisation of that splendid subject, the 107th Psalm. The words are a *scena spirituale*, and afforded full scope for the effect which Mr. Stewart has produced. It opens with a double chorus in C, in eight real parts (as required for the doctorate), *andante maestoso* set to the first verse; and at the second verse it breaks into a fugue of a joyous description. This is followed through some verses by a soprano solo. At the words, "He led them forth," written in A minor allegro, the principal theme is bold, expressing confidence, while the bass marches forward majestically. At the words, "He brought them out of darkness," the instrumentation is admirably wrought, vividly suiting the sound to the sense. This leads to the charming passage in F andante, which is frequently heard through the composition, "Oh, that men would therefore praise the Lord." A bass recitative follows at the 16th, 23rd, and 24th verses, accompanied by chords on the brass instruments, giving a most truthful interpretation to the psalmist. This breaks into a chorus descriptive of a storm, portrayed in the 25th and 26th verses. The storm clears away at the recitative for soprano, "So when they cried unto the Lord," &c.; and an andantino movement in 6-8 time of a melodious and gentle character succeeds, descriptive of the stilling of the waves. The instrumentation of both these choruses is masterly and finely contrasted. This is again succeeded by the soprano solo (accompanied by chorus) allegro molto, "Then are they glad." Again, the theme, "Oh that men," &c., is heard; and a maestoso succeeds, followed by a choral recitative in which each class of voices is separately heard, declaring in succession the various works of God, in the words of the 33rd, 34th, 35th, 36th and 37th verses. A tenor solo, to the 39th, 40th, and 41st verses, comes now of a different character from anything else in the work, the andante being in E minor, and the allegro in E major, in which latter, at the words "maketh him households like a flock of sheep," the flute is made prominent in a sort of pastoral style. The chorus breaks in with a bold modulation to the key of C, with which the work opened, and is now concluded. This is Handelian, constructed in massive harmony, set to the last verse, so suggestive of reflection—"Whoso is wise will ponder these things, and they shall understand the loving-kindness of the Lord."

Whilst the fashionable auditory were assembling in the theatre, a scene of the greatest interest was engaging the attention of those most deeply interested in the proceedings of the day.

The Lord Chief Justice (Vice-President), the Lord Chancellor, the Hon. and Very Rev. the Dean of St. Patrick's, and the other Members of the University Choral Society, assembled in the Commons Hall, about half-past two, when the Professor of Music to the University was called forward, and the Right Hon. the Lord Chief Justice read to Professor Smith a congratulatory address, and at its close begged his acceptance of the academical dress of a Doctor in Music. The worthy Professor having read his reply, was invested with the magnificent robe. It is a rich white figured damask silk gown, lined and faced with crimson satin; the sleeves wide and open, turned up with crimson satin; a double hood of white damask silk lined with crimson satin, and a black velvet round cap.

The Lord Chief Justice next read an address to Dr. Stewart, conductor to the University Choral Society, and presented him with the academical dress of a Doctor of Music. Doctor Stewart replied, and the robe was placed upon him: it is similar, in every respect, to that of the Professor.

Those who took part in these interesting proceedings then formed a procession, and walked to the theatre in full academics, with hoods. On the procession arriving at the theatre, the performance commenced. The orchestra numbered 120 persons, and was composed of the performing members of the society, the leading artists of Dublin, and several amateurs of high rank and station, among whom we observed some of the clergy of Christchurch Cathedral. The execution of the different vocalists and instrumentalists was in every way worthy of the subject: and the eminent artists who assisted on the occasion fully sustained their high professional reputation. At the conclusion, the vast audience assembled in the theatre dispersed, highly gratified with the proceedings of the day—a day such as was never before witnessed within the walls of Trinity College.

THE LATE MR. PARRY.

THE late Mr. Parry, whose decease was announced in our columns last week, was born at Denbigh, in North Wales, on the 18th of February, 1776. His musical talent was manifested, as a boy, by making a fife from a piece of cane, and, without tuition, playing on it the popular airs of the day. From a dancing-master he received a few lessons on the clarionet, on which the boy was in the habit of accompanying the church singers in psalm-tunes. He joined the Denbigh Militia in 1793; and from the German master of the band young Parry took lessons. In 1797 he became in turn band-master; and he made himself acquainted thoroughly with every wind instrument in a military band, and studied also the harp, piano, and violin, although the clarionet was still his favourite instrument. At the benefit of Mrs. T. Dibdin, in 1805, Mr. Parry made his *début* in London, by performing "All's well" on two flageolets, and "Viva Tutte" on three flageolets in distinct parts. Such was the success of this feat, that Mr. Parry, in 1807, took up his permanent residence in London, and from that period was identified with our principal musical societies and institutions. He

THE LATE MR. PARRY.

wrote and composed songs for Vauxhall Gardens for many years. In 1814 he wrote the pilot and dialogue, and composed the music of a farce called "Fair Cheating," for Lovegrove's benefit, at Drury-lane Theatre. At the desire of Mr. Arnold, he composed the music for T. Dibdin's "Harlequin Hoax," which had such an extraordinary run at the Lyceum Theatre. "High Notions," a farce, was written, in 1814, for Drury-lane Theatre, by Mr. Parry; and in the same year he composed the music for "Oberon's Oath," at Covent-garden. At this theatre he produced a musical sketch, "Helpless Animals," in 1818; and in 1821, "Two Wives, or a Hunt for Husbands," at the Lyceum. He also adapted the music for "Ivanhoe," at Covent-garden Theatre. Innumerable songs were both written and composed by Mr. Parry, in his day, for Braham, Incledon, Sinclair, Fyne, Phillips, C. Taylor, Knight, Harley, Munden, Collyer, Miss Stephens, Mrs. Dickons, Mrs. Mountain, Mrs. Bland, Miss Povey, Miss Cubitt, &c. Mr. Parry being a quick and ready poet as well as musician, his powers were often put in requisition for the Theatrical Fund dinners, &c., and very frequently extemporaneously. He wrote the songs for Braham and others, sung at the *fêtes* given to the Allied Sovereigns, the Prince of Orange, &c.; and "Arthur the Brave," in honour of the Duke of Wellington, for which he received a letter of thanks from his Grace. The Cambrian Society presented Mr. Parry with a medal for adapting English words to Welsh melodies. In 1821, at a *Gorsedd* (assemblage of Welsh bards), a bardic degree was conferred on Mr. Parry, who from that time was denominated *Bardd Alaw*, or master of song. He wrote an historical essay on the harp, on the antiquity of Welsh music, and Pennillion singing. He published two volumes of the "Welsh Harper," and edited the old edition of Jones's "Bardic Remains." Mrs. Hemans, Mrs. Cornwall, Baron Wilson, and other writers, wrote English words to Parry's arrangement of the melodies of Wales. Mr. Parry composed the music of a farce, "A Trip to Wales," for Drury-lane Theatre, in 1826. In 1[illegible] he arranged the music for the "Welsh Girl," a piece played at the Olympic, by Madame Vestris, with great success. The popular "Jenny Jones" ("Cadair Idris") was published by Mr. Parry in 1820. He was the conductor of Eisteddvods, or bardic meetings, in Wales: at Wrexham, in 1820, Brecon, in 1822 and 1826; Denbigh, in 1828; at that held at Beaumaris in 1832 (her Majesty, then the Princess Victoria, and the Duchess of Kent being present); and at Cardiff, in 1834; as also at all the meetings in London under the auspices of the Cymmrodorion, or Royal Cambrian Institution, from 1822 to 1836. Mr. Parry was for many years hon. treasurer to the Royal Society of Musicians, and hon. secretary to the Melodists' Club. He assisted the Royal and noble directors of the Ancient Concerts for many years. He was hon. assistant secretary also to the Royal Musical Festival held in Westminster Abbey in 1834.

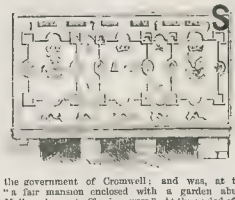
Mr. Parry was indefatigable in the cause of charity, and no concert ever took place for a musician or his family in distress, without the active co-operation of the kind-hearted Mr. Parry. He was a general favourite in the musical circles, from the Royal amateur down to the humblest member of the profession. He was not a profound musician, but he was an agreeable melodist, and many of his simple ballads will outlive much more ambitious efforts. An attack of paralysis, about two years since, compelled him to retire from active life; and a second attack, on the 8th, removed him from a world in which his career had been one of universal kindness. He has left a widow, who is at the advanced age of eighty, and, out of a large family, only one son survives, the celebrated John Parry, the vocalist, who, from being a very serious basso, has originated a novel and refined school of comic singing, in which, as yet, he is unrivalled, combining, as he does, such great powers of execution as a pianist with such vocal and dramatic imitative faculties.

The Portrait of the late Mr. Parry is from a miniature by Cornelius Durham.

GRAND MUSICAL PERFORMANCE IN THE THEATRE OF TRINITY COLLEGE, DUBLIN.

NOOKS AND CORNERS OF OLD ENGLAND.

SCHOMBERG HOUSE, PALL-MALL.

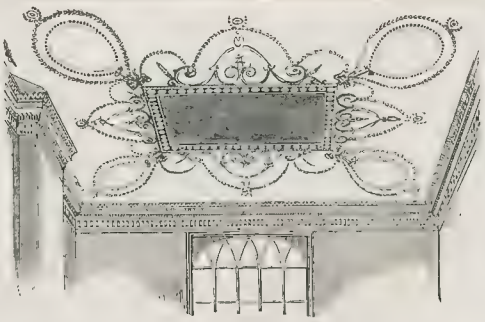


SCHOMBERG HOUSE is, perhaps, one of the most interesting of the few remaining mansions of the seventeenth century in the metropolis. With the history of this mansion are associated many of the most remarkable passages in the lives of those distinguished persons who occupied it at successive periods. The house was built about the year 1650, during the government of Cromwell; and was, at that time, considered "a fair mansion enclosed with a garden abutting on the Pall-Mall, and near to Charing-cross." At the period of its erection, Pall Mall was planted with elm trees to the number of 140, which the Survey Commissioners described as standing "in a very regular and decent manner on both sides of the walk." In 1660, on the restoration of Charles II., the house was occupied by several of the Court favourites; and, subsequently, by Edward Griffin, Treasurer of the Chamber, and by the Countess of Portland.

Le Serre, who speaks enthusiastically of the beauty of St. James's Park, and of the King's pleasure garden, tells us that the houses at the south side of Pall-Mall, of which there were not more than half a dozen, were surrounded "by large meadows, always green, in which the ladies walked in summer time." The Royal gardens, now the private grounds of Marlborough House, stretched immediately behind; and here it was that Charles amused himself by feeding his pet animals, and "discoursing familiarly," as Evelyn writes, with Mrs. Nellie, an "impudent comedian," and the Duchess of Cleveland, "another curse of our nation." Nell Gwyn then resided next door to Schomberg House (now No. 79), where the house had a terrace and "mount" at the end of the garden, from which she used to speak to the King, he "standing on ye greene walk under it."

In the reign of William III. Schomberg House was thoroughly repaired and beautified by Frederick Duke of Schomberg, who employed Peter Berchet to paint the staircase. The third Duke, who was killed at the battle of the Boyne, also made it his residence: and here it was

SCHOMBERG HOUSE, PALL-MALL.



CEILING OF SCHOMBERG HOUSE.

that the Duke of Cumberland—the "hero" or the "butcher" of Culloden, as the case may be—passed many years of his life. During the rebellion of Lord George Gordon the House was twice threatened with demolition; and that, too, at a moment when the King's troops were encamped under canvas in the Park at the rear of the building. The mansion, however, survived the troubles of the period, and was spared for many years, to become a store-house for the arts, and a rallying point for much that was celebrated in the world of literature and *belles lettres*—"Astley, the Beau," as he was termed, lived here for many years, and

STAIRCASE OF SCHOMBERG HOUSE.

painted some of his most conspicuous works. He erected, in the upper story, a suite of apartments accessible only to himself, and built on the roof a large painting room facing the park, which he called his "Country House." To this room he was in the habit of repairing; and, as he had several smaller apartments, and a separate staircase adjoining, he used to shut himself up for several weeks, without being visible to any but special friends. Richard Cosway, the painter, subsequently became the occupier of a portion of the house; and the apartments now used by Messrs. Harding and Company as their showrooms were the saloons in which the accomplished wife of the painter received the most distinguished *dilettanti* of the day. Here, too, in later days, Gainsborough took up his abode, and enjoyed the society of all the celebrities of his time; including the friendship of the beautiful Duchess of Devonshire, with whose loveliness he was so much struck, that he in vain attempted to paint her portrait. Gainsborough died in a room in the second floor of the west wing, exclaiming that he "was going to heaven, and that Vandyke was there." Schomberg House was subsequently occupied by the well-known Robert Bowyer, the author of the "Historic Gallery," and also by the eccentric Doctor Graham.

The mansion, which has been for many years in the occupation of Messrs. Harding and Company, the eminent silk-mercers, is now destined, in its turn, to give place to a modern structure, better adapted to the wants of the owners, and more suitable to the requirements of the present day.

We give a view of the exterior of this curious mansion; of one of its ceilings; and the principal staircase. Appended to the initial is a fine old lead cistern upon the premises

PASSION WEEK.

Among the Lenten Entertainments, that of Mr. Russell, at the Olympic Theatre, claims pre-eminence. In his fertile brain, he has conceived an entirely new kind of entertainment, not only highly suggestive in itself, but capable of being carried out to important issues. He has blended the picturesque and poetic in intimate union; and shown how each may be made mutually to assist the other, through the medium of music.

Mr. Russell presents the public with two dioramas in one evening. The first represents, under the title of "The Far West," the emigrant's progress from the Old World to the New. While the scenes succeed each other, Mr. Russell first describes, and then illustrates them, by singing or chanting a poem written by Dr. Mackay. The chief recommendation of the scenes themselves is their reality. Mr. Russell himself is their warrant that they are "transcripts from nature."

Some of the poetry by Dr. Mackay is exceedingly beautiful. The first piece, entitled "The Parting Tear," is touching; the second, called "Cheer, boys, cheer" is thrilling; and the third, named "Far, far upon the sea," is telling But having arrived at New York, the poet parts with the Old World altogether, and sends forth a joyous spirit, delighting in the present, and full of hope for the future. Aloud he singeth, like Chanticleer ushering in a new morrow:—

To the west, to the west, to the land of the free,
Where mighty Missouri rolls down to the sea,
Where a man is a man, if he's willing to toil,
And the humblest may gather the fruits of the soil.

Arrived at Niagara the poet's soul is awakened, and thus, in tones of inspiration, he gives voice to her impulses:—

NIAGARA.

Mighty Niagara! whose voice we hear
Bursting its thunder-call sublime and clear,
Thy glorious waters take an awful roar,
From the blue heaven to overflow the world
They speak high language to the listening flood,
No roar of billows battling with the sky
No thunder leaping from the hill-tops high;
No voice of Nature, warring or at rest,
Can equal thine, O river of the West!
The tempest's voice grows silent on the sea,
But thine, O flood, exults eternally!
The cloud-born thunder stills its wildest roar,
But thine, perpetual, rolls for evermore.
And evermore the waters seem to say,
"We rolled rejoicing, as we roll to-day,
Four thousand years ago, when Earth was young,
And Noah's sons their first glad anthems sung,
Long ere the foot of man disturb'd the wood,
Or human eye beheld my mighty flood,
To mourn and nights my voice sublime was raised,
In ceaseless gratitude, and God was praised.
On! ever on! my gathering waters flow
Men live and die, the nations come and go,
Race follows race, and change comes over all,
Fill us with wonder, as we stand afar,
Humbled to think how small and mean we are.
And as they rush, and foam, and burst, and roll,
My mighty flood shall thunder as to-day,
Its strength and beauty heedless of decay.
Be it to me to thank, and let me hear
The song of pleasure in the voice of cheer,
From our strong shores, run for evermore,
And float your navies to the ocean shore
Pass on, pass on, and work with heart and will,
And health and fortune shall reward you still.
The world is yours, enjoy it as you can,
And give your thanks to God, your help to man."

ILLEN CRAFT, A FUGITIVE SLAVE.—(SEE NEXT PAGE.)

The painting of the Falls of Niagara is very effective. It is followed by pictures of the emigrant's settlement in the western states, of the backwoods, of the inundation, of the rolling prairie, of the sleigh in the winter season, and of the emigrant's domestic happiness increased by the receipt of letters from dear Old England

The second diorama represents "Negro Life in Freedom and in Slavery." The poetry illustrative of the scenes is written by Mr Angus B. Reach. Both begin with descriptions of a Negro village in the interior of Africa, where

The plumed and painted savage may boast that he is free.

SCENE FROM MR. HENRY RUSSELL'S NEW ENTERTAINMENT, AT THE OLYMPIC THEATRE.—THE NEGRO FESTIVAL.

Next, we have the slave battle, and the chase of the slave-ship; soon followed by a slave sale in Havannah, slave labour in the sugar and rice plantations, and the fugitive slave pursued by bloodhounds and riflemen. Other scenes, such as the forest on fire, the Mississippi, the planter's house, the Negro village, and the Negro-dancing festival (of which we give an illustration), conclude the exhibition.

Mr. Russell, in the recitative and vocal department of his entertainment, exhibited his usual tact and talent introducing the customary varieties, for the sake of a jest or an anecdote. He may, with his present materials, set an example of a superior kind of exhibition, in which a single subject, judiciously chosen, and the powers of the poet and the vocalist in connexion with the worthiest theme. It contains an idea which, in its real station, might bring fame and fortune to one who was willing to serve his generation by the regulation which it implies

On Monday, at the Adelphi Madame Thillon and Mr. Hudson gave their well-known and popular entertainment.

At the Haymarket Mr. C. E. Adams delivered his highly useful lecture on Astronomy—the subject being completed to the present time by the addition of the nine new planets to the Orrery: and Mrs. Fanny Kemble read "Henry VIII." at the St. James's: followed, on Tuesday morning, by the "Tempest."

At the Music Hall, Store street, Mr. Henry Nicholls has also read, during the week, "Othello," "Macbeth," and "The Merchant of Venice." This gentleman's vocal is exceedingly fine, and he reads with great judgment and effect. At Crosby Hall, Mr. Newman has ventriloquised, and at the Beaumont Institution, Mr. Jacob has wizardised; while, at the Soho Theatre, Dr. Darling has electro-biologised their several astonished audiences.

Such have been the amusements of Passion Week.

FUGITIVES FROM SLAVERY.—REMARKABLE RETURN IN THE CENSUS.

We are reminded by Mr. Russell's powerful denunciation of Slavery of a remarkable instance of its baneful effects, which has just been illustrated by means of the census return in Yorkshire. It appears that William and Ellen Craft have lately been relating, at the Wesleyan Mechanics' institute, a touching account of their escape from slavery; and as they sojourned with Mr. Wilson Armistead, of Leeds, on the 30th of March, it was requisite that their names and places of nativity, as well as their rank and profession, should be inserted by him in the Government Census paper to be filled up and returned on the 31st. These two individuals were accordingly entered by Mr. Armistead under their real designation "*Fugitives from Slavery in America the land of free natives?*" This is a startling entry, perhaps more extraordinary than any in the new return of our population.

The particulars of the escape of these fugitives from slavery are of the most romantic character. William and Ellen Craft were reared in Georgia, under different masters; but, living near to each other, they became eventually man and wife. William is a black man, but his wife Ellen is only white. Whenever they met, after their marriage, they contrived and discussed plans of escape; and in 1848 this was accomplished: the wife, with her hair cut off, and wearing a gent's spectacles, disguised herself as a young man, and became master and he slave or servant. They first travelled to Savannah, and then took the steamboat to Charleston, in Carolina. After escaping many dangers of betrayal, and having now expended their savings in obtaining their liberty, they settled in Boston, William to work at his trade of cabinet-making, and Ellen to work with her needle. In this way they maintained themselves, learned to read and write at evening schools, until they fancied they were in safety from pursuit, and on the very first evening they attended the school the warrant was issued for their apprehension, and the slave-catchers were abroad in Boston. The excitement and agitation of the three or four days' hunt in Boston were extreme; but William and Ellen ultimately succeeded in getting on board a British vessel, while the kidnappers were at New York.

The fugitives arrived about four months since in Liverpool, where, for the first time, they set foot on really free soil. They are very interesting and intelligent persons. Ellen is twenty-four years of age, and as fair as most of her British sisters. William is very dark, but of a reflective, intelligent countenance.

THE THEATRES, &c.

HER MAJESTY'S.

The season before Easter terminated on Saturday last, with the second performance of Auber's "Muta di Portici" (Masaniello"). The Queen and Prince Albert, accompanied by the Princess Mary of Cambridge, were present, in addition to a very fashionable assemblage. The opera was signalised by the appearance of two richmonds in the field, the *Masaniello* of Signor Fortini played the second and third acts, and M. Ponitier the fourth and fifth acts, the former having been attacked with indisposition on the night of his *début*, and being obliged to abandon his exertions, on the second occasion, in the middle of the opera. M. Ponitier, who sang the part of *Rubivy*, in "Gustave," is the celebrated *tenorhier* of Rouen, whose advent on the lyric stage in Paris, at the Académie Royale, created such a sensation some ten years since. His *Masaniello* was regarded as his best effort. In the air of "Sleep," in the fourth act, he produced an immense impression; but stage fright, and the novelty of the language, quite frustrated his powers last Saturday. To the general audience, who, of course, most unfortunate for the execution; but Mdlle. Monti's *Fenella*, eloquent, expressive, and novel pantomime, and Massol's spirited *Pietro*, were consolations for the disappointment.

The activity displayed by the management since the opening night on the 22nd ult. has been prodigious. The production of two grand three-act operas, Auber's "Gustave" and "Masaniello," in less than three weeks, is one of the greatest lyric achievements within our recollection, and reflects the highest credit on the musical director, Balfe, the indefatigable *régisseur en scene en scène* (Mr. Harris), and the artists engaged in the costs. "Gustave" has been given four times, and "Masaniello" twice. The *débût* of Mdlle. Dupres—her very appearance in *Lucia*, her serious one in scene, and four repetitions of the *Page*—has been most triumphant. The return of Coletti, and the *débût* of Massol, are the other events of moment. A new and beautiful ballet, "Life on Amazons," has been added to the choreographic attractions, and Carlotta Grisi has returned with renewed grace, if possible, in her style of dancing.

Next Tuesday, the Titan of bases, the unrivalled Lablache, will administer his nostrums to his patients, as *Dulcamara*, and Mdlle. Pauline Duprez will appear as *Adina*, in which she was so well received at the Parisian Italian Opera House: there will be a new barytone, Signor Ferranti, for *Belcore*, with Calzolari as *Nemorino*. The *débût* of Mdlle Alaymo, from the Pergola at Florence, is fixed for saturday next, as *Lucrezia Borgia*; and Madame Sontag will return on Tuesday, the 29th, as *Maria* in Donizetti's "Figlia del Reggimento," with which she has been obligingly the Parisian and-cores during the winter. Alary's "Tre Nozze," and Thalberg's new opera, will be the earliest novelties

ROYAL ITALIAN OPERA.

The directors were under the necessity of presenting Rossini's "Semiramide," for the fourth time, last Saturday, for the same reason as on the previous Thursday, namely, the indisposition of Tamberlik. This change, from the announced representation of Meyerbeer's "Robert le Diable," occasioned much of discontent and disorder during the overture and introduction to "semiramide," and the demands for the appearance of Mr. Gye were vociferous. The storm, however, died off on the entrance of Grisi, and her singing, combined with the exertions of Artgi, ultimately restored peace and quietness; although the opera went very flatly, Salvatore's hoarseness rendering the *cantabile* anything but gratifying. It should be explained, that, up to late in the afternoon, Lopez and been entertained, as her Majesty and Prince Albert intended to have been present at the performance of "Robert," of Tamberlik being sufficiently well to have undertaken his part.

Next Tuesday, Mario will make his first appearance this season, as *Raoul*, in Meyerbeer's "Huguenots," Grisi, Goldi an, Angri, Herz, Ferranti, Tamberlik, and Tagliafico being included in the cast. On the succeeding Thursday, Beethoven's "Fidelio" will be performed, for the first time in this country, in Italian, the principal characters sustained by Madame Castellan, Tamberlik, Tagliafico, and Herr Formes

The prices of admission are to be reduced at Drury Lane, on and after next Monday. The ostensible reason for the change is, that foreign visitors, after the assimilation of the prices to the continental theatres. We shall thus have at the national theatre a two shilling pit. This is a reform which ought to have been commenced much sooner. Cheap theatres, and plenty of them, are the true means for the regeneration of the drama than all other means combined. Mr. Anderson revives Schiller's boy-play of "The Robbers," and himself performs *Charles Moor*. How is it that this gentleman, in going off the English stage, selects his earlier and worst pieces?

The subject of the burlesque at the Haymarket is "The Bohemian Girl" by the Brothers Brough. It will be produced on Monday. Mr. H. W. Mclack is announced also in "Richard the Third."

At the Adelphi, the fairy burlesque of "O'Flanigan and the Fairies" will be produced; in many parts necessarily re-written, owing to the loss of the original MS. in the *President* steamer, with poor Power.

We have already announced the new pieces at the Surrey: Mesers. Anglo-[illegible] Lyceum: [illegible] Queen's: [illegible] Olympic: [illegible] Sadler's Wells: [illegible] Princess's: [illegible] Strand: [illegible] Adelphi: [illegible] Lyceum: [illegible] Haymarket: [illegible] St. James's: [illegible] Princess's: [illegible] Soho: [illegible] Music Hall: [illegible] Crosby Hall: [illegible] Beaumont Institution: [illegible] Soho Theatre: [illegible] Dr. Darling: [illegible] Adelphi: [illegible] Haymarket: [illegible] St. James's

THE ILLUSTRATED LONDON NEWS.

April 19, 1851.] 317

COUNTRY NEWS.

EXECUTION OF THE FRIMLEY MURDERER.

On Tuesday morning, at eight o'clock, the two men, Levi Harwood and James Jones, who were convicted at the last assizes at Kingston of having concerned in the murder of the Rev. George Hollest, at Frimley, suffered death in front of Horsemonger-lane Gaol, in the presence of between 7000 and 8000 persons.

The murderers have confessed their guilt. The confession of Jones to the chaplain of the gaol was as follows:—There were in the room at the time of the murder, Smith, myself, and Levi Harwood. I held Mrs. Hollest round the waist. I had a pistol in my hand, and might have shot her, but never intended to do it. Levi Harwood was then standing at the foot of Mr. Hollest. The second time Mr Hollest was stooping to pick up the poker, and Levi Harwood was the man who fired the shot." He said with emphasis, "I am certain of that. Smith and Levi Harwood both ran out of the room, leaving me the last person in it. I followed as soon as I could get away from Mrs. Hollest. Then I immediately left the room, and went down into the garden on the side of the turnpike-road. A4 four. namely, Levi Harwood and Samuel Harwood, Smith, and myself, came on together. After I had left the premises and had got into the main road, I heard the sound of fire-arms, as from the house of Mr. Hollest. The account given by Smith of what took place in the room is quite true, and Mrs. Hollest is mistaken in sewing me as to her belief that it was Levi Harwood who held her, as it was me. Myself and Samuel Harwood parted from Smith and Levi Harwood about four miles from Frimley, and came on together. Samuel Harwood was the man who fired the shot."

The confession then detailed the circumstances attending the apprehension of the burglars, as already known to the public.

On the morning of the execution, a few minutes before eight o'clock, Levi Harwood, who had up to that time refused to make any admission, sent for the Governor, and said, "The truth has been spoken by Smith. What was done was never intended to be done." He was asked by the Governor, "You mean the murder was not contemplated?" Harwood's answer was, "Yes, that is what I mean."

With respect to Smith, the approver, he will be detained in Horsemonger-lane Gaol until the Surrey summer assizes, when he will be arraigned on the coroner's inquisition: but it is probable that the Government will not offer any evidence against him respecting the murder of Mr. Hollest. After the gaol trial for a burglary at Farnham, in the same county, no sufficient evidence will soon be adduced to prove his connexion with a recent robbery there, in company with Samuel Harwood and the parties who were executed. He is also connected with them in the burglaries in Sussex.

THE LATE EXECUTION AT CHELMSFORD.—The body of Sarah Chesham, who was recently executed for poisoning her husband, was given up to the relatives of the deceased, but, on being taken to Clavering, the clergyman refused to read the usual burial service, and the body was taken back to the Chelmsford gaol, to be buried in the churchyard. Some correspondence, it is said, took place between the ex-gryman and the diocesan, and, pending the issue, the coffin, containing the corpse, was temporarily placed in a grave dug for that purpose, and covered with boards. During the night the body was stolen, and no traces of it have been discovered.

THE FRIMLEY MURDERERS.—APPREHENSION OF ANOTHER BURGLAR.—Saturday last having been appointed by the magistrates at Horsham for the re examination of Samuel Harwood, one of the persons charged with the murder of the Rev. Mr. Hollest, and James Hamilton, the latter appeared at the Uckfield burglary, the Town-hall was crowded to excess. The prisoners having been placed in the dock, Mr. W. H. Biddlecombe, the chief superintendent of the Surrey constabulary, said from circumstances which had come to his knowledge it was necessary that he should at once apply for a remand. He came there that morning prepared with evidence which, after it had been heard, would justify them in committing both the prisoners, but in consequence of a communication he had received that morning—that John Isaacs had been apprehended the day before at Frome in Somersetshire, and whom he charged as one concerned in that and the Uckfield robbery if the bench would grant a remand it would enable him to place the man in the dock with the other prisoners. The magistrates asked Mr. Biddlecombe what remand he required? —Mr. Biddlecombe thought a week would be sufficient. It was necessary that he should apply to the authorities at Tunbridge Wells to allow him to place Isaacs in the dock with his fellow prisoners. The prisoners were then remanded the prisoners to the last instant. It is stated that some extraordinary disclosures will be made at the next inquiry. The man Isaacs is one of the clerks who assisted the Messrs Harwoods's house, near Uckfield, in December last, the other seven having been tried and transported at the last assizes at Lewes. It is stated that he was one of the party who broke open the iron-safe with sixty quarters of corn, five ricks of corn, ten pigs, nearly 200 head of poultry, a vast quantity of farming implements, &c. The granary, though in the midst of the flames, escaped, and the fire was extinguished before the furniture was much injured by removal. It is much feared that the fire was not accidental. The labourers asked on with apathy; some, indeed, stole a barrel of beer, and cut slices from the burning bullocks. The whole country for miles round was lit up by the flames.

REPRESENTATION OF PLYMOUTH.—The electors of this town have determined, according to the local paper, to reject Mr. Bremridge, and have their representative as soon as possible, and to return a staunch Protestant in his place. Mr. Collier has been named; and Mr. George Eve has offered himself as a candidate, and will visit the borough in a few days.

REPRESENTATION OF OXFORDSHIRE.—At a meeting of the Oxfordshire Conservative Association, held on Tuesday, at the Star Hotel, Oxford, it was agreed unanimously, in the absence of a dissolution of Parliament, to put in nomination Lieut.-Co.. North, a very popular landowner of the county, in opposition to Lord Norreys. The Colonel, after great solicitation, has consented to be put in nomination

MR. BRIGHT AND THE REPRESENTATION OF ROCHDALE.—Mr. Bright, M.P. for Manchester, has addressed a letter to Mr. W. Chadwick, the chairman of the meeting of electors, at which a requestion to Mr. Bright was agreed upon. In this letter, Mr. Bright declines to accept the invitation to become a candidate for Rochdale, at the next dissolution of Parliament, on the ground that he does not conceive it consistent with his public duty voluntarily to abandon the post which he now occu

The Government has decided on making Deptford and Plymouth the emigration depôts. The South-Western Railway Company offered to convey emigrants and all their luggage from London to Southampton, and place the whole on board ship in Southampton Docks, at 6s per head, if Government would make Southampton the depôt; and enable the emigrants to avoid the dangers and delay of that part of the Channel voyage between the Thames and the Isle of Wight.

GREAT PROTECTIONIST MEETING IN SCOTLAND.—A public dinner is announced to take place on Tuesday, the 22nd inst., at the Music Hall, in Edinburgh, for the purpose of discussing the principles of fair protection to native and colonial industry. The Earl of Eglinton will take the chair. It is expected that many of the members of the House of Commons, and others favourable to the objects of the meeting, will be present, and take part in the proceedings

A shoal of porpoises were seen disporting in the sea on Wednesday morning, off Brighton, within gun-shot of the shore. So numerous a shoal has not been seen off Brighton since the coming of the railroad.

An extraordinary and fatal accident occurred in Greenock on Tuesday, in Bank-street, in the family of Mr. Duncan Brown, cloth merchant. He had gone into his own bath-room to take a tepid bath, and had remained beyond the usual time. The servant of the family in the flat below observed water coming through the plaster, and went up stairs to Mrs. Brown to ascertain the cause. On Mrs. Brown entering the room she found her husband drowned in the bath, and the water overflowing.

SINGULAR DEATH.—A fatal accident occurred at the Cavendish Bri ge Brewery, near Burton-on-Trent, a few days ago. John Sheffield, one of the men employed at the brewery, fell into the vat, which was filled with porter. Though speedily got out, all efforts to restore him were quite in vain. Deceased was 60 years of age. Mr. Eaton, the proprietor of the brewery, declared at right, notwithstanding the great loss to him, to run off the contents of the vat into the Trent: and this course was adopted in the presence of the clergy of the parish, the coroner and jury. The waste of the porter was estimated at upwards of 80 barrels (2880 gallons), and valued at from £150 to £200.

A park of 70 acres in extent, with a considerable frontage to the river Dee, is about to be opened in the city of Chester by a private individual.

CAPTAIN J. D. CUNNINGHAM.—The papers brought by the last India mail announce the death of Captain J. D. Cunningham, of the Bengal Engineers, author of the only good "History of the Sikhs," and eldest son of Allan Cunningham, the Scottish Curator and poet. The thieves (or half his life), unmerruptedly, in every climate of India; but his death was mainly occasioned by a sense of ingratitude inflicted upon him by the East India Company, in removing him from his post of political agent at Bhopal, for making "unauthorised" use of official documents in his "History of the Sikhs." Captain Cunningham had applied to the Court of Directors for permission, and thought, in common with others, that he had obtained such permission.

On Friday week information was received by the metropolitan police, that a large Ordnance powder-mills at Waltham Abbey had been barbariously entered and plundered of a large amount of property. The thieves (or half his life), uninter

"THE PRINCE," ROYAL MAIL STEAMER FOR DENMARK.

THE DANISH PORT, HJERTING.

year as his Majesty, married another daughter of Frederick VI. At the interview we are describing, the King conversed in French, making such inquiries relative to the particulars of the journey as showed him to be thoroughly conversant with the entire scope of the expedition in its bjects and details. He

INTERVIEW WITH THE KING OF DENMARK.

was dressed in a plain dark green military frock coat, and had a small hanger-shaped weapon, rather less than a foot in length, suspended from his girdle. One side of the room was occupied with a sort of raised throne, over which was a canopy of crimson velvet; and the apartment, without any pretensions to regal sumptuousness, being not only carpeted (rather novelty, even in a Danish Palace, it will be seen hereafter), but also otherwise well furnished and well warmed, had an air of comfort about it most consonant with English notions, sharpened, as these were, to the highest appreciable point by the hyperborean aspect of things out of doors, and in the approach to the Royal presence. In the ante-room was an open fire-place, wherein glowed, not the light cheerful blaze of the wood of the country, but the more lurid, and, to the strangers, the more luxurious flame of coal, the only specimen of that estimable mineral seen by the party during their Danish exploration

After a rapid and animated conversation of about a quarter of an hour, the Englishmen bowed themselves out with the usual ceremonial of "advancing backwards" observed before all crowned heads on such occasions; but it may be remarked that there was nothing whatever *exigeant* in the stipulations of the Lord Chamberlain as to the costume of the visitors, white gloves comprising the only distinctive feature of the toilet insisted upon. The affable mien and cordial demeanour of his Majesty immediately put the party at their ease, and they took leave of him impressed with a vivid sense of his high breeding and discriminating intelligence, their *amour propre* being probably not a little additionally flattered on learning that Frederick had declined a game at billiards with a performer of European celebrity, and to which his Majesty had specially invited that individual, in order that he might render the honour of an interview to the representatives of the English press. Shortly before the period now being spoken of the King had returned from fishing—an amusement for which he has a strong predilection, as indeed he has for all the national pastimes: hence, no doubt, one main element in the great popularity of Frederick, at least among the middle and humbler classes, upon whom the curtailment of certain invidious immunities among the aristocracy has recently conferred substantial advantages, in which the mercantile, trading, and burgher ranks have also largely participated. After leaving the King's presence, the journalists were entertained at the table of the Lord Chamberlain Berling, in an apartment adjoining the Royal suite.

In the King's billiard-room is a collection of portraits of the Monarchs of Denmark and their wives, amongst the latter being Caroline Matilda, wife of Christian VII., and sister of George III., and whose alleged criminal intimacy with the Minister Struensee (beheaded, with his accomplice Brandt) occasioned so much discussion some eighty years ago, and is still one of those political puzzles wherewith the historical speculator delights to bewilder himself, for "there is much to be said on both sides" this once fiercely debated question. She was a great favourite amongst the poor in the neighbourhood of her various residences; and by the humbler ones she is held to be entirely guiltless, though, if she were not, a sufficient justification would be found in the memory of the Danes on the ground of the weak, false, and cruel character of her husband.

The party, on leaving Frederickesborg, proceeded to Elsineur—whose Shakspearian and historic associations were, of course, productive of the usual topographic investigations due to the *genus loci* at the hands of all Englishmen.

From Elsineur a portion of the party, including the writer of this notice, proceeded across the Sound to the Swedish town of Helsingborg, where they were received with extreme urbanity by several of the principal inhabitants. After an interchange of civilities, the enquiries of the Swedish gentlemen were directed with the most lively interest to the proceedings connected with the Great Exhibition, and they appeared exceedingly pleased at the prospect of their being able to reach that universal centre of magnetism by the medium now being opened up.

Returning to Copenhagen, the party waited on the Postmaster-general, with whom they had a long interview, the result of which was a reassurance on the part of that functionary that the Danish postal department of the Government would do all in their power to promote the objects of the new route. There is every probability, in consequence, that a new road, for a portion of the distance between Hjerting and Kolding, will be at once made by the Danish Government; and there is, moreover, a prospect of a railroad connecting those two places, a project towards that end having been set on foot; and from the few engineering difficulties, and the moderate price of materials, with every appearance of success.

Next week we shall resume our Illustrations of this new and interesting route, with Views of the principal towns, with Sketches of costume and other characteristics of the people.

LONDON: Printed and published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, APRIL 19, 1851.

THE ILLUSTRATED LONDON NEWS.

No. 480.—VOL. XVIII.] SATURDAY, APRIL 26, 1851. [SIXPENCE {WITH SUPPLEMENT. GRATIS.

A REMONSTRANCE WITH THE DAILY PRESS.

IT has been said that the character of a people is reflected in its press, and that the public journals of any nation are never much before nor much behind the intellect of the age and the country in which they are issued. A brutal people loves a brutal press, a frivolous people will not encourage sober journals, and a nation of warring factions will transform public writers into violent partizans. Not only opinions, it is said, but manners, are faithfully reflected through the press; and a vicious age not only requires and creates a vicious literature, but a vicious literature reacts upon the public sentiment of the age, and degrades it with an unhappy fatality into a still lower depth of pollution than that which was its own origin. But while there is much truth there may be much error in this as in some other sayings that have acquired the currency, if not the validity of established axioms. If any intelligent foreigner among the tens and hundreds of thousands of visitors whom we may daily expect on our shores, were to judge of the British nation by this rule at the present time, he might draw a picture of us from the columns of our daily press, which would be anything but flattering to our self-love, creditable to our taste, or just to our morality and intelligence. If he took up the great daily sheets that aspire to guide the public opinion of England, and cast his eye over the advertising columns—by the profits of which they are enabled to pay able writers, accurate reporters, and active foreign agents and correspondents—he would find announcements of the most disgusting kind, couched in language that renders them unfit for the perusal of women, and which, were there no other objectionable matter in their broad superficies of print would render it a duty imperative on the head of every father of a family to keep them from the sight of his untainted family circle. If the intelligent foreigner, instead of confining himself to the editorial articles, those diurnal essays of a brilliancy which, fifty years ago, would have been sufficient to give their authors a lasting and honourable place in the literature of their country, were to investigate still more closely the records of the public tribunals, which the journals make it a point of preserving and presenting to the world, he would be still more disgusted, still more shocked, and still more puzzled to know, by means of the rule we have quoted, what sort of a people the English were. He would find details of the most prurient and abominable vice broadly and unreservedly printed, that all the world might read. The slang, vulgarity, and blackguardism of the police-courts would form the smallest and most inoffensive portion of the foul pabulum daily served up to the breakfast-tables of those who are wealthy enough to buy or borrow a leading London journal. All the odious details which the Common Law, the Ecclesiastical, and the Appellate courts are compelled to extract from unwilling witnesses, in cases where the honour and happiness of wives and husbands are concerned, he would see in unblushing type, and in the very language of the brothel: and, from the unnecessary minuteness and particularity with which the reporters of these unhappy cases dwell upon the incidents and circumstances of the criminality of the one party and the degradation of the other, he might also be justified in the belief that these *employés* of the journals were expressly ordered to hide nothing, but rather to exaggerate and display, than to soften and generalize them. Even in the preliminary and *ex parte* investigations before the police magistrates—of which the statements very often turn out to be the unfounded assertions or mistakes of complaining parties—the same rule would be found to guide the judgment of the reporters who write, and of the editors who publish; and our intelligent foreigner might be tempted to inquire, if the English were in reality the well-informed, the moral, the decent, and the religious people which they are represented to be? "Surely," he might say, "there must be a large and degraded public, that has a taste for such garbage, or the leading journals of the country would not so industriously supply it."

But our foreign critic would be wrong. We are convinced that the great body of the English people, so far from seeking such details in the newspapers, disapprove of them, and that the daily journals injure their own sale by this unworthy pandering to the readers of the pot-house, or of worse places. The daily journal, instead of being a welcome guest in the families of the upper and middle-classes of society, is banished to the counting-house, the club, the

VISIT OF HIS GRACE THE DUKE OF WELLINGTON TO THE GREAT EXHIBITION BUILDING (SEE NEXT PAGE).

tavern, and the beer-shop; and the homes of the people are deprived of the daily history of their age and nation, lest in taking the food of wholesome politics and elegant literature, the young and the innocent should be polluted with the moral poison of the stews, and familiarized with modes of vice, of which but for these vehicles of corruption they would be ignorant of the very name.

Within the last three weeks the daily journals have afforded a greater number of more glaring examples of this abuse of the liberty of printing which we fortunately enjoy in this country, than we ever remember to have seen. The evil which has grown to this height, and which we feel bound to notice, is one of comparatively recent introduction. Eight or ten years ago, the great leading newspapers made it a rule to omit all offensive details of the kind to which we allude, and contented themselves, in painful cases, with a general statement that the evidence was unfit for publication. But, now-a-days, nothing seems unfit for publication in their columns. They appear to vie with each other as to which shall give the most prurient and filthy examinations and cross-examinations, as if they themselves took a pleasure in such disclosures of misery and profligacy, and expected their readers to do the same. It will not do to allege in extenuation that the publication of the evidence in our law and assize courts is attended with advantage. There can be no doubt of the general fact; and we should be sorry to see the day when the records of the courts of law should be sealed books to the great bulk of the people. But the journals that claim to be public instructors ought to practise decency, and exercise a moral supervision over their columns. Even the judges of the land, who are compelled, in the exercise of their functions, to sit and hear these cases, order their courts to be cleared of women and children, when evidence unfit for their ears is about to be given; and it is rather too bad, that newspapers, which are under no such compulsion as the judges, should put themselves out of the way to make public that which good feeling, if not common decency, should conceal. They lay themselves under an imputation which we are sure they do not deserve—that they parade such cases because they imagine they will pay. We, on the contrary, believe that the newspapers do not act upon this principle; but, that what they do they do through inadvertency, or from a misjudging idea of the necessity of full publicity and impartiality. But it is high time the evil should be checked; and we think that it only requires a little consideration on the part of the proprietors and conductors of our first-class journals, to insure a return to the comparative delicacy and scrupulousness which were the rule among them until very lately. To think that the public enjoy or approve of such details, is to wrong the intelligence of the age. If a bookseller were to publish a book with half the indecencies that appear in the daily newspapers, he would be scouted by the trade and by the public, besides being liable to a prosecution. We do not see why the newspapers should be less careful. On the contrary, they should be more anxious to avoid offence, because their power for evil is so much greater. While the book has but one reader, the newspaper may have hundreds, or even thousands

For ability, for enterprise, for honesty, and for independence, the daily press of England stands unrivalled and unapproachable. It would lose nothing in the estimation of men, if it were rendered fit for the perusal of women; and would cease to be as powerful for good as it is at present, by becoming more careful in the exclusion of that moral filth which lawyers must investigate, but which there is no necessity should be laid bare to our wives and children. And while its influence upon the mind of the nation would be better and purer, its admission into those family circles—whence in self-defence it is now banished—would be a benefit, because both its sale as a public speculation, and its usefulness as a public institution. It is not enough that the press should be free and honest. The intellect and the feeling of this age and country require that it should be decent.

THE DUKE OF WELLINGTON AT THE GREAT EXHIBITION BUILDING

SUNDRY and manifold have been the episodal passages in the history of the progress of the Great Exhibition Building, to be chronicled hereafter in the true Boswellian spirit. Not the least striking among the characteristic incidents will be that portrayed by our Artists upon the preceding page.

Among the visitors to the Crystal Palace, on Wednesday week, was the Duke of Wellington, accompanied by his daughter-in-law, the Marchioness of Douro. After walking through the high-arched transept, the noble and gallant Duke proceeded eastward to the Foreign Department, where he paused to observe one of the exhibitors removing from an oaken case various costly articles of gold and silver plate. At the moment of the Duke's approach was uncovered a pair of silver equestrian statuettes of the Duke himself and his once formidable rival, Napoleon. The great Captain smiled at the incident; and, to an enquiring look of the exhibitor, quietly nodded assent. The news instantly spread that the Duke of Wellington was within "the French territory;" and, in a few moments, probably for the first time in his life, the noble and gallant Duke was surprised and surrounded by a body of Frenchmen. Their national character for politeness prevailed over other feelings; the hats and caps of the bearded foreigners were as once raised to the British hero; and the Duke, having returned a military salute, passed on to the next department.

The incident is fraught with food for reflection, and highly merite pictorial commemoration, which instantly appeals to the mind's eye Many a poem has been penned upon a less impressive dictum of the world's history; and we question if there will occur a more suggestive scene within the cosmopolitan area of this Palace of Peace

THE GREAT EXHIBITION.

THE Royal Commissioners, after their meeting on the 22nd, published the programme of the state opening by her Majesty. The regulations declare that—

"Exhibitors' attendants appointed by the Executive Committee will be admitted between the hours of 8 and 9 o'clock at doors specified on their cards, and will immediately take their places by the counters, &c., of their employers

"Holders of season tickets will be admitted at all doors on the south side, and west of the building between the hours of 9 and half-past 11 o'clock, and will take their places, subject to police regulations, in the lower part of the building and in the galleries assigned to persons ranked in the nave and transept.

"A platform, with a chair of state, will be raised to the north of the centre of the transept.

"Her Majesty's Commissioners will assemble at half-past 11 o'clock in the transept, opposite the platform, together with their Executive Committee and the Foreign Acting Commissioners, in full dress, or in plain evening dress

"The Archbishop of Canterbury, her Majesty's Ministers, the Great Officers of State, and the Foreign Ambassadors and Ministers, will take their places on the platform to the right and left of the chair of state, in full dress, also at half-past 11 o'clock.

"Her Majesty, proceeding in state, with the Royal Family, foreign guests, &c., and her and their suites, from Buckingham Palace, up Constitution-hill, and down Hyde-park, will enter the Exhibition Building by the north entrance precisely at 12 o'clock She will take her seat in the chair of state, and a choir will sing "God save the Queen."

"Then his Royal Highness Prince Albert, with the Royal Commissioners, will proceed to the platform, and read a declaration to her Majesty a short report of the proceedings of the Commissioners, together with the catalogue of the articles exhibited. Her Majesty will return an answer, handed to her by the Secretary of State; and Prince Albert will take his place again by the side of her Majesty. The Deputy of the Corps Diplomatique will read an address to her Majesty on behalf of the foreign contributing nations, which her Majesty will answer. His Grace the Archbishop of Canterbury will then say a prayer, followed by a short anthem by the choir

"The Royal Family, and the Commissioners, turns to the south, and to the centre of the nave by its north side, return to the east end of the nave by its south side, including the end of the transept, and come back to the centre along the north side of the nave. During the procession the organs appointed will play marches, taking the music up at the queen's approach.

"On her Majesty's return to the platform, the Queen will declare the Exhibition opened," while will be announced to the public by a flourish of trumpets and a Royal salute on the north of the serpentine; will hoist upon the nave, will be thrown open, and the [illegible]

[illegible] by the Lord Chamberlain, and the Lord Steward, by which she came. All the doors, which will have been closed at half-past eleven o'clock, will, upon her Majesty's departure, be opened again."

Spectators of all classes, without and within the Building, are thus accommodated, and we trust that the usually propitious weather which attends her Majesty's progresses and ceremonials will lend its sunshine to the thousands who purpose making holiday at this inauguration of our Great Industrial Temple. Were the municipal authorities, or any of the great City guilds, by subsidiary processions, to add to the splendour and character (both derived from and bound up with) our commercial enterprise) of the festival, the attractions and solemnities of this unspeakable and unprecedented event would be vastly increased, and the popular share of the out-of-doors spectacle would be greatly augmented. Of course, according to street etiquette, the guard of honour which will attend the Queen will be chosen from her household troops; but we would suggest that some special position or function should be selected for the trusty, efficient, active, and intelligent Sappers and Miners, who have materially advanced the growth and settlement of the World's Fair. The officers of the Engineers and Artillery, and indeed the whole military staff, are worthy of public commendation, thus marked as the opening day and its glories.

The Building was closed on Good Friday, and very little work was accomplished by any save some of the foreign exhibitors. The location of articles of sculpture and statuary has been finally entrusted to Mr. John Bell, vice Sir Richard Westmacott. Most of the principal groups and figures have been transferred to the transept; but it would have been as well for the favourable impression of the spectator entering at the south, to have simply decorated the space up to Osler's great glass fountain in the middle, with flowers and shrubs. The statues at present in this area are of very important or striking size, and the first object which arrests the eye is the girlish effigy of her Majesty on horseback, to which we have previously alluded. The advance in the British division removes nearly all apprehension as to the completeness of our home contributions. Mr. Punch's artist has made a flagrant mistake in this week's caricature on Britannia's great party, which represents Britannia as unprepared for her guests. Though indicrous, the point of the joke is impertinent and untrue. There is also a false statement in the assertion that the Executive Council were responsible for the original arrangements of her Majesty's State visit These gentlemen, from the first, strongly advocated the admission of the assembled nobility during the Queen's presence. We willingly transfer to our columns, however, "Mr. Melody's Account of the Sights of the Crystal Palace:" it gives a capital impression of the wondrous and diverse appearance of the collected results of ingenuity and labour, and where these are so prominently observed

There's holy saints,
And warfare saints,
By Mayfield Pugin,
A Scarborough Jones
Did paint the trees
Of yellow and gamboge in.

There's fountains there,
And crosses falls
[illegible]
turrets.

There's statues bright
Of marble white,
Of silver and of copper;
And some in stone,
And some I think,
That is an error proper.

There's stayen eglooes,
That stand in shoe,
[illegible]

There's casts and gigs,
And pipes for pugs,
Parr's children and there's
harrows;

And ploughs like toys
For little boys,
And elegant wheel-barrows

For them genteels
Who ride on wheels,
There's plenty to indulge
them;
There's Broslyn stair
[illegible]
And varyle-s from Bulgium.

There's cabs for stands
And shandy-dan[illegible]
There's vehicles from New
York here;
There's Lapland sleighs
Have crossed the seas
And standing cyare from Cork
here.

[illegible]
From glass to glass,
[illegible]
From woodthorn grows
to tree now
in this sublime Museum

Look! here's a fan
Of Indian design,
A native from Damascus
There a shawl we got
From far Thibet,

And Cotton prints from Glasgow

There's Gorman flutes,
Marooky boots
And Naples macaronies
Bobsynas
Has sent Bolzay
Polonia per potatoes.

There's granite fonts
That's quite luminous,
There's sacks of coals[illegible]
tum;
There a swords and guns,
And soap in cums
And ginger-bread and jewels.

There's tay pots there,
And canisters tar
There's coffins filled with
sore—
There's canvass tents,
Iscose instruments
Mountains of clothes by Moss

There a tea, as sure
Of it ups a store
But then I don't remember;
For cold chicken,
Did I compose
From May time to November!

The British galleries have received the greater portion of the contributions to be there displayed. The models and specimens of machinery in motion are numerous and choice; the variety of clocks, watches, and timepieces very rich. Musical instruments are hardly yet arranged. Surgical and philosophical instruments are visible in abundance. Glass, pottery, and ceramic manufactures are being uncovered and set in order; but little of the shawls, tabby, or carpets are as yet exposed. Precious metals, too, remain in their cases, but the arrangements for these will be but a brief affair.

In the Foreign galleries, stained glass is at present the principal attractive feature: vestments, bronzes, and light furniture are visible in several spaces. The counters for the new Courts of Egypt and Nubia are rapidly erected. It is however, in the nave of the Foreign department that the scene is most attractive, the statues and works of art which we have, from time to time, noticed, are nearly all complete and placed on their proper pedestals. The glass, bronze, jewellery, and furniture spaces for the Zollverein, Belgium, and France, are considerably in progress with; but no material next week. In order to guide readers a synoptical, though cursory, account of the most remarkable objects in the Foreign compartment. The courts for the East Indies and Canada exhibit evidences of increasing activity. In the former animal and vegetable kingdoms the display is varied and valuable, in dyes, pigments, resins, oils, gums, grain and wild-fruit, timber and fancy wood; and, indeed, a profusion of raw produce is remarkably extensive. The goldsmith's works, [illegible] shawls, muslins, and carpets are splendidly interesting, and the toys and [illegible] ivory are the native arms, tools and implements of different tribes, and specimens of their peculiar handicraft, and some of their [illegible] jewels (not over delicately set) will be remarked with interest. [illegible] minerals, ores, and manufactured articles of Canada are striking: [illegible] canoes, sledges, harness, wood, furniture, &c., are contributed; and, in the general produce of agriculture, mines, fisheries, and forests, the display is commendable. We have noticed that the new colonial departments are in progress, and we trust that they will be sufficiently forwarded their arrangements, and which have agreeably deceived us No commendation could surpass the collection of our own navy, steam-vessels, cables, tools, &c. The carving section also is well filled. Great activity is now observable in the printed wool and in wool fabric courts. The metropolitan furniture has received extremely interesting articles—those of Gillow's are choice beads, and cabinets. Mr. Jobson Smith's stove and grate compartment deserves especial notice, for its forward condition. The Medieval Court will undoubtedly be ready by the opening day, and our Sunday survey we must not forget to assure our readers that the noble industrial specimens in the British nave will not be arranged in time for the first of May. We must be excused from entering into further detail of the various paragons of human skill collected, as we repeat, we shall probably furnish to the visitor next week some hints for his first attempt to view the numberless attractions of the treasures spread before him

Let us conclude by [illegible] that, under the provisions of the Protection of Inventions Act, the Attorney-General has appointed Mr. R. Stephenson, Dr. I. Taylor, Mr. Woolrych, and Mr. Reve Protection commissioners for duly [illegible] the award of certificates of registration to exhibitors who would avail themselves of the benefit of the act just passed.

THE RELIGIOUS ASPECT OF CIVILIZATION IN THE UNITED STATES. I have not for some time been called to the Rappists and the Mesha, by which we now have constant communication with the spirits of the other world. The privilege of holding converse with the departed is no longer confined to the Fox family They have made so much progress in the south, which left them for business, and now there are actually thousands engaged in communicating with the dead As the circle of communication widens, the means are multiplied as they now, besides rapping, have a table and alphabet, by which involuntary movements of the arms, mute alphabets, and writings on paper thrown under tables on the floors Such journals as the *Voice* are already upheld almost solely by and [illegible] their communications. There is a newspaper published at Auburn in this state, which is solely represented by its proprietors to be edited by the apostles the medium, and nothing, say they, is inserted on any [illegible] but their wishes. The [illegible] is of no importance has, as yet, not been satisfactorily posed, certain it is, that the revelations of the opinions of Fénelon, Luther, [illegible] Franklin, and Washington are of the highest interest. Other communications have prevailed ever honesty. *New York Correspondent of the Daily News.*

PUFFING IN FRANCE.—A curious specimen of what may be called the *genre litteraire* of puffing has appeared in a few days ago before a court of justice, in the course of some squabble between two tradesmen. Leon Gozlan, well known to the public as a dramatist, lately received a commission for the fabrication of one of the [illegible] Hermodes of puffing. He was to furnish a detailed account of the plot he intended to employ, with descriptions of the principal scenes and incidents. He then charged an advertising agent to carry his document round to the different [illegible] and to obtain their terms for insertion (of course for a consideration) to introduce their names and addresses, with puffs of their wares, in particular places. His prospectus ran somewhat in this way:—"Chapter I. Marriage of [illegible] Here will be introduced the name and address of the former's tailor and of the latter's milliner, with a glowing description of the excellence of the garments.) Chapter [illegible] The husband is decoyed from his wife's couch, rushes up a [illegible] pistols and poison, that she will choose which death she will die. (Names of [illegible] to come in here.) Chapter 21. She dies, and is to be [illegible] Now is the moment for Turveydrop to be on, as a tenant, and is [illegible] In short there was not a single chapter a single incident which [illegible] opinion author did not propose to make the [illegible] Open one, [illegible] the literary value of this [illegible] move, writing; but at least a [illegible] in admitting that it is bold and [illegible] advance in the noble art of advertising.

[illegible] imported into London, 185[illegible]—From France, 1st quarter, [illegible] 2nd quarter, 109 437 cwts; 3rd quarter, 135,872 cwts.; 4th [illegible] 201,676 cwts From United States 1st quarter, 4,979 cwts.; 2nd [illegible] 2,264 cwts; 3rd quarter, 30,[illegible] 4th quarter, 69,764 cwts

The editor of the *Bangor Mercury* says that h[illegible] two individuals who are connected, having [illegible] name whose fathers were brothers, whose mothers were sisters, and whose wives are sisters. He challenges the whole world for a similar coincidence.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The suspension of the sittings of the Legislative Assembly during the Easter recess has left the Paris papers little to do but to speculate on the future: and although the revision of the Constitution, the prolongation of the President's powers, and the fusion of the two branches of the ex Royal Family, are subjects which have been so repeatedly discussed, that they seem to be quite worn out yet, for want of more enlivening topics, they have become the almost daily text for editorial disputation; but they cease to attract much public attention. In the *Constitutionnel*, which may be regarded as the organ of the Bonapartists, an article has appeared which has excited some notice in political circles. It leads to the inference that the Government are hastening on a crisis by preparing strong political measures, which it is intended immediately to introduce into the Assembly, that will probably produce great agitation out of doors; but that, in the event of any attempt at insurrection arising therefrom, the Executive will be fully prepared to put it down promptly and effectually.

The *Constitutionnel* also strongly recommends the adoption of a plan, which has been set on foot by the partisans of Louis Napoleon, for opening a register in all the communes of France for consulting the wishes of the citizens, on the most extensive and unrestricted scale, with regard to the question of a partial revision of the constitution. The signatures of each citizen attached to a simple "yes" or "no" is to be attested before delegates of the municipal authority.

Among the rumours prevalent in Paris during the week, was one to the effect that the French Government had addressed a note to the Cabinet of London, requiring the expulsion of Ledru Rollin, and other French refugees, whose presence facilities of communication with Paris and the departments are found exceedingly embarrassing to the French Government, and calculated to add dangerous complications to the present critical state of affairs.

It is announced that M. Guizot is about to enter the lists for the representation of the Landes, the elections for which department open on the 11th of May.

Arrangements were being made on a grand scale for the celebration of the anniversary of the Constituent Assembly on the 4th of May

The President of the Republic, on the report of the Minister of the Marine, has awarded a silver medal of honour of the first class to Mr. Andersen, pilot master in the English Royal navy, commanding the coast-guard station at Downderry, for having, at the risk of his own life, the crew of the *Pilcara*, of Plymouth, on the 19th of January last

An engagement took place on the 10th inst. at Oued-Sahel, in Algeria, between the French and the insurgent Caboul tribes of the Beni-Zeiaves, under Ben-Salem-ben-Bou-Baghla, when a number of the latter were killed, and the remainder took to flight. The victors afterwards set the village of Selloum on fire, which was soon destroyed. The French troops had one officer and ten men killed, and one officer and thirty-six men wounded.

PORTUGAL

The Duke of Saldanha's insurrectionary movement, according to accounts from Lisbon, of the 19th instant, has not met with that success which appeared to have been generally anticipated at first by all parties. He failed in reaching the important post of Santarem before the King took possession of it, and this primary want of success seems to have deterred many, whose loyalty to the throne was very doubtful, from at once joining him. The said, too, which he had expected from the Oporto junta was not accorded to him, whether on account of a want of unity of sentiment between him and the Oporto leaders or from any other cause is not stated. It is said, however, that Saldanha has addressed a letter to Count Cassal, the military governor of Oporto, with the hope of inducing him and the garrison to join his band, and that the Count had rejected the proposition, owing to promises made by the Queen, that he was to have the title of Marquis conferred upon him, and that Baroness Sobrero upon his youngest daughter. The last report of Saldanha's movements states that he was in a critical position, in the neighborhood of the city of Vizeu Colonel Antonio Bento, at the head of the Municipal Guards, had not succeeded in effecting a junction with the Duke, although he had managed to cross the river Tagus and Zezere. He was subsequently flanked by the first brigade of the Queen's troops, and compelled to retreat towards the latter river.

The Spanish Cabinet had offered assistance to the Portuguese Government both military and naval, in the shape of a force on the frontier, and two Spanish steam frigates, which had been ordered to proceed to the Tagus.

UNITED STATES.

We have accounts this week from New York to the 8th inst. from which we learn that the threatening disturbances at Galveston, on the subject of the fugitive slaves arrested there, had subsided. Large meetings of the populace were been held, and the speakers urged violent resistance to the laws, but the prisoners were safely guarded by the military. &c., and no rescue occurred on the 7th inst. Judge Shaw refused a writ of *habeas corpus*, applied for on the petition of Thomas Sims, the fugitive slave, whose case had originated the popular excitement. It is stated that fugitives were also discovered by the commissioners living upon the flesh of their dead companions

A new steam-ship, *Pioneer*, of 2700 tons, intended to carry passengers Europe to the Exposition, was launched at New York on the 8th inst.

Several new and somewhat threatening *crevasses* had occurred on the Mississippi

The Hungarian colonists in Texas have met with a most cordial reception from the citizens of Galveston.

The Indians continued their work of plunder and murder in the valley of the Rio Grande. The planters on the banks of the river are in the greatest alarm, and many families have removed to the Mexican side.

From California we have advices to the 8th of March, which present rather favorable pictures of the spirit of popular turbulence, and violence which is manifested at times in the "wild justice" of Lynch law. A young Englishman named Ellis, who had been in the employment of Sutter, was taken and arrested and brought to trial at once; but the impatience of the populace for his execution was so great, that, after clamorously besieging the court during the trial, they broke into the room, dragged him from the prisoner's box, and in spite of the opposition of the authorities, and at half-past nine o'clock at night hanged him from a tree at the corner of one of the streets of San Francisco

Another execution had taken place since the time mentioned, one long in two men suspected of almost murdering a merchant named Jansen, in his store and robbing him of 2000 dollars. Ultimately, the jury disagreed, and the people, after great deliberation, dispersed

Political affairs were also in an excited condition, arising from the struggle to elect a senator to the United States, in the room of Colonel Fremont. Although one hundred and forty-four ballots, the joint convention to effect adjournment *sine die*.

Though there had not been any remarkable discoveries of gold, yet the general terror of the news from the interior is decidedly favorable to the miners. The quartz mines are being worked with much success, and the accounts heretofore published of the richness of the *placers* at Trinidad Bay are corroborated by the arrival. Miners were going to the Gold Bluff in great numbers. Gold that was already arriving somewhat more free, at San Francisco, and the assayers were fully employed.

CENTRAL AMERICA.

From Chagres we have accounts to the 29th, and from Panama to the 26th ult. On the 25th, a shock of earthquake was felt on the island of Tobago, at Panama from which the storehouses and property of the Pacific Mail Steam Ship Company were barely saved. Some thirty houses were destroyed. On the 26th, the shock was slightly felt at Panama, but there was no loss of life or damage to the city.

Another robbery has been perpetrated at the Isthmus of Panama. The *Panama Star and Herald* of the 22d ult., gives the following account of the matter:—"The English mail carrier, brought by the steamer from the south, which left this city for Gorgona on Thursday morning last, was robbed a few miles from here of one mule load of about 320 pounds of silver. The mule was taken into the woods by the robbers, and there they had the whole possession of the animal; but after carrying the silver bars some half mile or so, they found the load too heavy, and were compelled to abandon them. The silver was recovered, but no evidence has yet been obtained of the party or parties by whom the robbery was committed by a white man and a negro, the negro, it is supposed, is well known in the city. There are various stories in town in regard to the robbery, but this is about the correct statement as to the affair, as near as we can learn"

The accounts from the survey of the route on the Isthmus for the Tehuantepec Railroad are highly encouraging. It is supposed that the work will be completed in about four months. The members of the expedition remain in excellent health. They have discovered a deep, well sheltered, and spacious harbour on the Pacific shore, a few miles south-east of the town of Tehuantepec.

CANADA. NEW BRUNSWICK, &c.

Montreal advices, to the 7th instant, communicate the fact of the Post-office department having been transferred, on the 5th, from the British to the provincial authorities. The transfer was effected without any fuss or éclat.

The annexation feeling has lately shown some symptoms of revival in Lower Canada. A public meeting has been held in the county of Huntingdon, which resolved between the predecessor and the Assembly, and announced that he was prepared to introduce a responsible government into the colony immediately if he were able to surrender the disposal of her Majesty's Crown revenues when the Legislature shall have agreed to certain conditions [illegible] on the part of the Crown

WEST INDIES.

Intelligence to New York has been received from Jamaica to the 31st ult. The colera still lingered at Lucia and Montego Bay, although the disease had in those places worn itself out, and the malady had reappeared in the Lucidas Bale district. Numerous deaths are reported

His Excellency the Governor had transmitted to the House of Assembly a letter despatch from Lord Grey on the abour supply question, on which [illegible] discussion was expected

The *Kingston Morning Journal*, of March 25, publishes the budget, as pr

sented to the House of Assembly. The liabilities of the island are estimated at £248,300, of which about £24,000 are for interest and salaries. The income is estimated at £210,850, leaving a deficiency of revenue of £37,460.

CALIFORNIA.

(From a Correspondent.)

Stockton-street, San Francisco, 1st, 26, 1851.

We arrived here Feb. 1; landed, and presented myself to a settler, who gave me my board and lodging, and me employment as a labourer for a week. Earned 10 dollars. Left to get better pay on ships in port, at 1 dollar per hour per job, and 5 dollars per day. Got gonne of Nesmith and Hurr, Brothers; traded, averaged till now 5 dollars per day. Went to Sacramento, up river 150 miles, to sell cigars; cleared 70 dollars, or 35 dollars each. He generally makes more than I, but is too small for labour. Sold my gun for 20 dollars; cost 5 dollars. Now preparing for the mines, six or seven of us, two men to one mule. Expect to get one clear ounce per day. Know the lucky fellow whose good fortune you must have seen in the *Times*: he dug out 1700 dollars in one day; he is one of our party. Klamath and Scots River is our spot, at present in four feet of snow; cost 100 dollars to get there, including toes and ratings. I know all the dangers, but all the rich men begin this way; 12,000 vessels in harbour; a magnificent city, built in three years. Saloons, the largest and finest in the world: evidences of wealth all over the city, all exposed, protected only by Judge Lynch: all the stores over-crowded with goods; trade unusually dull. It is winter, and the worst time, but the old times will never return, they say. Lovely climate, weather, scenery, and food of eating; all drinks very bad. Infamous police, and how wretched: a timid man dare not enter any place of amusement or public-house after dark; everybody carries pistols and knives; men pay down fifteen dollars to get there, including toes and rations

THE NEW ROUTE TO DENMARK.

KOLDING.

CONFIRMATION DRESS. BRIDAL DRESS FISHERMAN'S WIFE.

COSTUMES —ISLAND OF FUNEN

(*Continued from page 318.*)

IN our Journal of last week we briefly explained the object of the recent experimental trips from London, by way of Lowestoft, to Hjerting, in Jutland, and thence to Copenhagen; but, before we proceed to illustrate the journey, it may be as well to detail the circumstances which have led to this new enterprise.

A glance at the map will show, that, at least on geographical grounds, Hjerting and Lowestoft are the natural termini of any chain of connexion between the Danish and British metropolis; and on commercial grounds the advantages are no less obvious. Up to the present time, English travellers to Denmark, Sweden, and Norway have been compelled to encounter the long and tedious distance from London *viâ* Hamburgh, or otherwise the wearying passage from London, or Hull, steam, to Copenhagen. The latter, in addition to its occupying at le three days and a half, is available not more frequently than once twice a month; while to reach Hamburgh occupies an average of fif five hours, and the traveller is then distant from Copenhagen about 2 English miles. The advantages now eligible are, therefore, immediate apparent: for from London to Hjerting requires only from thir three to thirty-eight hours, and thence to Copenhagen is only about English miles. But rapid transmission of passengers was only a mi object with the new Company. The immense plains and marshes of J land, and the fertile tracts of Funen and the other Danish islands, he long been known to be peculiarly favourable to the rearing of cat repeated importations of which have been and are continually made i England.

These importations have been hitherto usually by way of Hamburg This, however, entailed the necessity of the beasts being driven so thing like 200 miles before embarkation, and they had then the voy of fifty-five hours to undergo. The consequence was, that they arri out of condition, losing in weight to an extent almost incredible to p sons unacquainted with the trade, and many even dying in bad weath By the Hjerting line, all this is avoided. The cattle have only a f miles inland to traverse before reaching shipboard, and then the voya as we have already seen, occupies considerably under thirty hou Moreover, on their arrival at Lowestoft, they are received in she whence they are at once turned into the pasture-grounds of Norfolk fatten, or are otherwise immediately conveyed to London by railwa and the *Prince* steamer, on her first voyage, conveyed from Hjerting Lowestoft 60 head of cattle and 162 pigs, the condition of which may inferred, from the former realising, at Smithfield, an average of upwa of £1 per head beyond the prices brought by similar cattle that h arrived by way of Hamburgh; besides which, the *Prince* conveyed barrels of pork, and 60 barrels of beef.

Last week our narrative of the land journey was omitted, in order detail the very interesting reception given by the King of Denmark the representatives of the English press, on their arrival at Cop hagen. The port of Hjerting was, however, described and illustrat and from this point we take up the descriptive particulars of the cour through which the visitors journeyed to Copenhagen.

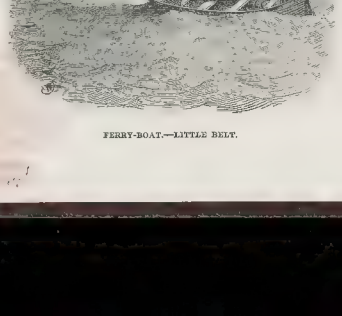
From Hjerting the party proceeded to

KOLDING,

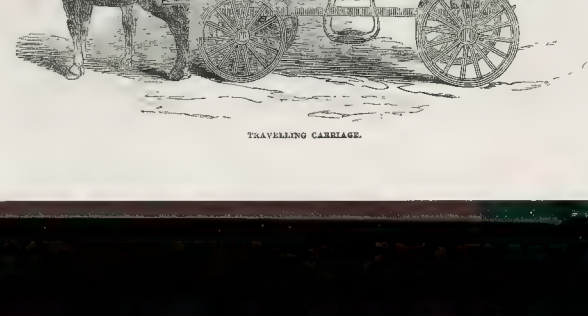
situate on the Little Belt, a distance of about 40 miles, traversing the en with of the peninsula of Jutland. The town derives some importance fr its vicinity to the passage of the Little Belt; and it figures in the hist of Denmark as the place whence, at the establishment of the Refor tion throughout the united kingdoms of Denmark, Schleswig, and H stein, a code of laws, entitled the "Recess of Kolding," was promulga by Christian III.

Kolding, though so little known to the general tourist and the co mercial statist, that its name is not mentioned in our latest and b gazetteers published this year, is a place of very considerable importa to the Danish traveller, and is possessed of no mean interest on score of historical reminiscence and picturesque attractiveness, b landscape and architectural. It is situated in the province of No Jutland, and is the focus of many routes to various parts of the Den territories; viz. 1st, the one we are traversing, direct to Copenhagen, Odense and Neyborg, to Korser and Roeskilde; 2nd, from Neyb through the Islands, which are exceedingly numerous, abounding beauties of many kinds, and especially rich in Scandinavian antiquit 3rd, through Christiansfeldt, down Schleswig and Holstein, to Hambu and, lastly, round Jutland. The castle, whose ruins are very p turesque, was built in 1248—a highly prized memorial of the civilisa and power of the victorious Norsemen, remaining almost perfect u 1808, when it was accidentally burnt by the Spanish troops quarte there, owing to their efforts to create the atmosphere of their na Mediterranean in the frigid Baltic.

The first portion of this journey lies across a heath, sixty miles length, and between twenty and thirty wide. The farm houses are merously scattered about, and seem extremely comfortable habitati The Jutland farmers are mostly landholders, and nearly all compa tively wealthy; but, their tenure is exceedingly peculiar, its tran



FERRY-BOAT.—LITTLE BELT.



TRAVELLING CARRIAGE.

giving rise, in innumerable instances, to a very embarrassing species of agrarian agitation when the owner attempts the enforcement of arbitrary lines. The holdings for the most part consist of from one to two hundred acres; but, as these are almost universally held only for life, the accumulation of money rather by penurious than a liberally judicious treatment of the land becomes the engrossing object of the occupant, and hence it reverts to the landlord rarely if ever improved. The Jutland roads are only tolerable, though, from the abundance of material for their construction, they might be easily improved, as doubtless they now will be when the traffic justifies the enterprise. The country is nearly flat, but the journey is by no means without its peculiar attractions. Our Artist has sketched a few specimens of the

COSTUMES OF THE PEASANTRY.

From Kolding, the party, after skirting the shore, crossed the ferry to Middlefart, in the island of Funen. This ferry affords some of the most beautiful scenery throughout Denmark, the Belt here being about an English mile wide. The high road, or, as it is called, "the Royal route," then runs through Odense, which traditionally derives its name from Odin, the chief of the Asas, and is the most ancient and considerable of the provincial towns of Denmark, besides possessing an extensive modern interest in the circumstance of its being the birthplace of Hans Christian Andersen the author, and Jerichau the sculptor. From Odense to Nyeborg is about eighteen miles, where the road terminates on the shores of the Great Belt.

We here Engrave, as a sample of the Steam Navigation, a

STEAM FERRY-BOAT,

such as constantly plies between Neyborg, the eastern extremity of the island of Funen, and Korser, in Zealand—the water flowing between constituting the Great Belt. About the middle of the passage is the little island of Sprogöe, on which is a telegraph for the transmission of news when the Great Belt is frozen over, and an inn for the accommodation of ice-bound travellers—the place and the predicament being so uncommonly uncomfortable as to give rise to a Danish malediction, "I wish he were at Sprogöe."

The whole island of Funen is in a high state of cultivation, and the scenery in many parts bears a great resemblance to the English rural landscape of our midland counties, being moreover the only portion of Denmark where the fields are enclosed with hedges. Our Artist has sketched a specimen of the usual modes of inland communication, by

FERRY-BOAT AND PUBLIC CARRIAGE

From Nyeborg a ferry crosses the Belt to Korsör, in Zealand, a distance of about eighteen miles. These and the numerous other ferries in Denmark are all regulated by Government, and the fares are very moderate; but payment is attended with some inconveniences to strangers unacquainted with the currency, which, however, is by no means complicated. It consists almost entirely of silver, gold being very scarce; but the notes issued by Government may be taken with safety; they are for sums as low as one rigsbank dollar, or 2s. 3d. English. These amounts, although almost ludicrously small compared with our English paper money, are a formidable sum when contrasted with the notes of

STEAM FERRY-BOAT—GREAT BELT

COPENHAGEN, FROM FREDERICKSBERG.

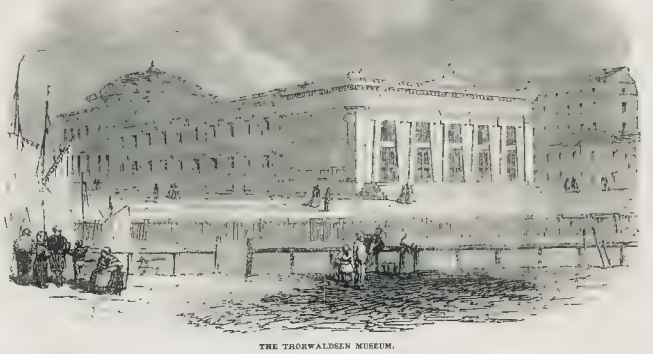
Sweden, which are as low as 2½d. of our money. The traveller in Denmark will, however, after a short acquaintance, find little difficulty from the currency, it consisting of dollars (2s. 3d.), and marks (4½d.), six of which make a dollar, a specie dollar being two rigsbank, and worth 4s. 6d.

As the new route we are describing will doubtless be seized on by intending tourists forthwith, it may be as well to state that from Hjerting the traveller can proceed, as he may desire, either by the public conveyance or, as is most usual, by post. This latter mode is remarkably moderate in price, being about 6d. per mile (English) for a covered carriage and pair of horses; and, as the vehicle holds four persons comfortably, travelling in Denmark may, with the exception of Norway, be considered cheaper than in any other country in Europe. There is also another description of carriage called Holsteins-vogne, still more economic, likewise drawn by a pair of horses and holding four persons; but, as it is entirely without springs and perfectly open, it is not often chosen by English travellers, though its adoption is very general amongst the natives, to whom its cheapness recommends it.

When the arrangements are completed, travellers may calculate with safety on reaching Copenhagen in three days from London. The greatest space of time is lost in the distance between Hjerting and Kolding, and the Danish authorities are taking every means to abbreviate the practical distance between those points; all that is wanted being the roads kept in somewhat better order, an improved description of vehicles, adapted to increased velocity, and the stages rendered more frequent. This latter point requires especial attention, twenty English miles being considered quite a comfortable stage for a pair of horses, and frequently they are taken much longer distances.

From Korsör to Roeskilde is about 46 English miles, through an extremely fine country, well cultivated, and remarkably picturesque. The roads are excellent throughout Zealand, and in summer are quite equal to the roads in England. From Roeskilde to Copenhagen there is a railway, 18 miles in length, which is ultimately intended to be continued to Korsör, on the Great Belt. This line, admirably appointed in every respect, is constructed entirely of English iron, the engines, axles, springs, wheels, and general ironwork of the carriages being procured in England, where they are obtained at a cost very much below the scale of Danish competition. This is at present the only railway in Denmark Proper, though there is another line from Hamburgh to Kiel, in the southern portion of Holstein.

Having accompanied the party to the capital, and already described their gracious reception there, we proceed to give a few of its characteristics. First, of



THE THORWALDSEN MUSEUM.

COPENHAGEN, FROM FREDERICKSBURGH.

Copenhagen, or, as it is spelt in Danish, Kjobenhavn, is said to have been founded by Bishop Axel in 1168, when he built was only a poor hamlet of fishermen; but, as a town, it dates only from the thirteenth century, and as a city, since 1443. Being well adapted for commerce, it rapidly increased, and soon became the seat of Government, and has ever since remained so, its population being now nearly 130,000. It is built on a piece of very flat ground, slightly raised above the surface of the sea, and is intersected in several directions with canals, &c., along which are numerous quays and wharfs. Copenhagen, as the reader will readily surmise, from the prominence it has had in the history and annals of modern Europe, is completely fortified; the city walls inclosing a circuit of about five English miles, which, however, includes the harbour and docks. These fortifications have stood some stout sieges, especially that in 1801, when, after one of the most desperate actions on record, Nelson, who was second in command to Sir Hyde Parker, sank or burnt all the Danish ships, and compelled Denmark to abandon the alliance she had entered into against England. Again, in 1807, Copenhagen was bombarded by Lord Cathcart (Wellington holding a command), and forced to capitulate, and for this siege the Danes still bear us a great animosity. England has, however, in some degree recovered the good opinion of the Danes by the support she gave them during the late war with Schleswig-Holstein; and this national animosity is now directed towards Germany, one consequence of which is, as was shrewdly remarked by one of the postmasters near Odense, "That the Danes are all learning to speak English instead of German, as they had been accustomed to;" a trivial fact that in some measure shows the bias of the public mind.

The streets in Copenhagen have little to interest the traveller. The shops are very poor in appearance, although tolerably well supplied with *material*; but, so far as regards external appearance, cannot be compared at all with the splendid establishments of our own metropolis, and are even inferior to most of our provincial towns. The houses themselves are very plainly built of brick and stucco, and are bald, uninteresting structures, although they cover a great deal of ground. The squares are, however, very ornamental, being surrounded with noble buildings, and having a statue in the centre. In the new town, the place of Amalienburg contains four palaces of uniform size and design. The churches are numerous, but few are remarkable for architectural beauty, though one of them, Von Frue Kirke, is enriched with several of the finest works of Thorwaldsen; and from its tower a good view of the city is obtained.

The Observatory, adjoining Trinity Church, was built 1637-42: its tower is about 120 feet high, and the circular room at the summit is said to have been used as one of observation by Tycho Brahe. Peter the Great is said to have driven a carriage and four up to the top of the tower along its spiral road.

The accompanying view is from the King's summer palace of Frederiksburg, in the environs of Copenhagen. It is a splendid structure, with delightful gardens; in the church attached to which the kings of Denmark are annointed.

Few cities are so well supplied with places of amusement as Copenhagen. The greatest feature is the museums and collections, which, on certain days, are accessible gratuitously, and are valuable means of improving and assisting the formation of a correct public taste

THE THORWALDSEN MUSEUM

Deserves especial notice, and, indeed, to the lover of art, this collection alone is worth the journey from England to see it. It contains about 300 of this great native sculptor's works, which are exhibited in a building attached to the Charlottenborg Palace. The edifice forms a parallelogram, having a spacious court-yard in the midst of it, in the centre of which is a mausoleum to the memory of the immortal artist. At one end of the building is the Hall of Christ, which contains casts of all the statues erected by Thorwaldsen, in the Frue Kirke; and here that wondrous work, the statue of Christ, can be best contemplated. There are many other museums, as the Collection of Northern Antiquities, the Royal Museum of Natural History, and various others, together with several excellent galleries of paintings, all of which are open to the public. Copenhagen is lighted with oil lamps, though surveys have been made preparatory to laying down a system of gas-pipes and sewers, which, it is anticipated, will shortly be commenced.

Of the homeward journey, it will suffice to state that the whole distance from Copenhagen to Hjoerring was performed in twenty-eight hours, which, it is expected, will be reduced to thirty, and even twenty-four hours. The travellers, having been hospitably entertained by the British Vice-Consul, left Hjerring by steamer, and, after a pleasant passage of twenty-seven hours, they landed at Lowestoft, and were in town at a quarter-past four on Thursday morning; having been only about three days and five hours on the journey from Copenhagen to London.

Altogether, this attempt of the Northern Steam Packet Company (in conjunction with the Eastern Counties Railway Company), to establish a direct communication with Denmark, cannot fail to lead, directly or indirectly, to results of the greatest importance to the two countries.

SECOND EDITION OF THE VOLUMES OF THE

NATIONAL ILLUSTRATED LIBRARY.

The First Issue now being all sold, ANOTHER EDITION IS IN THE PRESS, and will be ready in a few days.

Orders received by all Booksellers. 2s. 6d. per Vol.; post free, 3s.

Office, 198, Strand.

CALENDAR FOR THE WEEK.

SUNDAY, April 27.—First Sunday after Easter. Low Sunday.
MONDAY, 28.—Sun rises 4 h. 41 m., sets 7 h. 16 m.
TUESDAY, 29.—Babington, the eminent physician, died. 1833.
WEDNESDAY, 30.—Oxford Term begins.
THURSDAY, May 1.—Philip and James. Wellington born, 1769.
FRIDAY, 2.—First Methodist Society founded, 1738.
SATURDAY, 3.—Invent. of Cross.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 26, 1851

As the day for the opening of the Great Exhibition approaches, the interest of the public of this and other countries increases in intensity with regard to it. The fairy-like, but substantial structure, itself the greatest and noblest work of art and manufacture which the Exhibition has called forth, is completed, and challenges the admiration of daily crowds, many of whom, perhaps, will have no opportunity of entering within its portals. But even these, in seeing the Building itself, will have seen a casket richer than any single gem contained within it. The manufacturers, the artists, and the artisans of our own and foreign countries have nobly responded to the appeal made to them; and the long avenues and hanging galleries of the Crystal Palace are already filled with specimens of their skill, their taste, their ingenuity, and their enterprise. The whole progress of the scheme, since it was first broached authoritatively by the Prince Consort until the time at which we write, has been satisfactory in the highest degree. It is true that differences of opinion have arisen from time to time; but then they have been reconciled. It is true, also, that difficulties have been discovered; but it is no less true that they have been courageously met and manfully surmounted. Time itself—which seemed the greatest of all obstacles to the realization of the project—has been surpassed—has been fairly beaten in the contest which it provoked with the energy of the men, who determined, on taking up the cause, that they would do all that men could do to carry it to completion. If any one circumstance more than another created a feeling of disappointment with regard to this great industrial gathering of all nations, it was when the vague language of the offer of announcement relative to the inauguration led to the impression that the ceremonial would be private, and that her Majesty, on solemnly opening the Exhibition, would not be surrounded by that best body-guard of a British Sovereign, her faithful subjects. The miscouception, however, was speedily cleared up; and the satisfaction even of those millions who cannot by any possibility be present at the scene, is not less than that of the more fortunate few who will be privileged to behold it, to learn that Queen Victoria will publicly open the Exhibition with a ceremonial unparalleled for its splendour and its significance.

To be present at a scene, which in the history of the world is unexampled for the combination of many into shadow, showing the Golden Country and its Cities as they appeared last season. Daily, at 12, 3, and 8 o'clock. Admission, 1s.; stalls, 2s. reserved seats, 3s.

ROYAL POLYTECHNIC INSTITUTION.—The Rotation of the Earth Demonstrated by Foucault's recent Experiments, as exhibited at the Pantheon in Paris. Lecture by Frederick Chatterton, Esq., on the History of the Harp, with Vocal Selections by Miss Messent and Mr. Frank Mori. Lecture by J. H. Pepper, on Chemistry and its Natural Philosophy by Dr Bachhoffner Dissolving Views [illegible] Admission to the whole, 1s. Open from Ten till Five.

ROYAL GARDENS, VAUXHALL.—OPENING NIGHT, THURSDAY MAY 1st, 1851, with a GRAND BAL MASQUE to inaugurate the Opening of the Crystal Palace. Monster Attire, with a numerous Corps of Instrumentalists, and three additional efficient Bands. Mr. J. Nathan, Castle-street, Leicester-square.—A pointed Costumier. Admission, Gentlemen's Tickets, Half a Guinea.

The Regular Season will commence on FRIDAY, MAY 2d, 1851, with a galaxy of talent unparalleled. The three most eminent Female Equestrians in the world, Messdames Loyo, Mdlle Pauline Cuzent, and Mdlle. Palmyre Assolo, together with Hernandez, the Great American Rider. Mons. Arban and a powerful Band. Brand's Stupendous Picture, "The Terrace of Concord," with Brilliant Fireworks and splendid Illuminations.—Open Every Evening, previous Notice of Admission Half a Guinea.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

[illegible] with the Royal children. Her Royal Highness the [illegible] Prince generally riding on horseback, and her Majesty [illegible] with the Royal children. Her Royal Highness the [illegible] Prince Consort came to town on Tuesday, and presided at a meeting of the Royal Commission for the Promotion of the Exhibition of 1851.

Lord John Russell went to Windsor Castle on Tuesday, and had an interview with her Majesty.

The countess of Charlemont has succeeded the Marchioness of Douro in the [illegible]

We [illegible] of the Court has already announced. A series of [illegible] during the month of June; and the Queen will encourage, by every means in her power, the display of hospitalities on the part of the nobility and gentry.

Marshal Soult and Lady Adelaide Ware arrived in Paris on Friday week, from a tour in the south of France. The noble Marquis, while in the Pyrenees, had a sharp attack of fever, but his [illegible] ally strong constitution soon repelled the disease, and we are happy to learn that Mr. Charles Hamilton is now quite recovered.

Lady John Russell has issued invitations for an assembly, on Wednesday next, at the official residence of Lord John Russell, in Downing-street. Her Ladyship will also have assemblies on the 14th of May and the 4th of June.

Viscount and Viscountess Combermere and the Hon. Miss Cotton, have arrived in Belgrave-square, from Combermere Abbey.

Lord and Lady Holland are expected to return to England early next month, from the Continent. The noble Lord and her Ladyship, according to the latest accounts, were at Naples.

The marriage of Lord Ward with Miss de Burgh, daughter of Mr. Hubert de Burgh, took place on Thursday, at St George's Church, Hanover-square.

We regret to state that the venerable Sir Edward Codrington is still seriously indisposed, and that no hopes whatever are entertained of his recovery.

METROPOLITAN NEWS.

ST. MARY'S HOSPITAL, PADDINGTON.—A general meeting of the [illegible] was held on Wednesday, at the Mansion-house, for the purpose of [illegible] of patients. In order to procure the money still wanted without delay, the governors have established three separate funds, called the furnishing fund, the maintenance fund, and the general fund, for the attainment of their object, and to the contributors of these funds the report of the public was earnestly entrusted.

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL.—The annual report [illegible] from which it appears that [illegible] have availed themselves of the benefit of this charity. [illegible] been received [illegible] The [illegible] the appointment of a [illegible] for the operation for the removal of squinting. 4264 persons have been admitted to its benefits during the year, of whom 167 were in-patients. Of the principal operations during 1850, 98 were for cataract, 25 for the formation of an artificial pupil, 104 were for squinting, and 112 others for various complaints. Of the operations for cataract and artificial pupil, two failed. [illegible]

[illegible] means of doing it; and, to enable them to open these two wards, the committee [illegible] are fellow-creatures, and [illegible] are charitably disposed, to visit the hospital, when they will be convinced that more is done for nearly half the money expended at any other hospital in London, in consequence of the care bestowed and the excellence of the arrangements.

ROYAL INFIRMARY FOR DISEASES OF THE CHEST.—The annual meeting of the friends and promoters of this institution took place at the Infirmary, Dean-street, Soho, on Wednesday; the Hon. and Rev. W. Legge in the chair. [illegible] 1850, 1,000 patients were relieved, and 250 were now in weekly attendance. These patients consisted of clerks in offices, needlewomen, domestic servants, distressed foreigners, sailors, soldiers, and police. The principal causes of disease were attributed to the habits of living connected and the locality, as to intemperance, want of cleanliness and of out-door exercise, insufficient and adulterated food, wet feet and clothes, sleeping in damp rooms and in bad beds, &c. The committee regretted that many persons suffered to exist the medical art was capable of little more than palliating evils which were inevitable. It was worthy of remark that the treatment pursued at [illegible] was [illegible] resorted to except in very extreme cases. The report concluded with an earnest appeal to the public for its patronage and support. Mr. Burt moved the adoption [illegible]

[illegible] enabled to bear favourable testimony to the manner in which the institution was conducted. The resolution having been agreed to, other resolutions were passed in furtherance of the objects of the charity, and the meeting separated, with a cordial vote of thanks to the chairman.

GENERAL LYING-IN HOSPITAL.—A general meeting of the friends [illegible] York road, Lambeth: Mr. T. S. Cocks in the chair. The financial statement showed that the receipts for the quarter, including a balance of £318 9s. 6d., and £348 8s. 8d., half-year's dividend on £27,852, amounted to £1076. The expenses have been £362, leaving a balance of £703. During the past year, 1850, 201 married and 48 single women had been admitted into the Lying-in, and 439 patients had been attended at their own houses. During the last [illegible] years 1409 in-patients had been received in the house, and 2241 patients had been visited at their own homes, making the total number 3653.

ASYLUM FOR IDIOTS.—On Thursday, the fourth annual meeting of the supporters of this benevolent institution took place at the London Tavern; [illegible] increase in the number of patients at present in the institution, which now amounted to 14; and there were to be fifteen added by that day's election, which would make the number of the entire household 195. The establishment at Park Hill, Colchester, contained at present 180 persons, and 15 more would be added [illegible] to [illegible] these themselves: while those who had entered the institution perfectly dumb, were now able to utter distinct articulate sounds. The [illegible] last year, including a balance of £385, were £6014, and the [illegible] future left a balance of £566 3s. 4d. The report was unanimously adopted, and [illegible] election of the fifteen new inmates proceeded with.

RATES AND WASH-HOUSES, SOUTH-STREET.—The accounts of the income and expenditure of the model establishment for the baths and washhouses in Goulston-square have just been published; and we have the gratifying [illegible] [illegible] [illegible]

SKETCHES OF THE KAFFIR WAR.

PART OF COLONEL MACKINNON'S PATROL OF THE CAPE CORPS BURNING THE KRAALS OF A REBEL KAFFIR CHIEF.

We are indebted to a Correspondent for the accompanying Sketches of recent operations in Kaffraria. The first shows a portion of Colonel Mackinnon's patrol of the Cape Corps burning the Kraals of the rebel Chief Seyolo, on the morning of Feb. 5. The summary of the proceedings on the frontier before and after this date is thus given :—

"The number of detached forts and posts in British Kaffraria has proved, and probably will prove, a source of great embarrassment to the Commander-in-Chief, who is unwilling to abandon any, however useless, as the Kaffirs would argue weakness from such an act. The garrisons in these small posts have behaved with great gallantry on every occasion on which they have been attacked. As an instance we may particularly mention the defence of Fort White by Captain Mansergh, 6th Regiment, in which the Kaffirs were repulsed with considerable loss

"On the 3d of February, Colonel Mackinnon and Lieut.-Colonel Napier, C.M.R., made a combined movement upon Seyolo, who had occupied Line Drift, thus cutting off the communication between King William's Town and Graham's Town This duty was most satisfactorily performed; 800 head of cattle having been captured, and Seyolo and Umjanjen's Kraals destroyed This done, the patrol returned to King William's Town"

The Illustration shows the burning of the kraals, from a Sketch made by our Correspondent just after the operations. The party of the Cape Corps is the advanced guard of the column under Colonel Mackinnon, which consisted of 2000 men, besides four light field guns.

"The only important service now remaining to be effected before the Commander-in-Chief would be in a position to commence offensive operations, was to send reinforcements to General Somerset, who remained at Fort Hare, but not in sufficient force to attack the rebel Hottentots

"Col. Mackinnon marched from King William's Town for this purpose on February 13, arrived at Fort Hare on the 14th, commenced his return march on the 17th, and, after some smart skirmishing, reached King William's Town on the 19th."

The second Illustration shows the escape of his Excellency Sir Harry Smith from Fort Cox, the details of which have already appeared in our Journal.

The latest papers (to the 7th March) bring intelligence of the operations at the seat of the disturbances. An engagement had taken place between the Kaffirs and the troops under the command of Colonel Somerset, at Kat River, in which the Kaffirs were defeated. It was generally hoped and expected that the death of Hermanus would lead to the dissolution of the rebel forces at the Blinkwater; but this did not prove to be the case; on the contrary, numbers of Hottentots flocked to his successor, Jan Hermanus, and soon after their defeat at Fort Beaufort the rebels felt themselves strong enough to attack General Somerset's position at Fort Hare.

This was done on the 21st January, 1851, but, as might have been expected, without success. The Kaffirs and Hottentots found the garrison ready to receive them, and, after an obstinate contest, were driven back with considerable slaughter. The loss on the side of the British was six Fingoes killed and ten wounded severely

Since this repulse the rebels did not venture upon another attack, nor did General Somerset feel himself strong enough to move against them; the Hottentots accordingly congregated at the Blinkwater, whence they issued on petty marauding expeditions, and destroyed the properties and endangered the lives of the peaceable inhabitants of the frontier districts

Thus matters remained in *statu quo* until General Somerset, having received a reinforcement from the Commander-in-Chief, dealt with the savages with complete success.

The opinion, however, of those who have recently left the Cape is, that the war will be a very protracted and expensive one. The Cape colonists will not pay a single shilling of the expenses if they can help it, but will throw them entirely on the mother country if possible. The Kaffirs were fighting in a way in which they never fought before; all their movements were directed by intelligence, and carried into effect with promptitude and silence; they give Sir Harry Smith even a lesson in strategy.

Commodore Wyvill, in her Majesty't ship *Castor*, 36, was in Simon's Bay. He had, as anticipated last mail, despatched a body of seamen and marines to Buffalo Mouth.

The Cape people were earnestly engaged in discussing the advantages of the screw steam communicaion between England and the Cape.

Annexed are the details of the decisive victory over the Kat River rebels, from the journal of Commandant Walter Currie.

"Wednesday, Feb. 19.—Bowker arrived from the General with orders to move on the Kat River immediately; our mess produced no end of grapes, and all kinds of vegetables, the result of good living.

"Thursday, Feb. 20.—All hands got under way at sunrise. Nothing particular occurring; moved up Water Kloof to its source; outspanned to breakfast under Bushneck; started again about twelve; passed old Bear's place, all burnt to the ground, and pulled up at Kraal Koeck for the night; Hough's and Zinvogel's burghers kept ahead of us all day, and are out of sight in the direction of Post Re ief.

"Friday, Feb. 21.—Started at daylight; reached Retief in about three hours, and found mustered there about 800 men, mostly mounted (200 Fingoes, 200 English, 400 Dutch). Mr. Wilson held service in the morning; in the evening had a meeting of the commandants, and decided on the manner of the attack to be made to-morrow, at daylight. General Somerset, with 1800, will come from Fort Hare on Fort Armstrong, while our men, under their respective commandants (for a wonder, all unanimous), move upon Balfour, within two miles of Armstrong

"Saturday, Feb. 22. Started when the moon rose, about twelve o'clock, and reached the rebels, both Hottentots and Kaffirs (Hermanus's Kaffirs), at Balfour, at daylight. The Kaffirs were taken by surprise, and for about an hour we had it all our own way, until supported by a lot of rebels from Fort Armstrong, when we were obliged to defend ourselves and make two or three charges to clear some rocks where the enemy were annoying us, and about twelve o'clock we drove the enemy into Fort Armstrong, helter skelter, where we were met by Major-General Somerset, with about 1400 men, and two cannon, and in less than two hours after the fort was carried, sacked, and burnt down, and altogether we made a pretty example of the Kat River people of this post. "In the burgher force we had 4 killed and 14 wounded. I have found 90 rebels dead. Two fellows held on in the fort until this morning, when they were captured, and are to be shot immediately."

Although we have intelligence of a successful attack made by Major-General Somerset at the head of 1200 troops, and of the capture of a large number of Kaffirs, yet the general tenor of the information is averse to any expectation of a speedy termination of the war; and the skill and caution of the Kaffirs, coupled with their natural cunning, appear in many instances to have baffled the efforts of the regular forces.

"Whether the present war be speedily finished or much prolonged (it is observed in the *Cape Town Mail*), it is certain that a considerable body of military, consisting of troops suited to the peculiarities of this irregular warfare, must be maintained, and that the inhabitants of the frontier must be armed and trained, to insure their future safety from Kaffir aggressions until the power of their chiefs be entirely at an end; and any exercise of authority on their part over a tribe engaging in war with a colony should be made punishable by transportation to Mauritius or hard labour upon the roads."

Sir Harry Smith (at the date of the last intelligence) was at King William's Town, and had, in all, about 2000 troops under his immediate command.

M. de Gayza, a Hungarian *savant*, who is at present travelling in the interior of Western Africa, has just sent home to the Imperial Society of Vienna a communication full of interest for France. He has found amongst the Kommenis, a small tribe in Senagambia, traces of Jacques Compagnon, who was sent out by the Duke de Choiseul about 1760, on a voyage of exploration, but who was never heard of afterwards. The Kommenis are in a state of half-civilisation; they have some religious notions possessing a certain analogy with the Christian tradition; they have a regular language, an alphabet, and a mode of writing. M de Gayza discovered in one of their principal villages a little stone monument of a conical form, covered with an inscription in hieroglyphical characters. After carefully studying this construction, and after a careful inquiry amongst the old men of the country, and having heard the traditions which existed amongst them, he became convinced that the monument was the tomb of Jacques Compagnon, who had been detained by the Kommenis, and at last became accustomed to his position and instructed the natives in the principles of all the useful arts. He died in 1775, leaving amongst them the reputation of a sage or good genius. But the belief of M. de Gayza on the subject of Compagnon was changed into certitude when the head of the tribe showed him several objects which had belonged to a European, and which were looked on by the people as sacred; amongst them was a quadrant bearing the name of Jacques Compagnon in full. M. de Gayza intends making some stay among this interesting tribe.

MAJOR-GENERAL SIR HARRY SMITH'S ESCAPE FROM FORT COX

IVORY-CUTTERS AT BERHAMPOOR (BENGAL), FOR THE GREAT EXHIBITION.

INDIAN IVORY CARVINGS FOR THE GREAT EXHIBITION.

We have been favoured by a Correspondent at Berhampoor with the accompanying examples of the ingenuity which our Great Exhibition has called into action in Hindostan lands. One of the Illustrations shows the interior of the room, with the Berhampoor ivory workers engaged upon the manufacture of articles for the Exhibition of the Industry of all Nations. The walls of this room, it will be perceived, are covered with charcoal sketches of the various parts of the elephant, camel, &c., to guide the workmen.

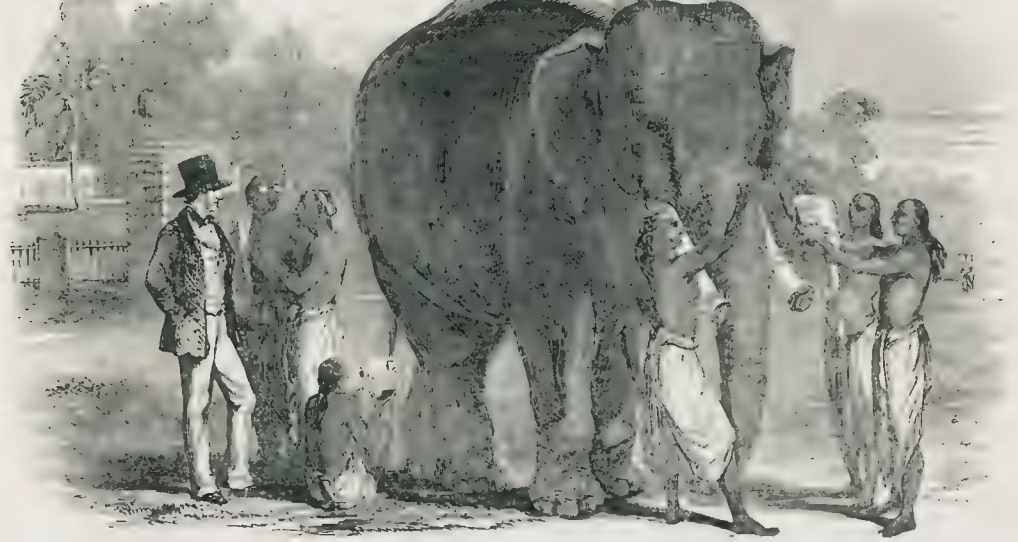
The second Engraving represents the workmen taking lessons in correct carving the living animal being their model. The elephant was constant attendance, to enable the workmen to turn out accurate representations of the noble animal as possible.

The subjects already carved are numerous, consisting of elephants, camels, bullocks, boats, palanquins, tigers, carts, a set of chessmen representing the figures from Layard's "Nineveh," puzzles, letters, and a variety of minor articles.

It would doubtless amuse many people in England if they could see the rough and primitive tools with which such minute and beautiful work is turned out: and more would it astonish them and others to witness the use the workmen make of their feet, which to them are equal to an extra pair of hands, the feet being constantly called into play even to picking up their tools when beyond the immediate reach of their hands.

The ivory carving trade at Berhampoor, the produce of which requires to be seen in England to be highly appreciated, has only existed for about fifty years, having been introduced by an Englishman, whose name at the present day is doubtful. Before his time a few ivory carvers were attached to the Nuwaub's court at Moorshedabad, eight miles from Berhampoor. Their work was, it is supposed, confined to ornamenting elephant howdahs, couches, and furniture. The present workmen amount to twenty-six in number, five of whom are considered orders or chief workmen who can draw their patterns and carve from them. The remainder are merely workmen. The several carvers are Bengalees, and can carve anything, however elaborate, of which a drawing or model is furnished.

The whole of the ivory work is at present under the guidance and superintendence of an officer in the army.



MODELLING IVORY FIGURES FROM THE LIVING ELEPHANT, AT BERHAMPOOR

The order of confirmation, according to the rite of the Church of England, was performed in the first week of the present month in the English Protestant Chapel, at the Porta del Popolo, in Rome, by the Rev. Dr Spenser, ex-Bishop of Madras, fifteen persons (of whom 14 were young ladies) being confirmed on the occasion. It was apprehended at first, in consequence of some vague rumour to that effect, that the Papal Government would have interfered with the ceremony, on account of its affording example of a British Protestant Bishop exercising his episcopal functions at Rome—the see, *par excellence*, of his Holiness. The Roman authorities, however, did not interfere.

TOWN TALK AND TABLE TALK.

The hard-working world is enjoying its annual time of holiday-making, and is more merry to-day [illegible] than it ever was before, and will be more merry to-morrow than it is possible to be to-day. If your true Englishman never plays at work, he always takes care to work at play. Easter time is the time for sight-seeing, and doesn't he see a few? The London artisan certainly never passes a more exhaustive and fatiguing period than the three glorious days after Passion Week. It is his immediate business then to be amused. It is a time for all manner of sights. It is a time for strolling from panorama to diorama—from exhibition to exposition—from this museum to that collection—from this wonderful giant to that marvellous dwarf—the preponderance of patronage bestowed upon the in-door and out-door entertainments depending very much upon the state of the weather. Many must have been the anxious glances cast on Monday last up to the skies by the proprietors of attractions with roofs over them, and the proprietors of attractions without. There are two different interests on Easter Monday: the suburban and *sub rosa* interest, comprehending all manner of locomotive personages and the hosts of all manner of out-of-town place- of entertainment and resort; and the opposing faction consisting principally of managers, panorama exhibitors—entertainment people of all classes, lecturing, musical, and *quasi*-scientific. The prayers of the first lot are all for fair weather, and a bright, hot afternoon; the aspirations of the second tend to clouds and rain. With many of the minor London theatres, the state of the weather on Easter Monday afternoon involves a question of many score of pounds more or less in the treasury. Shillings come tinkling in with the rain-drops: while the glare of a bright setting sun is too apt to stream over half-empty gallery benches.

The grand project of the Exhibition waxes steadily towards its accomplishment, looming over the world of talk like the Flying Island above Laputa. It is impossible to hear of a great many of the works of arrangement is likely to have to be done after the 1st of May. Our habits of business punctuality have left many of our Continental friends in the lurch. They expected a half-dozen postponements of the great day, and are bewildered at our steady adherence to the originally-declared resolution. Meantime, however, the streets and parks are assuming a decidedly foreign appearance. Moustaches have become alarmingly prevalent among natives as well as visitors. Enterprising gentlemen, of strong—smoaking to heroic—moral courage, are adopting picturesque styles of hat, in accordance with the Grand Anti-Chimney-pot League, formerly alluded to in these contributions; the idea being, that now or never is the time for us to deliver ourselves from the dreadful tyranny of costume under which we have languished so wearily and long. Foreign uniforms are also beginning to creep in. I noticed last Sunday, in the Park, one or two samples, the primary characteristic of which, however, I am concerned to say, was dirt. Paris, however, is to send us legions of her citizen warriors, who are, it seems, to march into London in battle array—a terrible prospect for Colonel Sibthorp and the gentlemen who believe that England will go to bed an independent nation, and rise a French province, with Changarnier for our military governor. The vapourings of the New York papers upon the subject are strange characters in the history of nonsense. Yankeeland, it seems, is to send a large cargo of republican and socialist philosophers. We shall have, we presume, Mr. Elijah Pogram, Mr. Hannibal Chollop, Dr. Ginery Dunkle, Professor Groper, Mr. Jefferson Brick, and the red of "the most remarkable case of any country," as Jemmy Taddle by Martin Chuzzlewit. Well, let them come. We will show them the old country, and try to persuade them that we are not quite so ill off as they take us to be. They shall preach Republicanism and socialism as long and as loud as they please; and when they are tired we will laugh at them, and shake hands with them, and they shall see all our rights, and, we hope, experience all our hospitality; and the result will probably be, that they will go again their native shores somewhat improved, with quite a different notion of our "grinding aristocracy," our "crushed down slaves," and our general dilapidated and one-foot-in-the-grave sort of condition; in fact, very much wiser and very much more advanced in common sense than when they came. As for our clever rattling neighbours from the other side of the Channel, there is every reason to believe that a new era of international intercourse is opening up. Let us mutually know each other, and we will mutually like each other. Our learned friend Jean is a far more flashy fellow than our smooth-chinned friend John; but then John has great substantial points, like his own oxen, and a shrewd knack of doing something while brilliant Jean is talking about his own very pretty sentences. And, at bottom, Jean and John are thoroughly good hearted, good-humoured fellows. Jean is beginning to comprehend that we don't all sell our wives; and John is abjuring the heresy of the frogs with a manful repentance. So the greater number of her *beaux et bien pensants* we send us, the better pleased we will be: and they shall take back triumphant reports that the sun does sometimes shine in London—that we do laugh occasionally—that we are not always eaten up with "spleen" and that we do not, as a general and peculiar movement, jump over London-bridge every Sunday, in despair of the continued tedium of fogs and *ennui*.

The preparations being made for the forthcoming occasion in the way of lodging letting, I proceed to be remarkably practical. The popular notion is, that to stick up a card in the ground-floor window, announcing "apartments," is about equivalent—so far as the results are concerned—to going to the "diggings." I have heard of instances in which cool landladies, favourably situated, have altered their terms from shillings to sovereigns, while shoals of amateurs in the traffic have been seen at auction-rooms, recklessly bidding for rickety bedsteads and moth-eaten blankets, to be set up and laid out in garrets and lumber rooms, for the special entrapment of the change in sterling English coin of thalers, groschen, ducats, and five-franc pieces.

One very excellent result of the approaching jubilee has been to establish public shoe-blacks in the streets. The brotherhood of *decrotteurs* ought never to have been allowed to die away. The last of the old race was, I believe, a negro, who haunted Fleet-street within memory of the present generation, and who had brushed Dr. Johnson's boots. Our streets have certainly improved since the stately old Sam snubbed Bozzy: but mud, I fear, is immortal. Mud was, mud is, and mud will be. Dig what sewers we may, hollow what gutters we may, the rain will rain, and the dust will revolve. Mud will adhere and feet will churn it into sloughs of despond. And there is no help for it, save the handy foot-stool, and the active brush, and the ever ready bottle of the shoe-black. In every Continental city the genus abounds in crowds. In small towns in Germany and east and south-west of France, their swarms are perfectly mysterious. There are two places in particular, in which, as I observed in a recent French tour, the name of the *decrotteurs* was greater even than legion. Where they lived on, whose fees they bestowed, was the puzzle. There were more hands to polish than feet to be polished. I had vague theories about their applying themselves to each others understanding, and so forming a strange mutually-supporting association living upon each other's boots. The two towns in question were Arles and Tarkes—the first not very far from the Piedmontese Alps, the latter at the root of the Pyrenees. The swarm of juvenile *decrotteurs*, I soon learnt, were the younger brothers of the families of the mountaineers, who, as soon as the snow begins to fall upon the hills, annually in the habit of packing up their brushes and blacking, and hotching themselves for the winter to the occupation which so strangely seemed to afford them a livelihood.

A new and not ungraceful conundrum has just begun to go the rounds. I hope to put it in type for the first time, and to inform my readers that, if any of them should be asked "Why burning incendiary fires are never likely to quarrel?" the legitimate reply will be—"Because the one is all for getting, and the other is all for Watt."

The literary world is in a state of almost unexampled stagnation. The Great Exhibition has overlaid and smothered every rival subject of interest. People are expected, moreover, to be too much occupied to care greatly about the new, or the records of the last observed year. They will have too much to see, too much to hear, too much to say, to have time to read. Accordingly, the book-advertising columns of the newspapers have been singularly barren, while of the few works of fiction which have ventured forth, none appears, in trade phrase, to have "done anything." The fact is, that the Exhibition Catalogue will be the book of the season. For a time it has checked all others—Pusyite novels and evangelical novels, high-life romances from Belgravia, and low-life horrors from the pens of the discovered authors of "penny dreadfuls," have been alike driven to the back. Even Orientalism is at a discount. The palm-tree and the sand, the camel and the minaret, are left, for the time being, without new chroniclers. We have too much to do at home to turn our eyes abroad, and, until the waning of the great excitement, until the autumn begins to shine upon the preparations for converting the Crystal Palace into a winter garden, the odds are, that small still voices emerging from publishers' strongholds will be fairly cried down and stifled in the mighty roar of the great social maelstrom which we have so dauntlessly set whirling round London

THE ROTATION OF THE EARTH MADE VISIBLE.

Sir,—I am happy to learn from many sources that my suggestion of last week is likely to be adopted, at least to the extent of trying the pendulum experiment action. Whatever value such an experiment may possess as an indicator of time, it must be surpassed by its employment for physical inquiry. The experiment of the rotation of the earth has been repeated in this country, and will continue to occupy attention on the occasion; but there are another [illegible] are perhaps more curious, and not less interested than the learned astronomers and mathematicians in the truth and phenomena of this beautiful experiment. With your permission, I will endeavour, as briefly as possible, by the aid of [illegible] *tion*, to convince the incredulous, and satisfy the curious, *that the earth do* [illegible] *ve on its axis*, and that a body suspended [illegible] plum parlakeet of the ordinary [illegible] tion of the earth, so far as its influences are concerned, whilst a plane fixed on any part of the earth's surface, except the poles, has a compound motion. To clearly appreciate the following popular explanation, it will be necessary for the reader to convince himself of one property of matter, namely, that of constantly vibrating in the same place. Let it be imagined that a pendulum is suspended over a common table, *the parts bearing the pendulum being also attached to the table*; that the table can move freely on its centre like a music-stool; the pendulum being put in motion will continue to move in the same line or plane between the eye and any object on the walls of the room, although the table is made to revolve, and during one revolution will have *each* [illegible] circumference. A new mode of reflection are only necessary [illegible]

FIGURE 1.

The above figure represents a plane or table on the top of a globe, [illegible] the pole of the earth. To the table are fixed two rods, from which is suspended a pendulum, moving freely in any direction. The pendulum is made to [illegible] in the axis *a b*: it will continue to vibrate in this line, and are no other forced or angular motion until the globe revolves, when it will appear to have vibrated through the entire circle, *to an object fixed on the table and moving with it*. It is scarcely necessary to say the circular motion of the pendulum is only apparent, since it is the table that revolves. The apparent motion of the pendulum in a circle, [illegible] ent motion of the land to a person on board a ship, or the revolution of the earth to a person in a balloon. The pendulum vibrates always in the same plane at the Pole, and in planes parallel to each other at any intermediate point.

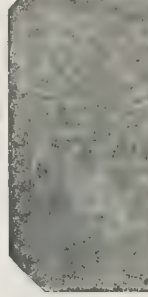


FIGURE 2.

Figure 2 represents the earth as a globe revolving once every twenty-four hours on its axis (*p s*). It is divided, on its upper half, by lines parallel to each other, representing the latitudes 10 degrees, 20 degrees, and the equator, where the latitude is nothing. The lines *a b*, at 30, 60, 30, and 0 represent latitudes, or, in more technical terms, [illegible] over which a pendulum is supposed to vibrate, and moving with them in their revolutions round the [illegible] The being clearly understood, the next object is to show how the pendulum moves round the poles, for each of the latitudes; also to show the gradual deviation of its circular motion as it approaches the equator (E E), where, as was before observed, the latitude is nothing.

A pendulum vibrating over the plane, or table (*a b*), on the top of the globe has been already shown (by Fig. 1) to go round the entire circle in twenty-four hours, or to have an angular velocity of 90, or quarter of a circle, in six hours. The 3 parts (a 90), as 60, has an inclination to the axis (*p s*) [illegible] will cause a pendulum vibrating over it to move through its circumference at a [illegible] rate. This will be shown by reference to the figure. The globe is here seen in the direction from left to right, the pendulum is vibrating over the line *a b*, which, at all times during its course, is parallel with the first point of vibration. The plane may now be supposed to have moved forty-six hours, or to have gone through a quarter of an entire revolution, equal to 90; but the pendulum has by moved from *a* to *a* considerably less than 90. Again, if the plane is carried another six hours, making together 180, the figure shows the pendulum to have moved only from *a* to *a*, considerably less than 180. The same remarks apply to the lower latitude of 30, where, it will be seen, the circular, or angular motion of the pendulum is considerably slower than in the latitude of 60, continuing to diminish, until it becomes nothing at the equator, where it is clear it is gone by the Figure to be always parallel to itself, and constant over its path of vibration through the entire circle.

The angular or hour motion of the pendulum may be thus expressed for any latitude:—As the radius or sine of 90 degrees is to the angular or hourly velocity of the Poles, so is the sine of any latitude to the hourly velocity of the pendulum at that latitude. Example of the latitude of 51 deg.:—As 1·0000 : 9871 : 11·8 This number being divided into 360 degrees gives 30·6, the hours the pendulum takes to move through a complete circle at London.

Yours obediently, W. LITTLE.

P.S.—A beautiful experiment might be made by suspending a large stationary plane, while shown above the same law that affects the pendulum, or a body [illegible] calculated to give quadruple satisfaction. Of being dexterous, no small Low it is held, it is rare to kill it unless who fires and his second, and scientific men who have examined it avow they are satisfied that a position which what is known as the "angle of safety," in the [illegible] of big guns, will not secure any one from its deadly effects. We were informed by the gallant Captain that this [illegible] was the result of long and careful study, and extensive experience in affairs of honour. He will be happy to exhibit the instrument to any philanthropist interested in putting a stop to the dreadful practice of duelling. He seems to have advantage of the invention to amass a fortune by securing a [illegible], and will amply be repaid for his trouble if he can but deter one hot-headed youth from sacrificing his life at the shrine of false pride and moral fear. *The Civil Service*.

PORCELAIN FOR THE GREAT EXHIBITION.—Among the novelties contributed by Messrs Rose from their works at Coalbrookdale, are two exquisite specimens of [illegible] by order of his father. There are also some good specimens to the Rose and the manufactory of Bell by artistic finish. Among the Parian exhibits is a large group of the Rape of Proserpine, and a bust beautifully [illegible] and perfect execution

COUNTRY NEWS.

THE FRIMLEY BURGLARS.

James Hamilton, who sought to turn approver against his accomplices, but whose evidence the magistrates on the occasion of the examination of his associates, John Isaacs and Samuel Harwood, on Saturday last, at Horsham, refused to accept on the part of the Crown, has, since his committal, made a full confession of all the burglaries which he and the gang have been engaged in for the last twelve months. The document is of a very extraordinary nature, and shows the immense amount of daring possessed by these men. He says he made some revelations to the police officers engaged in the case, by which they have been enabled to discover the receivers of the stolen property. It is, however, believed that some portion of the great amount of valuable property which had been stolen may yet be restored to the owners.

Hamilton, in the commencement of his confession, states that the gang consisted of him-self, Levi Harwood and Samuel Jones (charged on the murder of Mr. Forscolleat), Samuel Harwood, Jesse and Edward Isaacs, William Brooks, Joseph Carter, John and James Jones, *alias* Smith, Hiram Smith, Thomas Toot, *alias* Morgan, William Hilyer, John Brooks, Mary Crowder, Sarah White, and James Jones. John Isaacs was duly elected captain, and all the others acted under his directions. They were all sworn to obey the orders of the captain; and if any one attempted to back out or refused to take part in any robbery or murder, if necessary, he or she was to be instantly killed: and if any one left the gang without the consent of the captain, he or she was to be followed, and, if overtaken, to be shot. He then proceeds to describe the mode in which several other burglaries in which they were concerned were effected. The principal of these was in the house of two ladies of the name of Kennard, at Hayward's Heath, which was perpetrated the second day after the Kirdford burglary. A large quantity of plate and other property was amongst the booty on this occasion, and the approver minutely describes the manner in which it was apportioned. The particulars of the robbery at Miss Farncomb's, in which nearly the whole of the gang were implicated, are also given. In this case, also, several watches, trinkets, plate, and a considerable sum in money were carried off.

It is estimated that the amount of property stolen by these men during the last few years cannot be less than £1000. When Isaacs was apprehended at Frome, Mr. Morten, the superintendent of the Tunbridge Wells police, succeeded in tracing to the possession of the prisoner a valuable diamond ring, a gold chain, and a silver running watch, which were a portion of the property stolen from the Misses Farncomb in December last. These articles were not on his person, but in the house where he was staying. Mr. Morten immediately seized them, and the friends of the prisoner then applied to the County Court at Frome, and procured a summons, when he has been served on Mr. Morten, for the amount of £10 10s., the alleged value of the articles.

The band of burglars known as "the Frimley gang" is now completely broken up.

The charge on which the prisoners were examined on Saturday, at Horsham, was that of breaking into the dwelling of Harriet Stoner, a small grocer, at Kirdford-common, on the morning of the 4th of June last, and stealing moneys and other property therefrom.

The prisoners were committed for trial at the next assizes for Harwood to Petworth gaol, and Hamilton and Isaacs to Lewes gaol.

THE BRITANNIA BRIDGE.—The final sale of the machinery and material employed in this great structure was held last week. Upwards of 1200 lots, at unexpectedly good prices, were disposed of in five days.

The Marquis of Westminster is about to make great improvements in the interior of Eccleston Church, the burial place of the Grosvenor family.

THE LIVERPOOL DOCK ESTATE.—During the last few weeks, much agitation has been caused in Liverpool by a bill, submitted to Parliament by the Liverpool American Chamber of Commerce, the object of which is to alter the constitution of the dock committee, so as to give the merchants (as dock ratepayers) increased power in the management of the estate. Hitherto the Town Council have elected two-thirds of the members of the dock committee, and the dock rate-payers one-third. By the proposed bill the ratepayers will be empowered to elect one half of the members of the committee, and the Council the other half. The Council, as a body, are opposed to any alteration in the constitution of the committee: but many of the merchants are of opinion that, under existing circumstances (the preamble having been admitted), a continued opposition to the bill in Parliament would be injudicious. Accordingly, on Monday a special meeting of the Council was held, to determine as to the future course to be adopted with regard to the bill. The Mayor presided, and the attendance was exceedingly numerous. After considerable discussion, it was resolved that a petition and an amendment in a slightly [illegible] the numbers being 29 and 28, the following resolution was agreed to:

The Liverpool Dock Bill, as altered by the House of Commons, having been considered—Resolved, That, considering the slight practical amount of alteration thereby made in the existing law in relation to the constitution of the committee for the affairs of the trustees of the Liverpool Docks, and that the trustees will continue to have, by the exercise of the veto, the same control over the proceedings of the Dock committee which they now possess, it is inexpedient to offer further opposition to the bill, but that the Parliamentary committee be instructed to watch its further progress, in order to see that no alteration be made therein, affecting the rights of the trustees and of the corporation, and to take such attention in cases as may be necessary."

PRISON REPORT.—The third division of the 16th Report of the Prison Inspectors was issued on Saturday. It comprehends the southern and eastern district, Anglesea, Breconshire, Cardiganshire, Carmarthenshire, Carnarvonshire, Montgomeryshire, Radnorshire, Pembrokeshire, Monmouthshire, Cornwall, Devonshire, and Northamptonshire. The prisons comprised in this extensive district are thirty-six in number, as among them are included lock-ups and all other places of detention; and the inspector in general terms calls the attention of the Home Secretary to the insufficient means possessed by the greater number of them for carrying out the system of discipline recommended by the committee of the House of Commons.

Mr. Todd, a barrister, while cruising in a yacht on Sunday last, near the Nore, was thrown overboard by the boom suddenly jibing, and was unfortunately drowned.

The foundation-stone of a blind asylum, upon an extensive and magnificent scale, was laid at Edgbaston, Birmingham, on Wednesday. Earl Howe is the president of the institution, and in the interesting ceremonies of the day the orgy and dissenting ministers of the town and neighbourhood cordially united.

A robbery of a serious nature has been committed within the last few days at the Swan Hotel, Mr. [illegible], Bristol, the property carried off amounting in value to nearly £100. The robbery is supposed to have been effected by a man named John O'Brien, who had formerly lived in the house as [illegible], and who is now in custody.

On Sunday evening, whilst the bell at St. Alban's Church, Liverpool, which weighs more than a ton, was summoning the congregation to divine service, it suddenly fell with a tremendous crash, carrying with it three floors in the tower, and doing considerable damage. Fortunately, no lives were lost, but a person who was ringing at the time received some injury.

A new church, to be called St. Paul's, is about to be erected on Kersal-moor, the old Manchester race-ground.

The Sandon Docks, at Liverpool, was opened on Wednesday, and the *Great Britain* was the first vessel which entered.

A prisoner for debt in the Shropshire County Gaol, named Thomas Menlove, died on Monday from the effects of drinking gas-tinged sewage water.

A meeting of the London and North-Western Company, met his death at the Lime-street Station, Liverpool, on Monday, in a very shocking manner. He was employed about a year and a half in the goods' yard, when a large portion of the ponderous mass fell, partially burying the unfortunate man. The sufferer was conveyed to the Northern Hospital; but unhappily his injuries were of so serious a nature, including fracture of the skull, that surgical skill was of no avail.

EXECUTION.—The execution of John Wiles and John Smith, convicted, at the last assizes at Taunton, of the murder of a gamekeeper named Wilcox, took place on Tuesday morning, at the usual hour. Both men declared their innocence of the fearful crime for which they had been convicted, and Wiles, who was left for dead by the murderers, but fortunately recovered so as to be able to give testimony against his pals, took place in the presence of a large number of persons, among whom were Mr. Justice Talfourd, the Under-Sheriff, and the mayor of Taunton. The prisoners confessed their guilt.

THE ROBBERY AT THE GOVERNMENT POWDER-WORKS.—The four men charged with being concerned in the daring robbery effected on the night of the 8th instant, at the store-keeper's office of the Royal Powder-Works, near Waltham, were brought up for re-examination before the bench of magistrates. These prisoners were George Rowe, John Cornish, Charles Eve, and Jesse Griffiths. The first named, it has been already stated, is the keeper of a Shropshire public, called the Three Crowns, in Waltham; Cornish and Eve have been before employed on the Government powder-works, and Griffiths is an itinerant dismonger. The brief depositions of Inspector Lund and Mr. Topping, the Government store-keeper, at the powder-works, examined at the previous hearing on Thursday (last week), having been read over, some other evidence was taken, and the prisoners were remanded. Mr. Prentice, Mr. Parnell, and other legal gentlemen attended on behalf of the respective clients akin to bail, but the bench unanimously refused the application, and decided on remanding the prisoners until Tuesday next, by which time, it is believed, other parties will be in custody.

DEATH BY THE HAND OF A CLERGYMAN.—The *Carlisle Journal* records a most lamentable occurrence at Walton, a village about three miles from Brampton, which has caused the greatest excitement in the district by the [illegible] of the clergyman of the parish. The deceased was Mr. William Armstrong, of [illegible] Trees, in Bewcastle, a large farmer and considerable landowner, about [illegible] years of age, married, and leaving two elder sons. On Wednesday night week, he was returning from Brampton market somewhat under the influence of liquor, when it is supposed he proceeded to the parsonage occupied by the Rev. Joseph Smith, which was close to the road, for the purpose of seeing some of the servants with whom he was acquainted. At all events, Mr. Smith, who had not retired to bed at the time (half-past 11 o'clock), hearing a noise at the window, and fearing a repetition of the scene at Pardsey Parsonage, armed himself with a revolver pistol, opened the street door, and fired two or three times in the direction of the noise. In the morning the body of Armstrong was discovered just inside the parsonage gate quite dead, one of the balls having entered the right breast, another the right shoulder. On the outside of the gate were marks indicating that a horse had been fastened up there, and that it had stood [illegible] some time. Shortly afterwards, Armstrong's pony was found at Waste [illegible] a mile from Walton, on its way home

IRELAND.

Mr. Moore O'Ferrall has been returned M.P. for Longford by a large majority over his opponent, Mr Sleator, the numbers at the close of the poll being—O'Ferrall, 938; Sleator, 581.

FLAX CULTIVATION.—The practical instructers, from the Ulster Society, are now entering their operations. One of them, a Mr. O'Hara, is already located in the Wexford district, and the *London Advertiser* states that the efforts of the Agricultural Society of that county, and the practical exertions of Lord Bellew, Sir John M'Neale, and other gentlemen, have proved very successful in stimulating a greatly extended cultivation of flax throughout the county.

ENCUMBERED ESTATES.—Fresh batches of petitions are periodically announced. Thirteen were presented last week. The total number filed is now 170.

THE "CLEARANCE SYSTEM."—The Limerick and Galway journals note the large number of evictions of tenantry which are taking place in the west at present, notwithstanding the passing of "clearance" through the less cruel means of emigration. The *Galway Vindicator* says:

> [illegible] ments entered—18 at the suit of the trustees of A. H. Lynch, one of Mr. [illegible] which were brought by the law life insurance company, and of 188 [illegible] 87 were at the suit of the insurance company. With the exception of three [illegible] ments were all undefended—they were disposed of at the rate of one each minute; and the taking a average of five cases to each family would show that we will have 250 per [illegible] and in the entire 940 human beings cast upon poor-house relief.

The same journal roughly estimates the total evictions in Connemara at about 4000, and gives the following startling account of the unfortunate peasantry of that romantic but neglected region.

> The [illegible] mountaineers, whose lives and the lives of their fathers and great-grandfathers have been spent in reclaiming the barren hills where their home is, had been cast, were the victims of a series of agitations, unparalleled in the annals of Irish misery. They were calmly plotted over the rocky surface of a dreary waste for political purposes. In the days of the old freeholder, they were drawn to the hustings like a flock of sheep, to register his arbitrary will, but in many instances there no freeholder existed, and every man in common thing to his class and status is easily evicted from their homes—[illegible] terminated—but that they refused to vote according to the will of the landlord. Strange as they did not go far enough in the sin of perjury and the diabolical crime of impersonation [illegible] and [illegible] were [illegible] [illegible] [illegible]

WRECK OF THE "BORDER QUEEN" STEAMER ON THE WINGA ISLET.

WRECK OF THE "BORDER QUEEN" STEAMER.

THE fine iron screw steamer, *The Border Queen*, of Leith, commanded by Captain J. George Thomson, left Aarhus, in Denmark, on the 14th ult., for Leith, with a cargo of grain on board, but had the misfortune to strike on the same day, at 9h. 30m. p.m., on the Winga Islet, in Catte-gate, close to the entrance to Gottenburg. Great exertions were made to save her, but without success, and she became a complete wreck. The accident has been ascribed to the deflection of the compass on board, together with the thick and hazy weather which prevailed. Our Sketch shows the vessel on shore at Winga, close to the lighthouse and beacon.

ELEPHANT CALF IN THE ZOOLOGICAL SOCIETY'S GARDENS.

WE have again to record a very interesting addition to the menagerie of the Zoological Society, which promises to be nearly as popular as the Hippopotamus acquisition of last year.

On Saturday last there was first exhibited to the Society a female Elephant, which was taken by the natives who captured her, to the fair at Cawnpore, at the end of August, 1850: she was purchased by Mr. Wallace, a Calcutta horsedealer, who for several years has frequented the native fairs of Bengal. During the journey towards Calcutta Mr. Wallace made a halt of three weeks in the month of September, and the Elephant then gave birth to the healthy little Calf which is now at her side. Within very few minutes after that event, the Calf, which is said then to have weighed about half a hundred-weight, stood up and began to suck. This operation is performed in a very singular manner. The udder of the elephant is situated between the fore-legs, and the calf assists himself with his trunk in placing the teat in his lips at the side of his mouth. He sucked several times a day during the journey down to Calcutta, the keeper generally halting twice or three times in the course of each morning's march for the purpose of permitting him to take nourishment. At that time, the calf was not able to walk more than a mile in each march, and was therefore carried in a cart. The mother came close behind it, and generally caressed her offspring with her trunk as they moved along, as if to assure herself of his safety. The fatigue of the march, probably, diminished the mother's supply; and the keeper found it necessary to add to the nourishment of the calf by a certain quantity of zebu milk, which he readily took, and which agreed with him perfectly. Arrived at Calcutta, the elephants were sold, and shipped immediately on board the *Wellesley*, Captain Parish, where the Calf grew rapidly, notwithstanding the inconveniences to which hve stock of such magnitude are necessarily subjected at sea. The mother suffered considerably in condition in consequence of the fatigue which she has undergone, but is now improving under more succulent diet, and will, probably, in a few weeks, be as sleek and well furnished with flesh as if she had never left the jungle. The natives who saw the Calf on the march to Calcutta regarded it with great interest, as there is no recent instance, if any, of elephants breeding in domestication; consequently, a sucking elephant is almost as rare a sight in the neighbourhood of Calcutta as the hippopotamus was at Alexandria. The present instance is certainly the first in which so young an animal of this species has ever reached Europe.

The Zoological Society now possess *a herd of four elephants*; eight lions and lionesses, besides the hippopotamus, rhinoceros, and both species of tapir, being the largest collection of pachydermata ever possessed by the society, or ever exhibited in Europe. The number of carnivora is also unprecedentedly large. These large animals are in themselves an exhibition of the highest interest; and, in the instance of the hippopotamus and elephant calf, entirely without parallel. The herd of giraffes, the ostriches, and the aviaries, are also prominent attractions. The collection of living animals has been greatly increased during the winter, and now contains upwards of 1500 specimens

Among the preparations for the ensuing season is a building expressly for the exhibition of a splendid collection of mounted humming birds, of which 300 species exist. Early next month a large aviary will be completed for rapacious birds, including a more extensive series of eagles and vultures than has ever yet been seen at one view. The hippopotamus has continued to advance in health and condition during the winter; and the Council have had formed for him a large tank in the open air, where he may disport his "recreant limbs" within view of a thousand spectators at one time.

The Gardens were thronged with visitors on the morning of Easter Monday; and it deserves to be mentioned, that the liberal policy of the Zoological Society has rendered this costly collection as accessible to the masses as any place of public resort and amusement can be which is not maintained by the Government.

From the Sandwich Islands, under date January 28th, we learn that a terrible gale had been experienced: several vessels were much damaged. The difficulties with the French were expected to be amicably settled.

ELEPHANT CALF, IN THE MENAGERIE OF THE ZOOLOGICAL SOCIETY, REGENT'S-PARK.

REPORT OF THE ROYAL HOSPITALS FOR THE PAST YEAR

The following is a condensed report of the number of children and other poor people maintained in the several Royal Hospitals of the city of London, under the pious care of the Lord Mayor, aldermen, and governors thereof, for the year last past:

CHRIST'S HOSPITAL.

Children put forth apprentices and discharged from Christ's Hospital the year last past, 219, some whom being instructed in mathematics, and having been now placed forth apprentices to commanders of ships and to the mathematical school founded by King Charles II.	219
Children deceased the year last past	
Children now under the care and charge of the Hospital in London and at Hertford	1352
To be admitted on presentations granted to this time	182
	1574

The expense of repairing and keeping up the buildings of this hospital have been found to be extremely burdensome. A fund was established in 1802 with a view to the gradual and complete rebuilding of the whole fabric, and a great part has accordingly been restored in a most commodious and substantial manner, without reducing the number of children upon the establishment during the progress of the works. Much, however, yet remains to be done, and the governors regret to state that the fund originally subscribed has been completely exhausted, and a very considerable sum expended from the general fund of this charity; but they are willing to hope that the generosity of the public will afford the means of completing this great work, and prevent the necessity of encroaching further upon the permanent income of the hospital and thereby diminishing the scope of its usefulness.

ST. BARTHOLOMEW'S HOSPITAL.

There have been admitted, cured, and discharged during the last year, 3632 in-patients, and 66,705 medical and surgical out-patients, including casualties: most of them were poor, sick, and lame persons, and many of them being destitute of all relief, have been supplied with money, clothes, and other necessaries, to enable them to return to their several habitations, amounting together to .. ..

Died		378
Remaining under cure	in-patients	807
	out-patients	2049

The governors call upon the public to assis in defraying the very heavy additional expenses incurred by the extensive enlargement of this hospital for the relief of the annually increasing necessities of the poor.

ST. THOMAS'S HOSPITAL.

There have been admitted, cured, and discharged during the last year, sick, wounded, uncured, and diseased persons, 4229 in-patients, and 45,932 medical and surgical out-patients, including casualties, some of whom have been relieved with money and necessaries at their departing, to accommodate and support them on their journeys to their several habitations 50,171

Died after much charge in their sickness		370
Remaining under cure	in-patients..	455
	out-patients	2,289

So that there have been during the past year, of poor miserable objects under cure, and destitute of other proper care, in all 53,195

The governors of this hospital also make an appeal to the public, to enable them to defray the heavy charges incurred by the increased accommodation made for the patients, and the still greater outlay necessary to complete the plan of improvements now in progress

BRIDEWELL HOSPITAL.

Received into this hospital during the year, under commitments by the Lord Mayor and the Aldermen of the City, as criminal and disorderly persons, who have been kept to hard labour or received correction	643
Apprentices sent by the Chamberlain for confinement	20
Received poor persons who had been found wandering abroad, and begging in the city of London	321
	984

A favourable account of the results of the House of Occupation attached to Bridewell is appended. It appears from this account, that there were at Christmas, 1850, remaining in the house 108 males and 104 females.

BETHLEM HOSPITAL.

It appears from the report that there were remaining in the hospital, 1st of January, 1850, including those out on leave of absence, 213 males and 184 females; and that there were admitted during the year, 188 males and 215 females; making a total of 770. Of these, 74 males and 123 females have been discharged cured, and 40 males and 37 females are incurable

The sub-committee meet every Friday at Bethlem Hospital, to admit and discharge patients from all parts of the United Kingdom without expense to their relations or friends.

THE REV. DR. WOLFF.—This enterprising and indefatigable missionary traveller has just started on a tour through the northern portions of the kingdom, in pursuit of his evangelical labours on behalf of the funds for promoting Christianity among the Jews. While waiting at a railway station, about midnight on Monday last, our attention was attracted by certain little eccentricities peculiar to the Bokhara traveller, with whom we soon fell into an interesting conversation. The Rev. Dr. was formerly fellow-pupil with the present Pope, and is now vicar of Isle Brewers, Somerset. His immediate destination is Glasgow and the northern parts of Scotland, including the Orkneys and classic Iona, the burial-place of St. Columba and a host of Scottish monarchs. He will visit Sir John and Lady Matilda Maxwell at Pollock, and while in Glasgow will lecture on behalf of the Jewish Mission funds, which, it seems have got considerably in arrear, the debt remaining in the Free Church alone being £2000. Notwithstanding his advancing age, and the undoubted trials and hardships which the African traveller has endured, he still looks well, and, on the occasion to which we have alluded, the railway officials had ample evidence that his physical strength and the vigour of his lungs are not as yet materially impaired.—*Liverpool Chronicle.*

The Queen has been pleased to grant the office of Solicitor-General for Scotland to John Gowan, Esq., advocate

A novel mode of doing honour to the festival of Easter was exhibited on Monday last, at Dublin, by the crews of a squadron of Austrian and Greek corn ships, now lying in the Liffey. Having obtained the permission of the authorities for the purpose, they fired salutes of twenty-one guns each at eight o'clock in the morning and at noon

Large numbers of the working-classes now attend at lectures in Trinity College University—a circumstance altogether novel. This was particularly the case in a course of lectures on botany, which has just been brought to a close, and during which the audience was composed largely of practical horticulturists and working gardeners.

SCENE FROM "LA MUTA DI PORTICI," AT HER MAJESTY'S THEATRE.

HER MAJESTY'S THEATRE.

Donizetti's masterpiece in comic opera, the ever fresh and sparkling "Elisir d'Amore," was performed on Tuesday night, at the re-opening of the theatre after the Easter recess. The return of Lablache as the illustrious *Dr. Dulcamara*, the *medico ambulante*, in his gilt car, was welcomed with reiterated cheers from every part of the house. His coat was as intensely glowing, his waistcoat as gorgeously varied, his perruque as flowery, and topboots as collossal as ever, and majestic were the tones with which the rustics were called upon to listen to the opening address of the "Dottore enciclopedico." To state that Lablache is the greatest artist of the age, is a mere truism. It is not merely that he is such a consummate comedian, he is a thorough musician; and there is no concerted piece in any opera, comic or serious, in which his tact and judgment are not effectively evinced. He was the life and soul of the "Elisir," from first to last; his spirits never flagged; his "barcarola" was irresistibly exhilarating, and his medley of languages provokingly ludicrous. He is in excellent voice, and the heartiness of his reception evidently prompted the Jupiter Tonans of *bosso* to exert himself strenuously.

Signor Calzolari was *Nemorino*, Signor Coletti was *Belcore*, and Mdlle. Duprez was the *Adina*. The appearance of the young French *prima donna* in a new part added to the interest of this strong cast. Her success was as great as might have been anticipated from her previous triumphs in *Lucia*, *Oscar*, and *Amina*. *Adina*, in which, by the way, she was much admired in Paris, is peculiarly adapted to her powers. She renders the character arch and captivating—a piquant village coquette, and not a disagreeable termagant, as has been sometimes the case by other *artistes*. The music being florid and brilliant, could not have been interpreted with more ease and certainty than by Mdlle. Duprez, whether in the opening andantino, in three-four time, in the duos with Calzolari, Coletti, and Lablache, or in the aria, "Prendi per me," in the slow movement of which she displayed dramatic intensity, and in the cabaletta surprising feats of fioriture.

MASANIELLO (SIGNOR PARDINI)

Carlotta Grisi danced in the revived ballet of "Les Metamorphoses," as the sprite, assuming sex adherent forms with the utmost grace and vivacity.

GAETANO PARDINI,

Who has made such a successful *début* in the character of *Masaniello*, in Auber's opera "La Muta di Portici," at Her Majesty's Theatre, is a native of Leghorn, in Tuscany. His natural aptitude for music, and the possession of a fine voice, led to the cultivation of his abilities, under the most eminent masters in Leghorn. His first appearance on any stage was at the San Carlo, in Naples, in Maestro Taglioni's opera, "I Due Mariti" ("the Two Husbands"). After his favourable reception at Naples, Signor Pardini was engaged at Turin, and from that city he went to Verona. His next engagement was at the Italian Theatre in Trieste; and from thence he visited Padua, where he remained for three years and was an immense favourite. From Padua he travelled to Milan, where at the grand theatre, the Scala—he made his *début* in "Roberto Devereux" with signal success. After remaining a season at La Scala, Signor Pardini was engaged at the Royal Opera House at Berlin, and such was his popularity that he was engaged for four successive years, during that period accompanying the troupe to Dresden and Hamburgh. Signor Pardini has been engaged by Mr. Lumley, for the season, at Her Majesty's Theatre, and also for the season 1851-52 at the Théâtre des Italiens, in Paris.

Pardini is essentially a dramatic singer—a *tenore robusto*. His *repertoire* is very varied. He has sung the parts of *Max*, in the Italian version of Weber's "Der Freyschutz," of *Otello*, of *Edgardo* ("Lucia"), of *Roberto* (in Meyerbeer's "Robert le Diable"); *Ezra Diavolo* and *Masaniello*, of Auber; *Zampa*, of Herold; *Pollio*, in "Norma" (besides the principal characters in all Verdi's operas. *Otello* and *Roberto* are regarded as his finest delineations. Pardini has an excellent stage face, and good presence; his action is forcible; and, when the weather becomes more propitious, the vocal qualities which have won for him his Continental fame, will no doubt be thoroughly developed.

Our Artists have depicted the scene from "La Muta di Portici," immediately after the marriage, in which *Fenella* (Mdlle. Monti) discovers her seducer, *Alfonso* (Scotti), to *Elvira* (Madame Fiorentini). The action of the dumb girl in this scene is indescribably effective. Annexed is also a characteristic portrait of

XLVIRA (MADAME FIORENTINI).

MADEMOISELLE MONTI.

The highly-gifted lady is the daughter of the celebrated sculptor of Rome. She was born in Naples, and for some years was the star of the Scala at Milan, as the first mime of Italy. She paints, it is stated, beautifully, and is altogether a thoroughly accomplished *artiste*. Her *Fenella* is full of exquisite touches of nature; her style is unobtrusive and free from exaggerated gesticulation; but her *poses* are picturesque, and in every movement the intellectual intention is indicated. To comprehend the subtle and delicate points of her acting, her varying features must be watched. Heretofore, the mistake has been to make the dumb girl tell her story with her feet and arms; Mdlle Monti, on the contrary, conveys by the expression of the eyes the meaning of words

Of Madame Fiorentini a Memoir appeared in our Journal for April 5

On Thursday, for the grand extra night, Auber's "Muta di Portici" was given for the third time, supported by Madame Fiorentini, Mdlle. Monti, Signori Pardini, Scotti, Mercuriali, Balanchi, Lorenzo, and M. Massol. The restoration of all the original dance music of the composer, and the exquisite style with which the incidental divertissements are grouped and executed, form quite a feature in this attractive performance; whilst the beautiful part of the dumb girl has been rescued from the hands, we may write the feet, of the mere *danseuse*, and rendered a highly poetic and intellectual performance, thanks to the genius of Mdlle. Monti.

FENELLA (MADEMOISELLE MONTI).

Tuesday night will be distinguished by the return of Madame Sontag, when she will appear in her most popular character of *Maria* in "La Figlia." Her recent triumphs in Paris have imparted added strength to her voice, and renewed brilliancy to her execution. On Thursday, the opening day of the World's Fair, the new opera, "Le Tre Nozze," will be performed for the first time in England, with the Paris original distribution of the dramatic personages, which comprises Lablache, Carlotti, Ida Bertrand, Guiliani, and Sontag. The success of the work, on its first representation, was as decided as it was unequivocal. Carlotta Grisi, Amalia Ferraris, and Rosati will also appear on this occasion.

ROYAL ITALIAN OPERA.

Meyerbeer's "Huguenots"—that lyric tragedy of remarkable originality and enormous graphic power—was performed on Tuesday night, for the first appearance this season of Mario. He met with a rapturous reception, on his coming on in the opening scene of the opera, and sang the delicious romance, with the carious viola obligato so well played by Hill, who, as well as Mario, is the prime favorite with the audience for refinement and expression. He was equally successful in *Raoul's* duo with *Marcarita de Valois* (Mdme. Castellan), especially in the tender andantino "Beiti civina." In the septuor of the duel he quite a gratified the house by his magnificent delivery of the concluding phrase; and a repetition of this fine burst of vocal power was insisted upon for some time by the excited audience; but Mario prudently declined the encore after such a strain on the upper notes. Unfortunately, after the septuor, he was seized with the hoarseness which at the beginning of the season attacks him, but leaves him at the return of settled weather, and the duo with *Valentine* (Grisi), ending in a grand concerted piece, was also suffered from this sudden deprivation of his physical power. It was, however, evident from the earlier acts, that Mario has returned with his marvellous gifts of voice, and style unimpaired, or rather in his method, it may be stated that his duets are finished and refined than ever.

[illegible] some changes in the cast from last season when it was *San Bris*, and Lablache as *Marcel*. The last-assumption is unquestionable Formosi was suffering from the influenza but when he shall be in voice, the delineation with his fine organ may prove efficient if more subdued and g nified. Mdle. Angri was to have resumed the part of the Page, but the prevailing epidemic has put her hors de combat, and Mdlle. Bertrandi, from the Royal Italian Opera at Berlin, at a very short notice, was the *Urbano*, and acquitted herself very creditably as a trying emergency. In thus making an improvised *début*. With the exception of the andante of the quatuor, in the oath of reconciliation between the Huguenots and Catholics, the general execution was superb; despite the excessive exuberance of the undercurrent of orchestration, and of the choral pieces, the greatest precision was attained under the magic *baton* of Costa. The blessing of the daggers, the most intensely exciting dramatic piece of writing extant, went wonderfully; and the concluding chorus, the wondrous allegro furioso in G sharp minor, was encored with acclamations. Grisi and Madame Castellan sang splendidly throughout the opera, and the former in the fourth act was sublime both in singing and acting, receiving with Mario a special ovation at the close. Formes's *Marcel* is a grand conception, most spiritedly carried out; the more finished in its details the last season, and whether in the "Piff paff" couplets, the delivery of the chorale, the duo with *Valentine* in the third act, or in the trio finale, Formes quite insured the suffrages of the audience

On Thursday, for the extra night, Meyerbeer's "Robert le Diable" was given, with Grisi as *Alice*, Madame Castellan as the *Princess*, Louise Tagliani as the *Abbess*, and *Bertrand*, and *Tamberlik* as *Bertram* and *Robert*. The changes in this year's cast are Signor Stizelli, who made his first appearance at this theatre for Mario, as *Rambaldo*, and Polonini for Massoli, in the *Herald*. "Robert le Diable," by many accounts, is preferred to the "Huguenots" and to the "Prophète," and this opinion prevails generally in Germany. In this country our amateurs have not the same notion, and it is so much as regards the music which is certainly not inferior to that in the two other works just cited, but in respect to the libretto; for, despite the high moral purpose of the story, the struggle between evil and good in the soul of *Roberto*, there are situations in the drama looked upon as objectionable. Some of Meyerbeer's most musical inspirations are to be found in "Robert;" and for the last two seasons we have remarked that our audience display a higher appreciation of its manifold beauties, and are more enthusiastic in their demonstrations of gratification.

Certainly, Thursday's *ensemble* was eminently calculated to add to the popularity of the work, as the perfection of execution has never been in this country; the *artistes* now fully comprehending their respective parts and the character of the music. The new tenor made a most favourable impression. He has a powerful voice, and sings like a thorough musician. He was encored in the duo with Formes, but did not accept it, bowing his thanks for the compliment Grisi, Tamberlik, and Formes were called upon to repeat the unprecedented trio in the cavern scene; it was beautifully sung. The trio finale went admirably. This evening (Saturday), "The Huguenots" will be repeated; and next Thursday Beethoven's "Fidelio" will be produced, for the first time in this country in Italian, the principal parts to be sustained by Madame Castellan, Mdlle. Bertrandi, Tamberlik, Stigelli, Tagliafico, and Formes.

DRURY-LANE.

On Monday the tragedy of "The Robbers," by Schiller, was, as previously announced, produced for the benefit of the Easter holiday-folk, and the instruction of foreigners who may visit this theatre during the Exhibition. Such a one more unique can scarcely be conceived. The meanest *litterateur* knows, too, that "The Robbers" holds the lowest rank in its author's productions as the outpouring of a youth's feelings, a youth's opinions, with all the enthusiasm and unmatured genius, but without the form and method that belong to the artist in any state. Out of the abundance of his heart spake Schiller; but its imaginations were, at this time, "wildly" In its bizarreness, its extravagance, and revolutionary play, and that same play began frenzy in minds similarly disposed. But its influence was temporary; and, as a drama, it soon ceased to gain respect. The mind that began it lived to condemn it, and all the later productions of Schiller stand in contrast with this wicked offspring of his first impulses. Had it been possible to have asked Schiller's consent for its production on Monday, he would certainly have refused it. The manager stands in Schiller's place, and thinks differently. Had it been Mr. Anderson's intention to produce the dramas of the G rman poet in a series, it would be a worthy design, which we should do see carried out; but the present revival can hardly be considered the production of the more crude examples in the first instance. The present would improve as we went on; but the present venture, without a future to look to, strikes us with despair. Let us now criticise the performances. Mr. Anderson has placed the piece on the stage with scenery and costumes worthy of a better work. The arrangements are picturesque, and in the acting to be despised. His own *Charles* is, in spite of its preachiness, an admirable performance, with a dash and vigour peculiarly his own. If to his vehemence he would add a more rapid elocution, Mr. Anderson's acting would, in general, be increased in effect. His sly drags, from its slowness and weight of emphasis. But nevertheless, in the present instance, his commanding merits help him out of his difficulties, and willingly render it. Mr Cathcart's *Franz* was not quite up to the mark, and Miss Gilbert's *Amalia* far below it; but so careful was the *mise en scène*, that individual defects were lost in the *total ensemble*. Of the actors who accompanied Mr. Anderson's acting would, in general, be increased in effect. His sly drags, from its slowness and weight of emphasis. But nevertheless, in the present instance, his commanding merits help him out of his difficulties, and willingly render it. Mr Cathcart's *Franz* was not quite up to the mark, and Miss Gilbert's *Amalia* far below it; but so careful was the *mise en scène*, that individual defects were lost in the *total ensemble*. Of the actors who accompanied the scenic display, the only unimpaired, for the sudden deprivation of his physical power. It was, however, evident from the earlier acts, that Mario has returned with his marvellous gifts of voice, and style unimpaired, or rather in his method, it may be stated that his duets are finished and refined than ever.

[illegible] some changes in the cast from last season when it was *San Bris*, and Lablache as *Marcel*. Bertrandi, Tamberlik, Stigelli, Tagliafico, and Formes.

DRURY-LANE.

On Monday the tragedy of "The Robbers," by Schiller, was, as previously announced, produced for the benefit of the Easter holiday-folk, and the instruction of foreigners who may visit this theatre during the Exhibition. Such a one more unique can scarcely be conceived. The meanest *litterateur* knows, too, that "The Robbers" holds the lowest rank in its author's productions as the outpouring of a youth's feelings, a youth's opinions, with all the enthusiasm and unmatured genius, but without the form and method that belong to the artist in any state. Out of the abundance of his heart spake Schiller; but its imaginations were, at this time, "wildly" In its bizarreness, its extravagance, and revolutionary play, and that same play began frenzy in minds similarly disposed. But its influence was temporary; and, as a drama, it soon ceased to gain respect. The mind that began it lived to condemn it, and all the later productions of Schiller stand in contrast with this wicked offspring of his first impulses. Had it been possible to have asked Schiller's consent for its production on Monday, he would certainly have refused it. The manager stands in Schiller's place, and thinks differently. Had it been Mr. Anderson's intention to produce the dramas of the G rman poet in a series, it would be a worthy design, which we should do see carried out; but the present revival can hardly be considered the production of the more crude examples in the first instance. The present would improve as we went on; but the present venture, without a future to look to, strikes us with despair. Let us now criticise the performances. Mr. Anderson has placed the piece on the stage with scenery and costumes worthy of a better work. The arrangements are picturesque, and in the acting to be despised. His own *Charles* is, in spite of its preachiness, an admirable performance, with a dash and vigour peculiarly his own. If to his vehemence he would add a more rapid elocution, Mr. Anderson's acting would, in general, be increased in effect. His sly drags, from its slowness and weight of emphasis. But nevertheless, in the present instance, his commanding merits help him out of his difficulties, and willingly render it. Mr Cathcart's *Franz* was not quite up to the mark, and Miss Gilbert's *Amalia* far below it; but so careful was the *mise en scène*, that individual defects were lost in the *total ensemble*. Of the actors who accompanied

gardens of Prince Nemparisl—the Nuptial Bower of the Queen of Frogs and the concluding Lilliean, altogether indescribable for its beauty and brilliancy are realised bits of romance, which for the moment literally rap the spectator's mind in Elysium. The result will be doubtless a triumphant success and a profitable run

SURREY

We have already described the nature of the Easter piece at this theatre, as an attempt at the production of an intellectual melodrama, and to the full extent its authors (Mr. Morris Barnett and Mr. Angus B Reach) have been successful It is partly founded upon a French drama, which we suspect to have been originally derived from a Spanish play; but the materials have been subjected to rigid revision by the present authors. The title of the drama is "The Carina," and the scene is laid in Russia, in the reign of Elizabeth II., her Majesty herself being represented by Mrs. Rickard, and her favourite, *Cornaro Pitti*, by Mr Shepherd The latter is as faithless as the former is profligate. He courts *Meta* (Miss Fielding), although already betrothed to *Jean*, an armourer (Mr. Creswick). The maiden, apparently poor and of vulgar origin, is really an heiress and of noble family—facts of which *Cornaro* is aware. His secret is, however, partaken by a Jew, who demands an unreasonable reward for the surrender of the proper documents; whereupon *Cornaro* ruthlessly stabs him. *Jean*, however, is on the spot, and hears the story, though he cannot immediately avail himself of it, for he is charged by *Cornaro* with the murder of the Jew, and compelled to assist in his extrication. This done, the two rivals quarrel about *Meta*, and the act closes with their mutual declaration of mortal enmity. In the second act, *Cornaro's* intrigues is found to be already known at court. *Prince Benoski* (Mr. Norton) plots for his ruin. The Queen is jealous of her favourite's infidelity: *Meta* is confronted with her and him; *Jean*, also, shares the peril The Queen causes both *Cornaro* and *Jean* to be condemned to death, meaning, however, to save the former. But she is outwitted by her nobles. The one doomed to suffer is concealed by a black veil. She deems it is *Jean*, but it is *Cornaro*. The victim having been found, no more is to be done, particularly as the popular voice is in favour of the armourer. The crowds pour into the Royal presence, and demand the union of *Jean* and *Meta*; and so, amidst the cheers of the populace, the curtain falls

The whole was admirably placed upon the stage, and acted with skill and force. Miss Fielding, who performed the heroine, and made her *début*, we believe, in the character, is a promising actress, and promises well. The pace merits, and, no doubt, will have, a considerable run.

PRINCESS'S

To this theatre Mr Albert Smith has contributed the burlesque, and a light and sparkling thing it is, remarkably neat, elegant, and pretty Its versification and diction are highly commendable, correct, and polished. The subject is taken from Washington Irving's story of "The Alhambra," and the three princesses, *Zayda* (Miss Murray), *Zorayda* (Miss Leclerq), and *Zoralaqada* (Miss Mary Keeley), who have been immured in their apartments by their king's, *Sir Rupert the Heady* (Mrs. Keeley), *Sir Desperado the Dauntless* (Mr. A Wigan), and *Sir Toby the Timorous* (Mr. Keeley). The tyrant father was cleverly enacted by Mr Wynn. There is a kind of love passage to the piece—by Mrs Keeley and Mr. Flexmore the former wandering despondingly in Brompton-square, in search of a new subject, and the latter as *Asmodeus*, who proposes the present, and a balloon trip from London to Granada, over the Channel and Paris. The humour depends on the adventures of the captive knights, and the wit of a certain renegade *Hussein Bahn* (Mr. Harley) By the aid of capital acting and a most clever dénouement, a passable sufficient story, and nothing in incident, is nevertheless made inexplicably effective. To describe it were a vain attempt it must be seen to be appreciated, if not understood. The scenery and other appointments are magnificent.

OLYMPIC.

This management deserves more success than it receives. The drama, in four acts, of "Sir Roger de Coverley" by Mr. Tom Taylor, is designed and constructed with remarkable cleverness; and well acted as it is, merits, as a realisation of the life portrayed by Addison in the "Spectator," the public approbation. No performer could be better adapted to the part of *Sir Roger* than Mr. Farren, who looks and acts it to perfection; neither do his defects of speech here mar his efforts, tastefully being a feature of the original character as pourtrayed by this inimitable. *Will Honeycomb* by Mr. H. Farren, was an easy more laborious than happy; but the *Will Wimble* of Mr. Compton was admirable; and the *Widow* of Mrs. Stirling was an exquisite picture. To make out the plot, the playwright has introduced some original scenes, in which Mr. and Mrs. Marston, as *Block Wall* and *Honor Lee*, play two character parts with that careful attention to personages which is rarely met with in the present generation. The story in its progress becomes very complex, but at, its clifax ties are happy y unmeasured; and the triumph of old English Commons is celebrated by the characters wearing the same costume as in the drama. The audience, though not numerous, were delighted, the play being throughout and at the end loudly applauded.

THE ADELPHI

This theatre, this season, depends on revivals "Mary Ducange" and "O'Flannigan and the Fairies." The last is a judicious restoration, and, so far as it is recovered, may become a stock piece for an Irish performer We will do we recollect poor Tyrone Power in it; and Mr. Hudson, though not quite equal to the master in the visionary distresses of Dunnybrook fair and the terrors of the Lafarguey cave, has made a very creditable performance in his general conception and so excellent in many portions of his execution, that we could witness his performance with a pleasure undiminished by powerful reminiscences This is a strange text; and studies to be added to a lasting popularity for the deserving comedian.

SADLER'S WELLS

This theatre re-opened on Monday, with "Le Marchand de Venise," and "Fortunio." The part of *Portia*, in the former, was sustained by Mrs Goddard; and that of *Jessica* by Miss Baddeley. Both *débutantes* were respectable; and the latter of much sweetness and promise.

ASTLEY'S.

It is not often that this theatre gives us an opportunity of chronicling a new piece. Fortunately for the establishment, its productions are generally of long life. On Monday, the theatre re-opened in a re-decorated condition. The new spectacle is called "The Arabian Nights," and finely ventures, without a fear. The subject is the story of Henry II., his Queen, and Fair Rosamond. But the frail one is saved from her historical punishment by taking the veil. The Church comes to her aid, and pardons Eleanor, provoking criticism; but no matter, since it serves the purpose of spectacle, and, as such, the piece was even more than usually successful.

MR. SALTER'S PICTURE OF THE WATERLOO BANQUET.

We were admitted, on Saturday, to a private view of this extensive pain consisting of eighty-one portraits—the work of the artist for fifteen years. It has now value as indubitable, and this will increase with time. Already twenty-one of the guests have paid the debt of nature; the Iron Duke yet happily survives. In this picture he is exhibited in the act of addressing his guests assembled at Apsley House, on the 18th of June, 1836, and the accuracy as to time is as true in reality as the portraits are spirited and life like. The former are of the most elaborate kind, including the literal transcript of the gallery, as designed by Wyatt; with his works of art and gorgeous furniture, and the magnificent plate of famous shield, the porphyry candelabra, the gift of the Emperor Alexander, or the silver plateau, that of the Portuguese nation. In all these particulars the industry of the artist has been carefully tasked. But the work is about to be withdrawn from now a work of such admitted merit. Suffice it, that we state it is at this present visible at 16, Old Bond-street, and will repay a long-timed visit

PANORAMA.—OVERLAND ROUTE TO CALIFORNIA.

We were much gratified with Colonel Fremont's Overland Route to Oregon and California, a private view of which, at the Egyptian Hall, took place last Saturday The subject consists of views with a view of the city of St. Louis, and conducts us by the Upper Missouri and Platte rivers to the [illegible] mote. Rock Independence, the Sweet-Water Valley, the Great [illegible] Pass, and the central basin of the Mountains, with the Great Salt Lake and the Mormon City. Beautiful and interesting as these objects are, they are succeeded by others of nearly equal importance; such as the American Falls on the Snake River, Fort Walla Walla, Fort Vancouver, Pyramid Lake, the Pass on the Sierra Nevadas, the Sacramento, the Columne, the Moke ume, and other "golden streams," with the city and harbour of San Francisco. In a panorama so extensive we can but indicate the subjects presented, but the general features of views are all finely painted, and, notwithstanding their number, very artistically finished The sketches from which the views are taken have been provided, in part, by Colonel Fremont himself; but he has been assisted by Captain Wilkes, Mr Drayton, Sir W. Drummond Stewart, and W. R. Hamilton A visit to the modern El Dorado thus facilitated cannot fail to be pleasing to the sight-seeing public at this festival season.

VAUXHALL GARDENS [illegible] this (10th year), will be opened on Thursday next, May 1, with a host of attractive novelties, including an Avenue of All Nations, a Temple of Concord, &c., and the celebration of the inauguration of the Crystal Palace with a Ball Masque

NINEVEH EXCAVATIONS.—(*From a Correspondent.*)—By a letter from Mr Layard, of Mosul, dated March 4th, 1851, we learn that Mr Abdeman Zimla's vessel, the *Apprentice*, which brought over the former cargo of Nineveh marbles, distanced the *Warrior* ten days in her return from London Another of Mr Zimla's vessels, the *Portitude*, was lost in the Persian Gulf. Mr Rassam's vessel merely completed her cargo, and was expected to set sail in a few days Two boats and one raft, with another cargo, were [illegible] another smaller bull, and a great many packages and cases [illegible] and two portions of Colonel Rawlinson's bull, which were too large for [illegible] way, will be brought over by the *Apprentice* in her next voyage Mr Rassam had proceeded to Mosul, "not without [illegible]

THE GREAT BELL OF NOTRE DAME.—The large bell of the Cathedral of Notre Dame, in Paris, was cracked in a fire during a storm [illegible] three years, caused by repairs [illegible] A large crowd assembled in Paris to hear it. The bell is called Emmanuel, was cast in 1682, and Louis XIV. named it in the ceremony. Formerly, sixteen men were required to ring it, but, owing to an improvement in the hanging, four now suffice.

MUSIC.

M. GOUNOD'S "SAPHO."

The three-act opera of Charles Gounod, "Sapho," the libretto by Emile Augier, a popular author at the Comédie Française, was produced at the Théâtre de Lyrique, in Paris, on the 16th instant, with the most complete success. The names of the author and composer were announced from the stage, at the end of the opera, amidst the unanimous plaudits of an immense audience. When it is considered that no new composer had to contend with the settled opinions of the public in favour of Auber, Halévy, and Meyerbeer, the three great pets of the Parisian amateurs in grand opera, the importance of Gounod's triumph may be estimated. Nothing but genius of the highest order, or talent altogether fresh, novel, and original, could have had a chance of success against Donizetti, Auber, and when it is added, the French connoisseurs vaunt a lyric work by the number of its acts, and that, with the exception of Donizetti's "Favorita," no opera of modern times with less than five parts, comprised a war against the fashion of the day, and of divertissements, has been successful, the intrinsic beauties of the score of Gounod's "Sapho," thus to overcome existing prejudices, must be indeed great and striking. Poems of course based on Greek and Roman subjects are also out of fashion; and the predecessors of Gounod in the selection of Sapho's story, have not been fortunate, with the exception of Martini's version, to the lyric tragedy of "the Countess of Sabo," acted at the Théâtre Lyrique in 1794. I learned Kreutz's work was a failure in 1822; and Pacini's "Sapho," done at the Italiens in 1843—an English adaptation of which had little success at Drury-lane Theatre—9 degrees below Lablache in 1795, Lemoine in 1795, Piccini in 1778, and Mayer in 1794, treated the same theme, tempting as it is. M. Emile Augier has contrived to invest the character of Sapho with the deepest interest, by first making her triumph at the temple over the poet *Alcée*, the agency of acquiring the affection of *Phaon*, who was Grecian, and the first instance, between the Lesbian sapphic and the genius of *Sapho*. Then, in the second act, *Sapho's* triumph over the heart of *Phaon* is brief; the conqueror of the lyric crown at Lesbos is compelled with her own consent, to renounce her lover, at the vindictive request of the disappointed *Olyère*, through her influence over the sensualist *Pythéas*, has become mistress of the secret of the conspiracy against *Pittacus*, the King, entered into by *Phaon* and *Alcée*. This is undoubtedly one of the most dramatic in the entire opera, at the end of the second act, is depicted in a trio of surpassing beauty. In the third and last act, the despair of *Sapho* on Mount Leucas, on finding her lover faithful to the country with *Olyère*, and the consequent self-sacrifice on his faithless—as he supposes—*Sapho*, is the prominent incident. The *denouement*, related by Herodotus, is followed—she throws herself into the sea, at the foot of *Phaon*.

As an Italian adaptation of "Sapho" will be produced this season at Covent garden Theatre, and Viardot will be heard in the character, in which she has just achieved such an immense success at Paris, our analysis of the music will be reserved. The prominent pieces are a romance of *Phaon*, an invocation to Liberty of *Alcée*, the trial song of *Sapho* for the prize, in the first act; a duo between *Phaon* and *Pythéas*, a duo between *Sapho* and *Olyère*, which is wound up in a most exciting trio with *Phaon*, in the second act; and the grand scene of *Sapho*, the conquests of the gostherd, and the concluding air of the distracted priestess. Amongst the choruses are the introduction, "O Jupiter," that of the conspirators—the vaunt of long echoed for—has now been found in M. Gounod, who won the second prize at the Conservatoire in 1837, as the age of nineteen, and, in 1839, won the first grand prize for composition. Since that period he studied diligently in Italy and Germany, and the result has been a work produced with more sacred pieces, at Vienna, until four of his compositions were performed at the Monthly Concerts of Mr. Hullah, at St. Martin's Hall, on the 5th of January, a notice of which was published in the ILLUSTRATED LONDON NEWS of the 18th of January. We then expressed the conviction, that, in M. Gounod, "the advent of a master was announced," and a subsequent visit to Sabine's Requiem, at St Martin's Hall, on the 5th (noticed in our Journal of last week), fully confirmed our previous impressions The sensation produced by M. Gounod's "Sapho" in Paris, by the [illegible] of the composer, is an important epoch for art Admirable voicing for the singers, pure and flowing melody, mingled simplicity and severity in the combinations, massive unison, and marked originality, are the chief characteristics of M. Gounod, who thus bids fair to be as great in the sacred as in the operatic school.

FOREIGN MUSICAL NEWS

The Lisbon Opera-house closed its season in [illegible] Donizetti, and will open in October next. Lumley has engaged Mdlle. Wagner, Mdlle. Marchi, the Cruvelli and Mr. Sims Reeves, in Verdi's "Ernani," create a great sensation on every occasion.

Auber's opera, "Corbeille d'Orange" will be rehearsed soon at the Grand Opera in Paris, for Adonis, Mdlle. Nau, MM. Aymes and Merly, will be included in the cast. The work will be produced at Her Majesty's Theatre, with Adonis, Viardot, the advent of a master would be realised! and a rehearsal of the Sinfonia ad Beneditcus," at St Martin's Hall, on the 5th (noticed in our Journal of last week), fully confirmed our previous impressions The sensation produced by M. Gounod's "Sapho" in Paris, by the [illegible] of the composer, is an important epoch for art Admirable voicing for the singers, pure and flowing melody, mingled simplicity and severity in the combinations, massive unison, and marked originality, are the chief characteristics of M. Gounod, who thus bids fair to be as great in the sacred as in the operatic school.

[illegible] at Weimar state that Herr J. Hall's new opera, "Ester d'Angi" has been produced, under Liszt's direction, with brilliant success

Herr Jules Miller, a celebrated German tenor, died on the 7th Instant, at Charlottenburg, in his 71st year. He was famed in *Tamerlano*, *Ottavio*, *Titus*, &c., and composed some comic operas.

THE BEETHOVEN QUARTET SOCIETY.

The first morning performance for the season took place on Thursday, at the Hanover Square Rooms. Many of the old features were preserved in the management, as it was the first appearance in London of Camillo Sivori, the celebrated violinist, after an absence of three years in North and South America. There was a most efficient company, the selections being entirely from classical compositions. The Quartets were No. 6, in B flat, Op. 18, composed in 1792; No. 9 in Op. 59, executed by Sivori, Sainton, Hall, and Rousseloit; and Mendelssohn's Quartet in E flat (posthumous), performed by Sainton, Sivori (first and second violins), Hill and Webb (tenors,), and Rousseloit (violoncello). Sivori's execution was characterised by the brilliancy of his best days, and we were happy to find that he has trained another trip has not in the slightest degree diminished the peculiar refinement of his style. Sainton led in the quintet with great skill and power; the andantes scherzando, in C minor, was secured. The vocal music might have been spared: it stands no chance against such finished playing. The concert will be on the 30th inst

MUSICAL EVENTS.

Mr. Grattan Cooke gave a concert on Monday evening at the Royal Music Hall (Apollonicon Room, Adelaide-street), which was well attended. The band of the 2nd Regiment of Life Guards, of which Mr. G. Cooke is master, performed [illegible] Mr. Richardson played one of his intimitable flute solos; Miss V. Collins displayed a nice tone on the violoncello; Miss R. Collins exhibited brilliancy and a rich voice; Signor Bucalossi, his refined execution in a concertina solo; Mr. Distin family, their skill on the sax-horns; and M. Arban and Mr. F. Chatterton, their dexterity on the cornet-à-piston and harp. Mr. G. Cooke also performed on his violin with his usual ability. The vocalists were the Misses Poole, Messent, Collins, and M. O'Connor.

The Apollonicon performances of Mr Mather and other [illegible] have succeeded in attracting

[illegible] Operatic concerts at the Princess' Concert-Room have been [illegible] with

The Northampton Musical Festival, under the direction of Mr C. M'Korkell, took place last Tuesday and Wednesday, Haydn's "Creation" and Handel's "Messiah" were performed with concerts each evening The vocalists were Misses Birch, Williams, Poole, Messrs. Lockey, Messent, Williams, and Lawler. Mr. H. Blagrove was leader of the band

The usual arrangements for the ensuing week comprise the Fourth Promenade Concert (by Royal command) on Monday; the second meeting of the Musical Union, Mr. Balfe's pianoforte soirée, and Herr Witt's concert on Tuesday; the fourth meeting of the Sacred Harmonic Society, on Wednesday night, and the performance of Mendelssohn's "Elijah," by the [illegible] music Society, at Exeter Hall, on Friday, conducted by Costa: Miss Catherine Hayes will appear at the principal provincial towns and theatres in London since her return from Italy; Miss E. Birch, Miss Dolby, Miss M. Williams, Miss Reeves, J. A. Novello, and Herr Formes, will be the other [illegible]

[illegible] six works, sent in for the prize of £10 10 guineas, Dr. Benfield, [illegible] Death of Hector," has been awarded the prize, by the judges, Sir R. Bishop, [illegible]

NAVAL AND MILITARY INTELLIGENCE.

THE POLICE FORCE AT WOOLWICH.—The strength of the police force has been augmented to the extent of one sergeant and four constables at Deptford Dockyard, and one sergeant and six constables at Woolwich Dockyard, for six months. This increase is for the purpose of insuring greater protection being paid to country gentlemen visiting who may wish to visit the cradles of the Royal Navy of Great Britain during the approaching period of the Exhibition, when so many parties will visit the metropolis and the objects of interest in the vicinity, many of whom have never seen a ship-of war, or vessels of large dimensions, in progress of construction.

On Monday last, Captain Smithett, of her Majesty's steam-packet *Vield*, at present fitting at Woolwich, received orders to leave for Dover, and proceed in the *Garland* mail steam-packet, Lieutenant Commander [illegible] to Ostend, to be in readiness to embark the Prince Royal of Prussia at Ostend for conveyance to England, to be present at the opening of the Great Exhibition in Hyde-park, on the 1st of May next.

Her Majesty's ship *Daedalus*, which was at Valparaiso, in Chili (South America), on February 1, had received orders to take on board 90 months' provisions, in order to carry succour to the *Plover*, and other ships searching for Sir J. Franklin.

Major-General Roderick Macneil has been appointed to the staff at Madras, and will relieve Major-General Atchison in that presidency.

PREVENTION OF SHIPS' COPPER.—Mr. Peacock, who has been permitted by the Admiralty and the Trinity House and Oriental Company to try various experiments, with a view to the preservation of the bottoms of iron ships, has now brought forward a composition for preventing the [illegible] of wooden vessels. The Admiralty have offered him the opportunity of trying it, and have ordered, at all the dockyards, that the next new coppers, bottled ship shall receive a coating of the liquid, in order to test the merits of the invention.

NATIONAL SPORTS

The spring meetings succeed each other so closely, this season, that, without excess of special trains, the racing man of business would scarcely get time for his work. He is at Newcastle this week up to Friday afternoon, and again at Newmarket the Monday after; then and back in the following week; and then the good monster gathering of the year—Epsom! At all these meetings we look for good sport and a great concourse of spectators, including, there can be no doubt, a fair proportion of foreigners. It is to be regretted, however, that the various stewards had not acted a little more on the give and take principle, and left the week before the Derby "blank." Having mentioned Chester, we could merely to add that is the only race meeting of the week. The steeple-chase season is over.

EMIGRATION PROSPECTS.—[Extract of a letter received from Melbourne, Port Phillip, dated December 1, 1850:—"Labour is again getting dearer. Wages are the people about at home, that so many immigrants come out. Good women find food, good prospects for the future, with no fear of [illegible] open to all who are the most inclined to work, and can be depended upon. Ships come in loaded with goods, but short of men, women, and children for want of hands, some of the wool must be got up in the grease, instead of being washed, and the loss is thereby occasioned to all parties. [illegible] Servant girls are still at a premium. Even the needlewomen have all gone off, though there were some worthless ones among them. As a whole, in point of virtuous character, the Irish orphan girls stand much higher." *The Times*.

LECTURES IN GERMAN ON THE MODERN THEATRE.—An invitation to lectures on subjects of literature and art, [illegible] signed by distinguished and entirely [illegible] having been addressed to Doctor Gottfried Kinkel, late Professor at the University of Bonn, he will deliver a course of twelve lectures on the History of the Modern Theatre, at Willis's Rooms, commencing on Monday next.

BAZAAR AT LIVERPOOL FOR THE SAILORS' HOME.—A bazaar and flower show, under the auspices of the merchants, shipowners, and others connected with the port of Liverpool, was opened on Wednesday, and [illegible] proceeds of which are intended to be devoted in aid of the funds of the Sailors' Home. For some weeks preparations have been in progress to insure the success of the bazaar, which was held in the hall recently called the "Sailors' Home," and the selection was found to be a most admirable one. The attendance of visitors was very crowded each day, [illegible] expected that the proceeds of the three days of Wednesday, Thursday, and Friday, during which it was open, would amount to several thousand pounds.

COURT OF CHANCERY.—MARRIAGE OF MISS TALBOT.—On Wednesday, during the Lord Chancellor Mr Lysaght Palmer moved on the petition of Lord Edward Fitzmaurice Howard, M.P., second son of the Duke of Norfolk, and Vice-Chamberlain to the Queen, for an order for reference to the Master to inquire as to the fitness of a marriage between [illegible] and Miss Talbot, a ward of court, and in case the Master approved [illegible] that upon the [illegible] of a settlement [illegible] the petitioner [illegible] should be accompanied with the young lady in 1847, and had [illegible] every opportunity of making himself acceptable to her, and that [illegible] was now disposed to confirm, if the Lord Chancellor approved. Mr Bacon, on behalf of the [illegible] guardian of Miss Talbot, to express his concurrence in the petition, and to say that any similar application, having equal grounds to support it, would at any proceeding time have the same concurrence. His Lordship stopped the learned counsel by saying that they must take the usual reference. Order accordingly.

THE MONSTER TABLECLOTH FOR SOVEREIGN SYMPOSIUM.—This extraordinary specimen of Engl[illegible] manufacture [illegible] M[illegible] day night last. Its length is [illegible] and its breadth [illegible] upwards of 250. It is to be [illegible] on Monday next on the banqueting [illegible] in the encampment of all nations.

The Journal du Havre states that a few days [illegible] a procession of a wealthy inhabitant of Honfleur was [illegible] A poor old woman remarked to a friend: "How strange! [illegible] seemed everything to make his happy should be cut off, whilst a poor [illegible] I am, who have nothing to expect but misery, [illegible] that the moment he had uttered the last word, he [illegible]

The Cabinet of Washington have determined that [illegible] added as part of the cost of the [illegible] &c. from [illegible] had caused the [illegible] after a very long discussion.

In the United States a company has been formed to connect [illegible] Plattsburg, by constructing a railroad from [illegible] that line with the Edinburgh road; and that to M[illegible] the gentlemen concerned in this enterprise, the names of [illegible] Josiah Quincy, of Boston, Ex Governor Payne, of [illegible] Jamin Brewster, Esq., of Montreal, &c. &c. named.

On Tuesday morning, at nine o'clock, George Carnt, who was [illegible] and convicted at the last assizes held at Bodmin, Edmunds, before the Chief Justice Sir John Jervis, of the murder of [illegible] was executed pursuant to the sentence passed by the Judge. The awful penalty of the law on the new drop, erected on the top of the central archway leading to the interior of the prison in that town. The convict, previous to his execution, made a confession of his guilt.

MONETARY TRANSACTIONS FOR THE WEEK.

(From our City Correspondent.)

The fluctuations [illegible] been limited during the week to a quarter [illegible] business being particularly [illegible] by the Easter holidays. Monday's opening [illegible] account, which quotation was well maintained [illegible] Market manifested weakness, a result by [illegible] Consols, which naturally led to [illegible] [illegible] [illegible]

During the recess of 1840, when the position of affairs between the Porte and Syria, and the inclination of France to the former, and Great Britain to the latter, threatened war with France, Sir William Molesworth, by placard, called a public meeting of his constituents at Leeds; more than 8000 persons gathered in the Cloth Hall-yard, and, after an able speech from the hon. Baronet, an amicable address to the people of France was carried by acclamation. This meeting led to others in the great towns, and the rumours of war were soon over.

SIR WILLIAM MOLESWORTH, BART., M.P. FOR SOUTHWARK.—FROM A PHOTOGRAPH BY KILBURN.

At the general election in 1841, Sir William retired from Parliament, and devoted himself for a time chiefly to literary pursuits. At a social meeting, at which, amongst others, Mill, Buller, and, we believe, Grote, were present, it was suggested as a matter of regret that the works of Thomas Hobbes, of Malmsbury, close reasoner and master though he was of the English language, should be so rare and dear as to be quite beyond the reach of students of ordinary means; and that whoever had sufficient knowledge and means, would do a lasting service to the cultivation of sound logic and true philosophy by producing, at a moderate price, a complete edition of his works. Sir William Molesworth undertook the task, and by 1843 had collected, edited, and published in English and Latin, with notes, the complete works of Hobbes, in 16 volumes. Nor were the suggesters of the labour wrong, that it would need both means and time, for the cost was not less than about £6000.

In September, 1845, on the vacancy caused by the death of Mr. Wood, Sir William Molesworth was brought forward as a candidate for Southwark, was opposed by Mr. Jeremiah Pilcher, a Conservative and Protectionist, and Mr. Edward Miall, on the Maynooth grant and the editing of Hobbes, and was returned by a large majority, the numbers being—Molesworth, 1743; Pilcher, 1182; Miall, 352.

The hon. Bart. again spoke in favour of the immediate repeal of the Corn-Laws on the motion (Feb. 19, 1846) for going into committee on the bill of the late Sir Robert Peel. In 1847, in the debate on Mr. Hume's motion on Cracow, he gave a detailed history of the Russo-Dutch loan, pointing out that whatever loophole of escape some doubtful readings of points in the treaty might afford, there could be no doubt of the justice of the claim. In the debate on the Irish Poor-law amendment, March 12, 1847, he spoke in favour of out-door relief, and, in the great education debate of the same session, advocated the claim of Catholics to a share in all Parliamentary grants for the purposes of public instruction.

At the general election, in 1847, Sir William Molesworth was unopposed. In the session of 1848, January 7, he spoke in favour of the Parliamentary Oaths Bill. The honourable member also took part in the debates on the Army and Navy expenditure, and has been a diligent member of the committee upon the subject; but the question which he has most made his own in the House, and his mastery of which has been the work of years, is that of Colonial Reform, and retrenchment of expenditure on our land and sea forces by the better government and greater independence of our colonies. His first great speech upon the subject was July 25, 1848, in which he entered into a complete review of our colonial empire, and classified and described the items of expenditure upon our forty colonies in the several quarters of the globe. This speech was reprinted, in the form of one of their tracts, by the Liverpool Financial Reform Association, and, as a sort of text-book upon the subject, has had an immense circulation. The hon. member spoke at length in the following year upon Mr. Baillie's motion for a committee of enquiry into the grievances of Ceylon and British Guiana. In the session of 1849 he again brought forward his favourite Reform proposition, in a motion for a committee to inquire into the colonial policy of the United Kingdom, and in the debates of the following session, on the Government Australian Colonies Bill, he advocated the establishment of a second chamber, and, on the 6th of May, moved the recommittal of the bill for the purpose of omitting all the clauses empowering the Colonial Office to disallow colonial laws; and, in the same session, spoke in opposition to Mr. Roebuck's motion of approval of the foreign policy of the Government. On the 10th inst. the hon. member again renewed his colonial motion in the following resolutions:—

1. That it is the opinion of this House, that steps should be taken to relieve this country, as speedily as possible, from its present civil and military expenditure on account of the colonies, with the exception of its expenditure on account of military stations or convict settlements. 2. That it is expedient, at the same time, to give to the inhabitants of the colonies, which are neither military stations nor convict settlements, ample powers for their local self-government, and to free them from that imperial interference with their affairs which is inseparable from their present military occupation.

His speech upon the subject, since published in a pamphlet form, and certainly the ablest he has delivered, exhausts the whole question of colonial expenditure, colonial government, colonial discontent, unsettlement, and wars. It was listened to throughout with the most profound attention, and the debate stands adjourned until after the Recess.

The hon. Baronet married, in 1844, the widow of the late Temple West, Esq., of Mathon Lodge, Worcestershire.

Our Portrait is from a photograph by Kilburn.

NOOKS AND CORNERS OF OLD ENGLAND.

GILSTON-PARK, HERTS.

THIS fine old mansion, situated within twenty minutes' walk of the Burnt Mill Station of the Eastern Counties Railway, will next week be dismantled of its olden furniture, pictures, armour, &c., to be disposed of by the fiat of the auctioneer; the sale commencing on Monday next.

Gilston formed part of the estate of the Magnavilles, and afterwards of William D'Albini, whose daughter and heiress, Isabel, married Lord de Roos, Lord of Helmesley, in Holderness, by whom the manor was divided into Great and Little Gilston, and also Overhall and Netherhall. Thus devolved, by purchase and otherwise, through the families of the Giffords, Chaunceys, Gores, and others, to the Plumers, who came from Old Windsor, about the year 1660, upon acquiring Gilston and Blakesware, in the same county. Traditionally, they derive from a Saxon knight; but the pedigree in the Heralds' College dates only from the time of Elizabeth, at which period they were a family of great opulence. In 1680, Walter Plumer was created a baronet, but the title is now extinct. Colonel John Plumer, of Blakesware, married, in 1680, Mary Hale, of the Hertfordshire family of King's Walden; and his eldest daughter, Anne Plumer, married James Hamilton, seventh Earl of Abercorn, by whom she had, with other children, Jane Hamilton, who married, first, William Plumer, Esq., of Gilston Park, forty years member of Parliament for the county of Hertford. This gentleman, no male Plumer being then left, named his wife sole heiress to his estates, which she inherited accordingly at his decease. Mrs. Plumer married, secondly, Robert Ward, Esq., who thereupon assumed the additional surname and arms of Plumer.

Mr. Plumer Ward served as High Sheriff for Herts in 1832. He is distinguished in literature as the author of "The History of the Law of Nations," and of the very popular novels of "Tremaine," "De Vere," &c. Mrs. Ward, it appeared, had entertained high admiration of his writings, which she extended to their author; and at her beautiful seat at Gilston, says the Hon. E. Phipps, "he was enabled to enjoy that sort of rural life which, from the days when his young imagination had dwelt on Sir Roger de Coverley, formed the great object of his ambition. At a period when worldly prosperity seemed showered upon him, his happiness was much dashed by the deplorable state of the health of his three daughters. The fatal complaint which had caused their mother's death settled successively and irresistably on each. He lost first the two eldest, who fell victims to the same insidious disease within two days of each other. * * * Within a few months after, that wife, whose kindness and generosity had been unfailing during the short period of their union, died also at Gilston Park, which she had bestowed upon him—a gift, however, which the grievous afflictions of which it had been the scene robbed of half its value."

Mr. Ward subsequently married Mrs. Okeover, the widowed daughter of the late gallant Lieutenant-General Sir George Anson; but Gilston seems ever after to have been shunned by him, for we find him, writing from Wiesbaden, offering the place, and all its plate and jewels, for £2000 a year. Again, at Okeover Hall, he says, "I feel more comfortably off in this delightful, as well as respectable, old abode than ever I was in my life, and far happier than at Gilston." (Memoirs, by the Hon. E. Phipps.)

GILSTON-PARK, HERTS.

The fine old place is of somewhat fantastic design; but has withal in its armorial shields and battlemented gables, an ancestral air. Among the more interesting contents are several portraits of the Plumers, by Lely, Kneller, Stone, Hudson, Reynolds, and Lawrence. A few of the paintings, however, are "heirlooms," and are not to be sold. The collection, altogether, numbers nearly 100, mostly portraits. There are also twelve colossal marble busts of the Cæsars, and an assemblage of armour, some of a very early period. One of the lots, not for sale, is "four ancient standards, two ditto, armorial bearings of Plumer Ward's family, and the flag-staff of the Royal standard of Scotland, taken by Sir Ralph Sadleir, at the battle of Musselburgh (1547); also various pedigrees, &c."

REPAVEMENT OF THE STRAND.

THE usually crowded roadways of Fleet-street and the Strand have just been in part re-laid with granite pavement, in well-timed anticipation of the additional amount of traffic to be expected during the approaching Exhibition. The system now generally adopted in the metropolitan carriage-roads is, to prepare a foundation of concrete, and then place upon it the granite blocks to a proper curve, generally a flat segment of a circle, so as to throw off the water into the side gutters. The interstices are then grouted with liquid mortar, and the whole surface is afterwards strewed with sand, and thus made ready for traffic.

The illustration shows the work in progress on the west side of Temple Bar, where a line of paviors are using their rammers with almost the precision of an engineering operation. The combined power of the workmen, by means of this arrangement, is very great.

It may be interesting to add, that the present mode of paving the roadways of the metropolis almost precisely corresponds with that adopted in the streets of Pompeii, upwards of 2000 years since.

REPAVEMENT OF THE STRAND

VOL. XVIII.] SUPPLEMENT, SATURDAY, APRIL 26, 1851. [GRATIS.

GREAT EXHIBITION BUILDING.

IN connexion with the completion of the Great Building, there remain to be noticed a few constructive details of interest, to bring our Illustrated Record up to the period of opening this stupendous "Palace of Industry." First is

THE BOILER-HOUSE.

For the purpose of supplying steam for the gratuitous use of exhibitors of "machinery in motion," the Commissioners agreed to erect a boiler-house within the Building, as originally designed, but, on matured consideration, it was wisely determined to keep the furnaces apart from the Building itself, and thus remove what would have been a serious cause for alarm on the part not only of the exhibitors, but also of the public at large.

The Boiler-House, which is in a very forward state, is situated on the south side of "Rotten-row," at a distance from the north-west angle of the Great Building of 155 feet.

The whole length of the Boiler-House is 96 feet from centre to centre of columns, and the width 24 feet; for it is to be observed that the principle of construction is the same as that adopted in the "Industrial Palace"—cast-iron columns at intervals of 8 feet and 24 feet respectively, and 24-feet trellis-girders forming the framework of the structure, while, instead of close boarding as an inclosure, 9-inch brick walls are substituted.

The Building is divided into three compartments by two cross brick walls of one brick and a half in thickness, which support a capacious cold water tank. The largest compartment, at the east end, is for the boilers, being 50 feet in length; the middle compartment, intended for stores, 20 feet; and the western compartment, also for stores, 26 feet in length respectively. From the level of the ground to the top of the trellis-girders is 22 feet 2 inches. Over the boiler department the roofing will be of corrugated iron, whereas over the western division Mr Paxton's "ridge and furrow" roofing, exactly similar to that of the Great Building, is in the course of construction. The tank is formed of cast-iron plates, bolted together by means of internal flanges, in the ordinary way. It is 21 feet square, and 4 feet 6 inches in depth; consequently will contain rather more than 66½ tons of water.

There are altogether five boilers, all set in brickwork: the largest one is in the middle, and is from the works of Messrs. Galloway, of Manchester, consisting of two large horizontal tubes or cylinders communicating with each other at 4 feet 10 inches from the front of the furnace, and at the other end four vertical tubes of 8 inches diameter, passing from the lower to the upper part of the boiler, and ten conoidal tubes for the same purpose; the whole length of the boiler being 13 feet, and the diameter 6 feet 4 inches. The smaller boilers, two on each side of that already mentioned, are of the high pressure multitubular construction, as used for locomotive engines, being 3 feet 8 inches in diameter, and consisting of 41 horizontal tubes, each of 2¾ inches diameter: a cast-iron bracket is riveted to each side of the boiler, to secure it to the brick-work, the flame first acting on the bottom and sides of the boiler, which is supported intermediately by two cross walls, and returning through the tubes towards the chimney, which is fixed at the furnace end of the boiler. The chimney is constructed of iron plates, riveted together, being circular, of 16 inches clear diameter, and 21 feet high. These last-mentioned boilers are from the works of Mr. Armstrong, of Newcastle.

The pipes to convey the steam into the "machinery in motion" department are of cast iron, of 8½ inches diameter internally, connected together by flanges in the usual way, and coated externally with felt. The underground channel for these pipes is formed by a foundation of 3-inch paving, on which are built dwarf 9-inch sides of brick in cement, 21 inches high, the whole being covered at top by two planks, the lower one of 4 inches, and the upper one of 3 inches in thickness respectively.

MODE OF OPENING AND SHUTTING THE VENTILATORS.

We have already described the improved construction of Ventilators, as fixed all round the external wooden inclosure of the Great Exhibition Building; but, until very lately, the mode of opening or shutting the blades or laffers was not exactly determined on. We now find the shafting and apparatus in a very advanced state. The contrivance is so simple, that one man can move at least twenty-four sets of the lower Ventilators at a time. For this purpose, at a height of about 3 feet from the floor, is a small iron frame projecting from the close boarding to which it is attached. In this frame is a spindle placed horizontally, which is turned by a winch; and by means of a small bevelled wheel fixed on the spindle and working into a second wheel placed horizontally, and on the top of a vertical shaft, of ¾ inch diameter, with a worm near to the step fixed in the floor in which it turns, motion is given to cogged segments, fixed on the horizontal shafting as above. The segments can be moved either in one direction for opening the Ventilators, or in the other direction for shutting them. The apparatus is completed by double cranks, fixed at proper intervals, and by means of a ⅝-inch iron rod, in connexion with slight vertical arms for each set of Ventilators. The vertical arms are furnished with pivots, one to each blade, so that the whole are moved together.

COLD CHAIN AND BADGE PRESENTED TO THE MAYOR OF GATESHEAD.—(SEE NEXT PAGE.)

THE INDUSTRIAL EXHIBITION.—THE BOILER-HOUSE, ADJOINING THE GREAT BUILDING.

TESTING THE GALLERIES.

On a late occasion we gave an account and illustration of the mode adopted of testing the flooring of the galleries by bodies of closely packed men running, walking, and jumping over the floor, which we certainly thought would have satisfied the most prejudiced part of the public, but it seems otherwise, and so another mode of experimenting has been resorted so, which is certainly most satisfactory.

The load, distributed over a large area, was made up of eight cases of deal, each 4 feet 11½ inches square, containing thirty-six compartments, rather larger than the diameter of the iron balls placed within them, and mounted on castors, four to each case; the height from the floor to the top of the cases being 8 inches. These whole of the cases are strapped together, and make up an aggregate length of 39·54 feet, so that the area is 194·14 superficial feet. Each of the balls weighs 68 lb.; and, as there are altogether 288 balls, the total weight of iron is 19,584 lb., or 8·74 tons, giving 100 lb. to the square foot, independently of the weight of the wooden cases. The cases are secured at angles by iron elbows, and within each compartment the sides are protected from the action of the balls when in motion by flat fender irons screwed to the wood.

We were present when the experiments were made in the north-western galleries. Twenty-two Sappers, by means of ropes attached to the middle part of the cases, drew the whole load from end to end of the gallery, and the movement of the floor was almost imperceptible.

This experiment may be said to be conclusive, with regard to the strength of the galleries, for the ordinary traffic that will pass over it; but it may be desirable in parts of the galleries to make additional preparations for some of the enormous loads which will be placed upon them—for instance, Willis's grand organ will weigh about thirty tons; then there are some heavy turret-clocks, and such like articles, to be fixed in different sections of the galleries. It is only to remember in time the trite but true words, "Safe bind, safe find."

BADGE AND CHAIN PRESENTED TO THE MAYOR OF GATESHEAD

THIS magnificent gold Chain and Badge, subscribed for by the ladies of Gateshead, and presented to the Mayor of that borough, is of remarkably elegant design; formed of medallions, &c., on which are the municipal arms richly chased. The Badge is elaborately chased with the arms, crest, and motto. The manufacturers are Messrs. Lister and Sons, of Newcastle-on-Tyne; and the execution is highly creditable to their taste and skill.

By the way, the presentation of Corporation insignia has become very frequent of late; though scarcely a score of years have elapsed since such "baubles" (to borrow a Cromwellian term) were freely swept off by the sturdy brush of reform.

A STORY OF THE PRESENT DAY.

BY AUGUSTUS MAYHEW.

(*Continued from page 284*)

CHAPTER VII.

CATCHING BIRDS AND THIEVES

LONG before sunrise, the firm of Crumpley and Co. had commenced business. It appeared that "the pal" whose bankrupt stock they were to purchase was in great trouble, being in fact charged though, as Crumpley said, he was as innocent as a bird unhatched—with unlawfully entering divers tenements and outhouses, to wit, &c., with evil intent, &c. To use a nautical phrase, "the pal" was shortly to be laid up in dock, to be thoroughly examined, before proceeding to Australia, and his wife was desirous of raising the sum of £1 3s. 6d., which is the very smallest price at which a damaged character can be made good again. The lady was soon roused from her slumbers, the bargain struck, and Messrs. Crumpley and Co started for Bull's Pond, to commence proceedings.

It was a fine sunshiny morning, and so early, that, as Tim looked down the Goswell-road, there was not a soul to be seen. The lamps were yet burning, but their yellow flame was almost drowned in the golden light of day. The blinds were drawn down before nearly every window, and occasionally a night cab would crawl by, the driver with his pale face nearly hidden in comforters, and warming himself by whipping his poor half-starved horse, that seemed fairly sinking under late hours and nights on the town.

The junior partner, with an oblong canvass bag filled with call-birds and nets tied to the end of three or four green poles that rested on his shoulders, walked along whistling and longing for a few of the guinea larks and linnets that were to enable him to retire from business in double quick time. He was already in the country, singing away at the huge Australian trees that encumbered the Bradley estate. Oh, Lawrence was tending a flock of sheep with tails as big as bolsters; and Kitty was hard at work making the log hut tidy against her husband's return.

"It's a fine morning," Crumpley, striding third of his partner's silence; "we shall catch 'em like mice in a barn. We're a-going to the most rattling spot in England—near 'em a-turning away, and never thinking of giving over as long as there's a baker."

"Many of that there guineas sort?" asked Tim.

"Cram full," answered Crumpley; "see twenty pounds fly up bang afore your eyes. They're your sort—the real anti-forgery lot. No use trying to make their notes—ain't worth a song when you're perfect at it."

After two hours' walking, the firm reached their land of promise. It was a large field, one end of which was being turned into bricks as fast as four poor blind horses could work. All around were huge square piles of bricks—some turning red, as if ripening under the heat of the smoke that rose through them, whilst the others were damp, mud-coloured, and bilious-looking.

"What a queer smell, ain't there?" said Tim. "Tastes quite coppery, don't it?"

"It's the wholesomest smell I knows on," returned Crumpley. "A'most as good as cows, it is. Fatten a cove up like standin' over a cook-shop. Once knew a lad as only breathed sideways, like a ditch, along of working in brick-fields. Neighbours used to hire him to air clothes on. Obliged to put hoops round him to prevent him bursting, and prop him up like an old rick, to keep him on his legs, he were so fat."

The two long nets were soon spread out, and the little green cages with the call-birds posted round them, whilst the "firm" hid itself behind a heap of old straw. The larks and linnets were singing on every side, and Tim was breathless with excitement. Presently a bird would hang in the air, fluttering over the bait, as if making up its mind; but at last it would be off, rising and rising, till it was a mere speck in the blue sky.

"They're shy, ain't they?" asked Tim.

"Maybe lost a relation at it yesterday," answered Crumpley; "but wait a bit—they'll drop in to lunch afore long."

At length, jerk went the birdcatcher's arm, and down fell the net. The "firm" instantly ran up, and there, sure enough, was a poor little lark struggling in the trap.

"It's an old 'un," said the man, blowing the feathers open on its breast; "shouldn't at all wonder if he were one of the sovereign sort. Soon tell, when he gives over sulking," and he thrust the little thing through a canvass opening in the top of a long, low cage.

For the next three hours they caught nothing. They were obliged to keep so still, that sometimes the sudden rush of the little prisoner against the wires of its prison would make Tim jump as if a pin had pricked him. Altogether it was very slow work, so, as "the partner" had lit his pipe, the lad just stretched himself along the straw, and putting his cap over his eyes, soon fell into a sound sleep. When he awoke he was surprised to find the stranger had gone. Up Tim jumped, wide awake in an instant. The nets had been taken up, call-birds, everything moved away. Perhaps he's gone to another part of the field, thought the weaver, pale with alarm. He ran to the nearest pile of bricks, and clambering up, looked all round the field. There was no Crumpley to be seen. "The villain," muttered the lad, clenching his fists, "to sneak off when I were sleeping! The villain!"

"Get off those bricks!" shouted the men at work.

I'm ran to them as fast as he could move his legs. "Have you seen a birdcatcher in or a part of the field?" he asked.

"There were two on 'em just by where you were a standing," was the answer.

"I seed one on 'em go off two hours gone, with all his traps packed," said another of the men.

"Which way did he make for?"

"Over that hedge yonder—straight on to that white house; then I lost him."

Holding his coat tightly together, Tim bounded off in pursuit. He tore over the ground like a madman. The white house was soon reached, but there he could gain no news of the fellow. Trusting to good fortune, he ran down the road, raising the dust in clouds behind him. Labourers stood still to look after him, and carters stopped their horses and jumped off the shafts to have a peep at the man. Every one that he met he shouted to in the hopes of gaining some tidings of his partner, but no one had seen the rogue. At last, tired out and choked with dust, he was forced to halt. He was done; with two hours start he might as well try to catch the mail. "The villain! the scoundrel! the robber!"

He hadn't courage to go home. No; he'd go and try his luck at the steam-wharf again. Who could tell? he might get another half-sovereign. There was no saying!

He was too tired and vexed to-day to put up with any of the boys' insolence. If they began any of their nonsense, he'd stop 'em with a blow that should shut 'em up like a carriage door. So he brushed the dust off his clothes and bathed his head at a pump, and took a short cut over the fields for London.

When he reached the wharf, the rival boys were as sassy as ever. Tim said nothing—never even moving when a piece of orange-peel hit him on the cheek. The youngsters tried all kinds of means to drive him away, but without success. They would come pretty close to him, and push other lads against him. They would take the cap off the head of any passing errand-boy, and throw it in the weaver's face, but Tim only packed it up again and handed it to the half-frightened lad. At last, seeing how quietly he endured their attacks, they grew more courageous; and one of them, creeping close to the wall, tried to get near enough to knock the rival flat. He was on Tim's back; and no sooner was the young fellow within arm's length than he was seized, and shaken till the boy howled and screamed again, and his companions ran to the rescue.

"What did you do that for, you long-legged varmint?" cried one.

"The lad wer'n't hurting you, old bully!" said another.

"If I were you," said a cabman, forcing his way into the front, "I'd exercise myself on some one a little bigger. To go and shake a lad as if he were full o' feathers, and you was going to sleep on him."

"He's been at it all the afternoon," returned Tim, pointing to the orange-peel all about him. "Look here, what he's been at."

"No, he didn't, old gaspipe," shouted a boy in the crowd; "I did that there."

"If I catches hold on yer, then," roared Bradley, shaking his fist, "they shall want a broom to help take yer home, I'll pound yer so small."

"No you won't," said the cabman, putting his hands on his hips, and shaking his head.

"Won't prevent me?" asked Tim, growing pale with rage.

"Why, I will," answered the man, spitting on his hands.

"You!" sneered the weaver; "why, it 'ud be a case o' manslaughter. I'd do it as quick as you to give me a relish for my breakfast. I'd double yer up like a old map."

"Come on and try, old bellows-to-mend." And, pulling off his driving-cape, the man danced round Tim, like a horse in a circus.

Just then, a policeman, seeing the crowd, hurried up; and, showing his way through the people, gained the centre, just in time to prevent the fight.

Everything went against the weaver. There were thirty voices against his; and the evidence was so conclusive, that the policeman, pointing up the street with his staff, ordered Tim to be off. "If you aint gone soon, I'll have you hup, my fine feller; and don't let me see you again, or you shall have three months of it, as sure as you're born."

Thus ended all chance of gaining half-sovereigns by carrying carpet-bags. Where to go he didn't know, and, what was more, he didn't care. Nevertheless, he sauntered along, and, without knowing it, soon found himself in spitalfields. As if he were ashamed of himself, he crept up the stairs to Lamere's room, and, but for Kitty's opening the door to see who it was standing there, he would have turned round and gone to sleep at his father's.

He had determined not to say a word to Kitty of his misfortune. No, she had enough trouble as it was, and he wouldn't make her miserable with his mishaps. But the girl quickly saw that something had vexed him, and opened such a fire of questions and consequence, that, after he had been caught out in about twenty stupid bungling statements, he surrendered, and laid the whole of his sufferings before her.

"What a wicked, bad man," cried Kitty, throwing up her hands in horror—"only to think of it!"

"That aint strong enough—not half," said Tim, astonished at the mildness of her words. "Call him a confounded out-and-out burglar, and then you're miles from the point, you see;" and his anger broke afresh, and he poured out a torrent of abuse, till the girl had to beg of him to be less energetic, for fear her father should hear him.

"There's no good, Tim, in making yourself warm in that manner," said Kitty, quietly; "only think, if you would be regularly employed, why, we shouldn't know where to keep the money; have to hide in all in sorts of holes—stop out the draughts with half-crowns; won't it be nice?" And she went on talking and sewing so cheerfully, that Tim felt his spirits return as she spoke, and, in the end, was half inclined to laugh at his mishaps.

They spent the evening round old Lamere's bed. His leg was so much better, that he could sleep the whole night through without the pain awakening him. He joined in the conversation, cheering Tim up with hopes, which, had they been realised, would eventually have enabled him to start his carriage-and-pair. As he slipt into the rough bed, that by great exertion had been manufactured for him out of all sorts of coats and ends, Bradley couldn't help fancying that something or other was going to happen, and bring more good fortune to him than if he had been partners with fifty bird-catchers, with guineas larks pouring in from all sides. He was, he thought, the first to rise; but, as he was creeping out at the door, he just caught the sound of a needle clicking against a thimble. "Why, bless me!" he thought, "she working already, poor girl. She'll kill herself, she will. If it had been her wedding-day, she couldn't stick harder to it, she couldn't."

When he reached the Docks, although it was only six o'clock, he was startled to find the gates closely packed with men seeking for employment. Although the labour was so excessive, that in a few hours the strongest limbs ached under it, yet so eagerly was it sought after, that men, sooner than lose it, would rise early from their beds, content to stand idle for an hour or two, if they could but secure a good place near the gate. At the Docks character was of no use—the hard thick muscle was all that was required; so that those whose all-doings precluded them from any employment where a good name was necessary, resorted to the place as the only one in London where labour could be procured without questions being asked of him who sought it. There were men from every trade. The tattered blue blouse of one told that he had been a butcher; whilst the torn buttonless jacket of another was so whitened with the flour that had eaten into it, that Tim knew he had been a baker. There was a sun-burnt fellow still wearing the regimentals of the Spanish Legion; and close to him another one in a mason's flannel jacket, almost black with grease and dirt. Then every side some strange language was heard; Lascars talking and smoking together—Frenchmen, Poles, and Germans—men from all countries, united in the brotherhood of want. Many of the poor wretches appeared, from the mud on their clothes and the dirt on their faces, to have been sleeping under the Blackwall Railway arches; whilst others, from their blood-shot eyes and shaking hands, seemed as if they had been drinking in some night-house, waiting until morning should come.

As fresh hands came hurrying from all sides to swell the crowd, those that were already there packed themselves closely together, so as to prevent themselves being forced backwards; and the heat grew so oppressive, that, although the morning air was keen, still the weaver felt the perspiration pouring off his face.

"For Heaven's sake, don't push so!" he stammered out in pain, for he felt as if his chest was being forced in.

"By Gar!" answered a Frenchman, "it derange *la toilette*; but wait some minute, *attendez*, and it shall squeeze you like des gibus."

As the clock struck the half-hour, one of the gates opened, and a foreman jumped on one of the posts near the entrance. Then began a scene that Tim was little prepared for. The huge crowd rocked to and fro, heaving and sinking like a sea. Men clambered on each others shoulders, and all shouted and held up their hands. Some waved their hats, and others untied the handkerchiefs from their necks and flourished them in the air, to attract the "master's" eye.

"Me, your honor! me!—the jewel Terence O'Lynn, a friend of your darlin' modere"—"Pat O'Bryan had a hamper this morning! Charley Gripley's your man!"—"This way, your honor: little Billy!" screamed some of them, whilst the others yelled and howled, all shouting their names.

Tim was carried by the crowd nearly a hundred yards from the spot where he first stood. Once or twice he was nearly trodden under foot. He wanted, sorry when the ringing of a bell announced that the required number were chosen, for he felt sick and so weak that he could scarcely stand.

He moved off with some of the disappointed ones to a long shed, there to wait, in the chance of further help being required. His companions, savage with their failure, were inveighing bitterly against the foreman.

"It's the drink does it," cried one, whose coat had been wrenched off his back; "it's the drink: Didn't Charley Goller stand a quartern at the Old Sailor, and hasn't he got in?"

"This *accord cochon*?" muttered a Frenchman, crossing his arms like Napoleon; "it is because me am de Frenchman."

"No I-r-r-rish need apply!" shouted a son of Erin, shaking his fist at the sun in his rage.

So each man had some reason for his not having been fixed upon; each one fancying that it was done out of pique to himself.

There was very little stirring in the shipping that day. The wind had long been contrary, and few vessels had arrived in the Thames. Towards the end of the day one gang of eight was called in for two hours' work, but again Tim was unlucky, and remained with the other unfortunates, pacing the shed as a wild beast does his den.

For the first week Bradley attended every morning, and every day had to wear out the day under the shed. He could now push and hallos like the rest, but somehow or other his turn never came. At last his patience was quite worn out. One morning he vowed, as he left home, that he would not return until he could bring his half-crown with him. He pushed and screamed, threatened and praised, like a madman, but all to no use, and in despair threw himself on one of the benches in the outhouse, half repenting of his vow, but still determined to cling to it. As he sat, a picture of despair, with his head hidden on his knees, thinking to himself where he should sleep that night, some one touched him on the shoulder. Tim started up. It was a half-starved young fellow, with a knowing face, and two ringlets dangling from each temple.

"Are yer pretty tired of this work? I am," he said, thrusting his hands into his pockets.

"I'm so rattling tired of it," answered Tim, "that I'm almost wound up for anything. One touch 'ud set the pendt'lum off."

"That's your sort?" cried the young fellow; "that's your plucked 'un! Now I'll tell yer—I've been trying this dodge three weeks, and it won't do. If you'll be my pal, I cuts it—speak low, there's a flick listenen," he added, in a subdued voice.

"What's your line?" asked Tim.

"Come along, and I'll show you; it's the best paid in London, next to lawyers."

They sauntered along together till they reached the street. The lad led the weaver down a lane, and asked him "Do the peelers in these parts know you at all?"

Tim laughed, and answered he should say not, as he had never been introduced.

"That's all right! Come along, we'll do rarely," answered the lad; and they entered the street once more.

"Next gent as I sees go by, I shall have a try at. You follow close behind, and if yer sees a peeler, whistle. I'll chuck you what I takes, and you make off and meet me here in a four o'clock." Do you see?"

"Oh, that's your bus'ness, is it?" answered Tim, looking at him full in the face.

"Yes, that's it. Come on, there's a swell comin'; make haste, he's a prime 'un he's in such a hurry."

"Your perfession don't suit me," was the weaver's reply.

"Ah! you're bound 'prentice to starving, are you?" sneered the young thief. "Your trade's overstocked a'ready, I'm sure o' mine."

"No," returned Tim, resolutely, "it aint come to that yet. It's so plaguy hard to keep honest, I'll do it out o' spite."

"Now, I tell you," said the lad, taking the weaver by his arm and leading him up a court; "you'll come to it soon. You must. As for that nonsense o' being honest, you might as well try to be Lord Mayor. I've been a-trying the honesty dodge for the last month, and I never were so thin before. The grub as comes honest may be sweet, but it need have some sauce or tother, there's no plaguy little of it. You'd better come with me."

"I've managed as yet, and I'll manage on."

"What ready have I to-day?"

"You're no right to another man's goods."

"He oughtn't to let me want food, and I only takes what he ought to give. He doesn't miss it, and ought to help me."

"Stop me that feller, without ere a cost" and Tim pointed to a ragged bone-grubber—"were to come up and take your velveteen, saying, 'He ought to give it;' I wants it more than he does: my shirt's dirty, but it's cleaner than him." What have you say?"

"I'd fetch him something as should warm him more nor a coat," answered the young thief, laughing at his joke.

"But suppose he were the strongest, and took it whether you liked or no. You wouldn't feel best pleased, and you'd get very angry indeed. That's just what that gennelman 'ud think when he felt for his hankerchief. 'Somebody's been stronger at it than I am,' he says, 'but it ain't right,' and maybe the police 'ud agree with him."

"You aint going to 'blow' on me?" cried the lad, already prepared to be off in case the answer were unfavourable.

"Blub! no, not I. But you may depend upon this, old feller, if priggin' was to come into fashion, tim seems 'ud be the first to suffer, but in the end our turn 'ud come, and then we should be far honester, as they is now. So I do think it best for matters to be as they are. Lets go back and try for a job."

"No!" answered the young fellow. "I feel rather too down in the mouth. This is the third week as I've been a-hunting up a pal, and just as I thinks to get one, he funks it. I aint a-going back."

"Come!" said Tim, coaxingly; "I've got tuppence, and we'll share it. Come on."

"Pshaw! I'm tired of bread, I am," answered the lad, savagely; "I've been chewing it till I shies at a loaf. I hates the sight on 'em so. The pump and a crust is such very humble feeding; I'm going for something better. I like a bit o' meat to my meals."

"Well, come and work, and earn a bit."

"Nay; none of that," continued the lad, in a desponding voice. "I've been trying to be honest so hard, it's gone wrong and disagreed with me. Now I shall pay my hotel a visit. Do yer know where my hotel is?"

"No! What do you mean?"

"Oh! it's a slap-up place. Gives you no end of credit, and a room to yourself. Wax candles aint allowed; but they stands three meals a day: meat, taters, and all that sort of thing, and servants to wait on yer, and all complete. The only thing agin the proprietor is, he's such a rum feller, he will cut the hair of all his customers."

"What do you mean?" asked the astonished Tim, looking into the boy's earnest face.

"Why, I means the prison where they lodges, washes, clothes, feeds, and fires you for what I'm going to do. Come, and see if I'm a plucked 'un or not."

He walked off coolly, whistling as if to show his courage; but there was a nervous twitching of his eye that proved that he was ill at ease with himself. Tim was so startled that he could scarcely move, and stood with open mouth, following the youth with his eyes. Half way down the street the younker turned round, and beckoned the weaver impatiently to hurry after him. Scarcely knowing what he did, Bradley obeyed him. He saw the boy stop before the large plate-glass window of a gaudily fitted-up draper's shop. They were mending the street just before the door, and the young thief, lifting up one of the paving-stones in his hands, looked towards Tim, and then hurled it with all his force at the costly window. A frightful smash followed, and three or four men rushed from the shop, and seized the lad. He stood quite still, taking no notice of the captors. Presently a policeman came running to the spot, and in a few minutes the wretched youth, with the crowd at his heels, was on the way to the station-house.

After Bradley had recovered his senses, he followed after his late companion, and just as they started him, that should the boy recognise him by any sign, or speak to him, he might get into trouble, and the "hotel" receive two inmates, instead of one.

"Pray God, my fate may never be like his!" he muttered. "No, I'll home—that's the best place. I'm too poor to stand temptation long, and it's about everywhere. I'm hungry, and it always attacks an empty stomach first. So I'll sark the vow and hurry home."

Here was another sad time, but to tell Kitty. But this time he felt his heart beat calmly within him, and he ascended the stairs boldly, stamping, if anything, louder than usual, as if in bravado, for he felt he had been acting the honest man's part, and, to tell the truth, was rather proud of it—silly fellow!

(*To be continued.*)

LITERATURE.

The Stones of Venice. Vol. I.: "The Foundations." By John Ruskin. With Illustrations drawn by the Author. Smith, Elder, and Co.

Any work on art from Mr. Ruskin would be of high value, both to the artist and the thinker. The mystical relations of the symbolic with the essential never had a more eloquent and intelligent interpreter. Originality and a love of truth, with liberty of thought and speech, are impressed on every page, on every line of "The Stones of Venice" preach sermons—and such sermons! They tell of freedom and riches won and lost—of virtues and diligences triumphant—of domestic religion and purity—of commerce and the vicissitudes of nations and individuals—of art and its different styles—of the two orders of architecture and their various modifications—of Christianity in its Catholic and Protestant forms, and, finally, of Infidelity and Revolution, with the ruins around them, out of which, and at last by which, he was chosen; an aristocracy owing its origin to the accidental numbers, influence, and wealth of some among the families of the fugitives from the elder Venetia, and gradually organising itself, by its unity and heroism, into a separate body."

Mr. Ruskin dates the real commencement of the fall of Venice from the death of Carlo Zeno, May 8, 1418; and its visible one five years later, the death of the Doge Tomaso Mocenigo. From 1454, when the Inquisition of State was established, her Government took its mysterious and perfidious form. The league of Cambrai, in 1477, marks the period usually assigned as the commencement of the decline of the Venetian power: "the commercial prosperity of Venice in the close of the 15th century blinding her historians to the previous evidence of the diminution of her internal strength." Mr. Ruskin thinks that the history of Venice might be written almost without reference to the construction of her Senate or the prerogatives of her Doge. "It is the history of a people eminently at unity in itself—descendants of Roman race, long disciplined by adversity, and compelled by its position either to live nobly or to perish: for a thousand years they fought for life, for three hundred they invited death: their battle was rewarded, and their call was heard."

The decline of the political prosperity of Venice was exactly coincident with that of domestic and religious virtue. In public and private life no race was more active as in private it was vital. In public, all was sacrificed to her commerce. "Amidst the enthusiasm, chivalry, or fanaticism of the other states of Europe, Venice stands, from first to last, like a masked statue, her coldness impenetrable, her exertion only aroused by the touch of a secret spring."

Thus it is that "The Stones of Venice" reveal the spirit of Venice that spirit which all her interpreters find when we find it successfully resisting the temporal authority of Rome. Mr. Ruskin reads all this in the light of a Protestant intolerance: while in this, perhaps, too one-sided, he nevertheless hits the truth frequently, and is preserved by his mystical tendencies from ultra-Churchism, though a determined opponent to the Papacy, intolerant only to the intolerant.

Through Rome, however, Venice received her architecture from Greece, as Greece had done from Egypt; it was then coloured and perfected from the East. Architecture, as we learn well, Mr. Ruskin reduces to seven lamps, the Doric, the Corinthian, the Ionic being a variety of these, or rather an intermediate growth, proceeding from the Doric and perfecting itself in the Corinthian. In this way it may be considered as a kind of synthesis, and we think that Mr. Ruskin should have detailed the degrees of transition. But probably this will yet be done in his second volume.

Christian art Mr. Ruskin divides into two great branches, Western and Eastern, Rome and Byzantium; both, however, should be classed under one term, "Christian Romanesque;" with, however, the addition of the Gothic and the Arab. "The work of the Lombard was to give hardihood and system to the enervated body and enfeebled mind of Christendom; that of the Arab was to punish idolatry, and to proclaim the spirituality of worship." The Lombard covered every church which he built with the sculptured representations of bodily exercises—hunting and war. The Arab banished all imagination of creation from his temples, and remained satisfied with arabesques. "There is no god but God." Opposite in their character and mission, alike in their magnificence of energy, they came from the North and from the South, the glacier torrent and the Arab stream: they met and contended on the plains of the Roman empire; and the very centre of the struggle, the point of pause of both, the dead water of the opposite eddies, charged with enslaved fragments of the Roman wreck, is Venice. The Duca Palace of Venice contains the three elements in exactly equal proportions—the Roman, Lombard, and Arab. It is the central building of the world."

The richness of such a city seemed to Mr. Ruskin to present the proper study for architectural illustration. Here, in the decline of the state, he laments the introduction of the pictorial art, which, from Rome and Venice, from Holbein had arisen, the Protestant in Germany and England, the Rationalist in France and Italy. The former cast aside the heresies of Rome, and with them her arts; the latter kept her arts and cast aside her religion. Thus it is that Mr. Ruskin places Romano and Nicolo Poussin, in painting, and by Sansovino and Palladio in architecture.

And it is in this that Mr. Ruskin excites enmities unmeasurable against his book. He speaks of the basis school of landscape gradually usurping the place of the historical painting, which had sunk into prurient pedantry; of "the Alsatian sublimities of Salvator, the confectionery idealities of Claude, the Dutch nature of Caspar and Canaletto south of the Alps, and on the north the patient devotion of bee-tired lives to delineation of bricks and fogs, fat cattle, sun, fleshwater, and drink," contrasts Mr Ruskin, "Christian and mediæval, pure, high, and intelloct, and art, all crumbling together into one wreck, we are hurried on to the fall of Italy, the Reformation, the Revolution, and the ruin of England (saved by her Protestantism from severer penalty) in the time of George II."

Mr Ruskin is an idealist in art. Leaving to others to carry out his principles into practice, he himself revels in imaginative possibilities. Whatever falls short of their elevation or purity, he castigates with the utmost severity. His standard is so high, that it makes all men criminals. Science is that his book will meet with immense opposition In this style and spirit it is that he speaks of Salvator's tomb of the Vendramin, "unanimously declared the *chef d'œuvre* of Renaissance sepulchral work," which nevertheless our sincere admiration remains "base and senseless lie"—an extravagant example of "chiselmanship." In the same style and spirit, also, he condemns in the arch the double curve, called the Ogee, as the "profile of many German leaden roofs, of many Turkish domes, of Tudor turrets, as in Henry VII's chapel, and as at the bottom or top of sundry other b unders all over the world." Both he admires and finds with the Germans and the developed Gothic, but usually ascribed to the northern Gothic. Our cathedrals, he declares, were "built by worldly people, who loved the world, and would have gladly had it in for ever—who had no thought of its passing away, but only sought to do by building cathedrals, but who had very vague conceptions of Heaven in general, and very feeb desires respecting their entrance therein." Much truth in this, but, surely, much also that is false. The whole of this same argument is more acceptable. The animal activity of the north materially aided the system of building begun in more ability:—" An animal life, naturally expressed in erect work, is the vigour of the soul in meeting or leaping over its difficulties: the difference between the action of a man urging himself to his work in a snowstorm, and the inaction of one laid at his length on a sunny bank among gleedas and fallen leaves, and you will have the key to a whole characteristic group of sculptures which were forcefully expressed in the architecture of both; remembering always that sleep would be to the one luxury, to the other death."

The Athenæum Clubhouse comes under Mr. Ruskin's censure. "Few persons look at the Athenæum Clubhouse without feeling vexed at the meagreness and meanness of the windows of the ground-floor. . . . Any one of the boys in the corner of the designs of the said decorations." The use of buttresses, too, in modern Gothic is derided. "They stand in the place of ideas, and I think are supposed also to have something of the odour of sanctity about them—a certain heavenly scss why a warehouse seventy feet high should have nothing of the kind, and a chapel, which one can just get into with one's hat off, should have a bunch of them at every corner. And worse than this, they are even sometimes introduced when they can be of no possible use; and these stupid penthouse cottines are forced upon the eye in every species of decoration. In St. Margaret's Chapel, Westminster, there are actually a couple of buttresses at the end of every pew."

Som times Mr Ruskin's condemnations are delivered in a sportive vein. Thus, speaking of towers, he laughs outright at "the pattern four or eight-inch cracked things we call towers in England (as in York Minster)," adding that they "are mere confectioner's Gothic, and not worth classing

"The towers of the Flash cathedrals when they were unable to invent." Of Mr. Pugin, it is stated in round set terms, "that he is not a great architect, but one of the smallest possible of conceivable artists:" and, what is worse, the charge is proved by the poor architect's own words. Mr. Wyatt, Ferguson, and Mr. Garbett are convicted of erroneous logic. Buildings and monuments are also condemned, such as the base of the Nelson pillar, the pillar itself—the statue of Nelson—and you will have the key to a whole group of sympathies.

Amiens, Notre Dame of Paris, &c. With no artist, indeed, is Mr Ruskin pesfectly satisfied but with Mr. J. M. W. Turner, and with no work of art but with that of a master of the Flash cathedrals when they were unable to invent. This one idolatry Mr. Ruskin has reserved his decorations to put between the brackets; and by going up to the first floor and out on the gallery, they may succeed in obtaining a considerably nearer view of the designs of the said decorations." The use of buttresses, too, in modern Gothic is derided. "They stand in the place of ideas, and I think are supposed also to have something of the odour of sanctity about them—a certain heavenly scss why a warehouse seventy feet high should have nothing of the kind, and a chapel, which one can just get into with one's hat off, should have a bunch of them at every corner. And worse than this, they are even sometimes introduced when they can be of no possible use; and these stupid penthouse cottines are forced upon the eye in every species of decoration. In St. Margaret's Chapel, Westminster, there are actually a couple of buttresses at the end of every pew."

Some

THE NATIONAL INSTITUTION, PORTLAND GALLERY.

(Continued from page 368.)

THE most ambitious and the largest paintings in the Exhibition are those contributed by Mr. J. E. Lauder. His "Edict of Leo the Iconoclast" (No. 43) represents the slaying, by a party of women in a church, of an agent of the Pontiff entrusted with the task of breaking down the images, crucifixes, and so forth. The subject is so remote as to awaken no sympathy or interest, and the group conveys little other impression than that of its being a respectable Academy study. The "Widow," by the same artist, No. 56, is one of the finest specimens of no meaning we ever met with. It is a mere sketch barely finished. Mr. R. S. Lauder's contributions are principally of the sacred class: we have engraved one of them, "Peter denying Christ," combining skilful composition with admirable colouring. More attractive, however, is the same artist's picture, "Christ walking on the Sea." Mr. Burchett's "Death of the Venerable Bede" is carefully [illegible] but rather clumsily drawn, and brown and opaque in the colouring. The "P. [illegible] school figure in the [illegible] of two of their [illegible] Mr. Deuerell's [illegible] ment of Hamlet," Mr. J. Collinson's "Incident in the Life of St. Elizabeth, of Hungary," [illegible] which [illegible] goose cha[illegible] the early and embarrassing [illegible] one [illegible] of [illegible] ay, involving, as it [illegible] the repudiation of all natural and flowing lines of beauty; the substitution for them of the most [illegible] graceful and stiffly [illegible] dre and por[illegible] while the gene[illegible] comfort[illegible] unfortunate [illegible] ld gentle[illegible]

[illegible] —EXHIBITION OF THE SOCIETY OF BRITISH [illegible]

and never enjoyed the advantages of a competent surgeon to set them to rights again. The King of Clubs or the Knave of Diamonds are naturally and agreeably drawn personages compared with the monstrous shapes with which Mr. Denerell has peopled his painting from "Hamlet." The manipulation of the work being quite up to or rather down to the design, the picture is literally beneath the pale of criticism. Not so Mr. Collinson's painting. The tone of colouring is excellent, clear and transparent, and the details highly finished; but the unhappy wooden-jointed figures, as flat and as hard as boards, make one absolutely melancholy over the theory of art which such treatment of a subject implies.

Mr. H. Barraud exhibits a number of pictures which call for a word of especial remark. They are the originals of certain engravings which have of late enjoyed a high popularity, and manifested, in a signal manner, the profound degradation of the taste and sentiment for art as existing in certain otherwise highly respectable classes amongst us. The engravings in question profess to illustrate or shadow forth certain passages in a sentiment from the service of the Church. Now, to no higher or holier purpose can the pencil of the greatest genius be applied, than to the reverend illustration of religious subjects; but Mr. [illegible]aud's plan of dashing [illegible] a series of paintings, all characterised by a species of flimsy nullness and *ad captandum* cleverness, all utterly destitute of the slightest reverence or spirituality, [illegible] ly meant to [illegible] of the praiseworthy [illegible] gious instincts of the purchaser, when such exist, to the exclusion of anything like taste for, or knowledge of, art—a quack trade of this sort, disgraceful to art and reverent to religion, ought long ago to have been exposed, its trickery unmasked, and its produc-

tions stamped with their true value.'] The "First Sacrament" professes to illustrate the rite of baptism, the clergyman being about twice as big as the red coat with a head sticking out of it, which represents the father of the child.

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

In our notice of this collection at page 271, we characterised Mr. Baxter's "Rose, Shamrock, and Thistle" as a good specimen of this artist's careful execution and clever conception; and as "a most charming arrangement, most sweetly and delicately painted. We now engrave this already popular picture.

Upon the opposite page, also, is engraved one of Mr. Woolmer's ten contributions, "A subject from the Sleeping Palace —Approach of the Prince;" which, albeit reminding us of Maclise's famed picture, is a very clever scene from our nursery tale:—

She sleeps: her breathings are not heard
In palace chambers far apart;
The fragrant tresses are not stirred
That lie upon her charmed heart.
She sleeps: on either hand upswells
The gold fringed pillow lightly pressed.
She sleeps: nor dreams, but ever dwells
A perfect form in perfect rest.

A SUBJECT FROM THE SLEEPING PALACE.—"APPROACH OF THE FAIRY PRINCE."—PAINTED BY A. J. WOOLMER.—EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

PECKFORTON CASTLE.

At the extremity of that long range of high ground running from Malpas to Tarporley stands the insulated castle of Beeston, a very conspicuous object to the traveller as he passes from Crewe to Chester; and above it, though not appearing so as he is whirled under the bold escarpment of the ruin just named, is the modern building of which we have given an Illustration. In journeying through the monotonous level of Cheshire, the Castle of Peckforton presents three different aspects. On the north, east, and west sides, it is visible for several miles; but the high table land on the south shuts it out from observation in that direction. In this direction the scenery is grand and picturesque, and forms the home view of the edifice. There are few spots in England where Nature has more profusely indulged in sylvan beauty. She seems here to have luxuriated in all her divine wildness, and the heath, the fern, the gorse, the stunted oak, the verdant moss, the broken foreground, and the deep blue distance, lend a charm that will enchant the lover of whatever is sublime or picturesque in English scenery. It was nothing extraordinary, therefore, that Mr. Tollemache, the proprietor of Peckforton, should have selected a spot so admirably adapted for a residence -in harmony, too, with the surrounding view, and commanding one of the most rich and extensive prospects, on the three points already mentioned, perhaps in Great Britain We must confess, that, at first thought, the idea of a castle on a hill three hundred feet above the level of the Cheshire plain struck us as unsuitable to modern notions of comfort. and as at variance with preconceived maxims of taste; but, as we made the gentle ascent—as the wildness of the landscape gradually opened through our devious path—and as the forest became continually exchanged, from the gloom of its shade, its craggy branches and tangled thickets, to the open sunshine of the smiling plain we were leaving beneath, as the air grew purer and the view more extended and diversified, we began to think, that, after all, there was something worth striving for to secure a good elevation—such an one as would carry us above the mist and malarious vapours that float over low ground. The extensive

PECKFORTON CASTLE, CHESHIRE.—A. J. LVIN, ARCHITECT, F.S.A.—(SEE NEXT PAGE.)

pile on the eminence was now near, and presented all the appearance of an early English fortress. The curtain walls and towers rose simply from the broken ground below; there was no appearance of siding the hand of nature, and, were it not that the colour of the mottled sandstone gave a fresh look to the walls, so true was the configuration and general character to early buildings of a military kind, that an inexperienced eye might have thought that the Earls of Chester, Governors of Beeston Castle, had transferred their residence to a larger fortress in a more habitable position

Without tediously dwelling upon the details of this magnificent building, it may be sufficient to state that it comprises about two acres within the area of its walls; that its main features, both of style and proportions, are taken from the period of Edward II. It seems to exhibit the peculiar beauties of Caernarvon Castle, without its inconveniences. It more than fulfils the conditions of utility, and is picturesque. It surpasses Raby in the magnitude of its rooms, and it exceeds Warwick Castle in feudal grandeur. You enter it through a massive gateway, leaving a chapel on the walls to the right. A drop in the curtain wall lets the full south sun into the ballium. After crossing this you ascend into the baronial hall. This is 60 feet long and 40 feet high: the masonry is dressed sandstone, wide jointed; the roof is ribbed and vaulted; from the walls are suspended massive shields of armorial bearing, all amply wrought in stone; and the mellow colour of this, which throughout is kept in its natural state, gives, in the well sustained proportions of the whole, an effect very striking and pleasing. A little light, perhaps, admitted is not too much, enhances the effect, and tells the stranger that he has passed into the second portion of a castle; and he never ceases to feel this, whether he examines the mouldings of the style adopted, whether he looks through the deep splayed windows, or wanders through the lengthened corridors that lead him from one splendid apartment to another. Mr. Salvin, the accomplished architect, has proved, by the arrangement of the different rooms, that comfort and luxury are perfectly compatible in a castellated building. Indeed, so admirably is this planned, that it would be difficult to mention a house in England more entirely united to modern wants; and not only has it a dining-room 86 feet in diameter, vaulted with naked stone, and a drawing-room 56 feet, with oriel windows in its angular towers, true in every minute detail to the style of the second Edward, but everything is found in accordance with the most pure taste and refinement.

THE ILLUSTRATED LONDON NEWS.

No. 481.—VOL. XVIII.] SATURDAY, MAY 3, 1851. [TWO NUMBERS, 1s.

THE GREAT EXHIBITION.

OUR columns this day record and Illustrate the splendid and imposing ceremonial of the opening of the Great National Exhibition of 1851; the fit inauguration of a half-century which we fervently hope will be, throughout its course, of the grand and peaceful character of its commencement.

The pens of all the "ready writers" of Great Britain, and no small number of those of Continental Europe and America, are engaged upon this one theme. There is no other topic of interest or importance. The revolutions, incipient or half extinguished, in Germany, Italy, and France, awake no echoes in the popular mind. The Protectionists talk in vain in the *purlieus* of old Drury; and the members of the British Parliament refrain from making long speeches, because reporters do not care to report, and people, however hot in politics they may be, do not care to read them. The Exhibition—its glories and its wonders, its accomplishment in the present, and its example to, and promise of, the future, are the only topics of writing, speaking, and reading, and form almost the only subject, as our columns abundantly testify, of the draughtsman and the engraver. Great Britain has made holiday, and the world has come to partake of it. That it will not be the last of the kind which old Europe and young America shall severally offer, there is no hazard in predicting; and that good, and not evil, may be the result, is not alone the hope of the sanguine and the philanthropic, but the logical deduction and business-like calculation of the cooler heads of more practical working men.

Six-and-thirty years ago—and that is no long time—the most illustrious of living Englishmen brought to a conclusion the most furious and desolating war recorded in European history. It was a war which left behind it two sad legacies to the rising generation—an enormous national debt, and, as it then appeared, an enormous amount of international jealousy, and even of hatred. But, when it ended, it left the nations leisure to work. The peace of 1815, which has happily remained unbroken, diverted into the channels of industry, art, science, commerce, and literature, those energies which, for the lifetime of the preceding generation, had been almost wholly occupied in destructive warfare. A few years of quiet and security produced a beneficent change. In 1825 Europe had begun to recover itself; the debt of this country, though found to be a burden, was discovered to be one which the profits of the trade and industry of the people would enable them to bear; and the hatred of the French, and of all other foreigners, which a bygone race of Englishmen had nurtured, "not wisely, but too well," was gradually consigned to oblivion, and replaced by a more sensible, a more humane, and a more Christian principle. In five years more, the nations made a still further advance. Trade had done much; but Science began to feel her strength—to discover new worlds in nature for the exercise of her power and ingenuity, and to take the first steps towards drawing into closer and more indissoluble union the long-estranged brethren of the great human family. From 1830 to 1850, the history of Europe, and of Great Britain more especially, was but a repetition of triumphs achieved by the skill, the science, and the enterprise of her children. Railways were established, of which the speedy effect was to make this country one large metropolis to itself; and to make of Europe one large country, of which no part was more distant from another, if measured by time, than London and Edinburgh had been a generation previously. Steam upon the ocean lent its aid to the great work; the electric telegraph carried it a step further; and all these, with a thousand other civilising agencies, rendered possible by their combined operation the realisation of that great idea—a friendly rivalry in the arts of peace—an Exhibition of the Arts and Industry of all Nations! Thirty years ago, such an idea would have seemed the dream of a lunatic. Twenty years ago, it would have appeared the over-sanguine expectation of a too credulous philosopher or poet. Ten years ago, it would have been reckoned a thing possible, but not probable. But the intercourse of nations, caused by the practical annihilation of space and time which we owe to the railway system, has removed a whole world of difficulties. It has made us all understand one another better than we did before; broken down the ancient barriers of jealousy and exclusiveness; obliterated the rancourous remembrances of bygone wars; softened the lingering asperities of traditional hatreds, and convinced the people of Europe of the great and useful fact, which it is never too late to learn, that, if they had known as much of each other fifty or sixty years ago as they do now, there would, in all likelihood, have been no battles of the Nile, the Baltic, or Trafalgar, and no carnage of Aboukir, Marengo, Jena, Leipsic, Moscow, Saragossa, or Waterloo. Who shall say, if we had had a railroad system pervading Europe in 1780, and steam-ships plying between New York and Liverpool at the same period, whether Napoleon Buonaparte might not have become a great sculptor or a great cotton-spinner in 1810? whether Wellington, the mighty Captain, might not thirty years ago have been a philosopher greater and more genial than Bentham, or a Lord Chancellor more potent and profound than Eldon? whether a thousand battles would not have remained unfought? and whether the millions of men that perished in them might not have helped to adorn and improve a world which they were solely engaged in ravaging?

But if, leaving speculations like these, we take any space of a hundred years—or even of two hundred years—in our own history, or in that of any other people in the ancient or modern world, we shall not find, within either of those periods, the record of such progress in all the arts which elevate and adorn humanity, and extend its powers for good, as we do in the twenty years which have elapsed since 1830. The ball of improvement has rolled with accelerated velocity, increasing its impetus as it went; and we may reasonably anticipate, if no war arise in our time to destroy the auspicious work that has been begun, that the next twenty years will afford us

JOSEPH PAXTON, ESQ., F.L.S.—FROM A PHOTOGRAPH BY KILBURN.—(SEE NEXT PAGE.)

triumphs still more substantial and more brilliant than those which we already enjoy; and that the blessings of civilisation, both moral and physical, will extend to and thoroughly permeate a far more numerous class than those which are now familiar with them. There is a lower and larger substratum to be reached, which has already begun to feel the benigner influences, and to acknowledge the love to God includes love to man; and that to merit heaven hereafter it is our duty to make earth a little more like our ideal of heaven than in former times was considered either possible or desirable. The opening of the Exhibition of the Industry of All Nations appropriately inaugurates a half-century in which this idea promises to be paramount.

This age is that of the working and thinking man, as distinguished from the age of the fighting and unreasoning man; and the Exhibition is in reality the apotheosis of the intelligent labourer. It was in this spirit that the illustrious Prince, to whom we mainly owe the successful realisation of a project that will throw lustre on his name and country, conceived the idea; and this is the great lesson, which, amid a host of minor ones, the world will draw from the great gathering of 1851. It is not always, or even often, that the lesson is learned by men or nations are agreeable. They may be necessary, but they are too frequently the lessons of adversity, hard to learn and bitter to reflect upon. The great lesson of this year is a brilliant exception. It teaches peace by peaceful methods, inculcates brotherhood by the example which is better than precept, and elevates not alone the nation which gave, but every nation which accepted, the challenge to the generous rivalry.

MR. PAXTON,

ARCHITECT OF THE GREAT EXHIBITION BUILDING.

We think we best present our readers with the Portrait of Joseph Paxton, a man whose name will hereafter stand enrolled among those whose works have done honour to their time and country. Mr. Paxton, who, as all his friends know, and as all the admirers of his character and genius will be glad to learn, is in the very prime and vigour of his age, and bids fair to enrich not only science but literature, with many contributions worthy of his new great name, has acquired a reputation as wide as the civilized world, by the conception of the great idea of the "Crystal Palace," a building to which history offers no parallel, either in the past or the present. Whether we consider the noble and humanizing purposes to which that building is consecrated, the appropriateness, the elegance, the vastness, and the beauty of the design, or its simple but most admirable novelty, we must acknowledge Mr. Paxton's high claims to the grateful appreciation of his contemporaries, and to that enduring place in the national annals which is the best reward of all true greatness in any and every department of public usefulness.

Mr. Paxton, like most other men of note, is "self-made." He owes his high position to his own intellect and industry; and can say of his own right hand, and of his own courage and perseverance, and of the assiduous cultivation of his mind and heart, that they alone raised him from the humblest rank of the honest working-men of his country, to the enviable position in which he now stands.

Mr. Paxton, whose original profession, as is well known, was, as it still is that of a landscape gardener, was first employed in a responsible capacity by his Grace the Duke of Somerset, at Wimbledon. From that station he passed, about twelve or thirteen years ago, as we are informed, into the service of the Duke of Devonshire, at Chatsworth; but that nobleman was not slow to perceive that Mr. Paxton possessed administrative faculties, and a knowledge of and skill in financial arrangement of a high order, in those capacities, we believe, he has been of essential service in the management of the Duke's estates, both in England and Ireland

There are indeed few instances of scientific application which present so many points of interest as the circumstances by which this gentleman has earned his present fame as the architect of the Great Exhibition Building. With the name of Mr. Paxton has long been associated the glories of Chatsworth; and the sole contrivance of the vast conservatory, which the King of Saxony graphically compared to "a tropical scene with a glass sky." The house built from Mr. Paxton's design for the flowering of the *Victoria regia* was, however, the immediate parent of the Great Exhibition Building. A design for the latter structure had already been prepared, but had failed to impress the public with its fitness for the purpose; and Mr. Paxton, apprehensive that an irreparable blunder would be committed in the proposed Building, proposed to the Executive Committee another design. Certain difficulties lay in the way, but Mr. Paxton was not to be deterred; his mind was made up; "and," said the Duke of Devonshire, at a public meeting held at Bakewell, "I assure you Mr. Paxton's mind once made up to what he did not fully accomplish." On the morning of the 18th of June, whilst presiding at a railway committee, he sketched upon a sheet of blotting paper his idea for the great Industrial Building. He sat up all that night, until he had worked out the design to his satisfaction; and the elevations, sections, working details, and specifications were completed in ten days. Next morning, Mr. Paxton started from Derby by railway for the metropolis; and in the same train and carriage was Mr Robert Stephenson, the engineer—a member, moreover, of the Royal Commission, and who, at Mr. Paxton's request, examined the plans.

"Wonderful! (exclaimed the engineer)—worthy of the magnificence of Chatsworth!—a thousand times better than anything that has been brought before us! What a pity they were not prepared earlier!"

"Will you lay them down before the Royal Commission?"

"I will," was the reply.

Next day the Royal Commission met; but Mr. Stephenson had not an opportunity of submitting Mr. Paxton's plans to his colleagues and Prince Albert; the office was, however, delegated to an able hand, and in the same train and carriage was Mr Robert Stephenson, the engineer—a member, moreover, of the Royal Commission, and who, at Mr. Paxton's request, examined the plans.

"Wonderful! (exclaimed the engineer)—worthy of the magnificence of Chatsworth!—a thousand times better than anything that has been brought before us! What a pity they were not prepared earlier!"

"Will you lay them down before the Royal Commission?"

"I will," was the reply.

Next day the Royal Commission met; but Mr. Stephenson had not an opportunity of submitting Mr. Paxton's plans to his colleagues and Prince Albert; the office was, however, delegated to an able hand, Mr. Scott Russell, one of the secretaries of the Commission. Mr. Paxton next waited upon Prince Albert, at Buckingham Palace, to explain the details. The scheme was referred to the Building Committee, who could not entertain it, as they had devised a plan. However, Mr. Paxton proceeded to the public judgment in the illustrations and pages of this Journal, and the practicability, simplicity, and beauty of the scheme instantly became popular. Thus encouraged, Mr. Paxton next procured a tender to be sent in to the Building Committee for his design. This was prepared by his friends, and Henderson's and at length Mr. Paxton's plan was tendered by them as an "improvement" on the Committee's design, and their offer proved to be the lowest. It will be recollected what followed: the Crystal Palace was eventually chosen unanimously, not only by the Building Committee, but by the Royal Commission; and the many thousands who assembled within the fairy-like structure at its inauguration, on Thursday last, must have been impressed with the consciousness of this decision [illegible] circumstance which [illegible] fortunate adoption of Mr. Paxton's design: a more fitting temple for the world's industrial treasures could not be devised; and it was but a just recognition of its author's great share in contributing to the success of the Exhibition, that he led the inauguration pageant on Thursday.

Mr Paxton is a distinguished Fellow of the Linnæan and Horticultural Societies, and has produced a Botanical Dictionary of accredited worth, besides editing the "Flower Garden" and other botanical and horticultural works. The gardens at Chatsworth form an excellent flushing school for young men; and many foreigners having received here instructions in horticulture, has invested Mr. Paxton's taste and skill with European celebrity.

The accompanying Portrait, an excellent likeness, is from a photograph by Kilburn.

SOYER'S SYMPOSIUM AT GORE HOUSE.—The monster table-cloth has, *at length*, been spread in the grounds of Gore House, and the famed Amphitryon is again at home to the world, in the true cosmopolitan spirit, M. Soyer welcoming Europeans, Asiatics, Africans, Americans, and Australasians, to dine here together. The several rooms are decorated in characteristic style, ranging [illegible] from sunny south. We have an Apollo room, with a superb [illegible] collection; and a Chinese apartment, orthodox as a tea-chest; a de[illegible]ful nook, called the bower of Ariadne, its trellis-work loaded with [illegible] grapes; a saloon with a rich arabesque ceiling, raising tears of joy of accredited gems, &c. The staircase we is are painted with a series of figures of notable [illegible]itt and Fox to Bunn and Maddox, from the grotesque pencil [illegible] enduous brides (beneath [illegible]

They have been newly and [illegible]t by M. Soyer, who is his own landscape gardener. If we have a [illegible] artiste grieve; there a reirait *à la Watteau*; parterres of [illegible] interspersed with statues and sculptural groups. Adjoining is a large dining hall, with a gallery hung with paintings by the late Madame [illegible]

FOREIGN AND COLONIAL NEWS.

FRANCE.

The approaching festival of the anniversary of the proclamation of the Republic, on the 4th inst., has been seized on with avidity by the alarmists in Paris as a favourable opportunity to spread rumours of a probable *émeute* by the Reds, who think they ought, whether they do or not, to create a riot on that day. Little credit, however, is attached to these rumours, notwithstanding the appearance in the papers of Tuesday of a document signified with the title of "Tenth Bulletin of the Committee of Resistance," an effusion of the most violent and sanguinary character, recommending all true Revolutionists to prepare for immediate conflict in support of their principles, and to strike without mercy, by fire and sword, all who are amongst their opponents. The Socialist journal, the *Presse*, denies the authenticity of the document, and declares it to be a fabrication—the vile production either of a police agent, or a traitor to the cause. The *Peuple*, a Republican paper, takes a similar view of it.

The *Constitutionnel* and the *Débats* both treat the document as authentic, which they say has been widely circulated amongst the workmen of Paris, and that several copies have been seized in the provinces bearing the Paris post-mark.

On the publication of this sanguinary manifesto, the members of the Left assembled and prepared a counter publication, warning the people against *émeutes* and insurrections, urging them not to be deceived and misled by evil and designing men; but to watch with calmness and confidence the progress of events, and their cause would prove triumphant.

Another subject which has much engrossed the attention of the Parisian public during the week is the failure of an attempt to restore friendly relations between the President of the Republic and General Changarnier. The affair arises out of a visit paid some days since to General Changarnier by M. de Persigny, a personal and confidential friend of Louis Napoleon; hence sprang the importance attached to the visit. Although several versions were afloat respecting the interview between these two individuals, the most correct appears to be, that a friend of the gallant officer having intimated to M. de Persigny his deep regret that the cordial terms between General Changarnier and the Elysée should continue, the former reciprocated the feeling, and offered to wait upon the General, and make a tender of his services to effect a reconciliation. This interview was cordial, when General Changarnier complained of the revocation of his command, to which M de Persigny replied, by saying that such a determination on the part of the President of the Republic was indispensable to the maintenance of the right and dignity as Chief of the State. To restore to him that command could not be granted at the present moment, as it would be considered an act of submission on the part of Louis Napoleon through fear. It was, however, that General Changarnier would forget what had passed, and avail himself of the first opportunity of showing to the President that his entertained no hostile feeling towards him, when he had no doubt a full reconciliation might be easily effected. This was generally regarded by impartial persons as the correct account of the matter; though other versions represented the President as having conducted M. de Persigny to wait upon General Changarnier, and offer him any conditions, provided he would support the Government in a revision of the Constitution.

According to the *Siècle*, the Government will not take the initiative in the revision of the Constitution; but will leave it to the Assembly and to the country.

The *Moniteur*, in the early part of the week, published a formal disavowal of an order of the day issued by General d'Hautpoul, Governor-General of Algeria, condemnatory of certain proceedings on the part of the military, in the capture of the Kabyle fortress, on the 11th of April. This order, says the *Moniteur*, was highly improper, as it submitted to the appreciation of the army the opinions of its commanding officers, and it has the strongest reason to believe that Government, after inquiry, it is impossible that General d'Hautpoul, who is on his way to Paris *en congé*, can return to Algeria as Governor-General. It is generally believed, however, that when he left Algiers he had no intention of returning.

On Monday there was a sale of pictures belonging to the ex-King Louis Philippe. They fetched good prices.

UNITED STATES.

Advices from New York to the 16th ult. have been received this week by the mail steam-ship *Baltic*, which brought over a large number of persons to the Great Exhibition.

The no tical news by this arrival is not of any particular moment. In the New York Legislature a bill had been passed for the more effectua. suppression of gambling.

The Spanish Minister had notified to the American authorities of another conspiracy to seize upon Cuba. It was stated that the preparations were rapidly proceeded with, and that, in the meantime, Apalachicola was the rendezvous for the volunteers.

It is stated that there is a doubt whether Texas will be entitled to two representatives in Congress by the population under the new census. Governor Bell is a candidate for re-election. A detachment of United States troops recently overtook a band of Indians who had committed depredations on the Chaile River. The whole of the stolen property was recovered, and two of the Indians killed, without any loss on the part of the troops. Colby Macintosh, brother and chief of the Creek Nation, died recently at Fort Gibson. He was a white and is now employed by the Baptist board as one of the native preachers.

The news from Yucatan, brought down to the 10th of March, is of grave import; hostilities were [illegible] between the Indians, the whites and Indians, and to such advantage on the part of the latter, that they contemplated obtaining possession of the city of Merida. By this [illegible] the Spanish Consul de Vega had been dispatched from Mexico to lead an expedition against the Indians.

CANADA.

The news from Canada states that it is announced, on good authority, that Mr. Lafontaine, the leader of the French Canadians, and the Attorney-General for Canada East, will retire from public life at the close of the present Parliament. An association has been formed by the High Church party to prevent the secularization of the Clergy Reserves. It was stated that the measure would probably produce no decided effect. The lectures of George Thompson and Frederick Douglas, at Toronto, were heard with general interest, and have awakened a great deal of inquiry on the subject of slavery. The excitement continues to be strongly condemned by a portion of the press, on the ground that non-interference in the matter is the true policy for the British provinces.

COUNTRY NEWS.

REPRESENTATION OF THE ISLE OF WIGHT.—Mr. Charles C Clifford, a son of Admiral Sir Augustus Clifford, of Ryde, Usher of the Black Rod, has issued an address to the electors, declaring his intention to come forward, on Protestant, Free Trade, and liberal principles, in the room of Mr. Simeon, resigned. Sir Augustus is a connexion of the Duke of Devonshire.

REPRESENTATION OF THE EAST RIDING.—The *Hull Packet*, of Saturday, says:—"We are authorized to state that Henry Broadley, Esq., M.P. for the East Riding, who had, on account of ill health, intimated his intention to retire from the representation of the Riding, has, at the request of his friends, been induced to alter his determination, and will again appeal to the constituency in the event of a dissolution of Parliament. His constituents will be glad to hear that he has in a great measure realized from his indisposition."

REPRESENTATION OF NORTH HANTS.—It is said that Lord Henry Cholmondeley will come forward, in conjunction with Mr. Portal, on the Conservative interest, as a candidate for the representation of the northern division of Hampshire, in the room of Mr. Sotheron Estcourt, one of the Lords of the Treasury.

THE REPRESENTATION OF WEST NORFOLK.—The electors of West Norfolk have of late, in consequence of the views given in Parliament by the Hon. E. Coke, felt much dissatisfaction with the hon. member, and steps are now taking for the return of two Protectionists at the next election. With this view, report says, Lord Walpole, eldest son of the Earl of Orford, and Mr. G. P. Bentinck, nephew of the late Lord George Bentinck, who, in case of Lord Walpole consenting to stand for the county, are to be returned by the electors at the least possible expense.

BOROUGH OF TYNEMOUTH.—So far as Tynemouth is concerned, the expected general election may be said to have begun. Mr. Hugh Taylor, of Jesmond, a member of the Corporation of Newcastle-upon-Tyne, has announced a candidate for the representation of the borough; and Mr. Grey has announced his determination to accept the wager of battle. Both candidates were in Shields on Thursday week, attending the Easter Sessions.

MONUMENT TO EBENEZER ELLIOTT.—At a public meeting at the Council-hall, Sheffield, last week, it was resolved, "That Ebenezer Elliott's long, laborious, and successful advocacy of Free Trade, and his great services as a poet, deserve to be publicly acknowledged, by the erection of a monument to his memory." A subscription has, accordingly, been entered into, and £230 has already subscribed, chiefly in Sheffield.

A locomotive engine is said to be building in New York for the Erie Railway, in which nothing but alcohol is to be used for heating the boilers.

The merchants and manufacturers of Leeds have determined to establish a Chamber of Commerce in that town.

EXTRAORDINARY SOCIETY.—In the parish of Lukulyan, in the county of Cornwall, no poor-rate has been required or made this half-year!

THE BELGIANS AND THE SCOTCH FISHERIES.—For several years back fishermen from the coast of Belgium have been in the practice of fishing off the Scotch coast within the three miles limit, and in many cases, especially in the west of Scotland, have entered our harbours, and taken every advantage afforded by the shore, in the same way as if they were British subjects. These privileges" thus seized upon by the Belgians excited not a little jealousy among the Scotch fishing community, and more so that the produce of their fisheries is completely excluded from the territory of Belgium. The matter was brought under the notice of the Board of Trade, but a letter from the secretary to the Board of Fisheries shows the conclusion that has been arrived at in the meantime

[illegible]

In right of several charters alleged to have been granted by King Charles II., to fifty-two of the town of Reigate, and that, in consequence of the same, the said town under these charters having called for [illegible] by a writ thereby issued, [illegible] the Bailiff of the said town to be [illegible] for the purpose of [illegible] 1850 on [illegible] &c. &c. therefore after to be restrained [illegible] foreign [illegible] except in so far as any of the parties claiming under an

CHURCH, UNIVERSITIES, &c.

THE SYNOD OF EXETER

The following communication has just been addressed by the Bishop of Exeter to the Archdeacons of his diocese:—

"South Molton, April 3rd, 1851.

"Dear Mr. Archdeacon,—Having announced to my clergy my purpose of addressing, with God's permission, a synod of the diocese soon after the conclusion of my present visitation, I now request you to desire the deans rural to inform the presbyteries, whether beneficed or licensed, in their several deaneries, that I have fixed on Wednesday, the 25th of June next, for the meeting of the synod, to be continued on the two following days. We shall assemble first in the chapter-room, and proceed thence to the cathedral, at the usual hour of morning prayer, and, after having received together the holy Eucharist, will retire to the chapter-room, which the Dean and Chapter have permitted us to use for that purpose.

"For one great question, which only I shall submit to the synod on the first day, will be the fitness of our making a declaration of our firm adherence to the great articles of the Creed—I acknowledge one baptism for the remission of [illegible] as well as to the doctrine of our Church on the graces of that Sacrament, as set forth in its Catechism.

"On the two other days we will discuss such matters of practical interest as shall seem best calculated, with God's blessing, to promote the great ends of our ministry, avoiding all questions of controversial theology

"It is manifest that so numerous a body cannot usefully be brought together except by representation. I therefore invite the clergy of every deanery to elect two of their own number, together with their dean rural, to assist me, the dean and the greater chapter, my chaplains, and the officials of the archdeacons. This election, however, it may be better to defer till within a short time before the proposed meeting. In the meanwhile, the question to be proposed for consideration will be fixed. For this purpose I would desire the deans rural to call together, or otherwise to invite their clergy, to transmit to me any questions which they may recommend for the consideration of the Synod. It is desirable that such questions be proposed six weeks before the 25th of June, in order that I may select such as shall seem fittest for the general benefit of mutual consultation on various matters which shall, from time to time, arise, of importance to our ministerial usefulness, and, therefore, to the edification of the people.—I am, dear Mr. Archdeacon, your affectionate friend, and brother in Christ,

H. EXETER

SOCIETY FOR THE PROPAGATION OF THE GOSPEL IN FOREIGN PARTS.—With the consent of the Archbishops and Bishops, all of whom are Presidents and Vice-Presidents of the Society for the Propagation of the Gospel in Foreign Parts, it has been determined to have a great commemoration of the third completed jubilee of that institution. On the 15th of June next (Trinity Sunday), the society will have accomplished 150 years of missionary labour, and on the following day, June 16th (the anniversary of the granting of the charter), it is intended to have the full service of the Church in Westminster Abbey, on which occasion the Bishop of London has undertaken to preach. On Tuesday, June 17, a public meeting of the friends of the society will be held, and on Wednesday, the 18th instant, the anniversary sermon will be preached in St Paul's Cathedral, by the Bishop of St Asaph. On the following Sunday, June 22nd, sermons appropriate to the occasion will be preached in many of the principal London churches; but, in consequence of the recent collections which have been made under authority of the Queen's Letter, it has been thought better to defer the Jubilee sermons generally to a later period, probably to the season of Advent, or the Epiphany, 1852, as it is intended that the Jubilee shall extend throughout an entire year, that is, from June, 1851, to June, 1852

EXTENSION OF THE COLONIAL CHURCH.—The annual report of the Gospel Propagation Society, just issued, presents the following table:—

Bishopric founded.		No. of clergy when see was founded.	No. in 1850.
1824	Jamaica	57	116
1824	Barbadoes	50	114
1839	Toronto	71	144
1839	Newfoundland	19	40
1841	New Zealand	9	31
1842	Gibraltar	5	21
1841	Fredericton	30	64
1847	Melbourne	3	11
1847	Adelaide	11	22
1847	Newcastle	17	27
1847	Cape Town	14	[illegible]
		290	[illegible]

SECESSIONS FROM THE CHURCH AT HULL.—Another of the curates of the High Church of Hull, the Rev. Thomas Sykes, curate of unbeneficed Sculcoates, in the same grounds as those stated by his late coadjutor, Mr Barff. Mr Dykes says that he entertains "doubts," and will not again minister until those doubts are removed.

CATHEDRAL CONSISTENCY.—The Bishop of Rochester has issued an order to the Dean and Chapter of Rochester Cathedral, directing them to intone those parts of the service on which heretofore they have read, that cathedral church a mark by way of giving greater importance to this pictorial order and change, the bishop not only attended divine service on the Sunday (April 20) on which the intonation was to take place for the first time during his episcopate, preached twice on a Sunday in his cathedral.

WESTMINSTER ABBEY OPEN TO THE PUBLIC.—The Dean and Chapter of Westminster have resolved to open Westminster Abbey to the public without charge on and after Sunday next. Circulars have been dispatched to the choirs of the different cathedrals throughout the country requesting their attendance. There will be a full choir every Sunday evening.

ST. SAVIOUR'S WALBROOK.—At a recent meeting of the vestry of this parish, Mr. Rock drew the attention of the vestry to the propriety of improving upon their splendid church for the reception of visitors to London during the Exhibition. In Rome and Italy the Church of St. Stephen—the masterpiece of Sir Christopher Wren—was much talked of, being considered the most stately structure in Europe; therefore visitors from those parts would take great interest in its reception. He therefore begged to propose that the church be opened to the public free from charge or fees, on Mondays, Wednesdays, and Fridays, during the time of the Exhibition. Mr. Unwin seconded the motion, which was carried unanimously.

NEW CHURCH.—On Friday week, the ceremony of laying the foundation stone of the new district church, dedicated to St Mark, in Long-street of St Pancras, took place in the Albert-road, Regent's Park, in the presence of a numerous assemblage of ladies and gentlemen. Previous to the ceremony, Divine worship was conducted in the temporary church adjacent. The Rev. [illegible] Rector of St Pancras, laid the stone with the customary observances. This [illegible] seventh new church recently founded in the populous parish of St. Pancras, the present erection will be the largest of the whole. The church, which is proposed to raise by subscription, and to which £3000 has been contributed. The church will contain sittings for 2000, two-thirds being free.

FOREIGN CHURCH SERVICE.—On Sunday the service will be performed at St. Pancras Church, in the course of each week, in the German, French, and Italian languages. It is also announced, that the Free Church, in Burton-place will be at the disposal of foreigners of any nation, on application being made to that purpose.

ALLHALLOWS, EXETER.—The tower of th[illegible] the-Walls, in this city, is now undergoing [illegible] and the old and unsightly windows, forms a beautiful [illegible] every point of view.

SACRILEGE AT GLOUCESTER CATHEDRAL.—The [illegible] reports the existence of another daring case of sacrilege [illegible] the fourth within about three years. The thieves carried [illegible] boxes used as receptacles for the alms [illegible] ney, but the boxes had been emptied of their contents [illegible] and the robbers gained little by their sacrilegious [illegible] amount of [illegible] in Gloucester, at St. Nicholas' Church.

TESTIMONIALS.—The following clergyman have received testimonials of esteem and affection:—the Rev. J. H. Hall [illegible] Rector of Church, Rochdale road, Manchester, from the [illegible] mas, curate, from the teachers and scholars of the [illegible] ride removal, the Rev. Cornwall Bonnile, Episcopal Chapel, Bayswater, Middlesex, from the congregation, Marker, of Combe-house, from the parishioners of Gittisham, Devon; Rev. Fryer, of St. Matthew, Dewsbury, Yorkshire, from the congregation of Rev. F. Hoskin, on leaving the curacy of Bardsea, Lancashire; the Rev. B. H. Huntington, curate of St. [illegible] the congregation. The Rev. John Bowden has [illegible] on his departure; the Rev. John Pemberton Bartlett, of [illegible] from the attendants [illegible] Sunday evening service: the Rev. [illegible]

APPOINTMENTS AND PREFERMENTS.—The following [illegible] recently been made

[illegible] to Whitton-cum-Thurton, Northamptonshire. The Rev. Alexander Thurtell, to Caldecott, Norfolk. The Rev. Joseph Smith to Rotherfield Greys, Oxfordshire. The Rev. Henry John Pye to Clifton Campville with Chatcote, Staffordshire [illegible] George Elwes Corrie to Newton, near Wisbeach, Cambridgeshire. [illegible] The Rev. H. T. Todd to [illegible] The Rev. H. T. Todd to [illegible]

[illegible] Godfrey Harry Arkwright to All-Hallows, Derbyshire

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—MONDAY.

The House re-assembled for the first time after the Easter recess.

ECCLESIASTICAL TITLES BILL.

Lord J. RUSSELL said that perhaps it might be convenient if he were to state then, accurately to his promise before the recess, the view which the Government took with regard to the amendments which were proposed to be inserted in the Ecclesiastical Titles Bill on committee, and more particularly those which had been proposed by the hon. member for Midhurst (Mr. Walpole). With respect to the first clause in those amendments, her Majesty's Ministers would have no objection to its principle, but they thought that it would be carried into effect completely by the terms of the preamble of their own bill. With regard to the other clauses which the hon. and learned gentleman had given notice of, her Majesty's Ministers had found, after full consideration, that they could not agree in them. With respect to the preamble of the bill, he (the noble Lord) wished to reserve any opinion until the House should have gone through the clauses and settled what form the enactment would take.

Mr WALPOLE asked whether he was to understand that his first clause would not be objected to?

Lord J. RUSSELL said that they did not object to its principle, but thought its object would be better carried into effect by the preamble of the Government bill.

PROPERTY TAX BILL.

On the order of the day for the second reading of the Property Tax Bill,

Mr. SPOONER entered at considerable length into an elaborate statistical and investigation of the tax, which, if now removed, would be tantamount to the abolition of its being a permanent tax. He quoted the opinions of Mr. Horner, Lord John Russell, and others, against the tax, and contrasting his decided opinion that the continuance of the tax would be detrimental to all the most important interests of the country, he moved as an amendment that the bill be read a second time that day six months.

Mr. MOFFATT seconded the amendment, dwelling on the evils to persons in trade [illegible] to know their transactions, which, rather than submit to, [illegible] and [illegible] assessed profits.

Mr. HUMPHERY could not support the second reading of the bill for continuing [illegible] for a short time, on the understanding that the Chancellor of the Exchequer would take further information as to the equitable system of taxation [illegible] than which now existed.

The CHANCELLOR of the EXCHEQUER said, that, if Mr. Spooner's motion should be carried, the reduction of the timber and coffee duties and the abolition of the window duties must be given up, and some new taxes must be devised to make up the deficiency in the revenue arising from the abolition of the income-tax.

Colonel SIBTHORP asked if it was the intention of the Chancellor of the Exchequer to go into committee on Friday next?

The CHANCELLOR of the EXCHEQUER replied in the affirmative.

Mr. MACKINNON supported the second reading of the bill.

Mr. DISRAELI thought the objections made to the bill were rather for consideration in committee than upon the second reading of the bill, and he therefore hoped that Mr. Spooner would not divide the House upon the question of the second reading.

Mr. SPOONER said he would not divide the House upon the amendment which was then negatived without a division, and the bill was read a second time, and ordered to be committed on Friday.

The Customs bills were then read a second time and passed:—The Stamp Duties Assimilation Bill, the Exchequer Bills (£17,766,600) Bill; and the Indemnity Bill.

THE OPENING OF THE GREAT EXHIBITION.

Lord J. RUSSELL gave notice that it was his intention to propose that the House do meet at six o'clock on Thursday next instead of the usual hour.

The House then adjourned a quarter to seven o'clock.

HOUSE OF COMMONS.—TUESDAY.

Mr. HERRIES presented a petition from the shipowners of London, complaining generally of the injurious operation of the repeal of the Navigation Laws upon the shipping trade. The hon. member gave notice that on a future day he would call the attention of the House to the subject.

EXAMINATION OF MILITARY OFFICERS.

Colonel REID begged to ask the Secretary of War whether it was intended that the examinations of candidates for commissions in the army should continue to be conducted by the professors at Sandhurst College, who were the authors of "text-book" and other publications of a similar character, upon subjects in which the candidates were required to be examined? Also, whether he intended to propose to the House, during the present session, the appointment of "captains of instruction" in regiments of cavalry and infantry? Also, what would be the cost of this addition to our military establishment, and whether it would not amount to the sum of £30,000 per annum.

Mr. F. MAULE, in answer to the first question put to him by the hon. and gallant member, could only repeat what he had stated on the discussion of the army estimates, namely, that he totally and entirely disapproved of the practice of the examination to be conducted by the authors of "manuals." He also entertained the state of the case to the House Guards, and their attention was directed to the subject. With reference to the latter question, he feared the hon. and gallant member had taken up a suggestion which he had merely thrown out on moving the army estimates, and construed it into a distinct indication of intention. So much, however, had been said on the present head as to merely an idea of his own in order to enable officers who were expected to pass a tolerably strict examination, to be in some way prepared for it. He was now enabled to state that the Commander-in-Chief did not intend to carry or compulsory measure of the examination, though no objection existed to it if such should be his desire. But whenever an officer who had been examined for his commission originally should be in a position to act commander to a troop or company, he would be expected to pass the examination. With respect to the question last proposed, he feared the hon. and gallant member had formed a very exaggerated estimate.

ST. ALBANS ELECTION.

In reply to Mr SPEAKER, as to the steps taken to secure the personal [illegible] Wagget, and Heyward, against whom warrants had been [illegible] on a charge of keeping back witnesses, a misdemeanour proved to have been committed on the occasion of the sitting of a parliamentary committee to inquire into the validity of the St. Albans election,

The SERJEANT-AT-ARMS stated that during the adjournment of the House he had used all due diligence to execute the warrants of the Speaker against the parties charged thereon, but to no purpose. The police authorities had just reported to him up to that moment they had not been able to obtain the slightest trace of the parties.

Lord J. RUSSELL said, that, unless the parties were apprehended within a reasonable time, it would be necessary to address the Crown that a reward might be proclaimed. (Hear.) He would, therefore, take occasion, on a future day, to move that the House would resolve itself into a committee to consider the propriety of adopting an address to her Majesty, that she might be pleased to order a reward, with a free pardon, for the discovery of Waggett, Heyward, and Birchmore, the part as charged with the misdemeanour

SUPPLY OF WATER TO THE METROPOLIS.

Mr. GREY moved for leave to bring in a bill for the better supply of water to the metropolis. After quoting the opinion and recommendation of the Board of Health with respect to an abundant supply of water to the metropolis, he said that the Government were of opinion that the best course to be pursued was to pass a bill to consolidate into one all the existing water companies, and to place that company under one board, to be subject to the control of the Government, to be compelled to obtain its supply of water from such sources as might be determined upon by the scientific gentlemen now making inquiries on the subject. His proposal was that the fixtures of the different companies should be purchased from them at a liberal valuation, and that the consolidated company should be allowed for the present to make dividends of only 5 per cent. per annum, and at no period should it be allowed to exceed 8 per cent. The bill should be read a second time, it was his intention that it should be referred to a

[illegible] hon. Baronet for the anxiety he had shown [illegible] to work existing interests.

[illegible] proposed bill would only have the effect of con[illegible] monopoly of the metropolis.

[illegible] of resorting to new sources for the supply of water to the metropolis.

[illegible] not oppose the introduction of the bill, but feared it would [illegible] the power of [illegible] supply of water to [illegible] should access to the [illegible] not private [illegible]

[illegible] the water companies, and reminded the House that the [illegible] sanctioned by various acts of Parliament.

[illegible] from Mr. HOWARTH and Sir G. GREY in reply,

[illegible] to bring in the bill.

ASSIGNMENT OF DEATH IN THE COLONIES.

[illegible] have a resolution to the effect,—That it is expedient that [illegible] of this country with respect to the punishment [illegible] in many of our colonies the law was such [illegible] gard to capital crimes, but in others Lo[illegible] to many cases where it was not capital. In Malta, for instance, besides murder, theft, connected at sea, [illegible] ery, coining, and several other [illegible] crimes. In Ceylon, [illegible] a capital [illegible] which British-born law prevailed, this was [illegible] case.

[illegible] to enable him to submit the subject, when, at [illegible] to the House.

Mr. [illegible] was negatived by 52 votes to 12

THE ST ALBANS ELECTION

On the motion of Lord J. RUSSELL a resolution was agreed to [illegible] ing to the Crown, praying that a reward might be offered for the [illegible] very and apprehension of the missing witnesses summoned by the St. Albans election committee.

ADMISSION OF EXHIBITORS TO THE CRYSTAL PALACE.

In reply to a question from Mr. HUME, Mr. LABOUCHERE said that there was every wish to deal liberally with the exhibitors in the way of giving them free admission at the opening of the Exhibition, but it was felt impossible to do so owing to their number, which exceeded 15,000. It was, however, the intention of her Majesty to attend the Exhibition on some one Saturday morning, on which occasion the exhibitors would be admitted free, and it was the opportunity of explaining to her Majesty the particulars of the arrangements have excited.

The Highways (South Wales) Bill went through committee.

The Farm Buildings Bill was read a second time.

On the motion for the committal of the Sunday Trading Prevention Bill,

Mr. ANSTEY moved that the bill be committed that day six months. He considered that the measure was an offspring of fanaticism, and would enable the wealthy tradesmen to crush their poorer rivals. There were in it many ridiculous exceptions in favour of certain trades and articles, and a despotic power was assigned to the police, who might summarily seize the property of itinerant vendors of perishable commodities, which before a magistrate could order their restoration would become valueless. In many districts of London the measure was unnecessary, and in others, inhabited by large numbers of Jews, it would be most tyrannical.

Mr. B. WALL also opposed the bill, objecting seriously to its details, and wishing to make it, under an improved form, a general instead of a local and metropolitan measure.

Some further discussion resulted in the debate being adjourned for a fortnight.

MANORIAL RIGHTS.

Mr MULLINGS obtained leave to bring in a bill to extend the acts for the commutation of memorial rights, for the extinguishment of heriots and reliefs, and of rights of lords of manors to timber and trees on lands parce. of any manor and for the gradual enfranchisement of lands of copyhold or customary tenure, and also for extinguishing free rents, reliefs, duties, and services payable or to be performed in respect of freehold lands parcel of any manor.

HOUSE OF LORDS.—THURSDAY.

Their Lordships re-assembled, for the first time, to-day, after the Easter recess, but the House only sat for a few moments, and transacted no business of importance.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

The House did not meet until six o'clock.

The SPEAKER communicated to the House that he had received from the petitioners against the return for the borough of Aylesbury, an intimation that it was not their intention to proceed with their petition.

ADMISSION OF JEWS TO PARLIAMENT.

Lord J. RUSSELL moved the second reading of the Oath of Abjuration Bill.

Mr. NEWDEGATE moved, as an amendment, that the bill be read a second time that day six months. He deprecated the system of session after session placing the two Houses of Parliament in collision on the question. So far from the bill deriving any weight from the return of Baron Rothschild for the City of London, he thought that election only proved that in the City they desired the noble Lord not five per cent. better than a Jew.

In the discussion which followed, Mr. Roebuck, the Solicitor-General, and Lord J. Russell supported the bill, and Mr. Wigram, Sir R. Inglis, and Mr. Goulburn opposed it; and on a division, the second reading was carried by a majority of 27 to 200.—Adjourned.

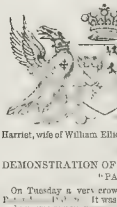
OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

ADMIRAL SIR EDWARD CODRINGTON, G.C.B.

THE eminently distinguished naval commander died at his residence in Eaton-square, on the 28th ult. Sir Edward was one of the oldest flag officers in the service, and his brilliant naval achievements are identified with the most stirring epoch of our national annals, when he was born, in the third son of the late Edward Codrington Esq., second son of Sir William Codrington, of Dodington, in the county of Gloucester, and commenced his career on board the *Augusta* yacht in 1783. On the outbreak of the war, in consequence of the refusal by our ministry describing the rights of the United Colonies, the young midshipman was appointed to the *Boyne*, one of the two columns of the closely-pruned ranks of which Byrne's "Naval Biography" affords it to say, that the neglect of the present notice was Lieutenant of the *Queen Charlotte*, in Howe's memorable action; that he commanded the *Babet*, in Brisbane's famous victory off the île de Croix, in the Bay of Biscay, and the *Brake*, in the West India expedition, under Sir Ralph, during the Peninsular War, the command of a squadron in co-operation with the Spanish patriots off the coast of Catalonia had been subsequently entrusted to him off the coast of America, during the important operations conducted against Washington, Baltimore, and New Orleans, in 1814, and that, finally, he achieved, in 1827, the signal victory of Navarino, over the Turkish and Egyptian fleet. This was the crowning exploit of Codrington's distinguished life

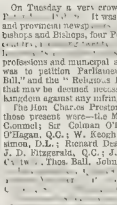
Sir Edward, after obtaining all the grades of the Order of the Bath, was nominated Grand Cross, immediately after the battle of Navarino. He was also a Knight Grand Cross of St. Michael and St. George, a Grand Cross of St. Louis of France, of St. George of Russia, and a Knight Gold Cross of the Tower and Sword of Portugal. His naval commissions bore date as follows:—Lieut., 26 May, 1793; Commander, 7th Oct., 1794; Captain, 6th April, 1805; Rear-Admiral, 4th June, 1814; Vice-Admiral, 19th July, 1821; and Admiral of the White, 1841.

Sir Edward was returned to Parliament by the borough of Devonport in 1832. He married, 27th Dec., 1802, Miss Jane Hall, of Old Windsor; and by that lady, who died in 1837, he had, with other issue, a son, the present Captain Henry John Codrington, R.N., C.B.



SAMUEL SANDBACH, ESQ., OF WOODLANDS, COUNTY OF LANCASTER.

THIS venerable gentleman, who died at Woodlands, on the 26th ult., in the 82nd year of his age, enjoyed a considerable fortune as a West India merchant of Liverpool, and served the office of Bailiff, Coroner, and Mayor for that important town. He was also a Justice of the Peace for Lancashire, and acted as High Sheriff of Denbighshire in 1835, he married, Dec. 15, 1803, Elizabeth, daughter of the Rev. Harry Robertson, D.D., minister of the parish of Kilberry, county of Argyle, and had several children, the eldest son, Henry Robertson Sandbach, Esq., is married to Margaret Roscoe, granddaughter of the celebrated William Roscoe.



JUDITH ANNE, COUNTESS OF RADNOR.

HER Ladyship, whose decease is just announced, was second wife of the present Earl of Radnor, and third daughter of the late Sir Henry Paulet St. John Mildmay, Bart. She was married 24th May, 1814, and leaves issue two sons, Jacob, Viscount Folkestone, and the Hon. Edward Robert, barrister-at-law, and two daughters, Lady Jane

Harriet, wife of William Ellice, Esq., and Lady Mary

DEMONSTRATION OF THE ROMAN CATHOLICS AGAINST THE "PAPAL AGGRESSION BILL."

On Tuesday a very crowded meeting of Roman Catholics took place at the Freemasons' Tavern. It was convened by requisition published in all the Dublin and provincial newspapers, and signed by twenty-four Roman Catholic Archbishops and Bishops, four Peers, [illegible] leading members of the Irish bar, [illegible] members of Parliament, a number of deputations [illegible] associates, together with large numbers of the learned professions and municipal authorities throughout the country; and its object was to petition Parliament against the "Ecclesiastical Titles Assumption Bill," and the "Religious Houses Visitation bill," and adopt all other means that might be deemed necessary to protect the Catholics of the United Kingdom against any infringement on their civil or religious [illegible]

The Hon. Charles Preston, son of Lord Gormanstown, presided. Among those present were—the Mayors of Cork, Limerick, Kilkenny, Drogheda, and Clonmel; Sir Colman O'Loghlen, Bart.; Serjeant O'Brien, Q.C.; Thomas O'Hagan, Q.C.; W. V. Keogh, M.P.; John Reynolds, M.P.; Christopher Anstey, M.P.; Richard Deasy, Q.C.; Alderman Bannin, Alexander M'Carthy, J. D. Fitzgerald, Q.C.; J. T. Devereux, M.P.; James Power, D.L.; [illegible] O'Connor, Thos. Ball, John Francis Maguire, Denis Caulfield Heron, Professor [illegible]

[illegible] attachment to the connection, we think we see in our assembling [illegible] unrestricted religious liberty which is enjoyed by all other subject[illegible]

[illegible] out intolerable violation of that religious liberty and that the alterations proposed to be [illegible] by the Government in that measure in no respect diminish our abhorrence of the obnoxious principle which it involves.

Resolved, That we call upon our representatives in Parliament, and our countrymen in general not only to oppose, by every constitutional means, the bill itself, but also to give an active opposition to any Administration which proposes or supports that or any similar measure.

That the warmest thanks of this meeting are due, and are hereby cordially tendered to the Right Hon. Lord Aberdeen, the Right Hon. Sir J. Graham, and the other English and Scotch members of the Legislature, to whom we are so deeply indebted for their general and powerful support of the principles of religious liberty, and the rights of the Catholic people of the United Kingdom.

That our deepest gratitude is due to those Irish members of Parliament, who, regardless of all party ties, offered such a strenuous and uncompromising opposition not only to the Ecclesiastical Titles Bill, but also to the administration by which it was introduced.

That we have read with indignant astonishment the calumnies which have been recently promulgated in Parliament and in the English press against those religious ladies who have devoted their lives to the service of God, the advancement of religion, and the well-being of their fellow-creatures.

That we view the bill recently introduced into Parliament respecting religious houses as a cruel and uncalled-for give a legal sanction to those calumnies, as involving in its purview and vexatious and tyrannical in its details; and that we therefore call upon our representatives in Parliament to give it the most decided opposition.

That petitions to Parliament embodying the above resolutions be presented to both Houses, and that the draft petitions now read be adopted, and that the presentation of the petition to the House of Lords be entrusted to the Right Hon. Lord Aberdeen and the presentation of the petition to the House of Commons be entrusted to John Reynolds, Esq., M.P. for the city of Dublin.

Resolved, that we call upon the Catholic clergy and people of Ireland to hold simultaneous meetings on [illegible] petitions against the [illegible] Bill, and to [illegible] Members of Parliament representing Parliament against the measures referred to, and to call upon their respective members to oppose the present, or any measure of a similar kind which would support any measure infringing upon the religious liberties of the people of this empire

ARRIVAL OF THE TURKISH FRIGATE "FEIZA BAARI."

AMONG the "Great Exhibition" incidents of the last few days, not the least striking was the arrival of the Ottoman steamer of war *Feiza Baari* (*Shammer of the Sea*), flag of his Highness Vice-Admiral Mustafa Pasha, Captain Said Bey. This noble vessel entered the Thames on Friday night (last week), and early on Saturday morning, after saluting the Turkish squadron lying at Spithead, came up to Southampton. She is the bearer of a cargo of Turkish contributions to the Great Exhibition in Hyde Park. On anchoring she immediately exchanged salutes with the town battery, after which the United States frigate *St. Laurence* fired a salute, which was returned by the *Feiza Baari*.

The *Feiza Baari* is the first Turkish steam-vessel that has ever visited England. She sailed from Constantinople on the 6th ult., and remained two days at Gibraltar; which, with other delays, brought the time under steam from Constantinople a little above fourteen days

The *Feiza Baari* was built at the Turkish dockyard at Constantinople. She is about 1600 tons burden, full ship-rigged, and is a favourable and creditable specimen of the proficiency in naval architecture to which the Turks have attained. Her fittings generally and cabin arrangements are very beautiful and commodious. The engines, of 400-horse power, on the double-cylinder and direct-acting principle, are from the factory of Messrs. Maudslay, Sons, and Field, and propel the vessel at a rate of from 8 to 10 knots an hour, according to wind and weather. The armament is a very heavy one, as the vessel is pierced for and mount 44 guns; viz. 2 long 10-inch iron Paixhan guns upon traversing carriages upon the upper deck, and 42 long brass 32-pounders on the main deck. On the present occasion, in consequence of carrying cargo, she has on board only eight of the 32-pounders and the two Paixhan guns. The complement of men is about 320. The officers, sailors, and firemen are all Turks, but there are three English engineers.

The *Feiza Baari* has brought a large number of distinguished functionaries and officers of high rank in the Turkish service as passengers, among whom are his Highness Gemaleddin Pasha, brother-in-law of the Sultan; Her Excellency Constantine Musurus, the new Ambassador from the Sublime Porte to the Court of St. James's.

On Sunday morning, Mr. H. D. Jourdin, the Ottoman Consul at Southampton, went on board the *Feiza Baari*, and was received with a salute of twenty-one guns—a similar salute having been also being given by the American frigate. Arrangements were then make for the disembarkation of the Turkish Ambassador, who, shortly after 1 o'clock, accompanied by his suite, left the ship under salutes of 17 guns from the *Feiza Baari* and the *St. Laurence*. On landing at the docks, no salutes were fired by the town, on account of the Sabbath. His Excellency left at three o'clock for London by a special train

There were on board this steamer 20 packages for the Great Exhibition which were sent on shore, and forwarded to the Palace of Glass on Monday and Tuesday. The goods consist in great part of silk stuffs from the Government factory, Turkish cloths, sword-blades, fire-arms, embroidered stuffs, carpeting from Midenem and Konieh, the whole being of great beauty and value. The number of specimens is said to be 1870, and their value nearly £100,000. About 5000 square feet of surface will be required for their display.

The Sultan has taken a great interest in the whole details connected with the origin and progress of the Great Industrial Exhibition in London, and has been most anxious that the country of which he is the supreme ruler should be adequately represented. This anxiety is plainly proved by the determination to despatch to England on a special mission so large and so fine a vessel as the *Feiza Baari*.

Except the characteristic red Fez cap universally worn on board, the dress, uniform, and appointments of the officers and seamen do not present any features of the ordinary Turkish costume, which appears to be slowly disappearing in the military and naval services of the Sultan. There are but few turbans to be seen on board, and those, we understand, are worn by the old and conservative or other Mahometans. Several of the officers speak the English and French languages fluently

ROTATION OF THE EARTH.

THE experiment of M. Foucalt for demonstrating the rotation of the earth continues to be daily explained by Dr. Bachhoffner, at the Polytechnic Institution. Our Engraving represents the apparatus employed. Fixed to the floor is a circular table divided into 360 degrees, and of 16 feet diameter north and south, supposed to rotate with the earth; while a ball, 28 lbs. weight, depending from an iron girder by a wire 45 feet long, vibrates over its surface. The plane of vibration apparently never changes; but the rotation of the table is visible by the alteration of the degrees, and the removal of small portions of a sandbank in the centre of the table by the point of the ball in its transit. Dr. Bachhoffner professes to confirm the experiment after the manner employed at the Pantheon at Paris, and on the principles laid down by the French mathematicians, adhering strictly to the definitions of M. Foucalt, as given in the Paris journals. The experiment is now drawing rise to much controversy, and it is hard to conceive that there is not some fallacy lurking at the bottom of it. Many letters have been written on the subject to the morning journals; but the scientific details are too minute for successful annotation. Besides, each correspondent has his own mode of solution, and thus extrinsic questions of all sorts become involved with the main one. Supposing the principle of the experiment to be just, the demonstration is calculated to astonish the [illegible]

Dr. [illegible] position assumed in the experiment is, that a pendulum properly suspended and put in motion will vibrate always in the same absolute plane, notwithstanding the shifting of the point of suspension, whence it follows, that as the globe is a complete revolution will be made in 24 hours, and that at the equator the plane of vibration will never alter at all with respect to the meridian.

ROTATORY PARADOX.

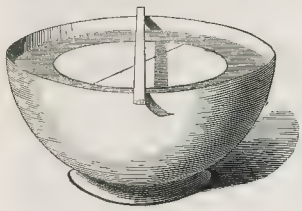
Exhibiting practically the present interesting question of the Rotation of the Earth, as rendered visible by the Pendulum.

THE following simple experiment illustrates completely the rotation of a table or plane placed on the surface of the earth:—Fill a small basin or cup nearly full with water, on which float a round piece of paper about the size of a crown piece, *the paper having a line ruled across it* to better indicate its movement. Then pass over the top of the cup a tea-spoon, or any other straight body, in such a direction that when the cup is taken up by the hand it shall point to the person holding it. Now, let the person holding the cup in one or both hands turn round, or revolve on his own axis. The result will be most striking, and the paper will evidently appear to turn round. What does all this signify?

The person holding the cup represents the axis of the earth. The cup itself represents a table or plane on the earth's surface; the spoon represents the meridian of the same plane; and the paper represents the pole of the earth [illegible], whilst the piece of paper represents the pendulum. But the experimenter will probably say, the piece of paper evidently revolves, whilst the cup or table, with the meridian, remains stationary, or at least is constantly pointing in the same direction. *The paper or pendulum does not revolve in the sense suppose*[illegible], if it turned on its centre, the line ruled across it would not point constantly in the same direction, but should alter at every point to every part of the room. Instead of taking the cup in the hand and turning round with it, let it be turned round on its axis as it stands on the table. The paper will remain stationary, and a meridian drawn across it will constantly point in one direction. In the latter case there is nothing paradoxical: the cup is actually turned round and the [illegible] remains stationary, whilst in the former the cup has [illegible] one in a large circle or orbit, and the other on its centre—the paper [illegible] of the orbital motion only—whilst, in the latter case, the cup

THE TURKISH STEAM-FRIGATE "FAIZA BAARI," AT SOUTHAMPTON.—(SEE PRECEDING PAGE.)

made to turn on its axis, the paper remains stationary; but if it is not the paper or pendulum, it must be the spoon and cup representing a table placed on the surface of the earth, which revolves. The *rationale* is simply this: The water in the cup being quite free, and almost without friction, remains stationary; consequently, the paper floating on its surface partakes of its immobility: the fact of the line across the paper being always in the same direction, or in planes parallel to each other, is evidence of this. What deviation takes place in the position of the paper arises from the friction between the water and the surface of the cup, which tends to give the water a circular motion with itself.



ROTATORY PARADOX.

The foregoing experiment is not intended *strictly* to show the motion of a table placed at latitudes intermediate between the pole and the equator, it simply exhibits how a body revolving with the earth, like a pendulum, without friction, will *apparently* have a circular motion, whilst, in fact, it is the earth's surface which revolves, not only round the axis of the earth, but also round the axis of its own plane; and it is this latter revolution, that gives the apparent circular motion to the pendulum.

TERCENTENARY OF THE FOUNDATION OF SHREWSBURY SCHOOL.

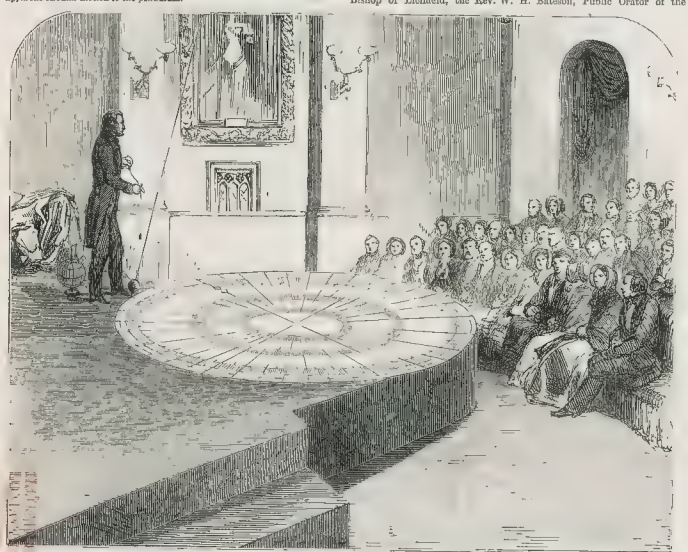
THE 300th anniversary of this Royal foundation was celebrated at Shrewsbury on Wednesday and Thursday, the 23rd and 24th ult., with great *éclat*. The festivities opened with a public breakfast at the Lion Hotel, attended by about 160 gentlemen. On the same day (Wednesday), at twelve o'clock, a performance of Haydn's grand oratorio of "The Creation" took place in the splendid Music-hall of the town. The principal vocalists were Miss Birch, Mr. Phillips, and Mr. Manvers; and the instrumental and choral parts were filled by the united forces of the Liverpool Philharmonic and Shrewsbury Choral Societies. Mr Hiles presiding at the organ, and Mr. W. Sudlow leading. The hall was nearly filled by a brilliant and attentive audience, to whom the masterly execution of Haydn's glorious work appeared to give the utmost satisfaction. On Wednesday evening the head master and Mrs. Kennedy received at the school nearly 500 guests; the principal rooms opened for the purpose being the upper school as a supper-room, and the library as the chief *salon*. Both these rooms were handsomely decorated, and the boys of the school, with some other gentlemen, appeared in fancy costume. The splendid plate belonging to the corporation was exhibited on the principal supper table, with other ornamental services. The company began to arrive at half-past eight, and did not quit the festive scene till break of day.

On Thursday morning a large procession attended the Lord Bishop of Lichfield (visitor) from the school to St. Mary's Church. At the head of the procession were the Mayor and Corporation of Shrewsbury, followed by the trustees of the School and those of the School livings. The Bishop was supported on his right by the head master (the Rev. Dr. Kennedy), and on his left by Chandos Wren Hoskyns, Esq., president of the festival. Behind him came the masters and members of the school, past and present, with many other gentlemen

Prayers were read by the Rev. W. J. Rowland, incumbent of St. Mary's, an octogenarian member of the School; after which, a learned, eloquent, and appropriate sermon was preached by the Visitor, from Acts xvii., 15.

At six o'clock the same day nearly four hundred gentlemen dined together in the Music Hall; Chandos Wren Hoskyns, Esq., in the chair. On his right were—Viscount Hill (Lord-Lieutenant of Salop), the Lord Bishop of Lichfield, the Rev. W. H. Bateson, Public Orator of the University of Cambridge; the Head Master, Dr. Kennedy; Robert Burton, Esq., &c. To the left of the chair were the Earl of Powis, Sir Andrew Corbet, Bart.; R. A. Slaney, Esq., M.P., &c. The various toasts and speeches were received with general and enthusiastic applause.

Here ended the proceedings of this memorable festival; but many gentlemen remained several days longer in the town, enjoying private hospitalities, and loth to quit the happy scenes of boyhood. The attendance of old members of the School exceeded 200; and many regretful excuses were received, especially from members of the legal profession, who were detained in London by the business of the Courts. The honorary secretary on this occasion was the Rev. Thomas Butler, Rector of Langar, son of the late Bishop Butler. The honorary local secretary, to whom great credit is due for the excellent arrangements, was W. Butler Lloyd, Esq., of the Whitehall, Shrewsbury, the bishop's grandson. It is hoped that a report of the whole proceedings will be published speedily, and a determination was expressed by the Shrewsbury men present (in whom they will no doubt be supported by all their schoolfellows) to commemorate this festival by the foundation of an exhibition or other prize, open to general competition.



"THE ROTATION OF THE EARTH MADE VISIBLE," AT THE POLYTECHNIC INSTITUTION, REGENT STREET. (SEE PRECEDING PAGE.)

TERCENTENARY OF SHREWSBURY SCHOOL.

Shrewsbury School was founded by Royal charter of Edward VI., in the year 1551, and has maintained its high reputation as a seat of learning to the present time, and it is stated in the *Shrewsbury Chronicle*, that, judging from the number of prizes obtained in the Universities by its pupils, Shrewsbury School, during the last half-century, has been the most efficient public school in England

We are compelled, by other demands upon our illustrated space, to limit our representation of the Shrewsbury Festival to a view of the principal entrance to the School.

RECEPTION OF THE QUEEN AT THE GREAT EXHIBITION BUILDING.

CALENDAR FOR THE WEEK.

SUNDAY, May 4.—2nd Sunday after Easter. Seringapatam taken, 1799.
MONDAY, 5.—Boussaparte died, 1821.
TUESDAY, 6.—St. John Evangelist
WEDNESDAY, 7.—Hammersmith Suspension Bridge commenced 1825.
THURSDAY, 8.—Half-Quarter Day. Sun rises 4h 21m ; sets, 7h. 34m.
FRIDAY, 9
SATURDAY, 10 —180th day of the year.

TIMES OF HIGH WATER AT LONDON BRIDGE,
FOR THE WEEK ENDING MAY 10, 1851.

BATTY.—First appearance of Signor CHIARINI, with his celebrated Troupe of Performers, on MONDAY, MAY 5th, and during the season, will perform in the new and splendid Equestrian Spectacle of ELEANOR the AMAZON, the queen of France and England. With new dresses, scenery, and decorations, and splendid Cavalcade. To be followed by a new and highly popular Scenes of the Circle. The whole to conclude with the laughable Farce of SHOOTING THE MOON; or, the Cove of Cork.

PUNCH'S PLAYHOUSE and STRAND THEATRE.—Lessee, Mr. W. R. Copeland.—On MONDAY, and during the week, LIVING in GLASS Principal characters by Messrs. Tilbury, Dacre, Norton, J. Howard, Adams, Coulthard, Cooke and Reader, Mesdames C. Horsman, C. Melville, Dibdin, and Wallis. The EXTRAVAGANZA Principal characters by Mesdames Marshall, M. Taylor, C. Horsman, and Dibdin. And a new and original Farce, entitled TAKING the CENSUS. Private Boxes, Stalls, 4s., Boxes, 1st Circle, 3s; 2nd Circle, 2s; Pit, 1s. Half-price to the Boxes only. Commence at Half-past Seven.

UNPRECEDENTED SUCCESS.—SALLE de Mons. ROBIN (late Pierat), opposite the Haymarket (Sole Lessee and Proprietor) every Evening at Eight o'Clock.—Mons and Madame ROBIN, from the Theatres Comique and Nouveau Comique, have met with such distinguished patronage, will continue their Soirées de SOIREES PARISIENNES and FANTASTIC PANTOMIME, with their unrivalled Company of Performers for a short period only, in consequence of the Royal Command for her Most Gracious Majesty the Queen, on the 25th of April.—Doors to open at Seven, and commence at Half-past Eight.—Private Boxes, 4 Morning Performance.—Tickets to be had, at Messrs. MITCHELL'S, BOND-STREET, ANDREWS', &c.

MRS. FANNY KEMBLE'S READINGS of SHAKSPEARE.—WILLIS'S ROOMS, King-street, St. James's-square.—Mr. BEALE has the honour to announce that Mrs FANNY KEMBLE will continue her Series of Morning Readings every Tuesday, Wednesday, and Friday, commencing on Wednesday next, May 7th, at Three o'clock precisely, as the strictest punctuality will be observed, it is particularly solicited that persons may take their seats before the commencement of the Reading.—Subscription for Three Readings, £1 1s. Single Readings, 10s. 6d. WEDNESDAY, May 7th, OTHELLO. FRIDAY, May 9th, TWELFTH NIGHT. Reserved Seats, 5s.; Family Tickets to admit Four, £1 1s. Unreserved Seats, 3s.—Tickets and Reserved Seats may be secured at Mr MITCHELL'S Library, 33, Old Bond-street.

JERUSALEM and the HOLY LAND.—New and magnificent Diorama, exhibiting the Sacred Localities of Scripture, the Routes of the memorable Journeys of the Saviour and his Apostles. Painted under the direction of Mr. W. BEVERLEY, from Sketches made on the spot by Mr. W. H. BARTLETT. The Diorama is open to the public DAILY, at the CHAMBER of HORRORS, St. George's Place, Hyde Park Corner. Morning at 1, afternoon at 3, evening at 8.—Admission, 1s.

BANVARD'S PANORAMA at BIRMINGHAM.—BANVARD'S Great Original PANORAMA of the MISSISSIPPI, MISSOURI, and OHIO RIVERS (the same that was exhibited by Royal Command before her Majesty the Queen, at Windsor Castle, in the Waterloo Chamber), is NOW EXHIBITING at the GUILD HALL, Birmingham, twice each day, at Two and Eight o'clock. Closes Wednesday, May 14th.

LAST DAYS of INDIA, AUSTRALIA, NEW ZEALAND, and BRAZILS. 308, Strand. 30 Unsized or 1d, Stalls, 1s (bottom of the). These beautiful Views, worth 5s, being given to each. To prevent disappointment, come early, at Ten, Three, Half-past Seven, and Half-past Eight. MY TICKET will continue to Answer the Question of the Company respecting Federation until his return to the colonies.

CATLIN'S AMERICAN INDIAN COLLECTION.—Six Hundred PAINTINGS in OIL, and several Groups of Indians before Canvas Cottages, &c., with NEW ADDITIONS of great interest, and his MODEL of NIAGARA, which has been remodelled and highly approved of by her Most Gracious Majesty and his Royal Highness Prince Albert.—RE-OPENED at No. 6, Waterloo-place, Pall-Mall.—Open Day and Evening. Admission, One Shilling; Children, Half-price.

HOLY LAND and JERUSALEM.—EGYPTIAN HALL, Piccadilly. The Original Comprehensive Diorama of the Sacred City of Jerusalem (removed from Pall-Mall), painted by HENRY WARREN and JAMES FAHEY, from Sketches made on the spot by Captain ROBERTS and Mr. BONOMI, and from Photographic Drawings by Mr. HOWLETT, is NOW OPEN DAILY, at Ten, Three, and Eight. Admission to Reserved Seats, 2s 6d; Area, 1s; Gallery, 1s; Stalls, 3s; Children half-price.

EGYPTIAN HALL, Piccadilly.—Now Open, an entire NEW PANORAMIC DIORAMA, illustrating Colonel FREMONT'S OVERLAND ROUTE to OREGON and CALIFORNIA, just completed from very late SKETCHES, showing the Golden Country and its Cities as they appeared last season. Open at 11 o'clock. Admission, 1s; Stalls 2s; reserved seats, 3s.

M. GOMPERTZ'S NEW and GIGANTIC PANORAMA, illustrating a VOYAGE through the ARCTIC REGIONS, will be EXHIBITED on and after MONDAY, MAY 12 at the Parthenon Assembly Room, St Martin's-lane. The intense and deep interest manifested for the fate of the brave and devoted Franklin, and his gallant crew, has induced M. GOMPERTZ (the successful exhibitor of various Panoramas for the last two years) to spare no pains or expense in the production of this Panorama, which, from graphic and historical knowledge the unwary and hardship encountered in a voyage from England to Melville Island, the most masterly print yet reached in human behalf, and the most picturesque regions. To complete the illusion, the Panorama will be continued on each side out to the close.

GALLERY of ILLUSTRATION, 14, Regent-street.—The DIORAMA of the OVERLAND ROUTE to INDIA having been entirely renovated, is now open daily at 3, 5, and 8 o'clock ; in addition to which will be represented on the scale the TAJ MEHAL (from drawings taken on the spot by Captain W Barnett). The Exterior of this extraordinary Building by Moonlight. The beautiful Gateway, called the Kalan Durwaza. Building with the gorgeous Interior, lighted by crystal and golden lamps, as in the days of the Great Mogals. The Tomb of the Emperor Akbar, at Secundra, near Agra. Open as usual, at two and seven o'clock. Admission (to each) 1s, 2s 6d, and 3s. Doors open half an hour before each representation.

TOURISTS' GALLERY.—EASTER HOLIDAY RECREATION.—Mr CHARLES MARSHALL'S GRAND TOUR of EUROPE, GREAT MOVING DIORAMA LARGE HALL, ELECTRIC-SQUARE (Linwood Gallery), presents to the spectator a magnificent walk in the most remarkable cities of Europe, the scenery between them, from Dover to Constantinople, Rome, Venice. Excursions through Switzerland over the Alps; Napoleon's Great Work; the Rhine; the Course of Canals of Lombardy, and the Scenery on the Rivers Po and Rhone. Performances by the Swiss Bell Ringers, accompanied by Lutherual and other Instruments. Hours of Exhibition at Three and Eight o'clock. Doors open half an hour before commencement. Admission, 1s.

EXTRAORDINARY ATTRACTION. — The INFANT PHENOMENON, Miss ADELAIDE KEMP, Pupil of the Right Trans orable, will give her FIRST EXHIBITIONS this Season at the MUSIC HALL, Store-street, Bedford-square, on WEDNESDAY, MAY 7th, and EVERY EVENING during the Week. In Sc. 3s, at Mr CHARLES OLLIVIER'S, 4, and 42 New Bond-street; also at Mr Campbell's, 23 New Bond-street; and at the Rooms. Doors open at Half-past Seven; commence at Eight. Morning Performance, Saturday, at Three o'clock. Admission, 1s; Schools, Half-price.

FOUCAULT'S RECENT EXPERIMENTS DEMONSTRATING THE ROTATION OF THE EARTH is shown Morning and Evening at the ROYAL POLYTECHNIC INSTITUTION.—IMPORTANT DEPOSITION by the GAS-LIGHTERS ASSOCIATION, of illustrating the economical application of GAS for COOKING and various other purposes.—Last day but two of Professor Charbonnel, Esq. on the HISTORY of the HARP from its Origin to the Springtime, with Vocal Illustrations by Miss Blanche Younge, R.A. of Music, and it illustrated by Drawings of the Harps of various Periods.—Lectures by J. H. Pepper, Esq. on CHEMISTRY, with brilliant Experiments; and on NATURAL PHILOSOPHY by Doctor Bachhoffner. Two splendid Series of DISSOLVING VIEWS one illustrating the HOLY LAND, painted by Chas Smith, Esq, &c.—Open every Morning and Evening.—Admission, 1s; Schools, Half-price.

THE GREAT INDUSTRIAL EXHIBITION OF 1851.

ON SATURDAY NEXT, MAY 10TH, 1851,
WILL BE PUBLISHED
A DOUBLE NUMBER
OF
THE ILLUSTRATED LONDON NEWS;
CONTAINING
PROFUSE ILLUSTRATIONS
OF
THE GRAND OPENING OF THE EXHIBITION,
On the 1st of MAY last.

On SATURDAY, MAY 17th, ANOTHER DOUBLE NUMBER will be issued on
THE QUEEN'S BIRTHDAY,
SATURDAY, MAY 24,
THE LARGE PRINT
WILL BE ISSUED,
GRATIS, WITH A DOUBLE NUMBER.

The FRENCH and GERMAN NUMBERS will contain matter almost exclusively devoted to the Exhibition : Single Numbers, price Sixpence each, and may be had separately. The immense demand which is certain to arise will require early orders to be given to all Booksellers and Newsmen throughout the British Empire, France, Germany, &c.

A LARGE VIEW
OF
THE INTERIOR OF THE EXHIBITION,

Taken from the Transept, is in preparation, and will be issued as early as the decorations and other arrangements in the Exhibition are completed. No expense will be spared to render these Illustrations faithful and beautiful Pictures.

Several LARGE SHEETS of ENGRAVINGS are also in Preparation, GRATIS!

GUILD of LITERATURE and ART ; to encourage Life Assurance and other Provident habits among Authors and Artists: to render such assistance to both as shall never compromise their independence and to found a New Institution where honourable rest from arduous labour shall still be associated with the discharge of congenial duties.

To bring this project into general notice, and to form the commencement of the necessary fund, Sir Edward Bulwer Lytton has written a new and original drama in verse and presented to his fellow-labourers in the cause a New Comedy in Five Acts. I will be produced, under the management of Mr Charles Dickens, in a theatre constructed for the purpose ; and will be performed by Mr Robert Bell, Mr Wilkie Collins, Mr Douglas Costello, Mr Peter Cunningham, Mr Augustus Dasent, Mr Augustus Egg, Mr A. W. Fonblanque, Mr Frank Stone, Mr Frederick Jerrold, Mr Charles Knight, Mr Mark Lemon, Mr J. Westland Marston Mr Frank Stone, Mr John Tenniel, Mr J. W Topham, and others. Portions of the scenery have been presented by Mr Absolon, Mr Leverls Hagley, Mr Roberts, and Mr Telbin.

The first representation of the Comedy, which is entitled

NOT SO BAD AS WE SEEM ; or, MANY SIDES to a CHARACTER,

will take place at Devonshire House, on FRIDAY, 16th MAY, before her Majesty the QUEEN and her Royal Highness Prince ALBERT.

Ladies and Gentlemen wishing tickets for the performance at Devonshire House—price Five Pounds each, this sum being regarded as a contribution to the enterprise—will, on a WRITTEN APPLICATION TO HIS GRACE THE DUKE OF DEVONSHIRE, AT DEVONSHIRE HOUSE, receive a voucher for the same, exchangeable at Mr Mitchell's Library, 33, Old Bond-street.

N.B. Prospectuses of the Scheme can be had on application at the office of the Guild, Well-[illegible] Chambers, Warwick-bridge; of Mr Mitchell 33, Old Bond-street; of Mr [illegible] Piccadilly; of Mr [illegible] Regent-street; of Mr [illegible] Pall-Mall; and of Messrs. J. ELLA' [illegible] Mr WILLIAM HOWITT.

MR. ALBERT SMITH'S ENTERTAINMENT, of the OVERLAND MAIL, with Mr. W. BEVERLEY'S ILLUSTRATIONS will be given on MONDAY, MAY 5th, at 8, BERKELEY-HALL, 65, St. Chester-, 7th, WEDNESDAY ; 8th, [illegible] Stalls, 3s.

MR. WILLY'S CONCERT, at ST. MARTIN'S HALL, on MONDAY EVENING, MAY 5, Vocal and Instrumental Performers will be Miss Nina Grisbach, Mr Frank Bodda, Mr Lindsay Sloper, and Mr Willy. Commence at Eight o'Clock. Tickets—Stalls, Seventh Seat, 5s ; Fourth Seat, 3s ; Area, 2s ; Gallery Seats, 2s.—To be had of Mr Willy, 23, Trigon-terrace, Kensington ; and at the principal Music Shops.

MR. JOHN PARRY'S ENTERTAINMENT, MUSIC-HALL, STORE-STREET, BEDFORD-SQUARE.—Mr JOHN PARRY will give his NOTES, VOCAL and INSTRUMENTAL, at the above Hall, on MONDAY EVENING, MAY 12, commencing at Half-past Eight. Stalls, 5s ; Unreserved Seats, 3s. Stalls to be had only of Messrs. C OLLIVIER, 41 and 42, New Bond street, and Messrs. H. OLLIVIER, 19, Old Bond-street. Private Boxes may be taken at the Hall.

MR. CALDWELL'S NEXT BALL will take place on TUESDAY, MAY 6, (Queen Dowager's last Ball this season), from Eight to Twelve. Admission, 5s ; per quarter, £1 1s. Splendid new Ball-Room, with all the arrangements complete. Musical director, Mr. J Bradley, of the Royal Italian Opera, Covent-Garden. Caldwell guarantees to keep up the spirit of gentlemen, totally unacquainted with the routine of the Ball-Room, to other with grace and freedom, and to take part in the fashionable waltz movement, in six private lessons, for £1 1s.—Dean-street, Soho.

MUSICAL UNION.—EXTRA CONCERTS. TUESDAY, MAY 6th, Half-past Three.—Quartet in G, Mozart. Solo Violoncello, Herr Merker (from the Court of Munich). Trio in D minor, Mendelssohn. Solo Violin, Herr Laub (from the Conservatoire at Prague). Morceaux pour le Piano, Herr Halle.—Members, on giving the numbers of their tickets at the door, admitted at seven shillings each : Strangers can procure Admission, half a guinea each, at CHAPPELL and Co.'s, where a quarter of a year can secure, for two guineas, a sofa, with reserved places. The Circle, as usual, is kept for the families of the Committee.

NEW BEETHOVEN ROOMS, 27, Queen Ann-street, Cavendish-square. Herr MOLIQUE respectfully announces that his FIRST CONCERT (CHAMBER MUSIC) being the first of a series of three, will take place on WEDNESDAY EVENING, May the 7th, at the above Rooms, on which occasion he will be assisted by the following eminent artists.—Mlle Johannsen (the celebrated soprano from Denmark) Mlle Molique, Herr Seydel, Herr Menter (solo violoncellist at the Court in Munich), Signor Piatti, Mr Mellon and Herr Schmidt. To commence at Half-past Eight o'Clock. The Second Concert will take place on Wednesday, May 21st. Tickets to admit a Lady and Gentleman to the Series, One Guinea. Single Tickets (to admit to any one Concert), Half-a-Guinea each to be had of Messrs CRAMER and BEALE, Regent-street; Ewer and Co., Aggas-street, and of Herr Moliqué, 9, Houghton-place, Ampthill-square.

NOTICE TO EXHIBITORS.—We shall be glad to receive from Exhibitors, during the whole continuance of the Great National Exhibition, any Drawings or Sketches of articles of any or every description which may be admitted into the Crystal Palace, in order that they may be engraved in this Journal, if from beauty, their novelty, or their scientific or industrial importance shall warrant their publication in our Illustrated Pages. We beg to intimate, at the same time, that no charge is made by this Journal for the admission of, or any explanation attendant upon these Engravings.

OPENING OF THE GREAT EXHIBITION.

At length the great event to which the whole civilised world has looked for the last eighteen months looking forward with mingled interest and curiosity—the opening of the Great Congress of Industry—has been accomplished, and with a pomp of circumstance and a solemnity of observance commensurate with the important social interests which, in its future results, it so deeply involves

On Thursday, the 1st of May, the day fixed upon from the very outset for the purpose, the Crystal Palace of Industry in Hyde Park was inaugurated by the Queen, accompanied by Prince Albert, the Prince of Wales, the Princess Royal, and many other branches of the Royal family, besides several foreign Princes, who had come over expressly to assist in the imposing ceremony. Further, in order to give increased importance to the occasion, to stamp it with the solemn adhesion of her Majesty's political advisers, the officers of State, both of the Government and of the household, attended upon her Majesty, in magnificent and glittering cortège.

Many an anxious doubt, many a weak misgiving which had at times been suffered to encroach upon the minds of the most zealous promoters and friends of this great undertaking, are now happily dispelled : the fondest aspirations of those who have worked unceasingly in bringing it to bear have been realized, and more than realized ; for confident we are that the most glowing anticipations of successful and splendid result which the most enthusiastic labourer in this great industrial field could have indulged in, have been surpassed by the glorious and gratifying reality of Thursday's graceful pageant.

In the first place, the [illegible] of the Building [illegible] the dismal faint-hearted foreboding of "impossibility" which the wild confusion in the interior of the [illegible] almost have excused, if not justified—spite of unfriendly elements, and of some shortcomings consequent upon the Building was finished and first shed forth with the world's wares in time. At two o'clock on Wednesday, according to notice duly given, the interior of the Crystal Palace was cleared of exhibitors and their assistants, and of the favoured foreigners who had previously been admitted to the Building for the purpose of a busy hive. Two companies of the Grenadier Guards, mustered, [illegible] the police, quickly and quietly swept the avenue of all persons not immediately connected with the arrangements of the Building, and then the preparations for the "opening day" were complete. All being previously partially commenced, were set about with an energy and [illegible] that [illegible] What the [illegible] and their effect, will be duly described, when [illegible] proceedings attending the Royal [illegible]

Never dawned a brighter morn than on this ever memorable "May day," the sky clear and blue, the sun coming forth in undimmed splendour, the breeze gentle and balmy, such as the poet would have wished should be. London, with her countless thousands, was early afoot ; by six o'clock, the hour fixed for opening the park-gates, streams of carriages, all loaded with gayly attired company came pouring in from all parts of the metropolis and the surrounding districts, while whole masses of pedestrians marched in ragged pomp towards the scene of action. All St. James's Park, all the way to Constitution Hill, all the way along Piccadilly and Knightsbridge, and Rotten row, was one sea of heads, whose owners were all intent upon one object—to catch a glimpse of her Majesty and splendid suite on her way to the Palace of Industry. The line of route was kept by the Horse Guards and the police, who, we are glad to add, appeared to have experienced little difficulty in preserving order, which was interfered as little as possible with the pleasurable enjoyment and [illegible] of seeing of the multitude, and [illegible] an appearance with the one desire to signalize this truly popular ceremony with generous and kindly feeling, and a respect for the rights and duties of one another. One fact alone will serve to exemplify and justify this statement, which we make with unfeigned satisfaction, namely, that at the time when the procession was awaited, amidst the usual excitement attendant upon such events, the weaker sex were allowed to remain in front of "the line," the men, who behaved like men, generally conceding to them the best place.

The road between Apsley House and Hyde Park Corner, and thence were those in Grosvenor-place and at Hyde Park Corner ; and trees were crowded with well-dressed persons, chiefly ladies, even to the very topmost branches. Long ere the procession was fully [illegible] after this fashion, so was also that of the park-keeper's lodge ; and at every point, when the procession emerged from the triumphal arch at the top of Constitution-hill, the cheering, which had been enthusiastic all along the line, rose into a burst which almost rent the air ; whilst hats and handkerchiefs were waved from every hand.

The windows of the new front of Buckingham Palace were also filled with elegantly attired [illegible] and the [illegible] of the balcony being occupied by the younger Princes and Princesses, attended by several ladies.

Pre cisely at eleven o'clock the Horse Guards commenced sideaning the path for the procession ; and at half-past eleven, the head of the regiment playing "God save the Queen," the Royal *cortège* set forth, in presence of a vast multitude, who cheered with unmistakeable heartiness a greeting which her Majesty and her Royal consort acknowledged by repeatedly bowing, smiling all the while with undisguised satisfaction.

The Royal procession consisted of eight carriages, the coachmen and footmen all in their state liveries. It was, however, in its order, in many respects different from the ordinary processions with which we are all familiar on the occasions of opening or proroguing a session of Parliament. We saw none of the Gentlemen Ushers, none of the Exons and Yeomen of the Guard, none of the trumpeters, but we did not hear their trumpets. And, as the most important distinction between this and that of her Majesty were drawn by a pair of horses each [illegible] carriage was not the large uncomfortable-looking [illegible] "dress carriage ;" sufficiently open, however, to enable most of the spectators to see him to advantage. The occupants of the other carriages were the Lords and Ladies in Waiting, the Lords of the Household, the Master of the [illegible] and the [illegible] of the Prussian.

The carriages were driven at a rather swift trot along the route, and thus curiously was not so perfectly [illegible] as at other times, when Royalty in state presents itself in public.

At a quarter to twelve o'clock the Royal procession reached the northern entrance of the Crystal Palace, the band stationed there striking up "God save the Queen," whilst a salute was fired from a battery prepared on the north or further side of the Serpentine, the monotonous roar of which, however, was drowned in the more heart-inspiring peals of thousands of Queen Victoria's peaceful and peace-loving subjects.

At the moment her Majesty entered the building of the Exhibition

the Royal standard was displayed from a staff erected at the top of the extreme end of the northern transept, which floated proudly above the hundred and one flags, of all nations, with which the exterior of the Building had from an early hour in the morning been dressed

Before closing our account of the out-of-doors proceedings of the day, we should state that at eight o'clock most of the metropolitan churches sent forth a merry peal: the union-jack being at the same time hoisted from their steeples.

Throughout the day the parks and the lines of thoroughfare presented a scene of indescribable animation, crowds of people running hither and thither; carriages, cabs, carts, and omnibuses crammed inside and out, forming a difficult passage through the dense uncounted and uncountable throng. In short, the opening of the "World's Great Fair" appeared to be kept by all, with one consent, as a national holiday—all the shops in Knightsbridge, and a great proportion of those in Piccadilly, and other neighbouring streets, being closed.

The hour fixed for the opening of the various doors to the holders of season tickets was nine o'clock; but long before that time every possible point of access to the Building was thronged with well-dressed persons—a great proportion of them ladies—eagerly waiting for admission. Considering the immense number who eventually were admitted—some twenty-five thousand or thirty thousand in all—the crowding was conducted with wonderful order and regularity, and with much less personal inconvenience than generally attends the congregating of large assemblies. The first *coup d'œil* of the Building, on entering its doors, was grand and gorgeous in the extreme: the vast dimensions of the Building; the breadth of light, partially subdued and agreeably mellowed in the nave by the calico coverings placed over the roof, whilst the arched transept soared boldly into the clear arch of heaven, count'ne. admirable, and distributing the full effulgence of the noonday sun; the bright and striking colours and forms of the several articles in rich manufactured goods, works in sculpture, and other objects displayed by the exhibitors, dissimilar and almost incongruous in their variety, were blent into an harmonious picture of immense grandeur, by the attendant circumstances of space and light to which we have just alluded; and the busy hum, and eager and excited movements of the assembled thousands, infused the breath of life into a picture, which, at the period of the crowning incident of the day, became truly sublime

The centre area of the intersection of the naves and transept was that set apart for the reception of Her Majesty and Her Court, and the other distinguished persons who were to take part in the interesting ceremonial of the day. At the northern portion of this area a dais was erected, covered with a splendid carpet, worked by 150 ladies for Her Majesty, and graciously accepted by her; and upon this was placed a magnificent Chair of State, covered with a velvet robe, or mantle, of crimson and gold. High over head was suspended an octagon canopy, trimmed with blue satin and draperies of blue and white. Before the chair rose the beautiful glass fountain, glittering as a precious stone in the morning beams. Behind rose the stems of the Oriental plants and the stately elm, one of the most agreeable and refreshing sights of the whole view. Along the galleries of the northern avenue, the department for British goods, a succession of the most beautiful carpetry was suspended like banneréts, only more splendid, in a knightly hall of old. Along the foreign avenue, the Austrian stood revealed in its best; and the vista along the whole line was perhaps the most splendid and extensive, as a piece of art and human contrivance, ever presented to human view

As 11 o'clock approached, the hour at which the circumstance of the public term.inated, the inward tide became very heavy, and some little struggling at one moment was given way to, but only for a moment. The immense mass of spectators assembled about the places allotted for them, having seats in front, the gentlemen standing behind them, and in the principal avenues and in the galleries.

The Duke of Wellington was early in attendance, arriving with the Marchioness of Douro, about ten o'clock; and it is known that there was his Grace's birthday, perhaps contributed to increase in volume the warmth the hearty cheering with which he was greeted as he passed to his place near the central area. Shortly afterwards, the members of the *corps diplomatique* and the foreign commissioners began to drop in, and after them the members of the Cabinet. A faint cheer being attempted for Lord John Russell, and another for Lord Palmerston; the latter, with true statesmanlike policy, thinking to ensure the harmony of his reception among the distinguished representatives of the world, by walking up the transept under the portly wing of Labloche, who looked as good-humoured as ever. Nearly the whole of the area in the north transept was occupied by the Mayor and Aldermen, with various civic authorities, all decked forth in their robes of office.

By this time the honour ble corps of Gentlemen-at-Arms, in their gay uniforms, had taken up the position at the west of the dais, and the time-honoured body of Beefeaters were ranged along the outer line of procession. The trumpeters and heralds stood ready to proclaim the arrival of the Queen of these isles, and the heralds to marshal the order of her coming. Sir George Nayler, Garter, stood, *baton* in hand, perched up in a small rostrum, in front of the north transept organ gallery, ready to beat time to "God save the Queen" for the first and, with time in his life Monarch. The Commissioners and his subordinate officers glided about, looking very well satisfied with all their arrangements: and Mr Commissioner Mayne was here, there, and everywhere, smiling so good-humouredly as for the moment to rob even police law of its terrors. Everybody was on the tiptoe of expectation for the arrival of the Royal personages who were to grace the day with their attendance.

At half-past eleven the Duke of Cambridge arrived at the north door, but did not enter the area, awaiting the arrival of the Duchess of Kent, who, accompanied by the Princess Mary of Cambridge, followed shortly after him. Their Royal Highnesses now entered the retiring room, which had been prepared for Her Majesty's reception, an elegant little apartment, covered with tapestry, and lined with silk, pale blue and white fluted, with a crown overhead in the centre. The Commissioners and foreign ministers now made their way down to the entrance-hall, ready to pay their respects to her Majesty on her arrival. Exactly at ten minutes to twelve, the Queen and her Royal Consort, accompanied by the Prince of Wales and the Princess Royal, alighted from their carriage; and after requiring to the retiring-room, proceeded to enter the magnificent edifice of the profession of which his Royal Highness had been the chief promoter. The Queen wore a dress of pink satin, brocaded in gold; Prince Albert, a Field-Marshal's uniform; the Prince of Wales, a Highland dress; and the Princess Royal, a white lace dress, with a wreath of flowers round her head. The Royal party, especially the young Prince and Princess, appeared much struck and delighted with the stately grandeur of the scene which burst upon their view. A tremendous burst of cheering now renewed and prolonged from all parts of the Building, greeted the announcement of the near approach of the Queen

At twelve o'clock a flourish of trumpets proclaimed the advent of the Queen, signified outside by the elevation of the Royal standard at the northern summit of the roof of the transept. As her Majesty and Prince Albert entered under the crystal arched roof, through the handsome bronzed and gilded northern gates, erected by the Coalbrookdale Company, through the adjacent spaces decorated by gorgeous exotics, sparkling fountains, and chaste statuary, and as the flourish of trumpet and clarion proclaimed this their state entry, a most deafening burst of applause came from the concourse of loyal subjects around her, who rose to welcome the Royal pair. The sight was overwhelmingly grand. When her Majesty had taken her seat in the chair of state—to which she was conducted through the Royal Commissioners, Foreign Ministers, and members of the Cabinet, who, in their bright Court dresses and splendid uniforms, were ranged round her chair—the national anthem, "God save the Queen," was performed by a choir of nearly a thousand voices, accompanied on the organ (built by Messrs Gray and Davison) by Mr. Goss and Dr Hopkins.

The Archbishop of Canterbury then read the following prayer, or benediction:—

PRAYER.

"Almighty and everlasting God, governor of all things, without whom nothing is strong, nothing holy, accept, we beseech Thee, the sacrifice of prayer and thanksgiving, receive our prayers which we offer up to Thee this day, in behalf of this kingdom and land. We acknowledge, O Lord, that Thou hast multiplied the blessings which Thou mightest most justly have withheld: and we acknowledge that it is not because of the works of righteousness which we have done, but of Thy great mercy, that we are permitted to come before Thee this day with the voice of thanksgiving. Instead of humbling us for our offences, Thou hast given us just cause to praise Thee for Thine abundant goodness. And now, O Lord, we beseech Thee to bless the work which Thou hast enabled us to begin, and to regard with Thy favour our present purpose of uniting together in the bond of peace and concord the different nations of the earth for the first time. O Lord, and not of the preparation of man, whereas that violence is not heard in our land, nor contentions, nor violence within our borders. It is of Thee, O Lord, that nation does not lift up sword against nation, nor learn war any more. It is of Thee that peace is within our walls, plentousness within our palaces, and men go forth in safety, and that knowledge is increased throughout the world. Therefore, O Lord, not unto us, but unto Thy name be all praise. Whilst we survey the works of art and industry which surround us, let not our hearts be lifted up that we forget the Lord our God, or that it is not of our own power, or of the might of our hands that we have gotten us this wealth. Teach us to remember that this store which we have prepared is all Thine own, in Thine hands it is to make great and give strength and honour. We thank Thee, we praise Thee, we entreat Thee to overrule this assembly of many nations, that it may tend to the advancement of Thy glory, to the increase of our prosperity, and to the promotion of peace and goodwill among the different races of mankind. Let the many mercies we have received dispose our hearts to serve Thee more and more, who art the author and giver of all good things. Grant us one more earthly boon, that Thou least given us so richly to enjoy, that they may not withdraw our affections from those heavenly things which Thou hast prepared for them that love Thee through the merits and mediation of Thy son Jesus Christ, to whom, with Thee and the Holy Ghost, be all honour and glory, world without end. Amen."

The "Hallelujah Chorus" then followed, by the choir, under the direction of Sir H. R. Bishop, accompanied on the organ by Drs. Elvey and Wylde.

His Royal Highness Prince Albert then descended from the dais, and, taking his place with the other Commissioners, read the following address

"May it please your Majesty—We, the Commissioners appointed by your Majesty's Royal warrant of the 3rd of January 1850, for the promotion of the Exhibition of the Works of Industry of all Nations, and subsequently incorporated by your Majesty's Royal charter of the 10th of August in the same year, humbly beg leave, on this occasion of your Majesty's auspicious visit at the opening of the Exhibition, to lay before you a brief statement of our proceedings to the present time.

"By virtue of the authority graciously committed to us by your Majesty, we have made diligent inquiry into the matters which your Majesty was pleased to refer to us—namely, into the best mode of introducing the productions of your Majesty's colonies and of foreign countries into this kingdom—the selection of the most desirable site for the Exhibition, the general conduct of the undertaking, and the proper method of determining the nature of the prizes, and of securing the most impartial distribution of them.

"In the prosecution of these inquiries, and in the discharge of the duties assigned to us by your Majesty's Royal charter of incorporation, we have held constant meetings of our whole body, and have frequently referred numerous questions connected with a great variety of subjects to committees composed partly of our own members, and partly of individuals distinguished in the several departments of science and arts, who kindly responded to our applications for their assistance at a great sacrifice of their valuable time.

"Among the earliest questions brought before us, was the important one as to the terms upon which articles offered or exhibited should be admitted into the Building. We considered that it was a main characteristic of the national undertaking in which we were engaged, that it should depend wholly on the voluntary contributions of the people of this country for its success; and we, therefore, decided, without hesitation, that no charge whatever should be made for the admission of such goods. We considered, also, that the office of selecting the articles to be sent would be entrusted, in the first instance, to local committees, to be established in every foreign country, and in various districts of your Majesty's dominions, a general power of control being reserved to the commission.

"We have now the gratification of stating that our anticipations of support in this country have in all respects been fully realised. Your Majesty's most generous donation to the funds of the Exhibition was the signal for voluntary contributions from all, even the humblest, classes of your subjects; and the funds which have thus been placed at our disposal amount to about £50,000. The local committees, from which we have uniformly received the most zealous co-operation, were formed in all parts of the United Kingdom, in many of your Majesty's colonies, and in the countries of the Honourable East India Company. The most energetic support has also been received from the Governments of nearly all the countries in the world, in most of which commissions have been appointed for the special purpose of promoting the objects of the Exhibition, by securing a space therein, in your Majesty's Royal warrant, as an Exhibition of the Works of Industry of all Nations.

"We have also to acknowledge the great readiness with which persons of all classes have come forward as exhibitors; and here again it becomes our duty to return our humble thanks to your Majesty, for the most gracious manner in which your Majesty has condescended to associate yourself with your subjects, by yourself contributing some valuable and interesting articles to the Exhibition.

"The number of exhibitors whose productions it has been found possible to accommodate is about 5,000, of whom nearly one-half are British. The remainder represent the productions of more than forty foreign countries, comprising almost the whole of the civilised nations of the globe. In arranging the space to be allotted to each, we have taken into consideration both the nature of its productions and the facilities of access to the country afforded by its geographical position. Your Majesty will find the productions of your Majesty's dominions arranged in the western portion of the Building, and those of foreign countries in the eastern. The British and colonial portion of the latter is composed of 1. Raw Materials. 2 Machinery; 3. Manufactures; and 4. Sculpture and the Fine Arts. A further division has been made according to the geographical position of the countries represented, the articles within the warmer climates being placed near the centre of the Building, and the colder countries at the extremities.

"Your Majesty having been graciously pleased to grant a site in this, your Royal park, for the purposes of the Exhibition, the first column of the structure, which, by your Majesty's gracious presence, was set up on the 26th of September last. Within the short period, therefore, of seven months, owing to the energy of the contractors, and the active industry of the workmen employed by them, a building has been erected, entirely constructed of iron and glass, covering a space of more than 18 acres, measuring 1851 feet in length, and 456 feet in extreme breadth, and capable of containing 40,000 visitors, and affording a frontage for the exhibition of goods to the extent of more than ten miles. For the original suggestion of the principle of this structure, the Commissioners are indebted to Mr John Paxton, to whom they feel their acknowledgments to be justly due for this interesting mark of their understanding.

"With regard to the distribution of rewards to deserving exhibitors, we have decided that they should be given in the form of medals, not with reference to merely relative excellence, but as a means for exciting in every exhibitor the exertion it may present itself. The selection of the persons to be rewarded has been entrusted to juries composed equally of British subjects and of foreigners, the former having been selected by the commission from the recommendations made by the local committees, and the latter by the Governments of the foreign nations, the produce sent from which is exhibited. The names of these juries, comprising as they do many of European celebrity, afford the best guarantee of the impartiality with which the rewards will be assigned.

"It affords us much gratification, that in undertaking the magnitude of this undertaking, and the great distances from which many of the articles now exhibited have had to be collected, the day on which your Majesty has been graciously pleased to be present at the inauguration of the Exhibition is the same day that was originally named for its opening; thus affording a proof of what may, under God's blessing, be accomplished by good-will and cordial co-operation amongst nations, aided by the means which modern science has placed at our command.

"Having thus briefly laid before your Majesty the results of our labours, it now only remains for us to convey to your Majesty our dutiful and loyal acknowledgements of the support and encouragement which we have derived throughout this extensive and arduous task from the gracious favour and countenance of your Majesty. It is our heartfelt prayer that this undertaking, which has for its end the promotion of all branches of human industry, and the strengthening of the bonds of peace and friendship between all the nations of the earth, may, by the blessing of Divine Providence, conduce to the welfare of your Majesty's people, and be long remembered among the brightest circumstances of Majesty's peaceful and happy reign."

To which her Majesty read the following gracious reply, which was put into her hands by Sir G. Grey:—

"I receive with the greatest satisfaction the address which you have presented to me on the opening of this Exhibition.

"I have observed, with a warm and increasing interest, the progress of your proceedings in the execution of the duties entrusted to you by the Royal Commission; and it affords me sincere gratification to witness the successful result of your judicious and unremitting exertions in the splended spectacle by which I am this day surrounded.

"I cordially concur with you in the prayer that, by God's blessing, this undertaking may conduce to the welfare of my people, and to the common interests of the human race, by encouraging the arts of peace and industry, strengthening the bonds of union among the nations of the earth, and promoting a friendly and honourable rivalry in the useful exercise of those faculties which have been conferred by a beneficent Providence for the good and the happiness of mankind."

The Royal procession was then formed in the following order:—

Heralds.
Architect, Joseph Paxton, Esq. Contractor, Mr. Fox
Superintendents of the Works C. H. Wild, Esq.; Owen Jones, Esq
Financial Officer, R. H. Carpenter, Esq
Members of the Building Committee. I. K. Brunel, Esq.; Charles Cockerell, Esq.; Professor Donaldson.
Members of the Finance Committee—Samuel Peto, Esq.; Sir Alexander Spearman, Bart.
Treasurers—Baron Lionel de Rothschild, William Cotton, Esq.; Sir John William Lubbock, Bart.; Arthur Kett Barclay, Esq
Secretary to the Executive Committee, Mathew Digby Wyatt, Esq
Executive Commissioners—George Drew, Esq.; Charles Wentworth Dilke, Esq., Francis Fuller, Esq.; Henry Cole, Esq.; Lieut.-Colonel William Reid, R.E., Engineers, C.B

FOREIGN ACTING COMMISSIONERS.

Austria—M. C. Buschek, Chevalier de Bang.	Russia—M. Gabriel Kamensky.
Bavaria—Professor Dr. Schafhault, M. Theobald Boehm, M. Haindl.	Sardinia Chevalier Lucciss.
Belgium—M. Charles Caylits, M. de Brouckere.	Saxony—Dr Seyffarth, LL.D., M. Gustavus Dörrlig.
Denmark—Regnar Westenholz.	Spain—M. Manuel de Yeas, M. Ramon de la Sagra, R. Ramon de Echevarria
France—M. Salladrouze de Lamornais.	Sweden and Norway M. Chas Totten.
Grand Duchy of Hesse—M. Rösler.	Switzerland—Dr. Bolley, M. Escher.
Greece—M. Kalli.	Tunis—Sidnor Hamda Elmkadden, M.
Hanse Towns—M. Pigheim.	Sanhilana (interpreter and secretary)
Holland—M. Goothens, M. J. P. Dudok van Hal.	Turkey—M Edward Zoreb.
Northern Germany—M. Noback.	Tuscany—Dr. Curridi
Portugal—M. F. J. Vanseller, M. Conde Valdez	United States—Mr. Edward Riddle, Mr. R. S. Dodge (Secretary)
Prussia—Baron Hebeler.	Wurtemburg—Mr. C. Brand
Rome—Signor Carlo Tribbi.	Zollverein—M Barrat's Sohn

Secretaries to the Royal Commission.—Edgar A. Bowring, Esq.; Sir Stafford H. Northcote, Bart.; J. Scott Russell, Esq
Special Commissioners—Dr. Lyon Playfair; Lieut.-Colonel Lloyd

HER MAJESTY'S COMMISSIONERS

Mr. Alderman Thompson.	John Gott, Esq.
R. Stephenson, Esq.	Wm Cubitt, Esq.
Wm Hopkins, Esq.	Thomas Bazley, Esq.
T. F. Gibson, Esq.	Thomas Baring, Esq.
Richard Cobden, Esq.	Sir Charles Lyell.
Charles Barry, Esq.	Sir F. Westmacott
John Shephard, Esq.	Right Hon H Labouchere
Philip Pusey, Esq.	Lord Overstone.
	Her Majesty's Master of the Ceremonies.
	Foreign Ambassadors and Ministers.
F. M. the Duke of Wellington, K.G., Commander-in-Chief	Earl Granville.
	Earl of Rosse
	Sir C. L. Eastlake
	Rt Hon. W. E. Gladstone.
	Lord John Russell
	Lord Stanley
	Earl of Ellesmere.
	Duke of Buccleugh.
F. M. the Marquis of Anglesey, K.G., Master-General of the Ordnance.	

Her Majesty's Ministers.
Bishop of London.
His Grace the Archbishop of Canterbury.
White Wands; viz., Comptroller of the Household,
Treasurer of the Household
Vice-Chamberlain.
Lord Steward. Lord Chamberlain.
Garter Principal King of Arms
His Royal Highness Prince Albert, leading her Royal Highness the Princess Royal.
The Queen, leading his Royal Highness the Prince of Wales
His Royal Highness the Prince of Prussia.
Her Royal Highness the Duchess of Kent.
His Royal Highness Prince Henry of the Netherlands
Her Royal Highness the Princess of Prussia
His Royal Highness Prince Frederick William of Prussia.
Her Royal Highness Princess Mary of Cambridge.
His Serene Highness Prince Edward of Saxe Weimar.
His Royal Highness the Duke of Cambridge.
Mistress of the Robes
Lady of the Bedchamber, Marchioness of Douro.
Lady of the Bedchamber in Waiting.
Maid of Honour in Waiting. Maid of Honour in Waiting.
Bedchamber Woman in Waiting. Lady Superintendent—Lady Caroline Barrington
Foreign Ladies, and Lady in attendance on H. R. H. the Duchess of Kent.
Gold Stick in Waiting. Master of the Horse.
Master of the Robes. Groom of the Stole to H. R. H. Prince Albert
Captain of the Yeoman of the Guard. Captain of the Gentlemen at Arms
Master of the Buckhounds.
Lord of the Bedchamber to H.R.H. Prince Albert in Waiting. Lord in Waiting to the Queen.
Groom of the Bedchamber to H.R.H. Prince Albert in Waiting. Groom in Waiting to the Queen.
Clerk Marshal.
Equerry to H R H. Prince Albert in Waiting. Equerry to the Queen in Waiting.
Gentleman Usher. Gentleman Usher to the Queen. Gentleman Usher.
Sword of State.
Silver Stick in Waiting. Colonel Commanding Officer in Brigade Waiting.
The Gentlemen in attendance upon their Royal Highnesses the Duchess of Kent, the Duke of Cambridge, and the Prince and Princess of Prussia
Heralds.

The Royal procession went up to the west end of the nave by its north side, returning to the east end of the nave by its south side, including the south end of the transept, and coming back to the centre along the north side of the nave, all present were thus excellently well enabled to see her Majesty and the Royal party.

During the procession, and at the Queen's approach, the organs in the British division, built by Messrs. Willis, Walker, and Hill, of London, and those of foreign importers, Du Croquet (Paris), and Schulze (Erfurt), were successively played

On her Majesty's return to the platform, the Queen declared "the Exhibition opened;" which was announced to the public by a flourish of trumpets and the firing of a Royal salute on the north side of the transept. The barriers, which had kept the nave clear, were then thrown open, and the public were allowed to circulate, which they by no means appeared disposed to do, as they were all crowding towards the glories of the transept.

Her Majesty then returned to Buckingham Palace by the route by which she came, and all the doors, which had been closed at half-past eleven o'clock, were again opened.

Throughout the whole of the Queen's traverse of the Building, her face was wreathed with smiles and pleasant looks, and her Majesty evidently took a more than common interest in the brilliant spectacle which everywhere attracted her notice. The Queen wore a rich embroidered pink satin dress set with precious stones, and a tiara of diamonds on her head. Prince Albert wore a Field-Marshal's uniform

The Duke of Wellington and Marquis of Anglesey attracted much attention, the Duke supporting himself on his more aged companion, while both seemed highly gratified in their tour of inspection. We must also remember the droll Chinese Mandarin amongst the foreign Ambassadors and Ministers, who swayed along from side to side, close below and those behind him leaving a pretty full berth for his comical progress

Let our last words respecting this truly national festival be commendatory to those who originated and perfected it. No event—not even the coronation of our Monarch—had ever more steadily called forth public expectation; and none, we will at the same time affirm, ever more completely fulfilled it.

The ceremonial was one, it may be said, without precedent or rival. The Lomaine said by the Sacrament of the widest empire in the world. The industry and genius of both hemispheres, will not fill a page in history as a mean and unsubstantial pageant. While the race of man exists, this solemn and magnificent ceremonial will most readily fade away from the memory like the "baseless fabric of a vision:" it commences an era in which the sons of toil shall receive honour and reward; and, in accordance with the spirit of the day, it stimulates the energies of man to conquer "fresh domains," and discover new fecundities of nature and her products, for the well-being and use of his fellow-creature.

Of itself, as a passing display of state, pomp, and power, we cannot speak too highly: for even Oriental gorgeousness fades in comparison with the glories of the unequalled temple which enshrines the Exhibition of all Nations in Hyde Park.

We append the Programme of the Musical Performances:—

At the entrance of her Majesty a flourish of trumpets

When her Majesty had taken her seat in the Chair of State, the National Anthem, "God save the Queen," was performed, under the direction of Sir George T. Smart, organist and composer to her Majesty's Chapel Royal, by the choirs of her Majesty's Chapel Royal, St. Paul's Cathedral, Westminster Abbey, St. George's Chapel, Windsor, some of the pupils of the Royal Academy of Music, with the chorus and part of the band of the Sacred Harmonic Society, and many other performers, both foreign and English. Accompanied on the organ (built by Messrs. Gray and Davidson), by Goss, organist of St. Paul's Cathedral, and Mr. Turle, organist of Westminster Abbey.

After the Prayer by his Grace the Archbishop of Canterbury, the "Hallelujah Chorus" (Handel) was performed, under the direction of Sir Henry R. Bishop, the Professor of Music at Oxford; assisted on the organ by Dr G. Elvey, organist of St George's Chapel, Windsor, and Dr. Wylde, Professor at the Royal Academy of Music.

During the Royal procession the organs (in the following order), built by Messrs Willis, Walker, Hill all of London; and the organs built by Messrs Du Croquet (Paris) and Shulze (Erfurt), were played under the superintendence of Mr. W. Sterndale Bennett, by Dr. Wesley, organist of Wirkenside Cathedral; Mr Hopkins, organist of the Temple Church; Mr. G. Cooper, organist of St Sepulchre's Church; M Dubois, organist of Notre Dame, Paris, and Mr. Iliff, Smart, organist of St. Luke's Church, Old-street.

When her Majesty had returned to the platform, and declared the Exhibition opened, a flourish of trumpets, and the National Anthem, "God save the Queen," were repeated.

INAUGURATION OF THE GREAT EXHIBITIO

UILDING, BY HER MAJESTY, MAY 1, 1851.

METROPOLITAN NEWS.

CHURCH OF ENGLAND METROPOLITAN TRAINING INSTITUTION.—The annual meeting of the subscribers and friends to this institution was held on Wednesday, at the institution, Highbury Park, Islington. The chair was taken at half-past two o'clock, by Mr. Frampton, M.P. Among the gentlemen present we observed the Earl of Waldegrave, Lord Ranelagh, Mr. Childers, M.P. (sent as observer the Earl of Waldegrave, Lord Ranelagh, Mr. Childers, M.P.), Mr. O'Malley, Mr. Kinnaird, Mr. Martin, the Revs. D. Wilson, Hawtrey, Dr. Hook, Mr. Piper, J. G. Shaw, W. Mackenzie, &c. The objects of the society were ably enforced by various speeches, and the meeting broke up.

CHURCH OF ENGLAND SCRIPTURE-READERS' ASSOCIATION.—The seventh annual meeting of this association, which is at present supporting grants for 105 Scripture readers, was held on Wednesday, at the Hanover-square Rooms. The patrons of the society are the Archbishop of Canterbury and the Bishops of London and Winchester. The Earl of Harrowby took the chair; and on the platform were the Bishop of Lichfield, Lord Charles Russell, Lord Robert Grosvenor, M.P., the Rev. Dr. Spence, the hon. clerical secretary, &c. The proceedings were commenced by prayer, offered up by the Rev. Dr. Spence. The secretary proceeded to read the seventh report (a document of great length), from which it appeared that there was an increase of £241 in the general funds. The income for the past year amounted to £3405 11s. 10d., exclusive of a sum of £567 of which £500 was presented as a donation by Lord Robert Grosvenor—stated as a special fund for building and endowing schools for readers. "We might mention the gifts and offerings of very many devoted Christian individuals, of every rank and station—from the gentleman who, calling at the society's bankers, deposited with the cashier a bag of two hundred sovereigns; or from the lady, who, under the signature *'Gratus agnus tibi,'* sent ten munificent gifts of £100; or from another lady, who, during the year, counted amongst her friends and acquaintances no less than £230, including a note offering from her elf and a contribution of £5; to the last, no less welcome, gathering of the pennies of servants, and the poor woman who, herself on the list of subjects, regularly sends her collection to the society's funds. But we prefer recording especially in the pages of our report the one sovereign received at the close of the year, as the offering of a working man, a deputy-pointer, for the protection of Scripture reading." At the commencement of the present year, the number of grants made through our association was 97. They are now 105. The field of labour embraces a population of upwards of 1,050,000, including 81 parishes and districts, but in which there exists church accommodation for little more than 170,000.* The Chairman bore testimony to the high character of Scripture-readers in general, and read a letter of apology from the Bishop of Chester, expressing his sympathy for this society. Several resolutions in support of the object of the meeting were agreed to. The hammer-sheet showed a balance in favour of the society of £1244 16s. 6d.

NAVAL AND MILITARY BIBLE SOCIETY.—The annual meeting of this society took place on Wednesday, at the Hanover-square Rooms. The Marquis of Cholmondeley was in the chair, and opened the proceedings by stating that 17,000 copies of Bibles and Testaments had been supplied during the last year, a considerable number of which had been distributed among the soldiers' and sailors' households. The report stated, that, since the last meeting, 967 Bibles and Testaments had been distributed to soldiers in her Majesty's service, including 678 Bibles to the household troops, upon a requisition from the chaplain. 1,500 Bibles had been furnished to the troops at the Hon. East India Company, making a total of 1117 copies supplied to soldiers during the past year. Thirteen of our men-of-war had been furnished at Plymouth with 538 Bibles. At Portsmouth, nine vessels had been supplied with 344 copies, which made a total of 902 which had been placed on board 22 vessels in addition to which 100 copies have been granted for distribution to seamen and mariners leaving Hull for Hospital. The total distribution to schools and merchant seamen, during the year, had been 14,626. The number supplied to the naval stations had been 2284. A great number had been distributed at Edinburgh and Liverpool, at Halifax, Nova Scotia, and many other places. The receipts for the year were £2080, and the payments £2153.

THE LONDON SOCIETY FOR TEACHING THE BLIND TO READ.—The annual meeting of this society was held on Tuesday, at the Hanover-square Rooms; the Hon. Arthur Kinnaird in the chair. The report stated that the affairs of the society were in a very prosperous condition. The number of inmates in the institution during the past year had averaged 62, of whom 32 were females, and 30 males, and of that number 14 were adults. They had been females, and 30 males, and of that number 14 were adults. They had great pleasure in calling attention to the efficiency of their system for the instruction of adults, because it was with reference to these that the stereographic method of Lucas was peculiarly valuable. They were most anxious also to promote the mental welfare of the pupils by a system of careful religious training; while, at the same time, they must not be insensible to the advantages arising even to this object by the mental training of education, by means of the geography for the purpose of conveying a sound knowledge of arithmetic, as well as geography; and by another ingenious system the blind were enabled to communicate their ideas in writing. The financial department showed a balance in favour of the society of £182.

MIDDLESEX HOSPITAL.—On Thursday the quarterly general court of the governors of the above charity was held in the board-room of the institution; Thomas Hill, Esq., in the chair. Owing to the great attraction of her Majesty opening the exhibition in Hyde Park, the attendance of governors was much smaller than usual. The ordinary routine business was then proceeded with. The report stated that the average weekly attendance of new cases through the year had been 40, and of patients who had died in the course of the year, 84; while the average of out-patients, for a period of five years, had been nearly 10,000. The committee had received the gift of a donation of £10, presented in gratitude by the friend of a patient who had died in the cancer ward; and having further stated that Colonel Maude, R.E., would preside at the audience of the Duke of Northumberland on the anniversary festival in June next, a hope was expressed that the gallant Captain would be supported by a numerous attendance on the interesting occasion, and the business of the meeting terminated.

ST. LUKE'S HOSPITAL.—On Wednesday, a meeting of the governors of this hospital took place at the George and Vulture, Lombard-street, for considering the recommendation of the committee, to expend a sum of £5000 in improving the drainage, in building a new chapel, a new laundry and workfamily, and in providing other necessary accommodations for the hospital. Mr. Henry F. Ludwell in the chair. From a statement laid before the meeting, the following results, arising from the present system of treatment, appeared: From 1821 to 1830, the percentage of recoveries was 47½ per cent.; from 1831 to 1840, 59¾; and from 1841 to 1850, 60 3-5. The committee, referring to the valuable report of the physicians, presented at their last meeting, turned to the consideration of the grounds of their present appeal to the bounty of the public, to enable them to prosecute the work in which they were engaged. They had found that the present system of drainage was deficient, and wholly inapplicable to the present improved methods. The arrangements of the laundry were also inadequate to the wants of the establishment; and the work-rooms and out-buildings were unsuited to the establishment. To provide an improved system of drainage, a new laundry and work-rooms, and a chapel, were the results anticipated by the committee on the occasion of this centenary festival. After some discussion, resolutions empowering the outlay of the sum required were passed.

THE UNIVERSITY OF LONDON.—The anniversary festival of the friends of this valuable institution was celebrated at the London Tavern, on Monday evening—the Right Hon. the Lord Mayor presiding, supported by Lord Brougham and Hodgkinson, Sir James Law Lushington, Mr. Masterman, M.P., Mr. Frewin, M.P., and about 140 other friends of the charity. His Lordship made an appeal in behalf of the charity, which he stated had been established only last year 987 patients had been received, of whom 245 had been cured, 173 materially relieved, considered incurable, 83 discharged for irregularity of attendance, and 80 remained on the books. The total number of patients received since the formation of the charity in 1836 being 6505. He was glad to say that the charity had received a piece of ground for the erection of an hospital in the City, upon the most favourable terms, indeed he knew twenty persons who would be glad to give them an advance on their bargain. The health of the founder of the Institution (Mr. Salmon), and other appropriate toasts having been drunk, donations and subscriptions amounting to upwards of £300, were announced, in addition to the £3000 from an anonymous contributor, and the £1000 bequest from the late Mr. Cline, reported at the general meeting in June.

HANDEL AND SYDNAL INSTITUTION.—The annual meeting of this charity was held at the Freemasons' Tavern, on Thursday, Mr. Wayley in the chair, when a report was presented, which stated that the society preserved a greater support during the last year than in any previous year. The charity had had during the past year, and still had, six patients on its couches; and the committee regretted to say that the number was limited from the inadequacy of the charity, upwards of 80 applicants being anxious to be admitted. The total revenue of the past year had amounted to £530 4s. 2d., and the expenditure to £470 5s.; leaving a balance in favour of the charity of £59 19s. 2d. The report was adopted, and the officers for the ensuing year having been elected, the meeting separated.

GUILDFORD BENEVOLENT INSTITUTION.—The eighteenth anniversary festival in aid of the funds of this institution was held at the Freemasons' Tavern, Great Queen-street, on Monday; Mr. James Garrard, principal warden of the Goldsmiths' Company, in the chair. The Rev. Dr. Hawtrey, Provost, the chairman proposed the usual loyal toasts, coupling "The Church" with "The Queen," and, in reference to Prince Albert, making a graceful allusion to his Royal Highness's present to prince Albert, making a graceful allusion to his Royal Highness's present to promote the commercial and industrial prosperity of his country. "Success to the institution" was next drunk and great applause, the chairman on great acting his audience upon the increasing prosperity of the charity which had led to enlarged operations. He demonstrated by a reference to the enlarged number of gentlemen around him, and the extended subscription list of the past year. He pointed out, as proof of the satisfaction, an addition to the funded property of £300; to the annual subscriptions of £40; and urged, by way of appeal to the feelings of his hearers, the fact that, in times past the present recipients of their bounty had enjoyed prosperity, and indeed hopes similar to those which they themselves now experienced and entertained. Mr. J. W. Thomas, president in returning thanks, drew a moving picture of the wants of those relieved by the institution, exhorting the subscribers to renewed exertion in a cause so fertile of good to those benefited, and so gratifying to their benefactors. He further remarked, amid considerable applause, that two cheques for fifty guineas each had been forwarded to him by the then gentlemen who, on the occasion of the annual ball, had signalised their selves by their efforts to promote the interests of the charity. Of these, one was a donation, the other to go to the annual subscription fund. This showed what private exertion might do for the promotion of this work. Other toasts and a liberal subscription followed, after which the company dispersed.

ART UNION OF LONDON.—The fifteenth annual meeting and drawing of prizes of this society was held on Tuesday afternoon in the Lyceum Theatre; Lord Monteagle in the chair. There was a large attendance of members, who occupied the boxes and pit of the theatre, while the wheels of fortune, containing the numbers and prizes, were arranged on the stage. The proceedings were opened by the reading of the report. The chairman, in moving the adoption of the report, congratulated the society upon the progress which had been made since its foundation. In 15 years they had raised £115,000, and they had every reason to believe that they were carrying on a long and successful career. The report was adopted. Mr. Ward moved that the thanks of the society be presented to the members of the council for their exertions. The motion was cordially carried. A vote of thanks was also passed to Mr. Godwin and Mr. Pocock, the honorary secretaries. The prizes were then proceeded with. The following were among the successful prizes: Entitled to a work of art of the value of £600—Mr. J. A. Woodward, Peckham. Entitled each to a work of art of the value of one hundred pounds: Mr. Roberts, New York; James Thatcher, Weston, Bath.

DISTRIBUTION OF PRIZES AT KING'S COLLEGE.—The annual distribution of prizes and certificates of honour in the medical department of this college took place on Tuesday, at three o'clock; the Bishop of London, in the absence of his Grace the Archbishop of Canterbury, presided. The number of medical students who attended the lectures of the medical school, from which it is learned that in no former year has the number been so great, was considerable. The report stated that the number of deaths which occurred in the hospital, it appears that, since the last report, the mortality for a new and more commercial structure has manifested itself rapidly for the better. The number of patients that followed the purchase of the Metropolitan Free Hospital, situated in Carey-street, within two doors of the present building. The number of in patients increased from 22 300, in 1849, to 25 516, in 1850. The funds for accomplishing this object, which, last year, were £25,000, now amounted to the sum of £34,000; a sale of the present site ensuring the erection of a handsome building and endowment contiguous to the Lyceum. It was intended to erect a building sufficiently large to lodge 200 beds, and make a direct communication with the college, through which students would not only prove a great boon to the college, but likewise contribute to the metropolis an improvements. The cost of collecting the £33,000 did not exceed £600. After the report had been read, the Rev. Dr. Jelf, the principal, announced the names of the successful candidates for the Divinity, the Warneford, and the Leathes's prizes. This was followed by the prize-men, the successful candidates, receiving the names of the successful candidates for prizes and certificates of honour. After the different prizes had been presented by the right rev. chairman to the successful candidates, the Rev. Dr. Jelf, on the part of the college, presented the Rev. Dr. Lonsdale, in returning the vote of thanks, passed a high eulogium on the general character of the Rev. Dr. Jelf, and was sure that as long as that gentleman continued to preside over the college, its best interests would be well cared for. Dr. Lonsdale concluded by proposing a continuance of the same warm and heartfelt support which he had been his pleasure to give to the college for the last 20 years. Besides the gentlemen whose names have been already mentioned, the Bishop of Lichfield, Sir E. Inglis, Sir P. B. Brodie, Rev. A. Robinson, and the Rev. F. D. Maurice, were among the company.

SURREY CONSUMERS' GAS-LIGHT AND COKE ASSOCIATION.—A general meeting of this company took place on Monday, at the Bridge House Hotel, London-bridge; Mr. J. A. D'Aguilar in the chair. He stated, in reference to the immediate object of the meeting, to present the sanction of the proprietors to borrow a sum of money, that they must be aware that it was impossible to carry out works of magnitude without the sinews of war. There were only three courses for them to pursue: 1st, to pay up the amount of their respect ve shares to meet their claims; 2dly, to make calls; or, 3dly, to call this meeting for the purpose of obtaining the powers to raise the required sum. They found that by the first plan the sum raised would not be adequate; by the second, by the wording of their deed, the calls could not be got in in time to meet the proposed arrangements; so they had determined on the third plan, and called this meeting to obtain the powers to raise £50,000. If they acquiesced in this view, it would enable the directors to supply them with their own gas by the 1st of September next; and he could be trusted that they would not declare a dividend to warrant them in declaring a dividend. A resolution, authorising the directors to receive a sum not exceeding £20 00 s, at a rate of interest not exceeding £5 per cent. was then carried unanimously, and, after very few words from the chairman, the meeting separated.

EQUALISATION OF THE LAND-TAX.—On Wednesday, a meeting of the inhabitants of the Old Artillery Ground, Bishopsgate, was held in the Artillery-house, for the purpose of considering the propriety of memorialising the Commissioners of Land-tax on the subject of the unequal proportion of land-tax payable by the different parishes within the liberty. The inequality of the tax in their district, a memorial was drawn up, and ordered to be presented to the Commissioners of Land-tax, stating the amount of land-tax now paid, the amount which ought to be paid, and requiring an equalisation of the land-tax.

Several parishes in the metropolis were contributing an almost nominal rate; that the memorialists did not wish in any way to be relieved from their fair proportion of the burden, but they merely asked for justice to be done to them. In pursuance of the resolution of the Commissioners the fact of their being assessed in such an unequal proportion, and to an amount the highest of any places within the City of London; and they therefore prayed that, in lieu of present unequal assessment, an equalised rate in the £1, on all property, be made, which would afford considerable relief.

ANNUITY RELIEF SOCIETY.—The annual dinner of the friends of this society, established to afford assistance to the families of the suffering poor, by granting them allowances not exceeding 6s. a week when in distress, took place at the Albion Tavern, on Tuesday evening; Mr. Turner in the chair. It was stated that during the last year 97 families, consisting of 400 individuals, had been relieved at an expense of £300 7s. Several appropriate toasts were drunk, and a subscription list of the charity entered into.

ADMISSION OF SOLICITORS.—The Master of the Rolls has appointed Tuesday, May 7, at the Rolls Court, Chancery-lane, at four o'clock in the afternoon precisely, for swearing solicitors. Every person desirous of being sworn on the above day must leave his common-law admission, or his certificate of the service for the current year, at the Secretary's Office, Rolls-yard, Chancery-lane, on or before Monday, May 6.

THE FLAXMAN HALL.—The Flaxman Hall, having been inspected by Prince Albert, it is shortly inaugurated by the special invitation of the leading architects and other artists. The arrangement of the large collection of the works of the great sculptor, by Professors Cockerel, and Donaldson, will give popularity to University College.

ROYAL BOTANIC GARDENS.—In order to provide for the admission of foreigners to the Royal Botanic Gardens, Regent's Park, the commissioners during the period of the Great Exhibition, authorised five tickets to admit four persons daily instead of two, which is a great concession, as the gardens are maintained as a select promenade, and no money having been for admission, there is a great demand for tickets. They have likewise given facilities to foreigners in obtaining tickets for the flower shows. This is in addition to the privileges granted to the ambassadors, by which they have the opportunity of occasional conversazioues to be given in the gardens to the exhibitors and scientific visitors.

LADIES' NEGRO ASSOCIATION.—The annual meeting of this society took place on Tuesday, at Willis's Rooms. The Hon. E. Buxton took the chair, and opened the proceedings by observing, that he could not but feel a deep interest in his society, as, although its name was Ladies' Negro Association, it had been already the means of relieving negroes in the West Indies. The report showed, that, within the diocese of Jamaica, the society had supported 36 schools, all which, and more particularly the normal school, had been under the superintendence of Mr. Agnes had furnished abundant proofs of encouragement in St. Vincent, the infant school under the care of the Rev. G. Brown contained 69 children; and at St. Christopher's, the normal school attended the school. In the island of Dominica, the number of pupils had been 182; in Tortola, 80; and in British Guiana, between 40 and 50. The receipts during the year amounted to £1012 11s. 3d., and the expenditure to £877 3s. 3d., leaving a balance of £128 8s.

We understand that her Majesty has been pleased to give directions that private carriages be permitted to pass through Buckingham and Stable-yard gates of St. James's Park during the next four months, beginning from the 1st of May. The privilege will not be extended to any public carriages; and the gates will be closed at such hours as may be necessary on those days on which her Majesty holds drawing-rooms and levees.

IVES HIPPODROME.—This extensive building now erecting at the corner of the Hampstead-road, Tottenham-court, is fast nearing its completion. It is of oval shape, about 500 feet long by 400 feet across. Its capacity being, it is said, to hold some 14,000 persons, who sit on seven raised seats, whilst the area is open to the sky. It is from the design of Mr. Ives, and does credit to his architectural ability of Mr. G. L. Taylor. Situated so immediately in the vicinity of the Crystal Palace, and arranged by a gentleman so experienced and popular as Mr. Ives, there can be no doubt of its receiving a vast amount of patronage during the forthcoming influx of strangers into the metropolis.

THE Lord Mayor and the Lady Mayoress have issued cards of invitation to a banquet at the Mansion House, on the 8th of May, to her Majesty's Judges and their ladies, the commissioners in Bankruptcy, and many of the leading members of the bar. It is said that the dishes of the dinner of these ten counties, and the sitting magistrates of the several police courts of the metropolis.

GREAT OMNIBUSES FOR THE EXHIBITION.—On Monday, no less than ten new omnibuses for general fares to the Exhibition, charging no more than 2d. for each passenger for the entire distance, taking the route of Kensington green, Wilcox-place, over Westminster-bridge, to Charing-cross, and thence to Piccadilly, &c. A similar number, upon the same terms, will be placed on this Line in a few days, and a like number, it is understood, will run from Camberwell-gate, at the same economic rate.

ROYAL INSTITUTION OF GREAT BRITAIN.—The annual meeting of this society was held at their house, in Albemarle-street, Sir Charles Lemon, Bart., M.P., in the chair. The report stated that the receipts for the past year amounted to £4110 3s. 8d., showing an increase over the receipts of the preceding year of £341 3s., from which £272 6s. 9d. had to be deducted on account of the Faraday accumulation fund. The number of new members in 1850, exceeded those of 1849 by 15. The institution would this year a revenue fee of £500 to the city of London, in return for which had available assets, amounting to £4794 4s. 6d. The report was adopted, and the officers for the ensuing year having been appointed, the meeting separated.

HORTICULTURAL SOCIETY AT CHISWICK.—The annual meeting of this society was held at the offices, in Regent-street, on Thursday; Mr. Hunter, V.P., in the chair. The report stated, that during the past year every care had been taken to improve the gardens, and that in the month of June Mr. Waterer would have an exhibition of American plants within the grounds. During the past year there had been a distribution of £293 plants, 40,493 seeds, and 1949 cuttings; and seventy-seven plants and seeds had been received from friends of the society. The receipts of the year last been £4648 19s. 9d.; the expenditure, £5043 10s. 8d.; and the liabilities, £4,379 9s. 11d. It was resolved, that, in order to render the gardens accessible to the foreign visitor to this country, they should be all open to the public on the exhibition days, 2s. 6d. each, and that on the days when the crowds of the public were not admitted, the charge should be 5s. each. The report was adopted; and some formal rose shows having passed, the meeting separated.

PRIVATE HOUSE ... [illegible] ... Exeter Hall; the Marquis of Cholmondeley in the chair. The circular stated that the society had circulated considerably more than half a million of prayer-books, and about three millions of tracts, and other books; still they found abundant room for the employment of all the funds at their disposal. Abundant proof was given to the meeting that the society had not only increased their efficiency, but had many applications for additional free places. The report was adopted, and after some ... a meeting separated.

VAUXHALL-BRIDGE COMPANY.—The half-yearly meeting of this company took place on Tuesday, at the Goose and Vulture, Lombard-street; Mr. H. Parnell in the chair. The report stated that land belonging to the company had been disposed of for the Westminster Improvements Commissioners and other lands had been carried to the reserve fund, amounting to £6472 14s. 2d. The committee recommended that the toll on two-horse carriages should be reduced from sixpence to fourpence, as they had many applications for a reduction of the fare. The report was adopted, and after declaring a dividend of 1l. per share. The receipts amounted to £710 ... after deducting the disbursements, there was a sum of £5,688 14s. 3d. ... balance. The report was adopted; and, after a vote of thanks to the chairman, the meeting separated.

INTRUSION IN KENSINGTON-GARDENS BY EQUESTRIANS.—On Monday night a large and influential meeting of inhabitants of Bayswater, Kensington, Notting-hill, and the vicinity of Kensington-gardens, was held at the Prince Albert Tavern, Notting hill, to consider the propriety of presenting a petition to her Majesty against the intrusion of equestrians in Kensington-gardens. Amongst those who signed the requisition calling the meeting were the two churchwardens of the parish of Kensington, and nearly all the respectable inhabitants of the district. The chair was taken at half-past eight, and the question they had met to consider was one which did not affect the inhabitants of Kensington alone, but one which materially concerned the health, recreation, and comfort of the whole metropolis. It was proposed to convert a portion of Kensington-gardens into a drive, and thereby to encourage a concourse of people, not only equestrians but costermongers, dealers in horse-flesh, and many other characters which were always engaged in the privacy and seclusion which the frequenters of the gardens had for upwards of a century enjoyed; such an assemblage would completely deprive the nurses, invalids, and children of the enjoyment of the gardens, and would act as an exclusion of them from the delightful and healthy recreations which they had been in the habit of enjoying. The proposed intrusion was wholly unnecessary, because at present there was a drive for equestrians between Notting-hill and the Serpentine, and if it were necessary to have a more extended drive, that could be easily obtained by making a new road, at a very trifling expense, in the northern part of Hyde Park, where there was ample room without interfering with the convenience, comfort, or privileges of people. Under these circumstances, it was proposed to present a petition to her Majesty on the subject, [illegible] of the intended intrusion. Mr. Dunford proposed the first resolution, which was to the effect, that the meaning viewed with alarm the intention of the Commissioners of Woods and Forests to make a drive in Kensington-gardens, which had for upwards of a century been set apart for the recreation of all classes of her Majesty's subjects, and particularly of the nurses and children. Mr. Forsyth seconded the resolution, and, in doing so, said that he considered that the proposed drive would be an infringement, not only of the contents of the deed, but also of the spirit of the privilege. Mr. Bennett supported the resolution, and said that he believed all that was necessary for them to do was to represent the matter properly to her Majesty, and she was sure, from the regard which her Majesty had always paid to the wishes and representations of her subjects, and in particular any representations of her subjects coming from the humbler classes of them, she would not sanction the proposed intrusion. The resolution was carried unanimously.—Mr. Bennett and Mr. Thorn [illegible] the sentiment of the resolution, and a petition to her Majesty, [illegible]

MEETING OF CENSUS ENUMERATORS.—On Tuesday evening, a numerous meeting of the enumerators under the census took place at the Eagle Tavern, Pentonville-road. Mr. Mr. Peter Gray kindly explained the objects of the meeting. Mr. Peter said he was an enumerator in 1841, and that when the remuneration was so little, all ought there was less work to do, the [illegible] the present remuneration was by no means adequate. He thought the present situation imposition on the part of the Government was allowed to pass unnoticed. After further animadversion upon the conduct of the Government, he concluded by moving a resolution, which he considered was of opinion that the remuneration fixed by Government for the enumerators of the census of 1851 was inadequate to the onerous and responsible duties which they have had to perform, especially in the metropolis, where the labour of the returns were heavy, the pay dimin shing in proportion as the labour increased. Mr. Roberts, of Chelsea; Mr. Fletcher, Mr. Ives, Mr. Oxley, and Mr. Hallam, addressed the meeting. The last-named gentleman read a letter from Mr. Hall, who, as enumerators were deceived when they undertook the arduous duties which were developed upon them. He was personally acquainted with a registrar, who had stated that if he hired [illegible] census, and wished to revenge himself upon an enemy, he would endeavour to appoint him as an enumerator. He would wish to call particular attention to the fact, that the remuneration was under 2d. per name that was no pay; and adding all these odd numbers together, he found that the enumerators were remunerated by the Government to the amount of £300. A committee was appointed to make arrangements for holding other meetings, to force the subject upon the attention of the Government, and the meeting separated.

SUICIDE OF THE PERSONAL COMMISSIONER FROM HOLLAND TO THE GREAT EXHIBITION IN HYDE-PARK.—On Monday, at noon, a jury was empanelled before Mr Baker, at No. 21, Finsbury-square, on view of the body of Mr. F. D. Camp, aged 54, a man who, with the most remarkable connection in the Netherlands, who was principal commissioner from Holland, [illegible] to attend to the arrangement of the contributions from that country to the Great Exhibition in Hyde-park. It appeared in evidence, that a partner in the house of Mr. John Matthews, solicitor, Arthur-street, West, London-bridge, attended at the Dutch Embassy, with Mr. John William May, the Dutch Consul, to whom he presented a letter of introduction. Mr. Clear attended to the fact, that the deceased, who had the deceased, about a month ago, engaged apartments. [illegible] Saturday night deceased returned from Hyde Park at seven o'clock. He appeared unusually depressed, and, on being questioned by Mr. Monsier, About ten o'clock the following morning witness went to his bed room, with a cup of strong tea. He knocked repeatedly, but could obtain no answer. Some one looked through the key hole, and saw the deceased lying on the floor. Madame Monsier also knocked frequently, came to his assistance. A key was obtained, with which Mr. Monsier opened the door. Deceased was then found suspended by pieces of cord from the bed post. A razor was also found immediately went for a surgeon, Mr. Mouchet stated that he cut the cord with a pair of scissors. He had heard that a person was about to be appointed a commissioner, to succeed deceased. He thought the duties devolved upon deceased had been rather too much for him. He appeared to have his mind overburdened with anxiety about the Exhibition. Mr. Mouchet considered deceased was labouring under mental derangement, and consequently was not responsible for his acts. He was in one only under the coroner's warrant, and he would, therefore, ask that the ball fixed by his Lordship might be taken before a magistrate for the county, to prevent the necessity of the deceased being brought by *habeas* to London. The learned Judge having read the depositions, said the case had been before his brother Coleridge, and he was of opinion that it was a fit case for the allowance of bail, and he therefore fixed the amount as follows: defendant himself in £400, and two sureties of £200 each. An order was then made accordingly, for taking the bail before a magistrate, bail to be approved of by him (the magistrate), upon which the reverend gentleman will be discharged until the next assizes.

ARRIVAL OF THEIR ROYAL HIGHNESSES THE PRINCE AND PRINCESS OF PRUSSIA.—Their Royal Highnesses the Prince and Princess of Prussia accompanied by Prince Frederic William of Prussia and the Princess Louise, and attended by a numerous suite, arrived in London on Tuesday. His Royal Highness the Prince Albert and Prince Edward of Saxe-Weimar met the Prince and Princess at the London-bridge terminus, and accompanied them in the Royal carriages to Buckingham Palace.

In accordance with an order of the Lord Chancellor, the offices of the Court of Chancery were closed on Thursday, in consequence of the opening of the Great Exhibition.

CHAMPIONSHIP OF THE THAMES.—The great match for the championship of the Thames, between Robert Coombes and Thomas Mackinney, will take place on Wednesday next, from Putney to Mortlake. The race, which creates considerable interest, is expected to be an interesting one, as both the well known equal by of the men, a first-rate contest may be anticipated. Citizen *J* has been chartered by the Messrs Searle for the accommodation of the *élite*, and will accompany the race throughout.

THE LATE ACCIDENT IN THE TEMPLE.—Mr. Langham, deputy coroner for Westminster, held an inquest on Saturday in the Old Hall of Lyon's Inn, on the body of Mr. James Parish, barrister at-law, who was killed on the previous Thursday night by falling from the staircase window of his chambers, in Paper-buildings, Temple. A variety of evidence was taken, all tending to prove that the fall of the deceased was accidental. Mr. J. Parish, the brother of the deceased, of Crowdy, a solicitor, proved having dined with Mr. the deceased on Thursday at an hotel in Covent-garden. They parted with him at ten o'clock, when he was quite sober and cheerful. Mr. H. D. Maclean, barrister, occupying chambers on the third floor, said immediately over those of the deceased, proved having heard some one come up to the second floor shortly after eleven o'clock on Thursday night. Immediately afterwards he heard a noise as if a person had tripped down a flight of stairs. Hearing a bustle at the hall door, he looked out, and saw the deceased on the pavement surrounded by several persons. He was lying upon his face with his arms stretched out. There was an immense pool of blood under him. His hat was lying by his side, and his walking stick, partly broken, underneath him. The witness deposed that the window through which the deceased unfortunately fell was situated between the first and second floor landings, and, consequently, when open at the top, as it was on Thursday night, to air the place, it would be very possible for a person who slipped near the top of the stairs, to descend with great velocity, and fall through the window without being able to recover himself. Evidence of a very narrow escape from a similar accident by another gentleman having been given, the jury, considering that some alteration should be made in the window, and was informed that it had already been done. The jury, expressing themselves satisfied, returned a verdict of "accidental death."

FORGED BANK NOTES.—The public are cautioned that forged £5 Bank notes are in circulation. The imitation is very good, but the water-mark has only the word "Bank," instead of the words "Bank of England"

THE GREAT FAIR NEAR KENSAL NEW TOWN, KENSINGTON.—The precise locality, or that which will be all events the nucleus of the holiday fair, during the great nuance of the Great Exhibition, is a large field of about 20 acres, abutting on the south of the Ta bt-road, by the Westborne Waterworks, and running up north ward to the bridge which carries the Great Western Railway, near the new ragged-school of the south-western extremity of hensal New Town.

BIRTHS AND DEATHS.—For the week ending Saturday last, the births registered in the metropolitan districts were Males, 771: females, 732: total 1503. In the six corresponding weeks of 1845-50 the average number of births was 1449 The deaths registered in the same months were, 1015 males, 1, which was of unusual amount throughout March, but in the subsequent three weeks of April showed a disposition to decline, again exhibits a considerable excess above what is usually experienced at this period of the year. Last week was the seventeenth of the year: taking the same week in each of the ten years 1841-50, it appears that the deaths did not rise in any instance so high as in last week; that in 1849 they rose to 1098, but in most cases scarcely exceeded 900. The average of the ten corresponding weeks was 904, which, if corrected for annual increase of population, becomes 968. Above this estimated result there was an increase last week amount gre 60. Compared with the previous week of March, when the deaths were 968, the present return exhibits a increase in the zymotic or epidemic, and tubercular causes of fata diseases, and in those diseases which affect the respiratory organs. The zymotic e ses numbered 2.7 deaths in the previous week, and has now risen to 232: the difference arising almost exclusively from measles, which has nearly doubled its last week's number of victims the fortnight. This quantity carried off 67 children last week, scarlatina 10, small pox 8 children and an adult. Typhus was fatal in 32 cases, diarrhœa in 21, influenza in 7, and hooping-cough in 66. Considerably more than the usual number of children are still dying from the last-mentioned complaint, which at this period of the year does not generally exceed 43 in its week's measure of fatality. Other diseases which have last week been augmented in their fatal effects are consumption, which rose in the last two weeks from 108 to 129 (the latter number not being far from the average), and pneumonia, or inflammation of the lungs, which rose from 69 to 93. The increased mortality this latter disease has been chiefly confined to children: and bronchitis, the mortality from which has spread more equally over all ages, actually shows a decrease. It is known, by a comparison of deaths at different periods of life, that both the youthful and aged portions of the community, but chiefly the former, have latterly contributed more than the usual amount of mortality, while the ranks of the middle-aged supply less than the average number of deaths for this season of the year The number of persons who died last week under 15 years was 344, which is considerably above the average number at 15 years and under 60 was 298, while the average is 316, and of persons of 60 years and upwards there died 216, while the average is 168. Births, recently, have been unusually numerous a fact which will be found to explain, in some degree, the increased mortality among the young. In public institutions 147 deat is were registered last week, and these are distributed in the following proportions: 83 in workhouses, 13 in prisons, 10 in hospitals, 7 in lunatic asylums, 7 in military and naval hospitals, and 3 in prisons.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean height of the barometer for the week was 29.546 in. The mean temperature was 42°5 deg., which is about 2 deg. above the average of the same week in 10 years. The mean daily temperature was above the average of the several days until Friday, when it fell be ow it. On the same day the wind, which had been in the east, west, and south-west, changed to north.

FINE ARTS.—We have been favoured with a private view, at Mr. Partridge's studio, 21, Brook-street, of a series of portraits, highly interesting, as they are now upon the eve of dispersion. Some of them are finished, and others a considerable progress of the members of the Royal Commission of the Fine Arts First in place we may mention Prince Albert, the likeness of whom is excellent, and represents him in the attitude of chairman of the Commission: next, the Duke of Sutherland, Lord John Russell, Lord Lansdowne, and Lord Palmerston Observe attention, with Lord Carlisle—the last an unmistakeable portrait. Lord Mahon, contemplating a map through his glass, is a good picture. In addition, there are some portraits of eminent men not in the Commission, such as Sir Gibson, the sculptor; Lord Colborne, and Dr Joan Forbes, the physician the last a very successful likeness. Altogether the series includes many of the notorians, statesmen of every shade of politics, and artists. Not least, though last, we may notice a capital. likeness of the Speaker—a handsome person, fully entitled to preside in an assembly consisting of many handsome members.

MR. SIMEON, M.P., AND THE ROMAN CATHOLIC CHURCH.—Mr Simeon, M.P. for the Isle of Wight, has announced his converts on to the Roman Catholic faith, and published the correspondence on the occasion resulting his seat, in which he says—I need not remind you that I have always, up to the present time, professed myself a member of the Church of England. Those who know me best will, best of how with what sincerity I have made that creed, and with what fidelity I have endeavoured to carry out the principles, and the course of act on which, in my opinion, it entailed. The events of the past year, which have on a variety of ways, into which it is unnecessary to enter, and decided entail upon me, as an honourable necessity, the duty of returning into your hands a trust which I am conscious that I should never have received had I been a Catholic at the time of receiving your suffrages.

REPRESENTATION OF BELFAST.—The *Belfast Chronicle* is "authorised to state," that, on the dissolution of the present Parliament, Sir James Emerson Tennent intends becoming a candidate for the representation of his native town.

GENERAL POST-OFFICE, APRIL, 1851.—Henceforward all letters and newspapers addressed to Port Natal will be forwarded £50 (ninety) country by the contract screw steam packets leaving Plymouth on the 15th of each month for the Cape of Good Hope, except such letters, &c., as may be specially directed by the writers to be sent by private ship or by any other conveyance. Letters for Port Natal will be liable to the packet rate of one shilling the half-ounce which must be paid in advance Newspapers will be transmitted free of charge

PAYMENT OF CUSTOMS DUTIES.—On Monday next, the 5th inst., it is intended that, on and after the 6th of May, al. duties under £15 will have to be paid in the Customs treasury, instead of the Long Room, as at present. For the convenience of merchants and others, payments of not less than £20 (twenty pounds) of £100, as formerly may be made at the Bank of England. Messengers will be despatched every half-hour between the Bank and Custom House. On and after the 6th of May, great alterations, with a view to greater public convenience, are to be made in the Customs departments

DIVINE SERVICE IN THE GERMAN LANGUAGE, according to the rites of the Church of England, is to be performed every Sunday during the Great Exhibition, at St. Mary's Chapel, Park street, Grosvenor-square, at nine o'clock in the morning, and at Percy Chapel, Charlotte-street, Fitzroy-square, at three o'clock in the afternoon.

TESTIMONIAL.—The inhabitants of Southgate have presented the Rev T. Sale, with an epergne, value £140, on his being appointed vicar of Sheffield.

Captain J. Rainier is appointed resident magistrate at Riversdale, Cape of Good Hope.

CHESS.

TO CORRESPONDENTS.

OBSERVER.—LIST OF COMPETITORS IN THE CHESS TOURNAMENT. As many readers of the Illustrated London News may feel an interest in knowing the names of gentlemen who have given in their names to play in the forthcoming Tournament, on their return to Germany, we subjoin a list of all those from their respective countries, the managing committee will not publish any list until the whole of those who will take part in the contest have arrived Among the most distinguished players who have promised to attend, are Herr Anderssen, of Breslau, Mr. Staunton, of Hanover Square, Captain Kennedy, Mr. Newham, Captain Kennedy, Mr. Wyvill, Mr. Lewis, Mr. Brien, Mr. Newham, Captain Kennedy, Mr. Mackenzie, Mr. Staunton

SCENE FROM "ARLINE; OR, THE FORTUNES AND VICISSITUDES OF A BOHEMIAN GIRL," AT THE HAYMARKET THEATRE.

'ARLINE; OR, THE FORTUNES AND VICISSITUDES OF A BOHEMIAN GIRL." AT THE HAYMARKET THEATRE.

THIS week we give an illustration of this amusing burlesque. Here we have Priscilla Horton and Annie Romer, as the *Distressed Pole* and the *Wandering Damsel*, indulging in those sweet passages of love and sorrow, musical and oral, which inspire with the yellowest jealousy the *Gipsey Queen*, half issuing from her tent. We wish that our artist could have exhibited the capital make-up of Mr. H. Bedford in fuller relief; but, of course, the requisite perspective would not permit what had been also desirable. But the hero and heroine are there, unmistakeable portraits—capital impersonations of the lovely and loving in burlesque—scarcely burlesque enough, perhaps. But in this our artist is not at fault: rather, is it the misfortune of the authors in the choice of a subject naturally restive to the exaggerations required by the extravaganza-spirit, on its part equally intolerant of compromise. But the sterling merits of the writing ensure the success of the piece.

SCENE FROM "ROGER DE COVERLEY," AT THE OLYMPIC THEATRE.

OUR Artist has here represented a scene from the gipsy episode of the highly interesting and characteristic drama now embodying, at the Olympic, the manners of the reign of Queen Anne as portrayed by Addison in "The Spectator." It represents Sir Roger in proximity with the gipsy camp, in company with his friend Will Honeycomb, both palming the gipsy heroines of the drama, Honor Lee and Mahala Stanley. The scene is picturesquely conceived, and serves to give variety to a drama founded on a subject full rather of character than of incident. It also serves to give a deep tone of colour and romantic interest to the gentilities of the general theme. It might be wished that the two strata of story had been more intimately blended, instead of lying side by side as they do; but there is a kind of necessity in this resident in the very constitution of the state of society described. The Romany tribe and the house dwellers never did mix, but, like parallel lines, remained one outside the other, however close they might approximate. We cannot, therefore, complain of that dramatic economy which resembles the life it would represent. As we have previously said, this play ought to be attractive; both author and actors have done their best in its production; and, should it not succeed, we must seek in foreign elements for the cause of failure.

THE THEATRES, &c.

HER MAJESTY'S.

Donizetti's "Lucrezia Borgia" was introduced on Saturday night, with a novel and strong cast. Mdlle. Alaimo, the new aspirant for lyric glory, made her first appearance in the country as the heroine of Victor Hugo's tragedy, on which the opera is founded; Mdlle. Ida Bertrand was the *Orsini;* Lablache resumed the part of the *Duke of Ferrara*; Gardoni made his *rentrée* as *Gennaro*; Signor Casanova, a new basso, was *Gazella*; the Spaniard *Gubetta* was allotted to Signor Lorenzo; Signor F. Lablache sustained *Petrucci*; and to Signori Balanchi, Scotti, Mercuriali, and M. Poultier were assigned *Astolpho, Lisarrito, Rustighello*, and *Vitelozzo*. It will thus be seen, that more than ordinary care had been taken to ensure the efficiency of the secondary parts, and the policy and advantage of the combination were indicated in the prologue and concerted pieces. The new *Lucrezia* experienced a very cordial greeting throughout the opera, and was honoured with an ovation at the close. She repeated her performance on Tuesday night, and exhibited less nervousness than on the previous occasion. When it is stated that her experience of the stage has actually not been more than four months, there is every reason to hope for a bright future for her. She is young and has a good stage presence, with a fine flashing eye. Her voice is a soprano of penetrating more than of sympathetic quality, and it is heard to the best advantage in forcible passages. She has a compass of about two octaves, rising to the C in alt. There is a determination "to do" in her style, indicative of a natural impulse. Her most effective scene was in the duo with the *Duke*, and her fiery action contrasted finely with the calm and child-like resolve of Lablache, as the revengeful husband Gardoni was heartily welcomed; the beautiful quality of his organ was heard to perfection in the tranquil passages of expressive melody. There was no lack of gaiety on the part of Mdlle Bertrand in the rollicking bacchanal, which was redemanded.

It was intended to have produced Signor Alary's new comic opera "Le Tre Nozze," on the Exhibition evening of the memorable 1st of May, but it has been postponed until next week: as a substitute, the management seemed resolved that the opening of the Crystal Palace should be signalised by a monster programme, embracing all former doings on the famed "long Thursdays." The entertainments began with Auber's "Muta di Portici," sustained by Madame Fiorentini, the gifted mime, Mdlle. Monti, Signori Pardini, Scotti, Mercuriali, Lorenzo, Balanchi, and M. Massol, with the dancing of Amalia Ferraris and M. Charles in the beautiful divertissement. The two Lablaches sang the popular duo, "Se fiato," from Cimarosa's immortal "Matrimonio Segreto." There was a divertissement by Paul Taglioni, with Pugni's music, in which Carlotta Grisi, Amalia Ferraris, and MM. Charles and Taglioni appeared; and, finally, the ballet of "Les Metamorphoses," with Carlotta Grisi's sprite, closed the evening's attraction.

ROYAL ITALIAN OPERA

Meyerbeer's "Huguenots," given for the second time on Saturday night last, was remarkable for the wondrous singing of Mario: perhaps, in the whole course of his professional career, he never produced a more exciting effect on an auditory, than in the duo with Grisi in the third act. Whether his acting or singing be regarded, his present delineation of *Raoul* has never been approached: it must be ranked as one of the finest performances of the lyric stage. Mdlle. Angri re-appeared after her indisposition in the *Page*—one of her cleverest assumptions: she was encored in the air of the second scene. The influenza, however, resolved not to be without its victim, fastened on Formes, who struggled loyally and manfully against the attack of the dire enemy of vocalists.

On Tuesday night, Meyerbeer's "Robert le Diable" was executed for the second time. The fates were propitious—there was not an apologetic notice of any kind—and the *artistes* were all in fine voice, Grisi, Madame Castellan, Signor Tamberlik, Signor Stigelli, and Herr Formes greatly distinguishing themselves. The *Alice* of Grisi is quite a new creation this year, and it must now be enrolled in her list of operatic triumphs as one of her grandest delineations. The unaccompanied trio in the cavern scene, between Grisi, Tamberlik, and Formes, was encored. There were many well-known French professors and amateurs present at the representation, and it was gratifying to hear their enthusiastic admission, that it fully equalled the best days of the Académie Royale, in Paris, where "Robert le Diable" was originally brought out by Meyerbeer.

Beethoven's "Fidelio," announced for the extra night on Thursday, has been withdrawn *sine die*, without any official explanation. There are divers rumours touching the "untoward event," but nothing positive can be relied upon. The "Huguenots" was the substitute for the long and anxiously expected novelty.

PUNCH'S PLAYHOUSE.

Such, we have already announced, was to be the name of the New Strand Theatre, under the management of Mr. W. H. Copeland, by whom it was opened on Monday, with two new pieces, one by Mr Courtenay, and the other by Mr. Shirley Brooks. An evident advantage was taken of the Crystal Palace in the titles of both ventures—"Living in Glasshouses," being the name of one, and "The Exposition" that of the other. The first, however, deals merely with the squabbles of two rival families, who live by calumniating each other; the other with a visit of Scandinavian deities to earth and the Crystal Palace. Both we believe to be pleasantly written, but cannot judge until the performers are perfect in the dialogue. Mr. Tilbury, Mr. Attwood, Miss Marshall, and Mr. J. Reeves are members of the company; and, when time for rehearsal shall have been given, will doubtless justify their past reputations in a new experiment.

ST. JAMES'S.

The Wizard of the North, Mr. Anderson, and the French plays occupy this stage, on alternate evenings. The first is as wonderful as ever, and astonishes not only by the number and subtlety of his tricks, but by the extent of his apparatus.

On Monday, Mr. Mitchell opened with the Parisian drama, and, according to his programme, promises the newest re-productions, so that we shall be as close as possible to the condition of the French stage. His proceedings, so far, keep pace with his pledges.

The leading piece selected for the present occasion is the last novelty of the associates, MM. Scribe and Legouvé, entitled "Une Bataille de Dames," and which was produced the middle of March at the Théâtre Français. This clever drama depends on its characterisation. The plot turns on an old device—that of a suspected person being protected, in the guise of a footman, by an influential lady, of opposite opinions: the former being a *M. Wansyn*, a young officer, escaping from the consequences of a Bonapartean conspiracy; and the latter, a *Countess d'Ambreuil*, by whom the prefect of police is deceived, until the danger has passed away, when the young gentleman, who had been made interesting by peril, is rewarded for the trouble he has been given with the hand of the Countess's niece. Sentiment, affection, and romance, all contribute their due share of ornament to this threadbare plot, and make a delightful dialogue-piece, in which incident is quite a secondary matter. Mdlle. Judith and Mdlle. St. Marc perform the *rôles* of the aunt and niece with wonderful propriety and *naiveté*, while M. Lafont enacts the lover with polished grace. But we must not pretermit M. Regnier, in the part of *De Grignon*, a guest of the Countess, who is mistaken and arrested for the delinquents, and whose alternations of courage and timidity were exceedingly comic. The performances conclude with a *petite* drama, called "L'Amour à l'Avenglette," draughted from the "Montanisier," an agreeable trifle, illustrating the inconveniences of being short-sighted. The house was fashionably attended.

At the HAYMARKET, a new comedy, entitled "Retired from Business," is announced for this evening (Saturday); and at the Olympic, that deserving actor, Mr. Leigh Murray, proposes to take his benefit on Monday, when the comedy of "Money" will be acted, and when we trust that the appreciation of the public will be demonstrated.

The Duke of Northumberland has given instructions, that, during the period of the Great Exhibition, his Grace's mansions of Northumberland House, London, and Syon House and gardens, Middlesex, shall be open for the inspection of parties visiting London, more especially those connected with the county of Northumberland. By applying, personally or by letter, at the commissioner's office, Alnwick Castle, introductions for this purpose may be obtained.

The first edition of Cocker's Arithmetic, a duodecimo volume, "printed for Thomas Passenger, on London-bridge, 1678," was sold, on Saturday, by Messrs Puttick and Simpson, of Piccadilly, amongst a collection of curious books and MSS. There is no copy in the British Museum, and on the authority of the auctioneers' catalogue but one other copy known: it is not, therefore, surprising that some active competition arose amongst the curious for the possession of the quaint little volume in question, which sold at £8 10s.

At a meeting of the East Country Dock Company, on Saturday last, a resolution to the effect that the bill now before Parliament to enable the Commercial Dock Improvement Company to purchase and enlarge the East Country Dock, and for other purposes, be assented to, was carried by a majority of 70 to 7.

SCENE FROM "ROGER DE COVERLEY," AT THE OLYMPIC THEATRE

PARIS FASHIONS FOR MAY.

HERE is Longchamps at last, with a brilliant, sunny day, which has the effect of bringing out all the fresh toilets of spring. We will not, however, detain the reader from a description of what we have remarked there, and what the fashionable shops have displayed for the last few days. Delisle has made a public exhibition (his yearly custom) of the new *objets* and materials of the season. We observed there dresses destined for the Queen of Spain: these are of very rich silk, including a white taffeta dress, with two skirts; the upper skirt with a wreath of flowers the under skirt open in front, forming a tunic, also wreathed with flower. Another dress has an immense bouquet of flowers at the bottom of each width, shooting up and lessening to the top of the skirt, at the waist. Figured dresses are the most numerous; and stuffs, which till now were worn quite plain, are ornamented this year. Even cambric muslin is many-striped, with larger stripes down each front width. Woollen dresses, such as the *Valencias popelinettes*, are disposed in the like manner. There is also a great quantity of barège dresses, woollen, silk, cotton, and muslin, with flounces. Dresses are of quilted cotton, with a white ground, and sprinkled with little flowers, and wreathed in front; their little *pardessus* of the same stuff, and ornamented like the dress. The coloured silks, with sprinkling or running wreaths, are much worn for dresses, trimmed with flounces cut out, and ribbons put on. We should also mention a charming *étoffe*, which is worn with the same kind of ornament—the silk *grenadine*. All dresses are worn with the body open in front, and wide open sleeves, so as to show in all their beauty the chemisettes and under-sleeves, which daily increase in richness and elegance. English embroidery is in high fashion, and will be so during the whole season; but, with the ornaments, is intermixed either Valenciennes lace, or heavy embroidery or tambouring. Dresses of *grenadine taffeta*, with flounces, are hemmed round the edges, scalloped with silk, or by a small lace of one of the shades of the dress. The *pèlerines* are trimmed with gathers of ribbon, either as small flounces or gathered in the middle. Little *mantelets* will certainly be more the vogue in the shape of small shawls, or fitting behind, that is, slightly hollowed in the centre; both trimmed with deep lace, or large fringing, &c. The *mantelet* is worn of all shades, and when light-coloured it is trimmed with two fringes of white lace, mounted with two rows of small ribbon gatherings.

Bonnets and *capotes* are remarkably elegant: the crown is exploded. The caps grow wider and wider; but, fortunately, they remain small. One thing noticeable, also, is, that the *capotes* are much preferred to bonnets: they can be more varied and more elegantly ornamented. The net and crape *capotes* are still trimmed with small flounces of ribbon, either a little areola over the whole *capotte* or *fanchon* shaped behind, so as to make the crown seem falling off. White crape and blond *capotes* are seen, with crowns embroidered with white but we do not think this fashion will last. Hitherto the bouquet has always superseded these attempts at spangles for walking and evening toilet.

Head-dresses are ornamented with exquisite artificial flowers, put on in rather small flat half wreaths, on each side of the top. Plain bonnets of sewn or rice straw are often trimmed with light-coloured taffeta.

The Illustration shows a dress of *grenadine*, sprinkled with small flowers; body and sleeves open. Head-dress of black velvet, trimmed with Malines lace. *Capote* of smooth crape, with crown falling off. *Mantelet*, trimmed with long silk fringe. Popeline dress. *Pardessus* of black velvet, and dress of pearl grey taffeta.

PARIS FASHIONS FOR MAY.

THE TWO WATER-COLOUR EXHIBITIONS.

THE Old and the New Water-Colour Societies have opened their doors to the public on the same day—a course of proceeding not very usual with them. We may, therefore, fairly, as we viewed them together, include them under one notice. Both societies are in Pall-Mall, and it is an easy and an instructive afternoon's work to visit both galleries. Pleasanter lounges in an April or May afternoon can hardly be devised. If it is raining in Pall-Mall East, you can seek shelter in sunshine, with Cox or Copley Fielding at the Old Society; if it [illegible] are roasting in Pall-Mall West, you can escape with Haghe to the cool of a convent in the New Society.

The two societies have the same objects—the advancement of water-colour art, and the sale of their own drawings. The Old Society excels, as before, in landscapes; the New in figures. At the Old, Copley Fielding and Cox, Evans and Hunt, Prout, and, perhaps, George Fripp, reign without rivals. At the New, the giant of the institution is Haghe. But there are men of note in Pall-Mall West besides Mr. Haghe. As Napoleon had marshals of scarcely inferior capacity as soldiers to himself, so Mr. Haghe has associates worthy to rank with him. Mr. Warren, the President, paints scriptural subjects quite as well as Benjamin West, and at lower prices. Young Mr. Corbould has a sense of chivalry and a knowledge of lists and ridings that would have endeared him to Walter Scott. Wehnert achieves in water-colours what few can accomplish in oil colours. Chase can take us to Haddon without the trouble of travelling there; and Davidson to green lanes such as Hobbema loved and drew so well, and such as [illegible] Patrick Nasmyth could transfer to canvass with a dexterity and finish and feeling worthy of the Dutchman.

In the *figure* line, at the Old Society, the two most ambitious works are Mr. Taylor's "Fête Champêtre in the Time of Charles II." (198), and Mr. Lonsdale's "Highland Smugglers leaving the Hills with their Whiskey" (208)—works of very different character, one giving us courtly, the other peasant life—one in the manner of Watteau, the other in the style of Wilkie or Edwin Landseer. In Mr. Tayler's picture there is

"THE VILLAGE SMITHY."—BY G. [illegible]—EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER COLOURS.

barrenness of invention he covers his paper with a great diversity of figure, groups his characters with a care and skill, attends to costume, and embodies a scene characteristic of the age of Charles II; but surely the tone throughout is somewhat cold. This, however, may arise from the number of warm-coloured pictures around it. Mr. Topham's "Highland Smugglers" consists of nine large figures, and is a picture such as Edwin Landseer will admire, and admit as much log, and cleverly too) in his own manner. The roguish young fisherman by her shoe after the smugglers for good luck is characteristically introduced, while the execution throughout is conscientious, and of great delicacy and firmness. It wants, however, that pearly texture which Teniers and Wilkie never failed in catching, and which under colour art is unable to reach: we are, therefore, wrong in perhaps expecting it, or even in referring to it.

Of Mr. Copley Fielding's thirty-five contributions, we prefer "Evening" (50), a charming composition, something between Claude and Barret, and yet with Copley Fielding's peculiar feeling in many places. View of the South Downs over Lancing March, looking to Old Shoreham," one of those Sussex scenes which Mr. Fielding's long residence in that district has enabled him to catch with unerring certainty; and his "Cliffs at Dover" (107), a coming squall, painted with the poet-like feeling of poor Falconer. Of his minor contributions, one of the most striking is that of "Scheveningen" (150), with an effect of sunset, taken, he tells us, "from nature," of which, indeed, we have little doubt. The effect, however, such as will reconcile Mr. Fielding's admirers to the truth of some of the startling combinations of colour observable in the works of Martin and Danby, too commonly called into question without due allowance for those eccentricities, those "sportings," as florists call them, in which nature indulges.

Mr. Cox, we are glad to observe, is less blotchy than he has been of late; while Mr. Evans retains all that facility of pencil which enables him to give Highland scenery with the same skill with which Mr. Topham portrays Highland life. Mr. Prout, we think, is colder and whiter than usual; but he has not lost one particle of that skill in drawing wealth to architectural detail, for which Mr. Ruskin has so justly eulogised him in his "Stones of Venice." Excellent in the same manner is Mr. Mackenzie, known to every person at all acquainted with Mr. Britton's architectural works. How admirably he has transferred the tracery, age, and feeling of the old tower entrance at Newcastle, and of the east end of Lincoln Cathedral. Mr. Lake Price has given (in 102) a new field of application to the Bridge of Sighs. Mr. Erskine has told a story of "A Gossip over a Wedding Gown" (44), with a pleasant sense of humour, and beauty. Mr. Hunt gives us hawthorn blossom and birds'-eggs, primroses and moss, with a marvellous eye for the minor beauties of water; while in his more ambitious work (312) he has drawn an ivy canopy, set with gold, and surrounded by fruit, with as much success as ever Mr. Lance (all marvellous in such matters) has accomplished in oil colours.

We have this week engraved one of Mr. Dodgson's contributions—"The Village Smithy," a very pleasing scene, treated with highly artistic feeling.

If we rule Mr. Cattermole and Mr. Lewis—as assuredly we do, and have to regret it—Mr. Joseph Nash and Miss Sharpe are sure to little advantage—we must hail with satisfaction a very marked improvement in the works of Mr. T. M. Richardson and Mr. George Fripp. The "Come" of the former (189), and "The Falls of the Dockart, at Killin, in Perthshire" (42), of the latter, are charming examples of water-colour art, rendered with a fine sense of the beauty of nature, and without any marked imitation of any other master than Nature herself. Quite as excellent in the same line, and by Mr. George Fripp, is his "View of the Thames at Maplederham," a sweet spot, full of associations connected with Pope and Martha and Theresa Blount.

Among the humor attractions of the room, let us mention "On the East Lynn, Lymouth" (13), by Penstice; "Frid. Heinrich Wilhelm Ernst from Marker" (22), by C. Bentley; "Durham Cathedral from the River" (76), by W. Callow; and "A Tyrolese Chamois Hunter" (137), by Carl Haag. Nor should we forget that Miss Nanny Rayner has a charming eye for picturesque sunny straw chambers and old palaces, such as Mr. Nash has happily preserved to us in his careful and picturesque publications.

The leading attraction at the New Water-Colour Society is the picture painted by Mr. Corbould, as a present from Prince Albert to the Queen. The subject is *Prince disclaiming his claim to Leyden*, from the fourth act of Meyerbeer's opera "Le Prophète." The passage chosen by the Prince is the following:—

John.—All ye attendant here your daggers now unsheath!
If I am her son, if I have deceived you,
Punish the Impostor! Behold my breast. Strike!
[Speaking in a loud voice to Fidès *]*
Am I your son?
[Chorus of people to Fidès.*]*
Speak, speak, thou strut fear or restraint.
Fidès. *[Confused and looking at* John. *whose eyes meet hers]*
Yes, the right now is on my darkened eyes!
Death, I have deceived you! He is not my son!
I have no more a son.

Mr. Corbould has worked well up to this passage—has filled his paper busy and an interested scene, and in some of the heads has supplied expression which his other works would have hardly led us to ask for. There are, we observe, a few figures in the picture which seem to want the colouring is warm and rich, and the whole picture worthy of the patronage which produced it.

Another order of excellence, and by the same artist, is (205) "Scene—Before Herod;" but the legs of the girls are somewhat too heavy for excellence in the art which "pleased" Herod. We would not have them by any means in the style of Taglioni or Duvernay, but more delicate they might have been, without losing any of the beautiful quality of flesh tint which Mr. Corbould has caught with a master's eye.

When the pictures are viewed apart from the interest attached to the Prince's commission, the best picture in the New Exhibition, the best to our eye at either society, is (49) "Church of St. Gommir, at Lierre, Belgium"—Mr. Haghe's single contribution to the rooms. But what perfection it is in its own way! David Roberts could not surpass it in water-colours, so full, so broad, so rich, with an effect of light perfectly decisive. Such excellence should have an enduring existence; and yet the water-colour art is more evanescent than the art of painting in oil colours—that art which Napoleon thought, even at its longest duration, was but a poor return for a picture—that art which, by the combination of so many natural and acquired qualities, exercised throughout a long life of patient and attentive industry to one pursuit. Mr. Haghe may be very well content with the reputation he has obtained, and the press he can command. Poetry, too, if we may believe a poet, is in itself evanescent:—

And such as Chaucer is, shall Dryden be.

But this we doubt, though this is hardly the opportunity to urge our objection.

Next week we shall return to the subject of the two Exhibitions, and the remaining pictures meriting attention.

MRS PEACHEY'S WAX FLOWERS.

Mrs. Peachey, the artist to her Majesty, has on her residence, 33, Berners-street, now exposed for her extraordinary skill in wax-work for the Exhibition, but not permitted to appear there in consequence of the space assigned to them being at the top of the building, where, owing to the want of the sun, they would be in part obscured. They consist of two remarkable models—one an enormous and magnificent bouquet of hundreds of flowers of the most attractive and full colouring, as well as the greatest diversity of character. The vase which contains the bouquet, with the water lily of Ceylon, and the newly-discovered Victoria regia, form part of this exquisite group. All the flowers are modelled separately from what was, and the colours afterwards painted on. The bouquet stands six feet in height, and is covered with glass shade. The other model is a group of fruitage, covered with a shade of the same size. The fruit and leaves of the vine, being the most difficult of any shown in England. It was manufactured from designs supplied by Mrs. Peachey herself, and is not to be seen elsewhere in the world. The model is about half of wonderful detail which it is impossible to describe, and implying a very large amount of labour and ingenuity, they had been purchased and unattended for about half the time since from the Crystal Palace, where yet, it is trusted, an appropriate position may be found for them.

CAFLIN'S AMERICAN INDIAN COLLECTION.

Mr. Catlin's Collection, in Waterloo-place, Pall-Mall, was opened to private view on Thursday. The effect on entering the room is startling, the immediate pass of hundreds of faces and figures of Indians, in the resistance of war, their weapons of war in their hands, and their long waving feathers. The first figure in Mr. Catlin's well-known collection when a few days ago a British Lady, and we were glad to hear that her face with a group of her damsels, who all doted of the small-pox, came so. The dress of the Chiefs are of the richest and most beautiful articles. They are filled with beads and ornaments wrought in bead, with a feather fan in one hand—that of the Chiefs—and of eagles' plumes, which, from one hand to his cheek, and make him appear, when standing after his dress in most decent bird. He has a spear and scalping knife in his hand, and pouch. The walls are hung with pictures, painted entirely by Mr. Catlin, describing the scenes he has witnessed: all the portraits are taken from life. Mr. Catlin also has shown his varied talents by a model of Niagara during winter—the foam frozen, and the giant fall of waters a sheet of ice. Such an exhibition ought to be nationally appropriated, it being impossible to reproduce the portraits and costumes, which are thus of great value, from their being unique.

DIORAMA OF JERUSALEM AND THE HOLY LAND, ST. GEORGE'S GALLERY, HYDE-PARK-CORNER.

The multiplicity of dramatic exhibitions which have flowed from Barnard's primitive production at the Egyptian Hall, have unquestionably led to the successive improvement of this class of works. The present addition is certainly entitled to this distinctive commendation. The route is lowed in this moving picture commences at the point where the Israelites crossed the Red Sea, and thence passes over to the Desert of the Wandering, by the Convent of Mount Sinai, to the land of Edom, and its wondrous capital, Petra; and thence, by way of Mount Hor and the Dead Sea, to Bethlehem and the river Jordan. Descending to the coasts of Tyre and Sidon, it traverses Mount Lebanon, the temple-strewed Bashan, and the cities of Decapolis. It once turns up southwards, it passes the Sea of Galilee, the villages of Nazareth, Nain, and Bethany; and finally reaches Jerusalem, terminating with an interior view of the Church of the Holy Sepulchre. The Exhibition consists of thirty-three scenes, and is accompanied with appropriate music. The views are from sketches taken by W. H. Bartlett, in his repeated journeys in the East; and they have already been commended for their fidelity by other travellers. The pictures have been cleverly painted under the direction of Mr W. Beverly; and the dramatic effects are very nicely managed. The landscapes are enlivened with characteristic incidents, and a good deal of explanation is given of the more celebrated localities. Altogether, this exhibition possesses attractions for a more reflective class of visitors than mere sight-seekers; whilst its picturesqueness must be admired by all. We intend next week to engrave one of its scenes.

MUSIC.

PHILHARMONIC SOCIETY.

Her Majesty and Prince Albert honoured the Fourth Concert with their presence last Monday night. The orchestra rooms were filled to overflow with a fashionable assemblage. The symphonies were Mendelssohn's in A. No 2 (MS.); and Beethoven's No 8 in C minor. The overtures were Meyerbeer's "Struensee," and Weber's "Der Freischütz." Overland's Concerto—Thanks to the presence of the Royal amateurs, the company were freed from the crying nuisance of encores, and were able to appreciate the very fine execution of the above works. The "Struensee" of Meyerbeer, written as an introduction to the tragedy of his brother, is a very original and beautiful production, and will be more relished with increased familiarity with its details by the connoisseurs. The sublime melody pervading the overture is scored in the most ingenious and picturesque style. The vocal gleanings comprised Beethoven's aria, "In questa tomba," sung by Miss Williams; Cimarosa's "Pria che spunti l'aurora, e Calerina, il pare," artistically given by Miss Louisa Pyne; Winter's terzetto from "Maometto," "Del che pensando," and Rossini's terzetto from "Zelmira," "Sento conforti," sung by Miss L. Pyne, Miss Williams, and M. Jules Strekhausse. The Fifth Concert will be on the 19th of May.

THE MUSICAL UNION.

The programme of the second *matinée*, last Tuesday, opened with Spohr's double Quartet in D minor, Op. 65, admirably rendered by Sainton and Deloffre (first violins), Herr Wilt and Mr. Watson (second violins), Hill and Mellon (tenor), Piatti and Pilet (violoncello): Mendelssohn's Sonata in B flat, Op. 74, executed by Sterndale Bennett and Piatti to perfection; and Beethoven's Quintet in E flat, Op. 4, were the other pieces. Mr. Bennett performing some of the "Songs without Words" from the fifth and sixth books, as a *bonne bouche*. Mr. Bennett's playing is worthy of his reputation as the first of English pianists: his touch is full of poetry and delicacy, and his mechanism is unexceptionable. Despite the pelting of the pitiless storm, there was a very full attendance. The first extra concert will take place next Tuesday, at which Herr Laub, the violinist from Munich, and Mr. Wehner, the violoncellist, will perform. The third meeting of the Musical Union will be on the 13th instant.

BEETHOVEN QUARTET SOCIETY.

The fourth meeting took place on Wednesday, at the Queen Ann-street Rooms. The scheme included No. 1, in E, Op. 18, in F, composed in 1792; No. 11, in E flat, Op. 74, and No. 12, in E flat, Op. 127 (MS.). The executants were Ernst (first violin), Cooper (second ditto), Hill (tenor), and Rousselot (violoncello). The fifth performance will be on the morning, on the 9th inst., at the Hanover Rooms.

MUSICAL EVENTS.

The musical arrangements for the ensuing week comprise the seventh concert of the Amateur Musical Society, next Monday; the public rehearsal of Haydn's "Creation," in aid of the funds of the Royal Academy of Music, on Monday morning; and Mr. Willy's evening concert, at St. Martin's Hall. On Tuesday will be the first extra meeting of the Musical Union, and will be Mr. E. Turner's concert. On Wednesday the performances of Haydn's "Creation," at the Hanover-square Rooms; Molique's first evening concert of chamber music; and a selection of sacred music, at Exeter Hall, by the London Sacred Harmonic Society. On Friday will be the meeting of the Beethoven Quartet Society, and "Elijah," at Exeter Hall, by the Sacred Harmonic society.

M. Billet gave the first of his second series of pianoforte performances last Tuesday, at St. Martin's Hall.

Mr. Willy commenced, on the 30th ult., a series of Wednesday Evening Concerts at 1, e Whittington Club, assisted by Miss P. Horton, Mr. M. Enoch, Mr. T. Bodda, Herr Hausmann, and Mr. Harper; with Mr. Lavenu as conductor.

The Cecilian Society on Thursday, performed Handel's "Solomon" at the Albion Hall: Mr. Crosby was the conductor, and Mr. J. G. Callcott presided at the London Tavern, on the 24th ult., assisted by Miss L. Pyne, Miss Dolby, Miss Eaton, Herr Meyer (pianoforte), and J. Cass (violin), and Mr. Lavenu, as conductor.

Mr. G. Buckland delivered a lecture on old English and patriotic music at the Sussex Hall, last Thursday.

The Sacred Harmonic Society, on Friday, performed at Exeter Hall, under Costa's direction, Mendelssohn's "Elijah." The solos were sung by Miss Catherine Hayes (her first appearance since her return from Italy). Miss Eliza Birch, Miss Dolby, Miss Williams, Mr. Sims Reeves (his first appearance since his return from Paris), Mr. J. A. Novello, and Herr Formes. The oratorio will be repeated next Friday.

The Norwich Musical Festival will not take place this year on account of the Exhibition. The triennial gathering of the choirs will be held as usual, at Worcester being the town they year; and the festival will take place the last week in August.

FOREIGN MUSICAL NEWS.

Four representations of Gounod's "Sapho" have been given at the Grand Opera in Paris, with marked success, the interest in the work increasing on each representation, a sure sign of its permanent popularity. Madame Viardot has achieved one of her greatest lyric triumphs, by her delineation of *Sapho*. With the exception of the *Phaon* of Gueymard, and the *Shepherd* of Aymes, the other characters were but feebly sustained. The *Ballet de Cupidon*, of each act, especially those of the first and third acts, created an immense *furore*.

Meyerbeer's "Prophète," on the 26th ult., produced a receipt of nearly £400, although the entrance money was doubled on that night.

Auber's "Corbeil à d'Oranges" will be produced early this month, for the return of Mdlle. Albont; and, in July, this work will be brought out at Her Majesty's Theatre, Mr. Lumley having purchased the copyright for this country.

Auber's "Enfant Prodigue" was performed this week; it is in rehearsal at the Royal Italian Opera.

The privilege of the direction of the Opéra Comique has been renewed by the French authorities to M. Perrin for eight years, from the 1st May, 1853.

Such was the success of Mdlle. Grisi and Mr. Sims Reeves in Verdi's "Ernani," at all, after the concert of the Italian Opera-house, on the 19th ult., for the season, an extra representation of that work took place on the 23rd, at which the enthusiasm was no manifested as on the previous occasion.

Fechter, the celebrated barytone of Strasburgh, has visited Paris on his way to London.

The military band of the 5th Regiment of Dragoons formed in Paris for playing on the newly-invented sax instruments, will, with the permission of the French Minister of War, visit London this season.

Mdlle. Rosa Bonheur, the Parisian Concert took place in Paris last Tuesday, and was a most successful one. The vocalists were Mdlle. Duprez, Mdlle. Moreau, and Mdlle. Lyrie (poem by M. Hippolyte Lucas, the music by M. Henri Cohen, called "The Lovers," founded on Dante's romance. Hermann Levi was the *Ambrosio*; M. Jordan, *Lorenzo*; Mdlle. Dobré, *Antonia*; and Mdlle. Vavasseur, *Matilde* (Lucile).

The Duke of Saxe-Gotha's opera, "Casilda," has been given three times at Gotha, with brilliant success. The new work of La Roya and Meyer (brother of Prince Albert), called "El Sposo Sospiro, will be brought out at Berlin.

Madame Sofia Saxton, the Swedish singer, has appeared as *Leonora*, in Donizetti's "Favorita" with such success, that she was recalled twenty times at the end of the opera, and then the audience conducted her in triumph from the theatre to her own residence.

From Madrid, we learn that Mdlle. Frezzel and Signor Ronconi created a great sensation in Donizetti's "Lucrezia Borgia" on the 14th ult. Massol was the tenor. Ronconi is to be in London in the course of next week.

INHABITED HOUSE DUTY.—The Government bill to repeal the

latter taxation is unchanged. It does according to the number of windows or lights, and to grant an abatement of 20 per cent on inhabited houses, according to their annual value, and so on a principle. The house duty is to commence from the 5th of April last from which time the window duty is to be repealed. The new duties are to be divided as under a former act. According to the schedule annexed to the bill, the duty on inhabited dwelling-houses worth the rent of £20 or upwards, by the year, the duty for every 20s. of such annual value shall be sixpence, and for other houses not rated or stated in the schedule a duty of ninepence in the pound to be charged.

GRAND PROTECTIONIST DEMONSTRATION.

The large and influential classes of the community who still put faith in the principles of Legislative Protection to domestic industry and capital, and the leading politicians who have advocated the claims of the agriculturists, both in and out of Parliament, have availed themselves of the occasion furnished by the anniversary meeting, on Tuesday last, of the National Protection Association, to make a demonstration in favour of their political principles on a magnificent scale, partaking, in no small degree, of that gigantic character which the influence of the example presented by the Great Exhibition appears to have communicated to every metropolitan display in the present year.

The meeting was held in Covent Garden Theatre, and was so crowded that a large supplementary meeting was formed at St. Martin's Hall, Long-acre, of those who were unable to find room in the theatre.

At both meetings, a vast amount of the wealth, rank, and influence of the empire was represented, and the earnestness and enthusiasm displayed have seldom, perhaps never, been exceeded at any similar demonstration.

At the principal meeting (in the theatre) the chair was taken at 12 o'clock, amidst loud and long continued cheers, by his Grace the Duke of Richmond, K.G., around whom were the following noblemen and gentlemen:—

PEERS.—The Earl of Cardigan, Viscount Canterbury, Earl of Glengall and party, Lord Berners, Viscount Strangford, the Earl of Eres, the Earl of Lisburne, Lord Sondes, Earl Talbot, Earl Cadogan, Earl of Sheffield, Earl of Winchilsea, Lord Ashburton, Lord De Ros, Earl of Stradbroke, Earl of Sheffield, Lord Northwick, Lord Hastings, Lord Burgh.

MEMBERS OF PARLIAMENT.—L. W. Buck, Esq., Philip Bennet, Jun., Esq., Spencer Weadington, Esq., Sir Jean Trollope, Bart., Richard Bremridge, Esq., Walter Long, Esq., Captain Howard Vyse, J. F. Stanford, Esq., R. Spooner, Esq., Colonel Sibthorp, Viscount Galway, Lord John Manners, Marquis of Granby, Colonel Pringle, Esq., Anthony Godard, Esq., Sir John Tyrrell, Bart., E. S. Gooch, Esq., Sir Charles Knightly, Bart., Augustus Stafford, Esq., W. J. Fraunfield, Esq., Lord Burghley, William Deedes, Esq., Viscount Lewisham, Lord Glenmorris, Daniel Haydock, Esq., E. W. Powell, Esq., Henry F. Compton, Esq., Captain Alpin, W. P. M. Cryley, Esq., Thomas Waterfield, Esq., [illegible] Esq., R. P. Long, Esq., Ashurst M Jardie, Esq., Mr. [illegible] Esq., [illegible] Esq., Worsley, Esq., T. W. Beach, Esq., W. H. Bodkin, Esq., Colonel Lee, Captain James Linton, Samuel Umbers, Esq., Mr. [illegible] Esq., Mr. [illegible] Esq., Mr. [illegible] Esq., the Rev. W. S. Marriott, Admiral G. W. H. D'Aeth... Rev. Frederick William Freeman, J. A. Thompson, Esq., Charles Tyrell Esq., Sir Matthew White Ridley, Luke Bearman, Esq., C. T. Tower, Esq., Sir James J. W. Mackie ... Bart., Captain Hanson, Colonel Warren, Richard Hewett, Esq., P. S. Punnett, Esq., &c.

Also delegates from Devonshire, Dorsetshire, Essex, and almost every county in England, and from East Lothian and Moraysnire, in Scotland.

The noble Chairman, after acknowledging the complimentary manner in which he had been received by that assembly of representatives of the agricultural interests in every part of this great empire, said it would be useless for him to attempt to add to his attachment to the cause of Protection because his feelings respecting free trade were known throughout the length and breadth of the land of England. (Loud cheers.) He considered that this large meeting of tenant farmers from all parts of the empire could not but be of the greatest service to their cause. (Cheers.) They cared not for the abuse of their opponents—(Cheers)—and all less for the ridicule which they had attempted to cast upon them. Lord Malmesbury (Rag-and-Bone Harry) they might they must, learn this lesson, namely, that their foes would not do this if they did not think their (the agriculturists') was a good cause. (Cheers.) If they did not think that the bodies of the operatives were coming over to Protectionists' notions, they would let them alone. (Cheers.) Nay, more. If they did not think that the constituencies of the country were opposed to Free Trade, why did they propound to the manufacturing operatives the doctrine that the prosperity of the agricultural interest was identical with that of the manufacturing districts around more with the Protectionists than with any other class. (Cheers.) They had joined out the fallacy of the "cheap loaf." (Cheers.) They had discovered that what was to make them happy, prosperous, and contented was fair wages, and always to be employed. (Loud cheers.) The noble Duke then resumed his seat.

The Earl of Winchilsea and Nottingham, who moved the first resolution. He should have shrunk from coming forward were it not for a dread lest his absence might be suspected of inconvenience to the cause he pleaded for. (Cheers.) It was a constitutional and constitutional meeting of trade and of every branch of industrial pursuit, and of every class of society, and of every portion of the empire of many parts of the United Kingdom, the increase of crime, and the destruction of home and country by pauperism, the increasing bodies of the most industrious and valuable persons of the British Islands—(Cheers)—and the increasing burdens on the rates, were the results of the system of free trade, which, if not speedily remedied, must end in the wide-spread disaster, destruction, and ruin. (Cheers.)

Mr. Butt, Q.C., seconded the resolution in an able speech, devoted to showing the injurious effects upon the agricultural interests of Ireland, by the withdrawal of protection. He observed that "Ireland had suffered more than any other country by the Free Trade delusion. For years past, the farmers of England might regard what was passing in Ireland as the programme of what would most assuredly befal England unless they reversed their policy. There could not be a better test of the state of the population than the progress of crime Now, in 1846, the first year of Free Trade, the number of convictions in Ireland were 9638; in 1847 they were 15,233. That was the first year of free famine, and they might attribute the increase to that; but in 1848 they amounted to 18,206, and in 1849 to 21 202; and the cases of transportation had increased in the following ratio:—In 1845 they were 625; in 1846, 687; in 1847, 2202; in 1848, 3733; and in 1849, 3073. He himself, in Irish courts of justice, had seen judges refuse to pass the sentence of transportation upon convicted felons, because they said they had committed the crime in the hope of being sent to a penal colony, and he had seen the judges issue an order reducing to the lesser grade that could sustain existence the gaol diet, because it was proved to them that the prisons were crowded by prisoners to get to the gaol, in order to escape from the unbearable nuisance that Free Trade had brought on them. He was not able to give them the exact figures, but

pital in large masses. (Cheers.) They said, too, that the tenant-farmers must transfer their capital to other lands. Thank God, the tenant-farmers' capital was inseparably imbedded in their native soil; and how great it was, them, to their credit be it that they must remove their capital to other lands. (Cheers.) Then, with regard to other nations following the example of Great Britain; the Zollverein and the United States still maintained a protective system. The learned gentleman then alluded to what he regarded as threats of a revolution thrown out in case an attempt should be made to recur to Protection. If the Free-traders should dare to put their threats into execution, they would give them such a demonstration as the world had never seen. But the whole thing was ludicrous in the extreme. The aristocracy, gentry, yeomanry, and artisans of the country were determined by a manner of the Peace Society; and by every disinterested member of that most respectable but not particularly warlike body. (Laughter.) And these were the men who were threatening us in the event of war! Let them try to do it if they dared. (Cheers.) But there was more than absurdity in the matter. When they found a sworn member of her Majesty's Privy Council joining in this threat, he must say that a more discouraging transaction never took place in the House of Commons. He concluded by declaring that they had unfurled their banner, which should never be taken down in the midst beneath it every British artisan enjoyed a full, a true, a just, and fair protection. (Loud and long-continued cheering.)

After a few words from Mr. G. S. Dawson, of Selby, Yorkshire, the resolution was carried almost unanimously, amid cheers and yells.

Mr. E. P. Long, of Wilts, proposed a resolution to the effect that the attributed the present depressed state of the agricultural interest to the state of the home and foreign markets, and to the unjust and unequal pressure of taxation upon the produce of this highly taxed country.

Mr. G. G. Day, who was received with loud cheers, seconded the resolution.

Sir J. Bell, of Kent, supported the resolution, as he was fully convinced that Protection would be restored to British labour and production, the most deplorable consequences, both political and social, would be produced to the country. (Hear, hear, and cheers.) He knew them well; he knew their motives, and, therefore, respect coming from them he deeply felt. Above seven thousand of them, whom he had then the honour to address, had met that day to tell the nation at large that Protection to ever land must have. (Loud cheers.) Would that the Free-trader, Sir James Graham,—(Hooting) could only for one moment listen to these honest cheers! It would drive him into self-death to Netherby, he would be afraid even of the honest, the intelligent, the industrious farmers of the country. But he (the Duke of Richmond) could explain some of the hostility of these members of Parliament to the landed interest. Did they believe that Sir James Graham had forgotten it all he was turned out of the Peel Government? Did they believe that Lord John Russell did not think of the defeat in Hampshire? Did Lord Palmerston was not aware he was turned out of Manchester? Did his noble friend Lord Grey not forget that he was turned out by the farmers of Cumberland. He did not bear [illegible] what his friends thought their opinion for this, but what he said was, that they were but human beings only injured. That showed what good judges the farmers were for how could them cut and turn them out. He wished them to see that principle a little further. (We will. Give us an election and we will do it.) That was exactly what he was recommending them to do. He asked them to look at the votes of their county members, and turn out every one of them who did not vote for Mr. Disraeli's motion. (One cry for a dissolution.) He asked their members to matters of detail, but to ask them the question whether supported Lord Stanley? If they said "No," then don't have them. They would have no more of the sort. He asked them to ask the Protectionist candidates that he would implement for the agricultural interest. They knew [illegible] they could benefit the agricultural interest but for protection. He asked them to say if the candidates who did not say openly "Yes" when they asked them if they would support Lord Stanley. He would not trouble them more at this moment. ("Go on")—but he would merely assure them that they were not going to follow the advice of some timid people to vote for them, and when they asked their members to matters of detail, but to ask them the question whether they

STATE OPENING OF THE GREAT EXHIBITION.—HER MAJESTY LEAVING BUCKINGHAM PALACE.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, May 3, 1851.

EXHIBITION SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS.

No. 482.—VOL. XVIII.] SATURDAY, MAY 3, 1851. [TWO NUMBERS, 1s.

A GUIDE TO THE GREAT EXHIBITION OF INDUSTRY.

At length the doubts and fears of many months are at an end—the work is done—the triumph is complete. The great idea of an Exhibition of the Industry of all Nations has been realised, and the gates are open of the vast Building, which every branch of industry, and almost every country in the world has contributed to furnish and adorn.

On the 1st of May—a May-day which will long be memorable in the history of our country—the Queen, with all the splendour of her Court—with all the pomp and pageantry of a royal procession—with solemn and rejoicing music—with salvoes of artillery, and the enthusiastic shouts of the representatives of a hundred different nations, proclaimed the opening of the Palace of Industry. Seldom have such ceremonies been bestowed in such a cause not the celebration of the close of a long demoralising war, but the commencement, as we believe and trust, of a new era of peace and good-will.

Into this Palace we are about to enter—to traverse day by day its long avenues and galleries—to describe, to explain, to criticise, to illustrate the various contributions of utility and beauty with which it is crowded

Here we shall find the fruits of scientific progress practically displayed; here we shall find, side by side, in friendly competition, prepared to exchange lessons in civilising arts, nations which once met only as deadly enemies

The great social lessons suggested by the completion of the Exhibition of the Industry of all Nations, are not less valuable than the educational. Of all European countries, England is the least visited by foreigners: they admire our industry, they purchase our solid manufactures, they dread our prowess and ambition; but the climate, the expenses of travelling, the absence of popular amusements, deter them from visiting our shores, or drive them away before they have had an opportunity of fully appreciating those personal qualities, which, when known, inspire respect, confidence, and permanent good-will

But they have come now; and before proceeding further, we shall do well, perhaps, to enumerate the nations which have cooperated with us, and filled with specimens of their industry, the eastern wing of the Crystal Palace.

France and Austria stand first in the number of their contributions, although Prussia carries off the palm in sculpture, with Kiss's vigorous poetical Amazon, without question the finest bronze of modern times. We have also Norway, Sweden and Denmark, Holland and Belgium; the Hanse Towns and Northern States of Germany; several of the minor States of the Zollverein, Saxony, Bavaria, Wurtemburg; the Republics of Switzerland; the kingdoms of Piedmont and Sardinia, Tuscany, and Naples; the Papal States; Russia, Spain, and Portugal; Mahommedan Turkey, Egypt, Persia, and Tunis; Pagan Western Africa, and the converted islanders of the Pacific. The American Continent has answered us from New Granada, Mexico, Peru, Brazil; and, although last, not least, the United States have aided us in this great work.

In addition to our foreign friends, whom courtesy compels us to name first, our colonies and dependencies, many of which, although much talked of, are less known to us than foreign states, make up a goodly array Among these, Canada, Nova Scotia, and New Brunswick, corn and timber-bearing, hold a foremost rank, grouped with the barren sheep-walks of the Cape; the great emigration-fields of New South Wales, Port Philip, and South Australia, famous, too, for minerals; Van Diemen's Land, the alpine island of Australasia; New Zealand, the most romantic, healthy, and unprofitable of all our settlements; Bermuda, where the name of the chairman of the Executive Committee will ever be revered as the re-introducer of agriculture and horticulture. The Bahamas, famed for pine-apples, turtle, and shells; many West Indian islands; and St. Helena, chiefly remembered as the prison-house of a great captive; Ceylon, "the farthest Indian isle," and the fortress of Malta, join for this time together; while India, with gorgeous manfactures and a crowd of unknown productions, fills a large and prominent space.

THE GATHERING OF THE NATIONS.—ALLEGORICAL DESIGN BY JOHANNOT.

Thus, then, without metaphor, we can, as a plain matter of fact, assert, that the long wished for triumph has come at last; and that, in literal truth a hundred nations, from Europe, Asia, Africa, America, and the fifth continent or Australia, have lent their hearty aid to the good work.

In this hour of pardonable pride and exultation, before joining the brilliant throng pressing forward to witness the inauguration of the jubilee of labour, it may not be amiss to pause for a few moments, and briefly recall the events which in less than two years have led to the realisation of a great idea; for, while we are shouting and throwing up our caps, and crying "God save the Queen," "God save the Prince. "God save the people, England, Scotland, and Ireland," we must not forget that more than once the whole scheme of an Exhibition has been on the point of being rendered impracticable.

It was on the 15th June, 1849, that his Royal Highness Prince Albert, as the strength of information collected by Mr. Scott Russell and Mr. Francis Fuller, announced to an audience assembled for the annual distribution of prizes, at the Society of Arts, that the time had arrived for attempting an Exhibition of the Industry of all Nations. On the 30th June the broad general features of the proposed Exhibition were laid down by the Prince in the shape in which they have since been carried. By deciding that the invitation should be extended to the industrious of all nations, the design was endowed with an original character, and, as will presently be shown, with an important element of success. A mere bazaar of British goods would have been of little advantage and of no novelty.

Within a month from the first announcement, the Prince was engaged in anxious consultation with the committee appointed by the Society of Arts and the President of the Board of Trade, discussing the amount of patronage which the Government could with propriety and safety extend to the undertaking. The committee prayed for the sanction and shield of a Royal Commission to distribute prizes, amounting to £20,000; the said £20,000 being at the time *in nubibus*, but projected to be raised by public subscription. Experience had proved that the principal manufacturers of the kingdom had no confidence in the *élettorat* judgment of the critics of the Artéplin, and no inclination to trust them with money.

The President of the Board of Trade declined to advise the Crown to issue a Commission to distribute prizes which might never exist, for, as he observed, "A Royal Commission must have some definite object, and ought not to be converted into an instrument for raising subscriptions." At this moment the fate of the project may be said to have hung upon a thread. With, at the prestige of a Royal Commission, the public would not subscribe and manufacturers would not exhibit. In this conference the only cheerful countenance must have been that of Mr. Labouchere, who had found a strictly constitutional protection against the infliction of a vast amount of new and unpaid labour. At length a solution was suggested by the financier and capitalist of the committee, Mr. Francis Fuller, to the effect that a contractor might be found willing to speculate on the profits to be derived from such an exhibition of manufacturing industry. This proposition was received as a godsend from heaven by the other parties; but drowning men catch at straws. It was certain, that without some such aid the whole scheme would dissolve and end perhaps in a book, a pamphlet, or a report. At that period the uttermost hopes of the projectors extended to the area of Leicester-square or the open space of Somerset House. The meeting separated, Mr. Labouchere virtually saying, "Find your £20,000 for prizes, and I will advise the issue of the Royal Commission to distribute them." And he no doubt felt fully convinced that a contractor so confiding was not to be found. But Fortune favours the wisely bold. By the 3rd of September Mr. Fuller had actually found in the Messrs. Munday, contractors willing to speculate on the building, at a cost of at least £50,000, as the Society of Arts might require; to invest for prizes £20,000, to pay some thousands of pounds towards the working expenses of the Society of Arts; to set aside one-third of the profits for the benefit of that corporation; to leave the amount of their own profits and remuneration for labour and risk to the decision of an arbitrator; and to permit the Lords of the Treasury to annul the contract, on certain terms of compensation, at any time before the 31st of March.

The Messrs Munday made a noble offer; and we dwell upon this part of the history of the Exhibition with pleasure, because we cannot conceive anything which will give foreigners so high an idea of the capital, the enterprise, the public spirit, and good faith of Englishmen, as the fact that two individuals, almost unknown beyond the circle of their private business, could be found, not only ready to risk £100,000 on an entirely new speculation, but willing to allow the [illegible] to be the subject of arbitration.

[illegible] conclusion of the search for a contractor was announced to the Prince by Mr. Fuller, at Balmoral, on the 3rd of September—a memorable morning—when his Royal Highness, immersed in the details of his great idea (now realised), kept gillies and hounds, and a hundred men "plaided and pinned in their tartan array," waiting a full hour until the sport of the morning, which had been prepared weeks before, was nearly lost.

The Exhibition of Industry was now "a great fact"; the sinews of war were provided; the issue of the Royal Commission was certain.

At this stage of the proceedings Mr. Wentworth Dilke joined the committee, which had previously the advantage of the services of Mr. Robert Stephenson, the great engineer of the age; of Mr. Scott Russell, eminent in almost every branch of science; of Mr. Fuller, a financier and agriculturist; and Mr. Cole, versed in official forms, and a well-known critic in art.

On the 3rd January the Royal Commission for the Promotion of the Exhibition of Industry of all Nations was issued: and at the first meeting of the Commissioners, they wisely resolved to annul the contract with Messrs. Munday, and make the undertaking rest upon the voluntary support of the nation.

Again there came a period of doubt and perplexity, if not of absolute disarrangement, which it would be as absurd as unfaithful to pass over in silence, in the hour of triumphant success. The appeal to the public for subscriptions proved a comparative failure. In spite of fine speeches in the City and in Westminster, the money came slowly dribbling in, and the Royal Commissioners and the Executive Committee saw insolvency staring them in the face.

After a suspense of some weeks, a *Deus ex machinâ* appeared at a moment when the Great Exhibition was vanishing like a dissolving view before the faces of a crowd of noble and wealthy Commissioners, in the person of Mr. Samuel Morton Peto, M.P., who gave his guarantee for £50,000; after which the Prince and Court, and City magnates, Lord Overstone, the Rothschilds, and others followed, until the amount reached £200,000. On this security the bankers willingly advanced the needful funds.

Events have proved that Mr. Peto's help was most timely. The subscriptions paid have never reached £70,000; for although the Exhibition was well supported by the press, and popular with the working and middle classes, it met with considerable opposition from the great body of the upper classes, the clergy, and the agricultural community; and found very lukewarm countenance among the country traders. Even while manufacturing districts were warm and earnest, ports like Liverpool and Bristol were cold and parsimonious.

With rare exceptions, the movements in the provinces in favour of the Exhibition were not spontaneous, but the result of agitation organised in London. For the arrangements of this agitation the Executive Committee deserve great credit; it was one of the parts of the work which they really understood.

The next great difficulty was to secure early in spring a building suitable in form and material for so novel a purpose. The plan of the building committee of architects and engineers, with their town of brick and dome of iron, which, as the official plan, although disapproving, we felt bound to exhibit in the ILLUSTRATED LONDON NEWS of June 22, 1850, would have indefinitely adjourned, if it had not totally ruined the undertaking.

[illegible] for a Crystal Palace was produced in time to save the project from being lost, and the £200,000 guaranteed from being absorbed in a desert of brick and mortar.

But, although this admirable design had powerful support in the Royal Commission, in Mr. Robert Stephenson, and perhaps too in the Royal Chapman, there were only a few weeks available (from the 15th of June to the 26th July) to create enough of public opinion in its favour to enable Mr. Paxton to bear away the palm from the combined efforts of a phalanx of official engineers, to induce the Executive Committee and bankers of the Royal Commission to adopt a design totally unlike anything ever before tried or seen, and to find capital to pay for, and contractors to make and put together, eighteen acres of iron and glass.

We believe that the ILLUSTRATED LONDON NEWS may claim a large share in procuring the adoption of this the only suitable design. On the 26th July, we gave our subscribers and readers an opportunity of judging for themselves the merits of a design to which no merely written description could do justice—a plan selected by us from hundreds pressed on our notice. This appeal to the eyes of the British public was answered by a universal verdict in favour of the Paxton plan.

But while public opinion was growing, funds, mechanics, iron, and glass had to be found before the 26th July, in order to realise the splendid paper project. They were found—and all in Birmingham—in the persons of Messrs. Fox and Henderson and Messrs. Chance; but it is not so well known that it was Mr. Charles Geach, the new M.P. for Coventry, one of the boldest and most successful financiers of the day, who, in engineering phrase, turned on the steam, and gave the contractors the strength and courage to undertake the gigantic task they have since so creditably executed.

From the day that the contract for Mr. Paxton's design was accepted by the Royal Commission, we have presented week by week a pictorial chronicle of its progress, until this day, when, with all the pomp and pageantry that Royalty can bestow, the Palace of Industry has been thrown open to the representatives of an admiring world.

In the meantime it must not be imagined that the other and all-important task of the Commission and its Committee—that of inducing the first manufacturers of every country to prepare to send their choicest productions was without difficulties. Among many very eminent manufacturers in this country, the project was decidedly unpopular. Men who had already earned a high and profitable reputation for the production of certain manufactures, were not pleased with the idea of entering into a competition which they imagined might injure and could not benefit them. Then, again, the manufacturers of textile and all goods depending upon quality for their value, as well as many others in the hardware districts, were, and still are, opposed to the system of prizes, on the ground that in nine cases out of ten no competent jury or satisfactory decision can be obtained.

A variety of circumstances contributed to override both opposition and indifference, and to compel all in this country who had anything worth exhibiting, to exhibit in spite of their scruples and fears.

The cosmopolitan character of the Exhibition at once excited the attention of the manufacturers and of the Governments of the Continent. Mr. Scott Russell, in two journeys through Germany, was enabled, from his high position as a man of science, bearing credentials from his Royal Highness, to create an interest in the undertaking, which soon spread through every manufacturing district throughout Europe. The enthusiasm of the Continent reacted on this country, and called forth the energies of a host of contributors. The local committees, under sagacious rules from head-quarters, were lavish in their grants of space; almost every country received a liberal allotment. Soon the cry went abroad that more than double the eighteen acres of Exhibition had been applied for; that the Colonies and foreigners had abundant funds, and that from England alone, and from all parts of the world except America, it would be filled to overflowing. The English public, hardly and indifferent to their success, now, for the first time, were in danger of being forgotten, so they rebuked, and begged for room, which, by a judicious weeding out of rubbish, was easily found.

From this rapid sketch, it will be seen, that, so far from the Exhibition of Industry of all Nations having been received with universal enthusiasm, and carried into execution without pause, halt, or hesitation, there were at least three times in danger of total shipwreck. The committee, the Commissioners, and the public would not subscribe and would not exhibit. The Royal Commission, with all its influence, could not be induced to sanction the Exhibition, if any; a reduction of that plan into a practical fact has rested on the elimination of those qualities for which the sons of England are pre-eminent—unanimous patriotism, commercial enterprise, and mechanical skill. In works of bronze and marble, in taste for the fine arts, in abstract science, foreigners rival and often excel us; but in no other country could a credit for £100,000 have been settled in one hour with the certain of a pen; in no other country could so exquisite a building in iron and glass have been completed in the same space of time (nine months); and hitherto no other country has been found willing to invite in friendly competition of skill in manufacturing art, to which, with infinite mutual benefit, Great Britain has frankly and successfully invited the whole world.

We now proceed to describe and comment on the internal arrangements; and, first, as to the officials in charge of the Building.

The Exhibition, although vested in the Royal Commissioners, is practically under the control of the Executive Committee.

The Perpetual Chairman of that Committee, selected by the Government, when Sir Robert Stephenson was created a Royal Commissioner, is Lieutenant-Colonel Reid, C.B. and F.R.S., the author of a work of great scientific and practical merit on the "Law of Storms," and successively Governor of the Bermudas and the Barbadoes, where he had the rare merit of becoming a popular colonial Governor, while contributing largely to the social, agricultural, and educational improvement of the people under his charge. The other members are Mr. Henry Cole, of the Record Office; Mr. Francis Fuller, and Mr. Wentworth Dilke.

Allowing for the topsy-turvy principle upon which many of the appointments were made, the details of the arrangements since the Building has been open for the reception of goods, have been conducted with great zeal and energy by all parties. The difficulties between the mistakes made by Local Committees and the mistakes made by the Executive Committee, were enormous; but hard work and determination, with a large staff of able practical men, eventually effected a distribution which will, no doubt, satisfy the sight-seeing public: to expect to satisfy all exhibitors, would be a hopeless task.

The space question has been settled, as far as it could be settled, then followed the task of classification,

CLASSIFICATION

It will be observed that the classification has been, as far as possible, effected on the principles suggested by Prince Albert at his first conference with the original projectors of the Exhibition, in June, 1849. That is to say, the Exhibition has been divided into—1. Raw Materials. 2. Machinery and Mechanical Inventions. 3. Manufactures. 4. Sculpture and Plastic Art.

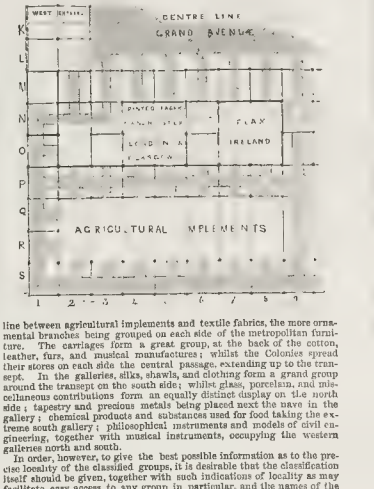
With respect to the productions of Great Britain, this arrangement has been strictly carried out. Various reasons rendered it advisable to allow each foreign nation to fill up its own space in its own manner. A strong argument in favour of this deviation from the original plan was found in the circumstance that without such concession the arrangement of the Exhibition would be indefinitely delayed until the last package from the most distant country had arrived.

Nothing could more clearly prove how well his Royal Highness had studied the problem he had undertaken to demonstrate than his suggested arrangement of raw material, mineral, vegetable, and animal, upon which the skill and industry of man is exerted to grow and manufacture; machinery, by which, from raw material, the greatest results may be obtained, in the shortest time and with the least cost; manufactured articles, in which the result of man's industry, applied to the gifts of a gracious Providence, may be seen and compared; sculpture and plastic art, from which the manufacturer and the consumer may alike learn to refine the perfection which can only be attained by the union of beauty and proportion with useful manufacture.

Under one or other of these heads, an illustration of every material add to the commerce, the agriculture, the manufactures, the sustenance, and the education of civilised communities, will be found. No matter to what country or pursuit a visitor may belong peasant or peer, duchess or dairymaid—soldier, sailor, or man of science—miner or miller, farmer or engineer—some one or other of the subdivisions of this classification we will undertake to find something which shall interest, amuse, instruct, and profit.

In order to perform our task as completely as possible, we propose to commence by giving a general summary of the countries and localities exhibiting 2ndly. To explain, by the aid of diagrams, how any section of the Building may be found. 3rdly. To give a bird's-eye view of the more striking objects in each department. And 4thly. To make a tour through the Building, explaining and illustrating what is most remarkable in each section, so completely, that this series of Exhibition Supplements will, when concluded, form a complete *History of the "Exhibition of the Industry of all Nations in 1851."*

The Building may be divided, as shown in the annexed diagram, into four great divisions, by a line running from west to east up the central avenue; and another running from north to south through the centre of the transept. These four divisions being to the north-west and south-west, in which the British and Colonial contributions are arranged, occupying the whole of the ground floor and galleries; and the north-east and south-east, in which foreign productions are displayed, including a large portion of the galleries east of the transept, certain parts of them being devoted to the more complete display of British contributions. The distribution of space in the foreign side was [illegible] geographical; whilst on the British side it has been as strictly technical as circumstances would permit. To [illegible] everything is so perfectly classified that the examples of each individual branch of industry are to be found in one spot, would be to state that the arrangements are perfection itself: in the great groups, however, this is the case to a much larger extent than could have been originally expected. Thus, manufacturing machines take the northern side of the north-west division; agricultural machines, the southern side of the south-west division. Textile fabrics of the most useful character form a large group, occupying that portion of the latter division next the nave or central avenue, with only a portion for cotton on the corresponding side on the north-west. The furniture department forms another group in correspondence on each side of the nave; whilst hardware, in its most useful forms, gives the dividing



line between agricultural implements and textile fabrics, the more ornamental branches being grouped on each side of the metropolitan furniture. The carriages form a great group, at the back of the cotton, leather, furs, and musical manufactures; whilst the Colonies spread their stores on each side the central passage, extending up to the transept. In the galleries, silks, shawls, and clothing form a grand group around the transept on the south side; whilst glass, porcelain, and miscellaneous contributions form an equally distinct display on the north side; tapestry and precious metals being placed next the nave in the gallery; chemical products and substances used for food taking the extreme south gallery; philosophical instruments and models of civil engineering, together with musical instruments, occupying the western galleries north and south.

In order, however, to give the best possible information as to the precise locality of the classified groups, it is desirable that the classification itself should be given, together with such indications of locality as may facilitate easy access to any group in particular, and the names of the gentlemen, and their assistants, to whom the arrangements in the various classes have been confided.

SECTION I.

RAW MATERIALS.

CLASS 1.—*Mining, Quarrying, &c.*

Professor ANSTED Mr. R. HUNT

Division A.—Mining and quarrying operations
B.—Geological maps, &c.
Division C.—Ores and metallurgical operations
D.—Non metallic mineral products

The contributions in this Class are placed along the south side of the south-west division, extending the whole length of the agricultural implement courts.

CLASS 2.—*Chemical and Pharmaceutical Processes and Products generally.*

Dr. LYON PLAYFAIR. Mr. PHILLIPS

Div. A.—Chemical substances used in manufacture
B.—Rarer chemical substances manufactured for the use of the scientific chemist
Div. C.—Chemical substances used in medicine and in pharmacy

CLASS 3.—*Substances used as Food.*

Dr. LINDLEY. Dr. ROYLE. Mr. MATCHWICK, Assistant

Vegetable Kingdom.

Div. A.—Agricultural produce—cereals, pulses, oil seeds, &c.
B—Dried fruits and seeds
C.—Substances used in the preparation of drinks
D.—Intoxicating drugs, fermented liquors, and distilled spirits from unusual sources
Div. E.—Spices and condiments
F.—Starch series
G.—Sugar series

Animal Kingdom.

Div. H.—Animal Food and Preparations of Food as Industrial Products

As already stated, these classes are arranged in the extreme south gallery, above the contributions in Class 1, and are followed in the arrangement by animal substances and raw products generally, as indicated in Class 4.

CLASS 4.—*Vegetable and Animal Substances, chiefly used in Manufactures, as Implements, or for Ornaments.*

Dr. LINDLEY. Dr. ROYLE. Mr. MATCHWICK, Assistant.

Vegetable.

Div. A.—Gum and resin series
B.—Oil series
C.—Acids; as acetic, citric, tartaric, oxalic, &c.
D.—Dyes and colours
E.—Tanning substances
F.—Fibrous substances, including materials for cordage and clothing
Div. G. Cellular substances
H. Timber and fancy woods used for construction and ornament, and prepared by drying
I.—Miscellaneous substances

Animal.

J.—For textile fabrics and clothing
K.—For domestic or ornamental purposes, or for the manufacture of implements
Div. L.—As agents in the manufacture of various articles
M.—For the production of chemical substances
N. For pigments and dyes

MACHINERY.

CLASS 5.—*Machines for direct use, including Carriages and Railway and Naval Mechanism.*

Mr. HENEMAN. Mr. BIDDLE, Assistant.

Div. A.—Steam-engine and boiler, water and wind-mills, various other prime movers.
B.—Separate parts of machines, specimens of workmanship. (See also Water and Gas-works in 7)
C.—Pneumatic machines
D.—Hydraulic machines, cranes, &c., pile drivers, &c. (See also 7)
Div. E. Locomotives and railway carriages, &c
F.—Railway machinery and permanent way
G.—Weighing, measuring, and registering machines for commercial and not for philosophical purposes

CLASS 5A.—*Carriages generally, not including those connected with Rail or Tram-roads.*

Div. A.—For town use
B.—For travelling carriages
C.—For general use
Div. D.—Public carriages
E. Carts and waggons of all kinds, not being agricultural

In this Class a great variety of machines are very distinctly classed in the arrangements, and occupy the whole of the three courts of the north-west division nearest the transept, and immediately at the back of cotton, leather, and furs, mineral manufactures, and furniture. The locomotives and railway carriages are placed on a line of rail, separating the machines not in motion from those to which steam-power is applied, the whole arrangement being very distinct and complete

CLASS 6.—*Manufacturing Machines and Tools, or Systems of Machinery, Tools, and Implements employed for the undermentioned purposes.*

MR. HENSMAN. Ensign CRASTER, E.I.C., Assistant.

Div. A.—Manufactures of all spun, woven, felted, or laid fabrics.
B.—Manufactures of metals.
C. —Manufactures of mineral substances, and mining machinery. (See section 1.)
D.—Manufactures of vegetable substances
Div. E.—Manufactures of animal substances.
F.—Machinery and apparatus for brewing, distilling, and manufacturing chemistry.

The machines to which steam-power is applied as indicated in the above classification, are all arranged on the northern side of the west end of the Building; cotton machinery being placed at the extreme west, followed by woollen machinery, that used in the manufacture of flax, and lastly silk and lace machinery, miscellaneous machines in motion; lathes and tools, with mills, concluding the group.

CLASS 7.—*Civil Engineering, Architectural and Building Contrivances.*

MR. HENSMAN. Lieut. WALKER, R.E.

Div. A. Foundation and building contrivances connected with hydraulic works
B Scaffolding and centering
C —Bridges, tunnels, and engineering contrivances for crossing rivers, ravines, &c.
D —Dock, harbour, river, and canal works
E. —Lighthouses and beacons
F —Roofs, buildings, and contrivances for covering large areas
G —Water-works, and the engineering contrivances connected with the obtaining, storing, and distribution of water in towns
Div. H.—Gas-works, and contrivances connected with the economical production of artificial light
I.—Sewerage, cleansing, paving, and the contrivances connected with the sanitary condition of towns
J.—Warming and ventilating domestic residences, and the contrivances connected therewith
K.—Miscellaneous

The models and contrivances in this Class are placed, so far as they are grouped, in the south-western corner of the south-west gallery; but numerous models belonging to this class, and those, too, of the highest character, are placed in various parts of the Building.

CLASS 8.—*Naval Architecture, Military Engineering; Ordnance, Armour, and Accoutrements*

Captain WESTMACOTT, R.E. Mr. WATTS, R.N.

Div. A.—Illustrations by models of ship-building for purposes of commerce
B.—Illustrations by models of ship-building for purposes of war
C.—Illustrations by models of ship-building for the application of steam or other powers
D —Vessels used for amusement, and small vessels generally
E.—Rigging, anchors, windlasses, capstans, sheeting, and articles connected with practical seamanship and the saving of life from shipwreck
F. Infantry army - clothing and accoutrements
Div. G.—Cavalry army - clothing and accoutrements
H.—Camp equipage—such as marquees, tents, &c.
I.—Artillery equipments, both in garrison and the field; machines for mounting and dismounting ordnance
J. —Naval gunnery and weapons of attack and defence more especially adapted to naval purposes
K.—Ordnance and projectiles
L.—Small arms
M.—Military engineering, field equipments, methods of passing rivers and other obstacles, the attack and defence of fortresses, and field fortification

The models in naval architecture and other contributions in Class 8 have been arranged in the north-western corner of the north-west gallery, so as to balance the arrangement of Class 7.

CLASS 9.—*Agricultural and Horticultural Machines and Implements.*

MR. BRANDRETH GIBBS. Ensign SOADY, E.I.C., Assistant.

Div. A.—Implements for tillage
B.—Drilling, sowing, manuring, and hoeing machine
C. Harvesting machines
D. Barn machinery
E. —Field, fold, and yard machinery
Div. F.—Agricultural carriages, harness, and gear
G.—Drainage implements
H. —Dairy implements
I.—Miscellaneous implements used in agriculture
J. —Garden engines and tools

Agricultural implements form a great feature in the south-western division, and occupy the courts between the main passages from west to east on that side of the Building extending from the extreme west to the Sculpture Room.

CLASS 10.—*Philosophical Instruments and Processes depending upon their use: Musical, Horological, and Surgical Instruments.*

Lieut.-Col. LLOYD. Ensign TREVOR, E.I.C., Assistant.

Div. A.—Instruments for the measurement of space
B.—Instruments to measure the effects of mechanical and physical forces
C.—Instruments to illustrate the laws of mechanical and physical science
Div. D.—Application of mechanical and physical science to useful purposes, not included in any of the preceding or subsequent sections
E.—Chemical and pharmaceutical apparatus
F.—Miscellaneous

CLASS 10A.—*Musical Instruments, &c.*

Div. A.—Wind instruments
B.—Stringed instruments
C.—Keyed instruments with fixed tones
D—Instruments of percussion
Div. E.—Automatic instruments
F.—Miscellaneous articles in connection with musical instruments
G. —Musical diagrams

CLASS 10B. *Horology.*

Div. A. Great clocks for churches, castles, stables, and public buildings in general
B. Astronomical clocks
C. Clocks applied in registration
D. Clocks shewing different phenomena
E.—Clocks for the common purposes of life
F. Clocks and timepieces in decorated cases, commonly called ornamental clocks, for drawing rooms, libraries, &c.
Div. G.—Sundries applicable to clocks
H.—Marine chronometers
I.—Pocket watches of various descriptions
J Watches for different markets
K. —Miscellaneous

CLASS 10C.—*Surgical Instruments.*

Div. A.—For operations on the ear
B.—Operations on the eye
C.—Operations on the nose, nasal fosse, and antrum
D.—Operations on the mouth and pharynx
E.—Operations on the thorax and respiratory organs
F.—Operations on the abdominal walls and alimentary canal
Div. G.—Operations on the genito-urinary system in the male
H.—Operations on the genito-urinary system in the female
I. Operations on the extremities

"BOY AT A STREAM."—BY J. H. FOLEY.

projecting into the central avenue, and is to the left of the west entrance, occupying the space under the gallery to the carriage courts at the back.

CLASS 12.—*Woollen and Worsted.*

Mr. GEORGE WALLIS. Mr. W. HAWKINS, Assistant.

Div. A.—Broad cloths	*Div.* F.—Serges
B.—Narrow cloths	G.—Tartans
C.—Flannels	H.—Worsted stuff goods
D.—Blankets	I.—Woollen, worsted, alpaca, and mohair yarns
E.—Woollen cloaking	

One of the large courts on the south side of the central avenue has been devoted to this Class and Class 15 (Mixed Fabrics), as the leading manufacturers of the north, or at least the great manufacturing districts, produce the articles arranged under the heads of both classes, and it was deemed desirable not to separate them, except in the special case of shawls. The large space occupied by these two classes being found insufficient, a large portion of the Scotch woollens, tartans, and tweeds have been placed on the north-west wall, near the woollen machinery.

CLASS 13.—*Silk and Woollen.*

Mr. GEORGE WALLIS. Mr. W. HAWKINS, Assistant.

Div. A.—Silk yarns	*Div.* E.—Gauzes and crapes
B.—Plain silks	F.—Plain ribbons
C.—Fancy silks	G.—Fancy ribbons
D.—Velvets	

The rich and varied productions in Class 13 are all placed in the gallery near the transept, at the angle of the south-west division. The Spitalfields contributions being next to the central avenue, and those of Manchester and Macclesfield parallel to them in the side gallery.

CLASS 14.—*Manufactures from Flax and Hemp.*

Mr. GEORGE WALLIS. Mr. W. HAWKINS, Assistant.

Div. A.—Flax fibre	*Div.* E.—Cambrics, cambric and linen handkerchiefs, plain, bordered, and embroidered; plain, printed, or dyed; printed linens, lawns, cambrics, bleached, unbleached, or dyed
B.—Linen yarn and thread	
C.—Plain linen of all widths	
D.—Damasks, diapers, drills, and other twilled linens, bleached, unbleached, and dyed	F.—Cordage of all kinds

This Class, representing the staple trade of the north of Ireland and some portions of Scotland, has been placed on the right of the central avenue, entering at the west door, immediately after Class 18. This arrangement was adopted in order to bring the leading textile products of Ireland into one group, as the poplins, woollens, and even the silks of that country have been placed at the corner of Classes 13 and 15, being separated from this Class by one of the staircases, in the entrance to which the poplin loom is placed, in which is displayed the process of weaving a rich brocade of that material.

CLASS 15.—*Mixed Fabrics, including Shawls, but exclusive of Worsted Goods (Class 12).*

Div. A.—Mixed woven fabrics.	*Div.* B.—Shawls.

It has been already stated that Class 15 is mixed up in the arrangements with Class 12. The shawls, however, both printed and woven, are placed in the galleries near the transept, grouping with the silks. The Paisley productions occupy the corner to the west of the transept, whilst the London contributions are placed at the side at a right angle with the metropolitan silks. The Norwich contributions are also placed here, the dress fabrics forming with London another group in the midst of Class 20.

"MASSACRE OF THE INNOCENTS."—EXHIBITED BY THE ART-UNION OF LONDON.

Div. K.—Operations on the osseous system	investigation and treatment of disease
L.—Operations on the vascular system	*Div.* P.—Surgical tables, beds, mattrasses, chairs, cradles, rests, &c.
M.—Autoplastic and orthopœdic operations	Q.—Post-mortem and dissecting instruments and instruments for embalment
N.—Dressing instruments	R.—Instruments applied to veterinary purposes
O.—Miscellaneous philosophical apparatus, applied to the	

This important Class has been judiciously placed between the models, &c. in civil engineering, and those of naval architecture, and forms with them, a grand group of examples of the most ingenious contrivances the mental activity of the present age has produced. The philosophical instruments are ranged in the galleries next the nave, and on each side the large organ placed at the west end, which is itself a type of a large number of contributions to one of the divisions of the class, that of musical instruments.

MANUFACTURES.

CLASS 11.—*Cotton.*

Mr. GEORGE WALLIS. Mr. W. HAWKINS, Assistant.

Div. A.—Cotton yarn and thread	*Div.* E.—Dimities, &c.
B.—Calicoes	F.—Coloured woven cottons
C.—Cords and beavertecns	G.—Oiled calicoes and cambrics for packing
D.—Muslins, &c.	

This Class is placed with the counters and most effective arrangements

"ROSAMUNDA."—BY JOHN THOMAS.

to the contributions in the precious metals. Carpets, however, are used, more or less, in the decoration of the Building, or are suspended from the girders of the roof above the galleries in various parts.

CLASS 20.—*Articles of Clothing for Immediate, Personal, or Domestic Use.*

Mr. GEORGE WALLIS. Mr. W. HAWKINS.

Div. A.—Hats, caps, and bonnets	*Div.* D.—Boots, shoes, and lasts
B.—Hosiery	E.—Under clothing
C.—Gloves	F.—Upper clothing

"ARIADNE."—BY KIRK.

This class has been placed in the galleries, and balances the shawls and silks, these being placed on one side of the large tree at the central entrance, and Class 20 on the other.

CLASS 21.—*Cutlery and Edge Tools.*

Mr. R. THOMPSON.

Div. A.—Cutlery: such as knives and forks, pen and pocket knives, scissors, shears, and razors	*Div.* B.—Files, and other small edge tools not included in manufacturing tools in Section 6

Cutlery and edge tools generally have been arranged in the north gallery.

CLASS 22.—*Iron and General Hardware.*

Mr. R. THOMPSON.

Div. A.—Brass manufacture	*Div.* D.—Steel manufacture
B. Copper, zinc, tin, pewter, and general brazlery	E.—Buttons, &c.
C.—Iron manufacture. (See, also, 1 and 5)	F.—Wire-work, &c.

The extensive and miscellaneous character of the contributions in this Class has been well provided for by its being placed in the avenue under the side gallery in the south-west division, thus separating, by a very distinct line, the textile fabrics and furniture from the agricultural department Birmingham and Sheffield occupy distinct localities on each side of the metropolitan display of furniture.

CLASS 16.—*Leather, including Saddlery and Harness, Skins, Fur, Feathers, and Hair.*

Mr. DODD.

Div. A.—Leather.	*Div.* D.—Skins and fur.
B.—Saddlery and harness.	E.—Feathers.
C.—Miscellaneous.	F.—Hair.

The articles comprised in the above Class are placed on the left of the central avenue, entering from the west, and follow the cottons, being separated from the latter by a staircase.

CLASS 17.—*Paper and Stationery, Printing and Bookbinding.*

Mr. OWEN JONES.

Div. A.—Paper in the raw state, as it leaves the mill	*Div.* D.—Paper and scaleboard boxes, cartons, cartonnerie
B.—Articles of stationery	E.—Printing (not including Fine Art Printing)
C.—Pasteboards, cards, &c.	F.—Bookbinding, &c.

This Class is placed between the colonial contributions and the provincial furniture, on the same side of the central avenue as Class 16.

CLASS 18. *Woven, Spun, Felted, and Lace Fabrics, when shown as Specimens of Printing and Dyeing.*

Mr. GEORGE WALLIS. Mr. W. HAWKINS, Assistant

Div. A.—Printing or dyeing of woollen or any mixed substances, as mousseline de sole, or alpaca mixture	*Div.* C.—Dyed cotton goods
	D.—Dyed linen goods
	E.—Dyeing or printing of leather, hair, fur, &c.
B.—Printed calicoes, cambrics, muslins, velvets, and velveteens	

This important department of our industrial and artistic productions has been located to the right of the west entrance, and on the opposite side of the central avenue to cotton manufactures. One of the courts has been divided between this Class and Class 14; the two being separated by a passage, leading to the hardware and agricultural implements.

CLASS 19.—*Tapestry, including Carpets and Floor-cloths, Lace, Embroidery, Fancy and Industriel Work.*

Mr. OWEN JONES. Mr. LOWE.

Div. A.—Tapestry	*Div.* D. Embroidery
B.—Lace	E.—Fringes, &c.
C.—Sewed and tamboured muslins	F.—Fancy and industrial works

The varied and interesting examples in this Class are placed in the gallery next to the central avenue, running from the metropolitan silks

"DOROTHEA."—BY JOHN BELL.

CLASS 23.—*Working in Precious Metals and in their Imitations; Jewellery, and all articles of Virtu and Luxury, not included in the other Juries.*

Mr. LOWE.

Div. A.—Communion services.
B.—Articles of gold and silver plate, for decorative purposes and presentation pieces
C. Smaller articles for more general domestic use.
D. Electro-plated goods of all descriptions, comprehending all that can be executed in silver and other metals.
E.—Sheffield and other plated goods.
F.—Gilt and ormolu work.
G. Jewellery.
Div. H.—Ornaments and toys worked in iron, steel, and any other metal which are neither precious metals nor imitations of them; as, chatelaines of steel, chains of steel, sword-hilts, cut steel shoe and knee-buckles, Berlin iron ornaments, chains, bracelets, and necklaces.
I.—Enamelling and damascene work.
J.—Articles of use or curiosity not included in the previous enumeration.

The important and valuable contributions comprised in this Class are placed in the gallery next the nave on the south-west side, and extend occasionally to the cross galleries or bridges.

IONIAN ISLANDS BROOCH.

CLASS 24.—*Glass.*

Lieut. PASLEY, R.E.

Div. A.—Window glass, including sheet glass, crown glass, and coloured sheet glass
B.—Painted and other kinds of ornamental window glass
C.—Cast plate glass
D. Bottle glass
Div. E.—Glass for chemical and philosophical apparatus
F.—Flint glass, or crystal, with or without lead; white, coloured, and ornamented, for table vases, &c.
G.—Optical glass, flint and crown

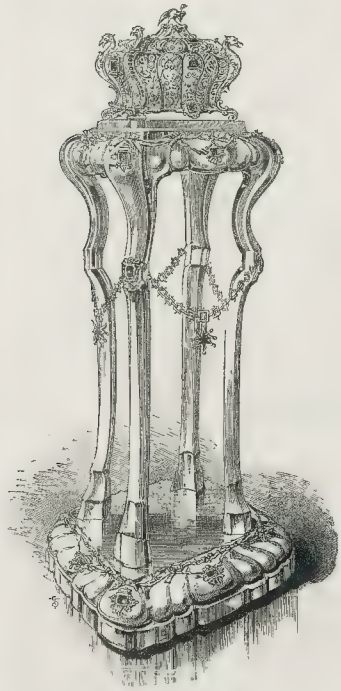
This Class has been arranged in the gallery next the central avenue on the north-west side, immediately above the colonial department.

CLASS 2. *Ceramic Manufacture—Porcelain, Earthenware, &c.*

Lieut. PASLEY, R.E.

Div. A. Porcelain, hard
B Statuary porcelain
C. Tender porcelain
D Stoneware, glazed and unglazed
Div E.—Earthenware
F.—Terra cotta
G.—Ornamented or decorated
H.—Productions for agricultural purposes

The examples of manufacture in this important class are arranged in the galleries on the north-west side of the transept, thus occupying a prominent position in the arrangements, and forming a well-defined group.



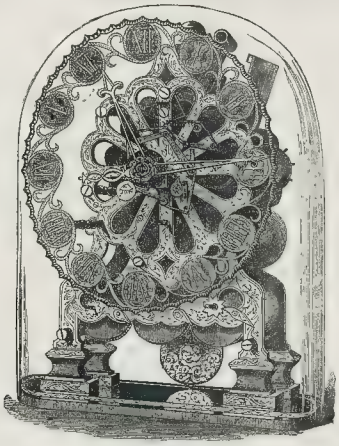
CASKET AND STAND.—BY WERTHEIMER.

CLASS 26.—*Decorative Furniture and Upholstery, including Paper-Hangings, Papier Maché, and Japanned Goods.*

Mr. T. THOMPSON

Div. A.—Decoration generally, including musical decoration
B.—Furniture and upholstery
Div. C.—Paper-hangings
D.—Papier maché, japanned goods, pearl and tortoiseshell work

This Class is divided into two distinct parts, both of which are arranged next to the central avenue—one being devoted to the productions



CLOCK.—BY MESSRS. MOORE.

of the metropolis, and the other to those of the provinces. A court at the back of one portion of the metropolitan division has been set apart for the illustration of modern revivals of mediæval design in furniture, metals, and decoration generally; in which Messrs. Pugin, Crace, Hardman, Minton, and others have united their respective contributions for the production of a complete group.

CLASS 27.—*Manufactures in Mineral Substances used for Building or Decoration, as in Marble, Slate, Porphyries, Cements, Artificial Stones, &c.*

Professor ANSTED.

Div. A. Manufactures in common stone
B. Manufactures in slate
C.—Manufactures in cement and artificial stone
D. Manufactures in marbles, granite, porphyries, alabaster, spar, &c., for useful or ornamental purposes
E.—Inlaid work in stone, marble, and other mineral substances
Div. F.—Ornamental work in plaster, composition, scagliola, imitation marble, &c.
G.—Combinations of iron and other metals with glass and other substances, for various useful purposes

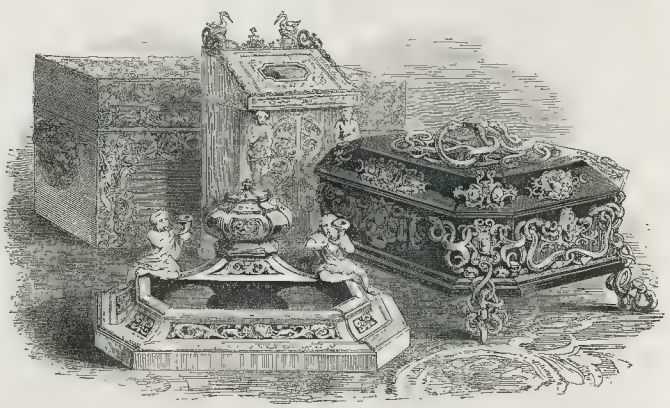
JEWELLED BOXES.—EAST INDIA COMPANY.

The beautiful examples of skill and industry which might have been anticipated would result from the manufacture of the rich and varied mineral stores of the United Kingdom, as thus classified, have been arranged next the central avenue, on the north side, between Classes 16 and 26.

CLASS 28.—*Manufactures from Animal and Vegetable Substances, not being Woven, Felted, or included in other Sections.*

Mr. T. THOMPSON.

Div. A.—Manufactures from caoutchouc
B. Manufactures from gutta percha
Div. C.—Manufactures from ivory, tortoiseshell shells, bone, horn, bristles and vegetable ivory



DRESSING-CASE, INKSTAND, CASKETS, &C.—BY C. ASPREY.

Div. D.—General manufactures from wood (not being furniture)
E.—Manufactures from straw, grass, and other similar materials
Div. F.—Miscellaneous manufactures from animal and vegetable substances

The examples of animal and vegetable substances, as wrought into articles of use or ornament, has been arranged under the above heads, in the north gallery of the north-west division, between Classes 21 and 25.

CLASS 29.—*Miscellaneous Manufactures and Smallwares.*

Mr. DODD.

Div. A.—Perfumery and soap
B.—Articles for personal use, as writing-desks, dressing-cases, work-boxes, when not exhibited in connexion with precious metals (23) and travelling gear generally
Div. C.—Artificial flowers
D.—Candles, and other means of giving light
E.—Confectionery of all kinds
F. Beads and toys, when not of hardware, fans, &c.
Div. G. Umbrellas, parasols, walking-sticks, &c.
H. Fishing tackle of all kinds, archery, &c.
I.—Games of all kinds
J.—Other miscellaneous manufactures

The contributions under the above heads have been placed in galleries on the north-eastern side of the transept, leading onward to the foreign side of the Building.

TEA SERVICE AND CLARET-JUG.—BY WIDDOWSON AND VEALE.

FINE ARTS

CLASS 30 *Sculpture, Models, and Plastic Art*

MR OWEN JONES The Sculpture being arranged by MR. JOHN BELL, *architect, &c.*

Div. A.—	Sculpture as a fine art	*Div.* F.—	Materials and processes applicable to the fine arts generally, including fine art printing, printing in colours, &c.
B.—	Works in die-sinking, intaglios		
C.—	Architectural decorations		
D	Mosaics and inlaid works	G	Models
E -	Enamels		

The numerous and valuable contributions in this Class are chiefly used to decorate the Building. Casts and wall decorations are therefore to be found in various localities, whilst examples of sculpture occupy suitable positions at various points. There are, however, two points at which an arrangement has been made of groups of examples of Fine Art, an apartment having been constructed on the south side of the avenue under the gallery in the south-west division, at the end of the agricultural department. In this apartment various examples of sculpture are arranged. In the more miscellaneous departments of Fine Art and Design, as applied to manufacture, the contributions are arranged in a court devoted to that purpose at the back of Class 17.

Having thus gone fairly through the great features of the classification adopted in the arrangements, and given brief but accurate indications of the general localities, it is desirable that a still more distinct understanding of the position of the respective groups should be arrived at; and to provide means for this, we insert a plan of the ground-floor of the western side of the Building and the transept, as also of the gallery on the same side, thus giving the whole of that portion devoted to the United Kingdom and the Colonies, the references to which will be found to correspond with the indications above given.

A little consideration will at once show that the very nature of the construction of the building suggests its subdivision into courts; and this is distinctly illustrated in the plan of the gallery, on looking to that portion of the plan between 29 in central south gallery (M) and 4 in the south gallery (P), when it will be seen that the staircase on the west, and the bridge from 3 to 28 on the east, give the boundary in conjunction with the galleries of the court in which Classes 12 and 15 are placed on the ground-floor; and that there are four of these large courts, and two smaller ones, parallel with the transept in each of these eastern divisions of the Building; and then the galleries these courts form a most interesting feature in the arrangements. It will not be sufficient, however, for the visitor to know the general locality of a group, but, if possible, he ought to be enabled to obtain the precise locality of each exhibitor; it therefore essential that the official arrangements for this purpose should be clearly understood, inasmuch as it is contemplated that the catalogue shall give the exact bay or square of 24 feet in which each exhibitor is placed. These bays are indicated in the gallery plan under it by squares formed by the spot representing the columns. In the courts no columns exist in the centre; but, as each court is only two bays or 48 feet across, the eye easily identifies the square sought for, provided the method is once understood. Thus, on looking at the plan of the ground-floor, and running the eye from north to south at the west end, it will be seen that each square is marked with a letter, commencing with A at the extreme north, and with C at the north-west corner, terminating with S at the south-west corner.

From west to east numbers are used for each bay, commencing with 1 and proceeding to 77. Each bay, then, has a letter and a number, by which it is known; and on looking at the accompanying diagram of the south-west corner of the Building, a key will be found to the whole art and mystery of reading off these letters and numbers when seen upon the columns in the building, as each column is so marked.

Assuming that the visitor requires to find the precise locality of an exhibitor of damask table-linen from Belfast, and the locality of that exhibitor is described in the catalogue as N 7, he immediately finds the letter N on the plan, and runs his eye along in a horizontal direction until it reaches the square or bay immediately over 7, as indicated by the dotted line in the diagram, and the position of the exhibitor is at once obtained. This illustration, then, will, we trust, be amply sufficient; should it not, however, it will surely be understood that we give up the extreme south west corner, and see S on the west side of the square or bay, and 1 on the south side, and learn that this bay is S1.

The foundation for our superstructure of description being thus far fairly laid, it may be useful to take another glance at the vast edifice in which the wonders of science, the beauties of art, and the highest achievements of the industry of the age are now located itself a marvellous example of all these, since it is based on science, constructed by industry, and perfected by art. A few years ago, it would have been a physical impossibility to have got the required amount of material together; and we here see displayed in a remarkable manner the results of the repeal of those fatal restrictions which for ever got glass trade at a standstill for two hundred years, and made a material so essential to the health, the cleanliness, and the comfort of a people, a comparative rarity. The restrictions being removed, how completely the manufacture of glass has developed itself, the Crystal Palace is an astonishing demonstration; and when we look to the illustrations of the artistic results, as displayed in the higher examples of this department of our national industry, no one would wish for a better example of the regressive character of all Excise laws bearing upon the undeveloped energies of any manufacture; and inasmuch as these restrictions on glass are amongst the things that *once were*, we trust that the results here displayed will teach a lesson to our financial statesmen — if they are indeed capable of appreciating the teaching — and cause them to bethink themselves whether there are not other departments of trade in a similar position to that in which the glass trade was a few years ago, thus indueing them to consider how far the interests of a large body of our industrious population may not be promoted by the removal of a restriction ten times more absurd than that of *glass*—the duty on paper For when we remember that in the manufacture of japanned *papier mache* England stands unrivalled, as this Exhibition will certainly prove, and that this restriction has a very marked effect on this trade alone, to say nothing of those undeveloped modes of employing paper as a decorative, and even as a constructive agent, not yet even dreamt of, the importance of this question of the paper duty forces itself upon us, since we cannot but remember what the glass trade once was, and now is, and feel indignant when we think what the paper trade is, and what it might be; and that, too, apart from any consideration of the ordinary, but most important modes of illustrating its impolicy, in the restriction of knowledge and limitation of the information of the people; although we thus find that it restricts the exercise of their industry and skill also. On these points we shall have more to say when specially reviewing the examples of glass and *papier mache* in that feature; but the comparison will force itself upon the mind now, since this Palace of industry never could have been, and the unwise restriction on the chief material of which it is constructed been continued.

Looking at the interior of the Building as a whole, one of the features which first strikes the spectator, and this was more remarkable before the roof was covered with canvas, is the perfect daylight effect which, though now subdued, characterises the whole Building. We cannot but think, however, that some mistake has arisen in covering the Building with scrim cloth, or, as it is technically termed, *crash*, over cloth, since there is a yellow hue pervading the light, which is highly detrimental to certain classes of goods; and we have no hesitation in saying, that, had a striped ticking, similar to the covering around the sole of the large tree at the entrance, been used, the effect of the light would have been far superior to what it now is, and Mr. Owen Jones's scheme of colour been more perfectly carried out. Surely those who had the management of this matter understood this, and was not a grey colour, but that it partook largely of a cream colour, instead of a neutral tone. Be this as it may, the colour of the light is, in many respects, very objectionable, and nothing but the cool tones in which the Building is painted could have possibly obviated it from utterly destroying effect. The scheme of decoration adopted, after much discussion by those who *did*, and still more by those who *did not* know anything about the question at issue, has proved, with the modifications judiciously introduced in consequence of the loud protestations then made, more successful than even those who, in the main, agreed with Mr. Jones, anticipated. The colour is sufficiently brilliant to give lightness and purity of effect, whilst it is sufficiently retiring at even moderate distances to act rather as a background to the examples exhibited, than as a rival polychromatic attraction, as it was feared might have been the case. Any attempt to decorate the building or make such arrangements as should have nullified the fact that *the Building was for the Exhibition, and not the Exhibition for the Building*, would have signally failed. Happily, in the midst of some forgetfulness of this axiom, there were those who steadily and unflinchingly kept this point in view, and never forgot that the Exhibition was not a mere show, a whim of the hour, or for the glorification of any individual or body of individuals, but a great moral and industrial demonstration, in which the facts to be brought forward were to have the first consideration, and that the building was a Mansion of the Nations, where the inventor, the artist, the artisan, and manufacturer were to appear as invited and honoured guests, not as servants or subordinates. Happily this result has been so far achieved, and nothing strikes the spectator more forcibly than the fact, that, as a whole, that great element of beauty, fitness, has been fully realised. The whole work comes well together, and, from whatever point it is viewed, the vastness of the structure, the extent of the arrangements, and the variety of objects displayed, all go to make one complete whole, which impresses the mind with sensations of the highest character

There are three points from which this result can be realised in its fullest form. First, and by far the most perfect, is the view from the cross gallery at the eastern end, looking down the nave: the whole array of special works placed in the central avenue is here seen to great advantage, the objects giving a distinct but beautifully broken line up the centre of the picture, the long lines of roof and columns carrying the eye into the distance, the breadth of effect only rendered more palpable by the brilliant breaks of colour arising from the display of richly decorated fabrics. The eye of the spectator rests with peculiar satisfaction on the bold and energetic action of the colossal horse and rider, the *Godfrey de Bouillon* of M. Simonis, contrasting as it does in colour with the deep-toned bronze of the Amazon of Kiss, and the colossal lion of Müller, as yet unstained and unsophisticated as it came from the mould.

The second view is at the corresponding point at the western end of the Building, from the side of the great organ. The *coup d'œil* from this point is, however, to our minds sadly marred by the Coalbrookdale dome being placed so nearly half-way between the transept and the west end, as if to interrupt the view, without giving, as it might have done, value to the objects around, had it been placed nearer to the west end. The very central position of such an object is as great a mistake as placing the chief object in a picture exactly in the centre of the plane, and the result is the same. Still, this point will have its admirers; and with the wonderfully elaborate model of the docks of Liverpool invisiting to descend for a closer inspection—the principle effects of the revolving lights—the liquid glories of Schweppe's fountain—not to mention minor, but scarcely less interesting matters—all tend to make up a scene which the mind can scarcely realise, and, in spite of the conviction that all is real, the visitor is compelled to doubt.

The third point of importance is from the south gallery of the transept, standing under the large tree. From this point the great glory of the structure, the arched roof of the transept (for which it ought ever to be held in grateful remembrance, we are indebted to that noble opponent of the Exhibition, the honourable and military member for Lincoln) displays itself in all its beauty and grandeur of proportion; and now that the trees have put on their summer dress, and that too much earlier than their kindred outside, as if in honour of the occasion, the effect of the whole is quite enchanting; and, however much the necessity for cutting down a single tree was to be regretted, we cannot but rejoice now that it was done, since double value has been given to those which remain.

We have now to take a glance at the external arrangements, and to understand their relation to the internal economy of the Exhibition. With three entrances, a central, western, and eastern one, there are thirteen exits, so distributed as to allow the egress of visitors to be spread in pretty equal proportions over the four sides of the Building. These exit doors, with windows on each side, break the line of panelling, and give an architectural feature to an otherwise blank wall of *ferasie*, exceedingly low, indeed, in relation to the proportions of the transept, which, externally as internally, is the great feature of the Building. The effect of the stained and varnished panels constituting the external walls, which, however, can be easily removed and filled with glass, is very excellent and [illegible] with the painted columns of the construction; we cannot, however, but think it a mistake to have painted the inside and outside of an edifice like this with the same colours, and especially in such light tones, for they are totally unsuited to a climate like ours. This discrepancy is the more striking on looking at the transept, which partakes in too large a degree of the *beefsteak* school of decoration; but which might have been easily avoided, and more solidity of appearance obtained, by adopting a suggestion made by Mr. Sang for the decoration of the interior—the preservation of the metallic type, which, though not quite suitable to the purposes of the latter, would have been more in place for the exterior, than the present duplication of the internal colouring. The line of distinction between the outside and the inside would then have been more complete than at present, and the effect of the latter would have been considerably enhanced by the contrast This is especially striking after viewing the western or eastern ends, as seen from the road, and afterwards entering the Building at either of these points; for it is felt at once that there is a poverty-stricken appearance in the brilliant contrasts of the arranged contributions cannot at once destroy.

The small trees left standing along the whole front of the Building are certainly very much out of place, since there is no room for their future growth; and if the Building were to be made into a permanent one, as all probability it will be, the whole of them should be cut down, and their places supplied with Lombardy poplars, as the only tree suited to the confined space between the road and the external walls

The points at which visitors will enter and leave the Building for the first time is certainly the central, or south, entrance, opposite Prince's Gate. This is very ingeniously formed by the columns supporting the elevation of the transept. The bays are made architectural in character, to a height corresponding with the upper line of the "buffer" bands, running along the base of the Building; the intervals above the portico, in a line with the upper ventilators, being filled with panelling This gives a certain degree of solidity to the design, very desirable at this point. The entrance is on a level with the road; and the floor is paved with large Llangollen flag-stones, as specimens of that material The ascent to the level of the floor of the interior is by steps of oak, the pay-boxes for the money-takers being to the right and left of the centre, in which stands the bole of a large elm tree: a gallery runs over head, and forms the roof of the entrance.

There are four pay-boxes on each side, connected with an internal queue, by which the crowding together of large bodies of expectant visitors is avoided as much as possible

THE TRANSEPT

Hurried, but not impatient, we pass a pair of richly gilded iron gates, and the full glories of the transept burst upon our view, heightened and magnified by the narrow dimensions of the external roof and vestibule. A vast hall is before us, lined on either hand with sculptured forms. In the centre rises, like some fantastic stalactite or splinter from an iceberg, a transparent crystal fountain, glittering with all the colours of the rainbow, which, towering from a solid base up to a point, pours down upon an overflowing crystal basin an unceasing stream, with a delicious bubbling sound. Beyond the fountain stands the chair of state—a throne of crimson and gold, commanding the grand avenues both east and west. On the left of the throne, at the head of the eastern avenue, the great Indian diamond, the Koh-i-Noor, glitters in a golden cage or prison. Other statues, another fountain of huge spouting stone tritons, a mass of broad-leaved tropical plants, and lofty, smooth-barked palm-trees, another pair of gilded gates, and over all a mighty dim, spreading its full-leaved branches far and wide, and touching the very summit of the lofty roof, complete our first impression of the scene as ourselves, are standing all around. Let us reach the ground, and we are recalled to the real purpose of this Fairy Palace by the word "India" at the head of the British, and "Egypt" at the head of the Foreign Avenue; both making a rich display of arms—the first manufacture of semi-barbarous nations.

The striking central avenue, east and west, challenges attention; and, were it possible, for the time being, to attain to that state of dual individualism which would enable us to be in two places at once, we believe there would quickly be a complete duplication of visitors, one half of each going west, and the other going east. As, however, there are great difficulties in the way of this rapid method, we must content ourselves with a selection, and, in spite of the temptation of the various striking objects on the eastern, or foreign side, of which a glimpse is obtained when standing at the point where the nave and transept intersect each other, we turn west, to view the leading trophies of the skill of our own countrymen: before doing so, we cannot but apologise to our foreign guests, since they ought to have received the earliest attention. Yet, when it is considered how much has to be seen, the late period, too, at which the greater mass of the contributions were arranged, and, to a certain extent, the incomplete state in which certain divisions still are, it can scarcely be considered neglectful not to describe or notice works seen under such serious disadvantages, and might even be considered premature. Despite, then, of our desire to do the fullest possible justice, and pay the greatest attention to the productions of our industrial brethren of France, Germany, and the Continent generally, to say nothing of the rich produce and ingenious inventions of our transatlantic compers, it is decidedly preferable that the arrangements on the British and Colonial side, as being most complete at the earliest period, should receive first attention, with such occasional glances of comparison at the corresponding articles on the foreign side, as may render the description more perfect, as more useful and instructive.

It was a very happy idea, this arrangement in the central avenue of certain leading objects, either individually or in groups, as trophies of the marvels assembled; thus giving in one continuous line an epitome of the whole classification: and certainly the result is all that could have been expected from such an arrangement, since in this continuous line of the third of a mile, we have an exhibition in itself, a marvel and a wonder—which a few years, or even months ago, no mortal, however sanguine or imaginative, could have anticipated.

As it will be necessary in due course to particularise those various contributions which claim the greatest amount of attention and consideration, in the rapid glance we are about to take at the most important points, criticism is not our present object. To tell our readers what to see, and afterwards to tell them how to see it, is the task undertaken. The first is the more immediate question.

Proceeding westward, then, from that crystal marvel, Osler's Glass Fountain, we must lead the visitor to the extreme west; the various objects arranged in the centre striking the eye in rapid succession, from the silk trophy of Messrs. Keith and Co. to the great mirror at the end under Willis's grand organ. This silk trophy is a novelty, and stands as the type of the textile fabrics of Great Britain and Ireland. It was originally intended, that, as each trophy would represent a particular class or manufacture, exhibitors in those departments should unite to form a combined type of their trade. Thus, the silk trophy was intended to have been contributed to by the various manufacturers of Spitalfields, and would thus have been a fitting representation of the silk trade in all its branches. Practical and technical difficulties, however, had to be overcome, in bringing together products so varied as those of the loom, even in one material; and Messrs. Keith and Co., as manufacturers of the largest kind of silk goods for furniture damasks, undertook the task. The production and arrangement of which is based on a suggestion and sketches made by the superintendent of textile fabrics, Mr. George Wallis, and subsequently improved upon and extended to the present structure by Messrs. Laughier, Dwyer, and Co., Poland-street, to whom the merit of the practical realisation in its present form is due. The whole is hung with the richest silk damasks, brocatelles, tabarets, &c., to the height of upwards of fifty feet; the sides of the base being filled in with mirrors of the largest dimensions, reflecting, at certain angles, the draped arrangement, and surmounted by flags and a banner, the central one being emblazoned with the Royal arms. In order to effect the regular re-arrangement of the whole at stated periods, the structure is so contrived, that, by ladders placed inside, the requisite work can be effected with comparatively little trouble in a short space of time.

This trophy stands between two bronzes of very different character—the statue of the Duke of Rutland by Davis, and a very clever group of a horse and dragon, by Wyatt, intended, we presume, to typify the triumph of the intellectual powers over the lower and more sensual propensities of our nature, since the horse is the symbol of the one, and the traditional dragon that of the other. As, however, notices of individual works belong to the future portion of our task, attention only is called to these works.

The Colonial or Canadian trophy is the next object of interest, and is formed of specimens of the timber with which our North American colonies supply us. These examples are cut into such slabs as may at once show the surrounding bark and the natural grain side of each being duly finished and varnished or polished. Among these specimens are two contributions by a fugitive slave, settled in Canada. This group of raw products is placed in the midst of the Colonial Departments; and the materials, though interesting from their utility, were certainly very unpromising ones for the formation of a trophy having any pretensions to symmetry or artistic effect; but the difficulty has been got over much better than might have been expected, and the whole is surmounted by a small canoe.

Passing the large mirror, with its elaborately ornamented framing and gilding, the spandril from Hereford Cathedral, placed at the back, cannot fail to attract the attention of the ecclesiastical love of decoration. St. Thomas's fountain, the subject of which is the story of Acis and Galatea, stands next, and is a work of no mean excellence. To do it justice, however, a recurrence must be made to it in future notices. The beautifully carved pedestal, the group of Cupids, comes next in order. The subjects of the reliefs are beautifully appropriate, and the whole is an excellent example of stone carving The next object is a kindred one, being a Gothic screen executed by the Patent Machine Carving Company, Gordan's Inn, London, at the side of which are excellent examples of the results of the same process as applied to general decoration.

The "Eldon and Stowell" group, two colossal portrait statues of those eminent brothers, the late Earl of Eldon and Lord Stowell, is well placed in the central avenue, as the work is a bold and massive one. The draperies are grand in their arrangement, and there is a repose in the whole subject which is highly satisfactory. The artist, the late M. L. Watson, would have appreciated to the extent which this work and another we shall take occasion to notice when visiting the sculpture, proves he ought to have been. This, alas! is the old story; and his talent is now fully recognised, when it is no longer available to us, or of any value to him.

The specimen of Honduras mahogany, several large pillars of alum, and some examples of chemical products, will astonish the curious in those matters; whilst Dent's Turret Clock, and the Sheffield trophy—a grand display of cutlery, &c., by Rodgers and Son—Rodgers and Sons—form admirable contrasts to these huge productions of nature and science.

The Coalbrook Dale dome—a most conspicuous object from all parts of the Building—commanding a view of the central avenue—as an example of constructive metal casting, is worthy of all praise. We wish we could say as much for the design as a work of art, although, in many parts, there is much to admire. The statue of "Eagle Conveying a Prize," by Bell, is placed in the centre; but, as this is one of those works to which, as a whole, recurrence must be made at some future period, and with ample illustrations, to render criticism intelligible, we pass on, after calling attention to Mr. Bell's gilded statue of Shakespeare, on the eastern side of the dome—a pleasing work, but of more pretension than power.

An equestrian group, representing a dead Crusader, his horse and mistress, illustrates a painful episode in the history of chivalry; whilst the great telescope [illegible] next to it as distinctly illustrates the glorious pursuits of modern science, her aims and triumphs

The glass cases containing splendid selections of furs by Nicolay, and feathers by Adcock, will be attractive to the ladies. The former is a remarkable example of ingenuity in arrangement, the case being supported round the base by preserved animals. At this point, too, the magnificent furs suspended from the galleries will attract the attention of the visitor

The use of terra cotta as a decorative adjunct in building, is admirably displayed by the model of a church in the decorated style, the whole idea being well and thoroughly carried out, and the application of the material as a constructive agent very successfully exemplified. Having seen and examined a church so constructed, near Bolton, Lancashire, built by the contributors of this model, Messrs Willock, of the Lady Shore works, we can bear testimony to its excellence in many respects, although, like all artificial materials, it has its disadvantages. For garden decorations, there is no material better adapted for general use; and with the progress made of late years, particularly by the enterprising firm to whom we are indebted for this example of skill, it is wonderful that the many elegant decorations adapted to ornamental grounds are not more generally used than they are, since we find elegance combined with cheapness, and, under all circumstances, with durability also

The next object, a model made by Mr. James James, of Broadwall, of a suspension-bridge erected over the river Dnieper, at Kieff, in South Russia, designed by Mr. C Vignolles, is the most perfect thing of the kind in the Building. A similar model to the one exhibited was made for the Emperor of Russia, and cost upwards of £12,000. The scale is $\frac{1}{4}$th of an inch; all the details are imitated with such nicety, even in the size of the nails and the threads of the screws, that from it a perfect copy of the original bridge might be executed on a full scale, without any written description. The abutments take to pieces, to show the construction of the masonry and the chambers for the chains it contains 6880 pieces of wood, and 87,007 pieces of metal. Before the construction of the suspension-bridge at Kieff, a bridge of boats was in use, the river being 1200 feet wide. Mr. James, the modeller, received

a ruby and diamond ring, valued at £200, from the Emperor, on the arrival of the first model, which is now set up in the Winter Palace at St. Petersburgh. The model of the Britannia Bridge, although less elaborate, is equally exact in scale. Between the two stands a model of Mr Brunel's bridge over the Wye, at Chepstow.

The large and massive fountain, by Seeley, constructed of artificial stone, will astonish and delight a large number of visitors. The whole work is at once an example of skill in construction and fitness of design.

The model of the Lord Mayor's state barge, by Searle, will have its admirers, particularly in those who delight in civic decorations.

In this rapid sketch of the leading objects in the western side of the central avenue, the revolving lights have been overlooked!

The very elaborate and costly model of the Liverpool Docks and the commercial part of that town is a remarkable example of the extent to which the economy of our great cities may be illustrated and permanently recorded. This admirable work originated in a desire on the part of certain patriotic gentlemen of Liverpool, that this great port, the outlet of so large a portion of our trade, and the scene of so important a part of the commercial transactions of the country, should be fairly represented in the Exhibition. As, however, Liverpool has no staple trade properly so speaking, but exists and owes its importance to the diffusion of the products of other localities, rather than by the productions of its own, the suggestion that the extent of its means for promoting the great purposes of international communication should be illustrated was a very happy one, and has been most admirably carried out by its originator and designer, Mr. John Grantham, C.E., a gentleman who has acted as honorary secretary to the Exhibition committee at Liverpool, and spared no pains to do honour to this great occasion. Upon a scale of eight feet to a mile, we have, then, an accurate representation of the docks of Liverpool, and the most important commercial part of the town, including St. George's Hall and the Railway Station, the Town-hall, Custom-house, St. John's Market, and several of the churches; the shipping lying in the docks, or floating, to all appearance, on the surface of the Mersey, which is represented by the silvering of coloured glass. The model is supported on an appropriately designed base formed of elephants, cast in iron, from the backs of which the columnar supports of the roof arise; pediments, filled with appropriate decorations in imitation of bas-reliefs, being at the ends and centre. Future descriptions will render this great and important contribution more familiar to our readers—a work which does honour to the merchant princes of Liverpool, and which is intended to be eventually deposited in St. George's Hall, as a record of this assemblage of all which constitutes the basis of its greatness, its wealth, and practical utility.

A specimen of plate glass of extraordinary size is placed against the columns supporting the cross at this end, and the whole scene through which we have so far journeyed is reflected with great effect

Standing at this point the whole length of the Building is seen, and the result is in the highest degree impressive and beautiful. It is to be regretted, however, that the sides of the central avenue have not been kept more clear of projecting objects, as in many instances one or two of these projections interfere with the whole range, and are anything but sightly. As a whole, however, more has been done in this direction than could have reasonably been expected, since each exhibitor would desire to display his own contributions in the very best possible position, and have as little regard to those around him as the regulations would permit. To our mind the British side is a wonderful exemplification of British character, and the notions each man entertains of his own freedom and independance of action. Like our street architects, each has run up his own erection in his own way, and it has only been by a constant supervision, that anything like an *ensemble* has been obtained. Bedposts and conservatories, glass cases, iron rods, and sign-boards, appear to have formed the base elements of the best mode of construction, and these have only been worked into a presentable form by a variety of modifications. Again, the substantial character of many of these erections strikes at once. If the whole Exhibition was intended to remain *en permanence*, and the contributors impressed with the idea that their great-grandchildren would display their industry and their genius in the space assigned to themselves to-day, they could not have more effectually provided for such a contingency. These fittings, therefore, form a remarkable contrast to many of those on the foreign side, which are remarkable for lightness, elegance, and remarkable fitness for their purposes.

SCULPTURE

The contributions in sculpture are very numerous, and, those disposed in prominent positions throughout the nave and transepts, add much to the beauty of the general aspect of the Building. As we shall, from time to time, present our readers with Engravings from many of these works, we shall not enter upon minute description or criticism in the present notice, but content ourselves with indicating some of the principal subjects which strike the eye of the visitor as he passes through the avenues.

In the centre of the south transept, Mr. Thornycroft's equestrian statue of the Queen commands attention. The horse is a portrait of one presented to her Majesty by the King of Prussia, six years ago. On the left, amongst various others, is one of some ambition by Mr Stephens, "Satan tempting Eve;" the latter a recumbent figure, as asleep or in a trance. Near the point of junction with the nave is a marble group of considerable merit, by Joseph Engel, a Hungarian by birth, who has studied for some years in this country. It represents an episode of the war between the Amazons and Argonauts. A sister in arms is supposed to have come to the rescue of another Amazon, whom she bears in her arms, whilst struck with pity for the prostrate Argonaut, she suspends the blow which was aimed to destroy him.

In the north transept are casts for equestrian statues of her Majesty and Prince Albert, by Mr. James Wyatt. In the rear is Mr. John Bell's beautiful statue of "Andromeda," in bronze, cast at the works of the Coalbrook Dale Company. The pedestal is of exquisite design, and richly chased and engraved. This work will deservedly attract a large share of public attention. In this portion of the building will also be noticed an "Adam," by Mr. E. J. Physick; an "Ancient Briton," looking out as a Scout, by Mr. Adams; "Abel and Thirza," by Mr Earle, and several other pieces, of more or less originality and merit.

At the upper end of the transept portion of the nave we are struck with a very graceful "Venus and Cupid," by Mr. E. Davis, being, we believe, the only work executed in marble, by a British artist, in this country, entirely, and without assistance, for this Exhibition. Next we come upon a "Horse and Dragon," in bronze, by Mr. Wyatt, senior; a production of remarkable merit, truthful and full of fire. Next in order is the same artist's beautiful portrait of the favorite dog of the late Lord Dudley and Ward, a work of the highest merit.

One of the most interesting works in this portion of the building is the restoration of a portion of the monument of Philippa of Hainault, Queen of Edward III., in Westminster Abbey, executed from the drawings and under the direction of Mr. George G. Scott, by Mr. Samuel Cundy; the figures by Mr. John Philip

Turning to the eastern portion of the nave we remark, on the right hand of the point of intersection, Mr. Macdowall's figure of Virginius at the moment of having slain his daughter—a figure full of energy, and with great dignity in the expression. At a little distance down a colossal statue of Queen Victoria, cast in zinc, at the works of the Montague Zinc Mining Company, of Paris. This remarkable work, which has the appearance of polished steel, stands with the pedestal twenty-one feet high. The figure was designed by D'Anton *aîné*, the pedestal by Le Norman. Another very beautiful contribution from our Gallic neighbours, is a Venus and Cupid, in bronze, by J. Pradier, the composition of which is original and very elegant This artist exhibits several other works deserving of attention. M. Etex has a large group of considerable merit, but of a most painful subject—no other than the cholera! His characteristic, in this and other works here exhibited, appears to be that rare gift, expression. In this department of the Building, which is richer in works of sculpture than any other part, are several other pieces, which will be honourable mention. Amongst the most conspicuous stands M. Simoni's colossal equestrian figure of Godfrey de Bouillon," Pierrotti's "Mazeppa," the "Amazon" on horseback attacked by a lioness, a subject worked out with extraordinary vigour, by Kiss, of Berlin, and others which we cannot enumerate at present

Certainly no person acquainted with the arts of this country can suppose for a moment that the specimens of sculpture exhibited on this occasion really represent the present position of this art amongst us; not that this position is anything upon which we could afford to be very congratulatory, supposing all the best men of the present day were thoroughly represented, which they certainly are not. With a few very honourable and pleasing exceptions, our examples of the plastic arts in their highest manifestation are below what could have been conceived, and the redeeming features only serve to prove the rule more fully by contrast. In glancing through the various examples scattered through the Building, the contrast of power and weakness, even in the same work, strikes every observant person; and, when the sculpture room is visited, the impression becomes settled, that, with much to admire, there is also very much to find fault with and to condemn.

This Sculpture Room, or court, is a well-defined apartment, of goodly dimensions, in which the works are arranged with discrimination and effect. The light wants concentration, and in many respects the examples suffer accordingly: but, on the whole, few will have any cause for complaint. The traditionary deep-toned background has been preserved, and no perilous innovations in the way of colour or effect have been attempted, although this might have been reasonably expected, and the ordinary dungeon-like appearance of the conventional sculpture gallery might have been improved on an occasion like this.

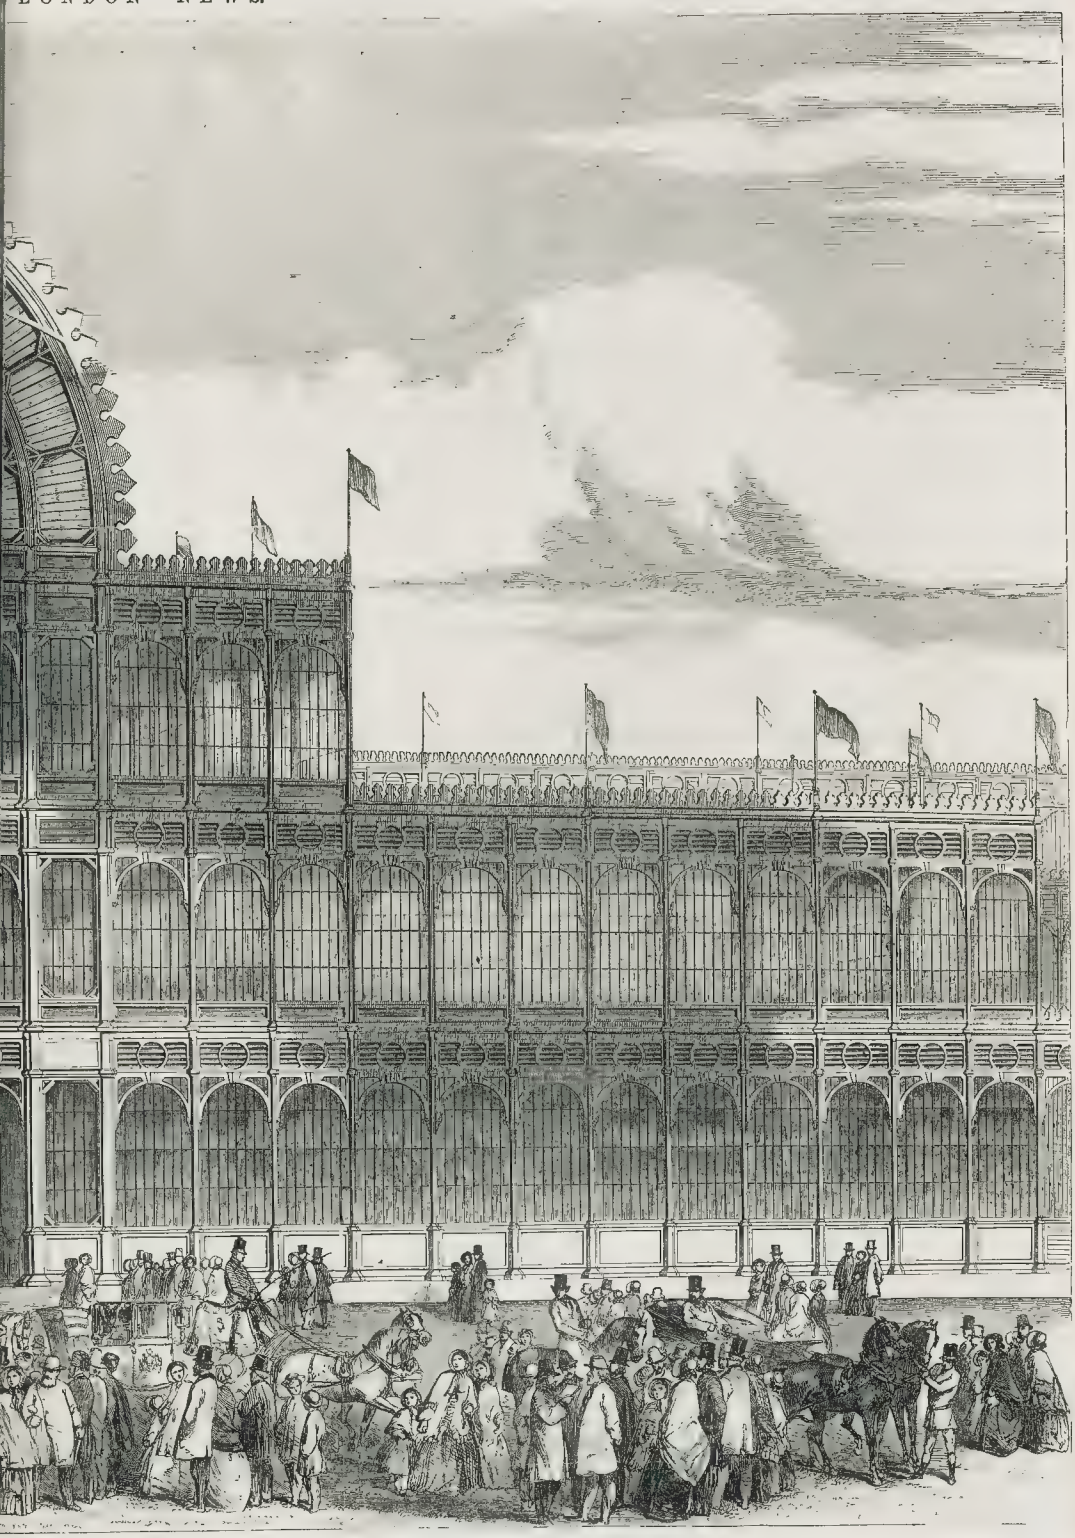
The works which we have selected for Engraving in the present Number are:—John Bell's "Dorothea," a work of much excellence, though more imitative in its treatment than is consistent with the highest development of the art; Kirk's "Ariadne," a pleasing specimen of this artist's style; T. R. Tolley's "Boy at a Spring," an extremely graceful production; the "Massacre of the Innocents," exhibited by the Art Union of London, being one of the competing subjects for their prizes of £100 and £50; and "Rosamunde," by John Thomas, whereof the figure, one of the best works, the attitude being dignified and graceful. The costume is of somewhat medieval character—the same feeling pervading the ornamental details of the drapery, &c.

ARCHITECTURAL DECORATION

As forming an important and highly interesting portion of the Fine Art Class, and in immediate connexion with sculpture, come the various methods of architectural decoration, and more especially those departments which belong to the adornment of the interiors of our dwellings. It is astonishing what an immense advance has been made in the pursuits connected with house decoration during the past ten or twelve years. From very indifferent imitations of woods and marbles—from ugly mouldings affecting to be very classic, and being in reality only very rococo—and in colour, from a system of universal drabs, we have emerged into something approaching to an artistic style in our house embellishments; and, whilst progressing in elegance, have not as yet certainly run into extravagance: an error always to be feared, unless constantly kept *in terrorem* before the eyes of those who, in seeking to be equal to their neighbours on the one hand, desire to outshine them on the other. A few years ago the upholstery was the only professional decorator, and even now the dictum of the mere dealer in furniture is too frequently taken in preference to the opinion of the artist, let him have made the question of beauty, as combined with utility in the embellishments of every day life, ever so much his study. Happily, people begin to think, that, when about to expend large sums in decorating houses, it can do no harm, and may possibly do much good, to have the opinion, at least, of some one who understands the relation of the respective parts of a room or its decorations to the whole; and that simply filling a house with furniture, painting or papering the walls of any colour, getting silk hangings and carpets without reference to design in themselves or congruity with the objects around, is not precisely the best mode of expending money to advantage, or obtaining a good and pleasing result when all is completed

The demand for elegance, then, has created the very thing required, and the admirable specimens displayed in this Exhibition, in almost every available style of decoration, is a sufficient proof that we are beginning to appreciate the importance of those decorative adjuncts, by which an educated and refined people have ever been distinguished from their less advanced neighbours. Ceiling decorations predominate; and, inasmuch as they could be so easily introduced under the galleries, and with such good effect, there can be no doubt that many of our best decorative artists were induced to contribute specimens of this kind. Decidedly the most perfect display of its kind, on the British side, is the ceiling and walls of the bay under the Central North Gallery, fitted up by Messrs. Jackson, of Rathbone-place, whose great reputation as the manufacturers of *carton pierre* ornaments and decorations is well sustained in the elaborate works here displayed. The carved ceiling which constitutes the roof of this compartment is an admirable specimen of skill in executing, as of talent in design. The figures, animals, and flowers, introduced as adjuncts to the ornaments, so combine with them as to produce a oneness of effect throughout; and the exquisite character of these ornaments is enhanced—and not, as too frequently, destroyed—by the introduction of these figures. The specimens of ceiling flowers, cornices, string-courses, and mouldings are all excellent, and the examples of curvatides—a detail in ornament generally marred in the execution are vigorous adaptations of the human figure to that use. Altogether

EXTERIOR OF THE SOUTH FRONT



THE GREAT EXHIBITION BUILDING.

Ladds 60 second and 16 first-class passengers, beside a guard's van, which will hold five more if needed—and carried on six wheels. The arrangements for getting round curves with the centre wheels are worth examining. This carriage is said to be 35 per cent. lighter than an ordinary vehicle of the same capacity. If practice proves it to be durable and economical, the advantage will be enormous; for dead weight, viz. unprofitable weight, is an enemy that has been constantly encroaching on railway profits and preventing reduction in railway fares. Next to the carriages stand a set of waggons, which will be the instruments of working a system of conveying spirits, for the use of the public bonded warehouses on wheels, impervious to weather and the attacks of petty thieves less audacious than professional burglars, for the walls and roofs are strong, and a bolt and lock, at one motion, make the whole affair as secure as locks and bars can. Gay as the arrangements of these carriages are, adorned with the flags of all nations contributing to the Exhibition, and with appropriate mottoes, they are, nevertheless, honest waggons, veritable specimens, except in ornament, of 600 of the same patent actually at work on the North-Western line. These carriages were invented and patented by Mr. Henson, to remedy more than one serious drawback in our carrying system, of which the first was an inheritance from the canals—that is to say, *loss by pilferage*.

During the "good old times" of canal and river navigation, and, we may add, of many-horsed road-waggons, robbery was reduced to such a system, that it came to be regarded not as a robbery but as a perquisite, by the boatmen and waggoners who shared the plunder. The publicans in remote places on the canal sides, and on the navigation of rivers like the Severn, grew rich by dealing in the *perquisites*. On one canal, boxes packed by the aid of an hydraulic press, with tin plates, were regularly mulcted of a percentage of their contents, to the amusement of the manufacturer; for without hydraulic power, it seemed impossible to pack the boxes, if once they were unscrewed. At length it was discovered that a scent-box rascal had turned a lock close to a tunnel into an hydraulic press, and with the help of the boat's mast placed against the ceiling of the tunnel, by letting on water as required, forced down the lid of each box as it had been screwed. To send any kind of valuable liquor by canal, without its being tapped and adulterated with canal water, was impossible. Indeed, there was a good story was prime old East Indian Madeira, as aromatic ancient Jamaica rum, to be had at certain petty taverns close to canal locks, as in any great house in Portman or Grosvenor-squares.

It was hoped that the rapid railway transit, the neat, regularly-paid servants, so unlike the canal bargees, would secure carriage from this kind of felonious toll. But unfortunately, while borrowing and improving the railway system of the north, we borrowed without improving the little square boxes on wheels, open at top, to carry our valuable goods in, with such good enough and safe entrance for Wallsend or Lambton's, but scarcely the sort of protection suitable for silks, tea, diamonds, fine china, and gold dust. We did not even take the trouble to put springs or buffers to many of these carriages. We covered them with a tarpaulin, which cost 6*d.*, in the morning; in the afternoon a pole was run through it; and at night the rain or snow soaked a hundred pounds worth of velvets. For want of buffers, china and glass went all to smash; for want of proper coverage, cotton was spoiled; indeed, nothing is sooner spoiled for saleable purposes than from cattle rust, and it become unmarketable. The waggon itself, which always had to stand in the open air when empty, rotted away; and for want of light springs, smack to piece

Improvements have been and beaver, but as waggon-building was not an object of business, no one thought of applying mechanical science, which should make every part useful as a support to such a simple thing as a waggon. But the waggons. The parties in charge of these open waggons, or engaged in unloading them, found the temptation too great for their principle. Sometimes valuables were "chucked" to an accomplice at night in a lonely place by the side of the railway: sometimes valuable packets fell accidentally into the straw while unloading on the tie opposite to where the carrier's clerk was standing

We have been speaking in the past sense, but the fact unluckily is, that this robbing system is still going on night and day in every part of the kingdom. Eatables, such as cheese, sugar, tea, and other things that cannot be traced, are fitched wholesale. On one line running through an agricultural district, the cheese lost, stolen, and broken cost the company more than the carriage; on another, a railway servant was found to have an attic full of sugar-loaves and tea

Of course, for all this pilferage, damage to goods, and damage to waggons, the public pay in some shape or other. The whole community, especially the agricultural and commercial parts of it, suffer from it

without putting on the dress of the miner, and exposing himself to the fatigue, dirt, and risk that accompany an under-round trip; and he will also be able to comprehend something both of the cause and nature of those fruitful explosions that sometimes occur, and of the means suggested or adopted for their prevention From the coal-mines he may pass to those working metalliferous ores, and see the ingenious methods that have been adopted for lifting minerals from the bowels of the earth, without much individual exertion; the methods of pumping out the water, that often accumulates in almost incredible quantities; the system of rendering merchantable the raw produces of the earth; and the many interesting and beautiful processes adopted with regard to the metals, before they are considered in a fit state for use All these are placed together, and with them are associated some drawings and other illustrations of quarrying Mining maps, geological maps, and sections partly cover the walls of the basement; and within the narrow strip of about 420 feet by 16, belonging to Class 1, there will be found collected a strange variety of minerals and mineral produce, exhibited by several hundred persons, but all tending to illustrate usefully, and in a popular way, the mineral riches of our country.

There is no such uniform and systematic collection of the mineral riches of other countries. Limited, of course, in space, and having to pay large expenses for land carriage and freight, the objects generally sent from the Continent and elsewhere are articles which are less weighty, or, at least, more manufactured. Still, a great many things will be found from different countries. From China there will be seen a large and most interesting series, illustrating the manufacture of Oriental porcelain. From Australia, the copper ores of the western part of that country. From Brazil, magnificent examples of native silver—one, weighing considerably more than 200 lb., and another weighing 164 lb.—have been sent, and will be shown. From Spain, very interesting series of raw produce, both in stones for building and decoration, in coal, and also in metals, will be found in their proper place. France and America, the two largest exhibitors on the foreign side, have not yet enabled us to judge of their intentions in this respect, but there can be little doubt that they will do justice to the important subject of unmanufactured produce from the mineral kingdom.

The exhibition will thus be seen to contain a gigantic series of objects, many of them hitherto only accumulated in museums, but all important as the groundwork of national riches. To our soil, our quarries, and our mines we must always refer as the elements of wealth; but it depends on the way these are used, to determine how far these elements are rendered available. The exposing them to observation and investigation is at least one way, and by no means a trifling one, in which the real nature and relative advantages of the raw materials may be best judged of.

MINERAL MANUFACTURES.

Under the title "Mineral Manufactures" are included all finished productions in stone, marble, alabaster, spar, slate, granite, and other mineral substances, used, whether commonly or occasionally, for purposes of construction. To these are also added sculpture, ornamental and various imitations of marble and stone, whether plain or decorative: various works in terra cotta, brick clay, fire clay, and porcelain clay; and some miscellaneous objects placed here as the nearest approximation that could be imagined.

Amongst the many attractive spots in the Exhibition, this will be found by no means the least. It opens from a portion of the north side of the central avenue, between "leather on the west and "furniture" on the east, and stretches back to the railroad on which are placed locomotive engines. It is readily found by its proximity to the great Colebrook-dale dome, and the remarkable combinations of glass prisms serving as a lighthouse.

The objects in this class form three or four well-marked groups, including 1, the marble, spar, granite, porphyry, and other ornamental material, together with inlaid work in marble and spar; 2, manufactures in stone, slate, and other material not admitting of a polish; 3, manufactures in imitation of marble, whether in composition, as scagliola work generally, or in solid material as slate, but used for decoration; 4th, imitation stone in cement and other material; and, lastly, though the first belonging to the class, all kinds of brick, terra cotta, tiles, and heavy pottery.

These varied objects are collected together and grouped as well as their nature and the limited space would permit; but, in addition to those actually in the court, a very considerable number will be found in the inclosure at the western extremity, where such objects are placed as might be expected to stand exposure to the weather without serious injury.

The objects in this Class are many of them of the most striking kind, and are certain to attract general attention Belonging to the first group there will be found various articles constructed in the serpentine of the Lizard Point, Cornwall—a stone exceedingly remarkable for its extraordinary beauty and depth of colour, and the large size of the blocks that can be obtained. At the south-western exit will be seen a block of this stone partly polished; but the general visitor will have to go as far as the pair of obelisks and font which form, as it were, the entrance posts of the mineral court, and which, with two candelabra immediately adjacent, form the principal frontage of the class. The Cornish serpentines and other softer stones there will exhibit a beautiful contrast with the magnificent inlaid work from Derbyshire immediately adjacent, in a manner not unfavourable to either

The materials used in the construction of the richly decorative articles here exhibited are of several kinds. They differ exceedingly in the mode of treatment, and in the objects they are best adapted to express. Amongst the chief objects exhibited are obelisks and candelabra, chimney pieces, pedestals, vases, and tables for various purposes; and the visitor will be able to judge of the comparative merits and adaptability, not only of serpentine marble, alabaster, spar, granite, and porphyry, but of the different quality, appearance, and finish of the various kinds of each. There are samples of the finest kinds of marble from Derbyshire, Devonshire, many parts of Ireland; and within the court there are also specimens of foreign marbles manufactured in England, or by English artists The granites from Cornwall, of several localities, and remarkable for their variety of colour, from the silver grey, so much admired for large work, to the richer colours —some of them very rare —used in ornaments of moderate size. The beautiful fresh-coloured varieties from Aberdeen will be found exceedingly remarkable for the perfect polish they take, and the gigantic size of the objects constructed of them. It is difficult to say more concerning these strikingly beautiful objects, without mentioning particular exhibitors, which it is not our intention to do in this sketch; but it may safely be said that all the principal manufacturers who exhibit in this class have gone to great expense, and taken every care to present themselves before the public in the best light We are sure that to them the Exhibition must prove a great benefit, as it will be apparent, both in the material and style that little is wanted to enable England to bring into the market the finest and most ornamental marbles and granites, and, at the same time, execute works in these substances of which no country and no artist need be ashamed.

The manufactures in stone, exhibited in Class 27, are not numerous; but they are very interesting and satisfactory. They consist of an exquisite font, in the centre of the Mineral Court, executed in Caen stone; a monument and niche, on the north wall of the court; and a vase and chimney-piece in the avenue leading to the Refreshment Court. All are good, both as specimens of stone and workmanship, and have presented also to great artistic merit in design. We must refer to them again, but would direct the attention of the visitor to them as well worthy of notice.

The collection of works in imitation of marble and stone is exceedingly interesting, and includes works in common scagliola; in composition of new kinds, cast and afterwards polished; in stucco, both ordinary and of the kind called Keene's and Parian; in enamel on slate, of which the variety is very considerable, and the effect most admirable, and also in painting on wood. Many of these objects will be found worthy of very close attention, and exhibit much taste as well as good execution. They are chiefly grouped together, and can be conveniently compared and examined

Next in order to the imitations of marble and stone is exceedingly interesting, and includes works in common scagliola; in composition of new kinds, cast and afterwards polished; in stucco, both ordinary and of the kind called Keene's and Parian; in enamel on slate, of which the variety is very considerable, and the effect most admirable, and also in painting on wood. Many of these objects will be found worthy of very close attention, and exhibit much taste as well as good execution. They are chiefly grouped together, and can be conveniently compared and examined

Next in order to the imitations of marble, we may mention the imitation stones, of which there are some examples. These are of three kinds: those known as terra cotta, and imitating Bath or Caen stone, of which there is a good specimen in a pinnacle, in the middle of the court; those made of Portland cement, and of grey colour, of which some garden figures are exhibited; and those of stone having silica base, and therefore much less liable to injury from exposure. Many of these materials are worked into vases exhibiting various degrees of excellence in form and material. Among the specimens of cement will be seen also some interesting modes of proving the strength of the material.

The collection of pottery and earthenware in this Class includes a considerable and interesting group of bricks and tiles, several gigantic retorts, and pipes and other objects both of interest and usefulness. The beautiful and highly ornamented tiles exhibited in the central avenue, are too remarkable to be passed by without notice. Nothing has been attempted of this kind that can at all approach this manufacture; and the floors and pavements made of compressed clay will attract general attention and admiration.

Among the miscellaneous articles in this class may be mentioned, as interesting from the material, a large garden seat, exhibited by his Royal Highness Prince Albert, and made of cannel coal, of which a block, a large wine cooler, and a model of the monument to the Earl of Durham, in the same material, accompanies the chair. There is also a model house of much interest, exhibited by the Society for the Improvement of Dwellings for the Working Classes, and made of a peculiar kind of hollow brick that is a non-conductor of heat, and very costly Other small models of houses and other constructions will be found illustrating special building contrivances.

TEXTILE FABRICS.

The importance of the Exhibition in this department cannot possibly be over estimated, since upon the position of the various branches of trade connected therewith, so much of our national prosperity depends, and the display now made cannot fail to do us immense service. For even supposing that our products do not bear the comparison with foreign productions to which they will be subjected, and that the assumed inferiority of British manufactures as regards the higher qualities of design prove true, our manufacturers will receive a stimulus which cannot fail to be beneficial; whilst our artisans will have placed before them examples of excellence, to the attainment of which in their own productions their spirit, talent, and energy will certainly prompt them to aim. But if, on the other hand, it should be seen that the products of our looms have been much underrated, and that, to some purpose of the dealer, it was more convenient to the seller to misinform his customer as to the real producer of the articles which he desired to sell; that, taking advantage of an existing prejudice against the products of his own country as not being of sufficient excellence to warrant his patronage, the seller led them on to buy or to believe that he was purchasing the silks of Lyons, the laces of Brussels or Valenciennes, the cambrics of Switzerland, or the embroideries of Paris, when, in fact, the silks of Spitalfields or of Manchester, the lawns of Paisley or of Nottingham, or the cambrics and embroideries of the north of Ireland were really and truly the objects of their barter—then shall we, as a people, gain still more largely, and receive encouragement thereby to go on for the achievement of greater excellence; and, whilst generously acknowledging the merits of our rivals, exert ourselves to emulate them, even in those departments of industry, and they are many, to which our attention has not been so immediately directed, whilst maintaining our position in those to which our skill and industry had been turned, and with a greater success, too, than we had anticipated.

In comparing the examples of the skill of the various countries of the world whose products are here assembled, it shall be our endeavour to draw instruction for the future; and, whilst candidly acknowledging the merits of our foreign brethren, whenever they are really manifested, we shall as fearlessly claim for ourselves the credit due to us as a people, for those manifestations of talent and industry in our own countrymen to which their works may appear to entitle them.

Taking the cotton manufacture as the first point in our glance at the textile productions, inasmuch as it may be said to be the basis from which the present manufacturing system of this country has sprung, and in which, through the inventions and improvements in machinery, we have been enabled so long to take the lead, some little disappointment may be felt, which may be expressed at the comparatively small extent to which a display of the cotton fabrics so large a proportion of our population is illustrated: but when it is remembered that the products of the cotton manufacture are not of that varied character to admit of any great or extensive display, and that no two specimens of the same kind of production is amply sufficient to show its nature, it is rather a subject for congratulation than otherwise, that a larger display of examples in this department has not been made; since, had all, or even a slight proportion of our cotton manufacturers, exhibited specimens of their products, the display would have been wearisome and useless, and whole acres of different qualities of calico are not precisely the most desirable objects to inspect, however useful we may acknowledge them to be. The visitor, however, will find in the display before him very much to interest and instruct him. Thousands will have before them for the first time the leading features of a manufacture which it is no exaggeration to say has revolutionized the progress of this country, not only in the material position of this country, but of the whole world; and a little reflection will show that there is much more involved in cotton than the mere question of supply opposed. With a ton yarn, in warp, weft, and calico, than is generally supposed. With a material so perfectly exempt from all liability to vermin, even more so than silk, since with care this latter material can be grown with success in England, we find that our skill and industry enables us to bring it across the broad Atlantic, and after putting it through the various processes admirably described in the display made by Mr. Bazley, take it back to the precise spot whence it came, spun, woven, printed, and dyed, fit for the clothing of the worker employed in raising more of the raw material, to be again wrought in the manufacture, with only a change, not only in the industrial position of this country, but of the whole world; and a little reflection will show that there is much more involved in cotton than the mere question of supply supposed. With a ton yarn, in warp, weft, and calico, than is generally supposed. With a material so perfectly exempt from all liability to vermin, even more so than silk, since with care this latter material can be grown with success in England, we find that our skill and industry enables us to bring it across the broad Atlantic, and after putting it through the various processes admirably described in the display made by Mr. Bazley, take it back to the precise spot whence it came, spun, woven, printed, and dyed, fit for the clothing of the worker employed in raising more of the raw material, to be again wrought in the manufacture, with only a change, not only in the industrial position of this country, but of the whole world; and a little reflection will show that there is much more involved in cotton than the mere question of supply op

IRON GATES.—BY MESSRS. COTTAM AND HALLEN, OXFORD-STREET.

Reynolds, Messrs. Pim Brothers and Co., Mr. Jones, and Messrs. Atkinson and Co., all of Dublin, will astonish and delight every visitor; and the poplin loom erected by the last-named house, in which a weaver is actively engaged in working a richly brocaded poplin from a design executed as proprietely enough by a pupil of the Dublin School of Design, will add largely to the interest of this part of the Exhibition. This machine is beautifully constructed, the framework being of mahogany, and the Jacquard mountings, &c., of suitable materials, producing, as a whole, a very elegant and tasteful effect.

At the back of the poplins, the Irish woollen goods are placed, and some excellent examples of the present state of the woollen manufactures of Ireland are to be found here, Mr. Richard Allen, of Dublin, and Messrs. Wilans being the principal exhibitors. At the back will be found the examples of Mrs Veevers's fabrics, manufactured from the fibre of nettles; as also various specimens made from the fibre of flowers. This lady resides at Mohill, county of Leitrim, and has paid much attention to the production of articles from the fibre of common plants not hitherto used for such purposes.

Before quitting the locality, it may be well to impress upon the visitor the distinct character of the arrangements for the display, almost in a national sense, of Irish products, inasmuch as they are, as far as the cloth itself on would allow, brought nearly all together. Hogan's celebrated statue of "Ethorne," the property of Lord Cloncurry, was to have been placed in front of the loom; but that distinguished patriot, perhaps wisely, desired to have a guarantee for its safe return to his possession. This guarantee could not be given; and so the symbol of Irish nationality, which would have completed the group, is wanting. Mr. Panormo, of Dublin, having sent his statue of "Caractacus," this work has been placed there, and stands as a fitting emblem of Irish industry, in the person of the chained captive. Let us hope, however, that the Roman soldier, whom we here see unloosing the bonds of the noble Briton, is also the symbol of this display, and that, ere long, free and unfettered, the industry, the talent, and the energy of Ireland will be fairly developed; and that, quitting the vague and unprofitable field of mere political activity, the social and industrial elements so long dormant within her will arise and work that change so much needed in the position of her people, but which it is in vain to look for from any other source than that of the development of those national resources possessed in such abundance, but so long neglected for the chimera of mere political change.

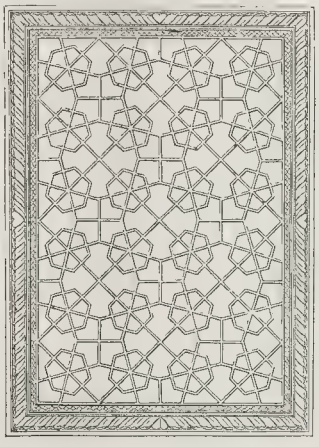
The great feature of the group of mixed fabrics and woollens, as arranged in the locality under consideration, is the display of that important seat of industry, the West Riding of Yorkshire. Owing to the desire of the respective committees of the various towns in this district, that the manufactured articles to be exhibited by them should not be divided, and as there was a strict analogy in the whole of them, it was wisely determined that the arrangement of Classes 12 and 16 should be made subservient to the wishes of so large a body of exhibitors. Accordingly, there will be found in this large group specimens of all those different branches of manufacture with which the West Riding supplies our own wants and those of our foreign customers. It is true that there are certain classes of goods peculiar to each of the great towns of the West Riding: thus, Leeds is the exponent of woollen cloths; Bradford, of mixed goods adapted to ladies' dresses; Halifax, of worsted damasks, and worsted and silk for furniture; and Huddersfield, of shawls and the lighter materials of dress each, however, partaking more or less of the character of the others in addition to its own speciality. The arrangement of the goods, though somewhat crowded, is, on the whole, very excellent. The fittings of each town are as distinct as it is well possible for them to be, and certainly their substantiality is most unexceptionable, since they appear as enduring as the Building itself. The arrangements in front, next to the central avenue, are an exception to those of the whole Exhibition; and whilst they are well adapted to the display of the specimens arranged therein, the enormous glass cases, with polished mahogany frame-work, do much to interrupt the view along the centre. In a display like this it would be invidious to select any particular exhibitors, whilst simply giving a glance at the leading features of the whole; in the regular course we shall pay our respects to each town and its individual exhibitors, and meantime commend the display to the attention and consideration of the visitor, who will indeed be fastidious if he does not find something to please him.

The West of England, also, has its group of woollens, and its reputation for the production of the highest class of cloths is well sustained; and, though not so attractive in appearance, being wanting in those fascinations of brilliant colours which characterise the articles around, the contributions will repay a close and critical examination.

The London exhibitors in this class appear simply in the character of merchants, or as the proprietors of certain kinds of cloth made for their exclusive sale, a fiction of commerce which has its advantages and its disadvantages, bringing the capitalist and sales-man to the aid of the manufacturer in one sense, but too frequently taking the reputation of the latter as a portion of the bargain.

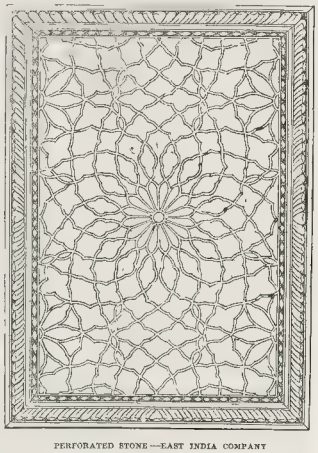
The manufacturers of Scottish woollens, shawls, tartans, and tweeds have combined to make a very great display. It is to be regretted, however, that the necessities of the case were such as to compel the division of these contributions. Thus, a portion are exhibited here with the other goods of their class; another portion on the north wall, extending the whole length of the court in which the woollen machinery is placed; and a third but small portion is placed in the transept gallery. The Galashiels tartans and shawls are kept together in their proper place, as also certain divisions of the Glasgow goods. The illustration of Scottish industry thus given is a very satisfactory one, and, taken as a whole, our friends of the north have done themselves credit in every sense of the word.

The remainder of this court is filled with specimens of the coarser kind of woollens. Some admirable specimens of horse-clothing, exhibited by Mr Bliss, of Chipping Norton, and a large contribution of blankets from the Messrs. Early, of Witney, illus-

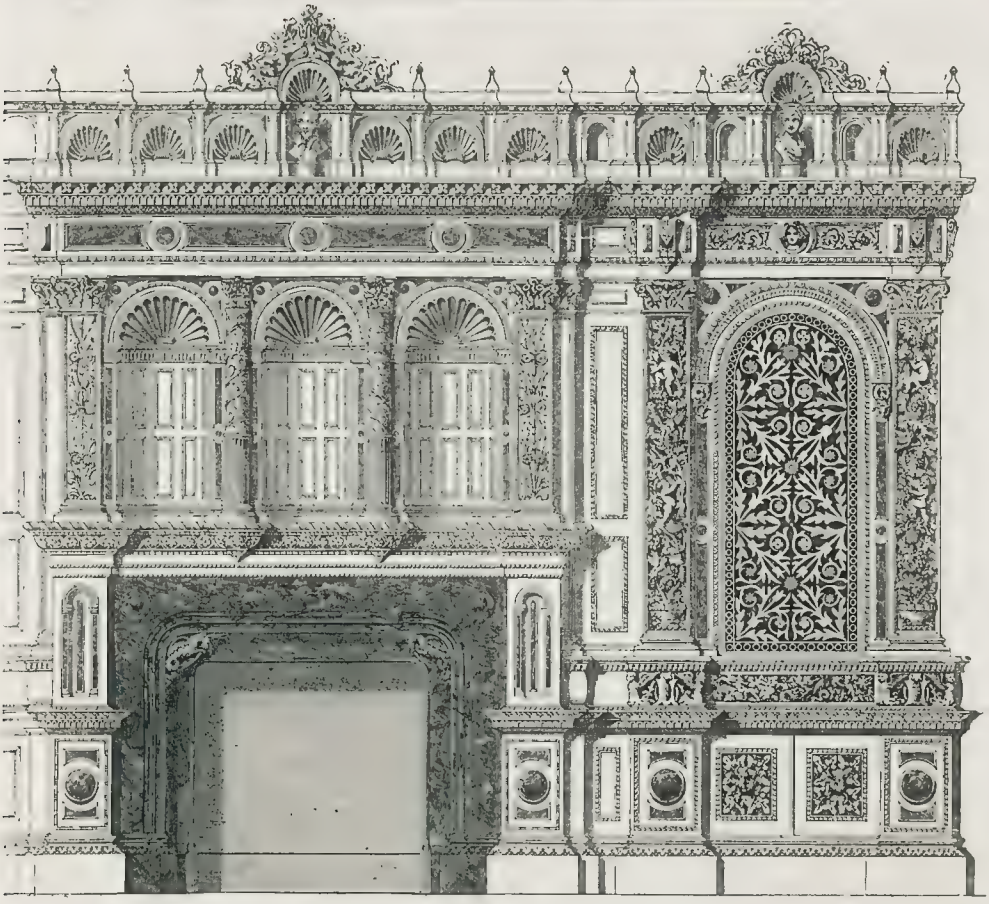


PERFORATED STONE.—EAST INDIA COMPANY.

CANDELABRUM.—BY JOHN WEBB, OLD BOND-STREET.



PERFORATED STONE.—EAST INDIA COMPANY



SIDE OF A LIBRARY.—BY MESSRS. HOLLAND AND SON.

trate the ancient reputation of Oxfordshire for this description of goods. Kendal, too, makes a good display in railway wrappers, Messrs. J. Ireland and Co. occupying the whole wall at the end of the court with their ponderous examples of the looms of Westmoreland.

Before quitting this department, we have no hesitation in saying, that, as a whole, the exposition of British industry and talent here made is of the best and most practical character; and, however much hypercritism may carp at exceptional examples, there is a large amount of excellence of which every man of candid judgment will feel proud, and every well-wisher of our commerce and the future progress of our industry and artistic skill, as applied to manufactures, be delighted to see.

COLONIAL SECTION.

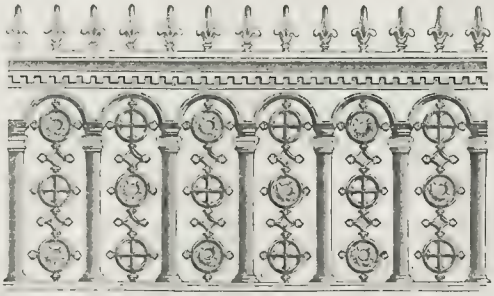
As we turn down the western arm of the grand avenue, on either hand, we pass the display of East Indian productions and manufactures, which the Company have been enabled, by the aid of their numerous and intelligent officers, to gather together for our instruction and amusement within the very short period available for that purpose. The examination of this valuable museum we reserve until, arranged in order, we are enabled to do it full justice.

We pass on to the succeeding sections, containing the produce of Ceylon, Canada, and our Australian possessions

THE CEYLON CONTRIBUTION.

Few if any of our Eastern possessions will be fairly represented at the Great Exhibition, not even the East Indies, where all the power of the Company has been brought to bear, chiefly owing to the shortness of time permitted for the collection of objects. Great complaints have been made in the colonies that they received no official notice of the Exhibition for two or three months after it had been mentioned in the papers, and that therefore no persons felt inclined to act. Added to these delays were the indifference of the native population in Ceylon, and elsewhere, and the natural obstacles of climate, difficulty of transport, &c., peculiar to those tropical regions

As regards Ceylon, there is scarcely anything exhibited in that art for which its inhabitants have been justly celebrated—carving in wood and ivory. It was not until March, 1850, that a local committee was formed; and to ensure the arrival of the goods by the prescribed time, the 1st of March, they had to be shipped by the end of September, thus leaving but six clear months for articles which required at least a year. It is quite impossible to persuade a Cingalese carver to work faster than is his custom; he will not depart from long-established usage. The ivory-work of Ceylon is scarcely known in Europe; and it is deeply to be regretted that no worthy specimen of this species of carving has arrived. The inlaid furniture of ebony, calamander, &c., is perhaps unequalled in any part of the world, yet there are but two specimens come to hand



CARVING IN A TEMPLE, COMBROOK DALI BY COLE.

The native goodies is worked in extremely elegant patterns: of this specimens are packed for the next Overland Mail, consisting of hair-pins, combs, necklaces collars, bangles, &c., set in Ceylon stones.

Ceylon is prolific in fibrous materials, many of which are well adapted as substitutes for flax and hemp. Some of these are shewn in the raw and manufactured state

The earthenware of the Cingalese is more curious than valuable; the art of pottery with them being, in all probability, not more advanced than in the time when Ptolemy and the Arabian navigators first visited

The utmost Indian isle, Taprobane.

The same remark will apply with equal truth to their agricultural and manufacturing implements. The Cingalese women may still be seen grinding their corn, "two at one stone," as described in Scripture

The bows and arrows employed by the wild Veddahs of the Ouvah and Bintenne districts, in the hunting of deer and buffaloes, are remarkable for little beyond their simplicity and diminutiveness.

The coffee, the cinnamon, and the cocoa-nut oil of Ceylon are articles well known in the commercial world: they are equal, if not superior, to the production of any other country. There are also to be found models of the buildings, machinery, and implements employed in coffee plantations in Ceylon. Models of the Cingalese fishing-canoes, which are of very singular and beautiful construction, unlike those of any other country, are displayed with their nets and gear on a proper scale.

First in value and importance are specimens of *cinnamon*, a spice highly prized from long antiquity, and peculiar to the "utmost Indian isle." Java has in vain attempted to produce cinnamon that should rival the fine spice of Ceylon, and the rough coarse bark grown on the Malabar coast cannot be compared with it The Portuguese and Dutch preserved a strict monopoly of the cultivation and trade in this article; and it was not until the year 1833 that the British Government threw open the privilege of dealing in it to the public Since that period, the preserved Spice Gardens have been sold, and are now cultivated by private parties. It is sorted into three qualities, and is just now worth an average price of 2s. the pound in this market.

Cinnamon is the bark of the *Laurus cinnamomi*, freed from its outer cuticle, and removed from the sticks in long narrow slips: these pieces of bark are rolled into *pipes* or *quills*, in layers of three or four, and are dried gradually first in the shade, and then in the sun.

A cinnamon plantation of 600 acres will produce annually 400 bales of spice, of 100 lb. each. The present consumption of cinnamon of Ceylon growth is about 2,50 bales per annum, of which not more than the 500 are used in this country; the remainder are taken chiefly by France, Spain, and South America.

Of far more recent

CURTAIN CORNICE OF PAPIER MACHE.—BY JACKSON, RATHBONE-PLACE.

date, though equally important as an article of commerce, is coffee. Twenty years ago, the *Coffea arabica* was scarcely known in Ceylon. It was not until the years 1832 and 1834 that a very few Europeans commenced the cultivation of the coffee-bush. There are now 300 estates, comprising 50,000 acres of land, all under coffee; the shipments amounting to 350,000 cwt. annually. This article is all grown inland, at various altitudes, the best being from the highest estates.

Coir fibre and rope is made from the outer husk of the cocoa-nut: the kernel of the nut yielding a most useful oil by pressure, which is exported to Europe in large quantities.

Paddy, or rice with its natural skin upon it, and in this state is given to all sorts of cattle and poultry. The rice of Ceylon is not nearly so fine as that brought to this country from Carolina and Bengal, but it has very nutritious qualities, and the Cingalese and many Europeans prefer it to any other description.

The woods of Ceylon are scarcely inferior to those of any other country, and exist in great variety. There are upwards of four hundred kinds, of which one half are employed for a variety of purposes, the remainder being useless. The ornamental woods are ebony, calamander, satin, cocoa-nut, peyimbeya, teak, tamarind, jack, palmyra, &c. The most abundant of the woods used for house and ship-building, of which specimens have been sent, are halmadilla, teak, morotto, dawete, sangee, keena, hall, and horra.

Under this head, there are several fibrous substances in Ceylon, capable of being turned to useful purposes: amongst those forwarded to the Exhibition are three, both in their natural and prepared state, from the pine-apple, hibiscus, plantain, *Sanseveria zelonica*, and Adam's needle.

There are a number of gums and resins unknown in this country, most of which are employed medicinally by the native practitioners. Besides these, a collection of medicinal plants, roots, and seeds, in a dried state, will be found. Many of them possess valuable properties, well known in Ceylon, in the removal of fever, dysentery, liver, and cholera. The Dutch and Cingalese doctors seldom have recourse to any but vegetable medicines, and these are often found to succeed where European remedies have failed. The collection was forwarded by Mr. T. Bois, of Kandy.

Under the head of Machinery, Implements, &c., we find three models of the various works and their fittings, as employed on coffee estates. First, there is the *pulping-house*, with its *pulpers*, *cisterns*, &c., for removing the outer red husk of the coffee berry, and afterwards washing the nucleus from it. Next is the stove, and moveable trays running on wheeled platforms, whereon the washed coffee is exposed to the sun in its inner covering of parchment-skin. When thoroughly dried to a flinty hardness, the berries are removed to the adjoining building, the peeling-house, where a pair of copper-covered wheels are revolving in a circular trough, under which the parchment rapidly breaks, and becomes detached from the coffee beans.

Next these will be observed another model of a stove for curing coffee. This is of peculiar construction, and fitted up according to a process which has been patented by the ingenious inventor, Mr. Cheshew, of the Rathongodde estate. It is formed on the principle of curing the coffee whilst in the *parchment* by means of a current of hot air, to be used during weather when out-of-door drying would be impossible.

The models of Cingalese palanquins will be regarded rather as curiosities than as specimens of fine work. Too much praise, however, can scarcely be accorded to the construction of the three Cingalese boats, which, are unique, not only as specimens of handicraft, but as models of very singular and beautiful vessels. The long sailing canoe, to be fully admired, should be seen in full sail when going at a speed of fourteen miles the hour, which it frequently does. The flat-bottomed fishing dhoney, with its nets and accoutrements, is a very pretty thing. The large dhoney is such as is employed in the coasting trade of Ceylon, for the transport of rice, tobacco, salt, betel-nuts, &c.: they vary in size from 80 to 200 tons; and not the least singular feature about them is, that not one iron nail is used in their build, nothing but wooden pegs and coir string holding the planks and beams together.

The plough, harrow, and rake of the Cingalese agriculturist attest the little improvement effected in their operations, which have, no doubt remained unchanged during the last 1800 years.

Amongst manufactured articles, the most attractive is, undoubtedly, a table and stand of ebony, richly carved, and beautifully inlaid with the many-tinted woods of Ceylon. There are also a desk composed of porcupine quills, a carved ebony box, an ivory stand in imitation of a cocoa-nut blossom, and some other trifles. These form but a tithe of what might have been exhibited, had time permitted.

There are some rather grotesque specimens of native pottery, the only one worthy of notice being a painted tea-pot used by the King of Kandy.

There are a number of specimens of cordage, &c., woven from the fibres previously named; also a pretty Kandian mat, and several ornaments displayed by the Kandian King on state occasions, made from fibres, and dyed with indigenous roots.

The Veddah bows and arrows are such as are actually employed in the present day by a wild and almost unknown race of Cingalese in the pursuit of deer, buffaloes, and wild boars. This singular cast of aborigines dwell entirely amongst rocks, or perched in trees like monkeys, living chiefly on roots, seed, and a little deer or buffalo flesh.

The manufactured oils of Ceylon are numerous, though most of them are at present unknown in this country. They may be divided into medicinal and commercial. Many of the former are said to possess valuable properties, yet, with the exception of the castor oil, they are not known to any but native practitioners. These were forwarded by Mr. Pirie, of Kandy. Of the oils of commerce, the cocoa-nut, cinnamon, lemon-grass, citronella, and kekuna are tolerably well known, the first being highly useful for burning in lamps; the second is chiefly employed in medicine and confectionary.

Arrack is a spirit distilled from the fermented juice of the cocoa-nut tree, called *toddy*, and has long been known in England as forming the chief ingredient of Vauxhall punch. The sample sent is very curious, having been upwards of thirty years in bottle, and coming originally from the cellar of the last Dutch Governor of Ceylon.

CONTRIBUTIONS FROM CANADA.

By crossing the breadth of the avenue we have travelled from Ceylon to Canada, and are within sight of the Cape of Good Hope. Van Diemen's Land, and the produce of the three Australian colonies of New South Wales, Port Philip (or Victoria), and South Australia.

Canada makes the best display, as was to be expected from the energetic character of the people, the means they had of obtaining early intelligence, of conveying their goods to this country, and obtaining the co-operation of the Governor, the Earl of Elgin, and their local authorities. The Canadian Exhibition is extraordinary exhibition of native produce, and selected from that Exhibition the best, as specimens of raw produce and manufactures.

The most prominent object is a fire-engine from Montreal, which carried off the first prize at the Canadian Exhibition of Industry, and has been sent, by subscription among a few patriotic Canadians, to show what the mechanics of that fine colony can do. As a carriage, it is extremely handsome. The panels are adorned with paintings of Canadian scenery, views of a great fire at Montreal, the principal churches, banks, and other public buildings, and figures of an Indian in snow shoes in winter costume, of a fireman, &c., executed with a spirit and feeling of reality which raises them above the class of ordinary coach-painting. The body is of copper, from the rich copper mines on Lake Superior, lined with wood. The tool-box is of mahogany. The mechanical arrangements seem good, and the finish of both the wood and metal-work is most creditable to Canadian workmen. It is followed by a hose-box on two wheels, to carry 300 feet of hose, and weighs altogether 35 cwt. It will pump up water from a depth of 27 feet; and, according to the statement of the gentleman who manufactured it, will throw 170 feet high from 300 feet of hose. Fire engines throughout both British and Republican America, are drawn by men, and not by horses. They are usually the property of young men associated into volunteery companies, who take great pride in adorning their respective engines. Hence the profusion of painting and other ornamental decoration.

Over the fire-engine is suspended a canoe of white birch, which presents no especial difference from canoes we have seen a hundred times, except its size; but this canoe was actually paddled 3000 miles of lake and river navigation, with a crew of twenty men, before being placed on board a steamer for England. It is the same description of canoe employed by the Hudson's Bay Company in their annual journies to the [illegible] bringing animals under their command. We should have been glad to see it and been accompanied by one of the voyageurs, whose costume and songs and simple observance manners, have been described in the book of Sir George Simpson, the Resident Governor of Hudson's Bay, or, as it is now officially named, Rupert's Land, and several North American travellers.

A piano, a large French bedstead, a set of tables and chairs, all elaborately carved out of Canadian black walnut, next come under our notice, as remarkable specimens of a wood as yet little known in this country. In colour, size, beauty of grain, and polish, it is equal, if not superior to the best specimens of French and Italian walnut. A slab, which forms part of the Canadian trophy in the central avenue, was cut from a tree which made 27,000 feet of available timber. The workmanship of this furniture, although very fair, offers nothing remarkable for praise or blame. We like the emblematic beavers carved round the edge of the table: we cannot approve of the same animals crawling like rats on the cross bars of the legs. Among the chairs are a set unpolished, and fashioned after some introduced into America by the earliest settlers. It is reported that her Majesty has condescended to accept them. One Canadian gentleman was under the impression that the originals had been imported from England in the sixteenth century, by Sebastian Cabot; but that is unlikely, because although Cabot discovered Labrador, there is no evidence that he formed any settlement in Canada at all. The originals are probably of French origin, and not older than the time of Louis Quatorze.

Around the fire-engine are arranged a set of Canadian sleighs. The white one is a cutter for one horse, the next, an elegant long carriage of very graceful curves, is a tandem sleigh; the largest is for a pair of dun Club. With the sleighs, we must notice a set of harness hanging on the wall, the saddles covered with bells, and adorned with pendant plumes of blue horse-hair: white plumes of the same material are arranged to wave from brass spikes between the ears of the prancing horses. On a bright winter's day we can imagine no prettier sight than the whole turn-out, with its blood horses, ringing bells, fair ladies wrapped in furs, and dashing fur-wrapped driver, careering across the hard snow or the sounding ice of a frozen river.

Furs, skins, horns, and Indian curiosities fill up the interstices of the Canadian collection. The head and wide-spreading horns of a gigantic moose, or elk, may be compared with the European variety of the same species, from the Lithuanian forests, exhibited in the Russian section.

AUSTRALIAN CONTRIBUTIONS.

The colonies of Australia, although among the most important of our possessions as producers of raw materials required for our staple manufactures, as large consumers of our manufactures, and as great fields for emigration, have nothing very new or very showy to exhibit. New South Wales, Port Phillip, and South Australia all send barrels of fine wheat and flour, which are satisfactory as proving that the intending colonist may depend on cheap bread in those distant regions. Australian wool and tallow are to be seen in such quantities in the warehouses of London and Liverpool, that we need not dwell on those great and annually increasing sources of wealth. The timber, although much of it is good, especially from Van Diemen's Land, and some specimens of which, [illegible], is not likely to become an article of commerce with this country.

The distance is too great to enable it to stand the competition of countries nearer at hand.

Van Diemen's Land, which probably grows the best wheat, supplies the other colonies and New Zealand with a considerable quantity of flour, but sent the jaws of the sperm whale—another source of colonial wealth— often hunted down from the shores of that island.

South Australia supplies specimens of the rich copper mine of Burra Burra, which restored the fortunes of that colony, and rendered it one of our most flourishing possessions, at a time when, under the ruinous results of an empirical system of land-jobbing and colonization, it had sunk into the lowest state of depression and stagnation: abandoned by men of enterprise or means, it was on the point of becoming a mere sheepwalk. It is a curious fact, that, although the copper exports of South Australia exceed a quarter of a million sterling per annum, no copper mine in that colony has paid a dividend except the Burra Burra, but that pays £1000 per cent.

On the walls of the South Australian section hang a set of clever water-colours, representing the country round this Aladdin's lamp of a copper mine, and the Australian scenes, likewise, on draw and block-cut, riding after cattle. On the wall appropriated to New South Wales, is a beautiful view of Caudee, where Macarthur first introduced the fine-woolled sheep, which has proved a living mine of wealth to the whole continent of Australia. Our colonial brethren, who know well how they are appreciated in the City, will excuse us from dwelling on sources of greatness which are more felt than seen: there is nothing picturesque in a sack of wheat, though the grain be "heavy and bright-coloured;" there is nothing interesting in a tun of preserved Australian beef, excellent though it be, unless to a hungry man; little variety of "tone or colour" in a fleece fine enough to make the fortune of a Yorkshire manufacturer; and, as for copper ore, the most specimens can show is that the mark sparkling. Bottles of Australian wine inform those who were before ignorant, that wine is as easily grown in that country as cider is here.

The remarks on the produce of Australia and Van Diemen's Land equally apply to New Zealand, which has many curiosities, but only produces profitably wool and flour. The mineral treasures of all these countries will be noticed in a regular review of all the geological portion of the Exhibition, by an eminent Professor.

The most prominent objects in the articles sent from the Cape are some bullocks' heads with monstrous horns; some hides, skins, and walking-sticks, and two great antelopes, very badly stuffed. Van Diemann's Land makes a gay display of fancy woods and 'possum skins

THE HISTORY OF INDUSTRIAL EXHIBITIONS.

BY W. BLANCHARD JERROLD.

CHAPTER I.—INTRODUCTORY.

THE magnificent ovation which this country has paid to industry under the enlightened influence of the Prince Consort, will hereafter be referred to by historians, as a great and distinguishing epoch in the history of the working classes of the world. The skill that realises the dreams of the science, that follows with unerring fingers the pencil of the artist, which multiplies for thousands of readers the writings of the best and greatest men, will henceforth claim its honourable place. The weaver at his loom will have his recognised position: the worker, who scatters the seed abroad upon the fecund bosom of the earth, will feel the honour of his calling. Industry, whether exercised to fell an oak or to create an act of Parliament, is equally meritorious. Each man in his appointed sphere. All men are not Shakspeares. Each has his specialty: honour to him who works it out, even though it be, as in Eulenstein's case, the performance of the pyro-lamp. Honour to him who weaves the canvass, as to him who paints thereupon with the power of a master. There is honour in the conscientious exercise of the most limited power, as in the development of the most mighty conception; honour in grinding the paint, as in wielding the palette. Fame waits upon the doings of the great—waits the name of the artist and the writer across the world, but the obscure labours of the artisan are unknown, unregarded beyond the warehouse of his employer. It is a principle of human nature to venerate and deify power, whether expressed in the conduct of armies, the eloquence of the senate, the theories of the philosopher, the dreams of the poet, the realities of the engineer, or the colours of the painter. The greater the power, the more devout the veneration; the higher the throne, the louder the hymn of praise. It is only now that we are beginning to wake from the old hero-worship—to notice the honest men who bend the knee to our idols. You have placed yonder hero at a great height. You bend the neck to him: you acknowledge him as your leader. He has greater power than your puny self. He can toy with the weapon you cannot raise from the dust, naturally, therefore, you place yourself under his protection. He is undoubtedly the stronger, and is he the better man? Euclid—a name to you—is a child's page to him. Here you have proof of his power, in other words, of his genius; but of his moral power—his strength to endure—his patience under suffering—his faith in an intellectual capacity infinitely transcending his own—where are these great qualities? where is the moral power? Not there, near his throne, but very likely with that busy worker at his feet. Honour, therefore, to the moral power that works and suffers, while intellectual power soars aloft, and wields, often with a grim severity, the sabre, pen, and compasses. We are told* that "if we examine the moral character of weavers, we shall find them, from the earliest periods, distinguished by a propensity to scrutinise the received dogmas of the times, and generally foremost in the race of liberal opinions, zealous in supporting the promulgation of new doctrines, full of hostility to the encroachments of tyrannical power, disposed to fanaticism in religion, often of a gloomy and determined cast of character, and pervaded with the most entire devotion to the cause they espouse." A circumstance to which the peculiarity of their religious feelings mainly contributes. The doctrines of Luther were first sown, and first took root amongst the weavers and manufacturing population of Saxony, a soil the most genial for the reception of the new religion; and posterity is indebted to them for having received and sheltered that vigorous controversialist, and for having nourished and fanned the spark which afterwards blazed out far and wide, enlightened the European mind, and freed it from the chains of darkness and superstition. Amongst men less disposed to inquire and to question, and more inclined to bow to the dictates of authority, the nascent spark might have been extinguished. The weavers in England, also, were amongst the earliest converts of the Reformation, and were cruelly persecuted by Bonner. As, in the commencement of the sixteenth century, they had been among the foremost to receive and adopt Luther's doctrines, so we find them, in the commencement of the seventeenth century, equally ready to receive those of Puritanism; and they encountered, perhaps in a slighter degree, persecutions from the English hierarchy similar to those which their predecessors had sustained from the Roman Catholics. Great numbers of woollen and worsted weavers were driven out of the country by the intolerant measures of Laud, they also met with much severe treatment from Wrenn, Bishop of Norwich. Some of them fled to Holland, others to the new settlement in Massachusetts Bay. Glasgow, when the weavers were a corporate body in 1638, was early distinguished for its zeal against Popery; and, in the middle of the seventeenth century, was staunch in supporting the Covenant. The free spirit which animated the Huguenots of France, and the consequent discrust with which Louis the Fourteenth regarded them, was, in all probability, the cause of the revocation of the Edict of Nantes. This measure drove fifty thousand Huguenot families from France: they were chiefly weavers, and twenty thousand of them settled in Spitalfields, London, and gave a new impulse to the English silk manufacture.

Richard Guest's view of the weaver's mind is strengthened by their present social position. Ever ready to weigh public questions for themselves, prone to discussion, sensitive by blood, and inquisitive from habit, they are quick to master new ideas, ever prone to adopt innovations. In religion, as in political theory, they scorn control, and are restless and impatient, while they imagine that they are unjustly dealt with. Very few of them belong to the Church of England, the great majority of them being Methodists. They are proud of their calling, and honour their brotherhood; and, as an industrial class, display, perhaps more than any other, those virtues which we are beginning to respect in the working-man as in the listless lord. The time is now fast approaching, when, at the hands of the country, they will receive befitting acknowledgment of their social value; when their moral qualities will claim that respect which has hitherto been exclusively lavished upon brilliant intellectual capacity, or virtue in velvet. Men are beginning, with Emerson, to respect a man who can do something well. Perseverance, as a quality, has not been hitherto sufficiently respected; yet it is the prominent characteristic of the English mind. The applause that follows a burst of genius has drowned the feeble approbation that would have hailed perseverance. "We touch and go, and sip the foam of many crowned perseverance. "We touch and go, and sip the foam of many crowned efforts." The workman who toils unseen in the architect who conceives; yet there is a deep-seated morality in the fretful labour that knows no rest, but patiently, constantly strives. Let us follow the career of M'Intosh, the violin-maker, of Dorvedinland, who died last year. M'Intosh was a Highlandman, having acquired the art of violin-making, went to Dublin to pursue his business. His skill and steadiness secured his success. Soon his annual receipts amounted to above £300, some of his instruments selling at the enormous sum of £10, £15, £20, and £30 each. He supplied Paganini with violin strings At the height of his successful career, he tried to invent the "perpetual movement," which so many had failed in. Left Dublin, to get rid of his friends, and settled in Devonscotland. In this locality he laboured at his idea for eleven years, five of which he spent in an attic, suffering frightful privations, but wedded to the end to his theory, and labouring under no delusion of encouragement. There is a touching sentiment in this simple history. There must have been a moral stamina in the man who could so patiently suffer and persevere, that entitled him to take honourable rank among great natures. Let him stand side by side with the philosophers to which he bend the knee; let the great heart find its place near the great brain. We have mistaken the aim of national industrial exhibitions generally, but more particularly of the promoters of our Great Exhibition, if it be not destined to vindicate the worth of labour, as well as the grandeur of science and the influence of art, to acknowledge in the face of the world the hand that realises the dreams of science and the misty conceptions of the artist. The great aim is to weld individuals irrevocably to the whole, to guide the weaver's hand by the rules of beauty. But let not the workman be quite forgotten at the marriage. He is, perhaps, the weaker vessel, yet without him the artist may dream, but cannot create. The union will experience bears its out—but good fruit abundantly.

The social effect of an alliance of art with commercial industry cannot be overrated. At the present time it is generally accepted that the popular cultivation of art tends to the refinement and enlightenment of a community. "It seems as if an unhandsome action before the portrait of a noble female's countenance would be impossible;" and Leigh Hunt tells a pertinent story of a Catholic money-lender, who, when he was about to play a cheat upon an unfortunate customer, always drew a veil before the picture of his favourite saint. The assertion that the presence of beauty, in whatever form presented, exercises an elevating influence even over the ignorant or depraved, has become a truism. Beauty refines and elevates its votaries and its priests; and Scarpandi's "Descent" has been as potent in inspiring thousands with religious sentiments as the pulpit eloquence of the most gifted divines. All steps which tend to diffuse art, tend undoubtedly and directly to raise the popular character; and it is difficult to fully estimate and comprehend the possible extent of good a cottager would derive from the introduction of household objects into his humble abode, moulded in forms of grace and beauty. While art elevates the moral man, literary education simply enlarges his sphere of knowledge, and strengthens his intellectual capacity. Art and literature, to do their full measure of good, should and must go hand in hand. The good effects arising from the educational encouragement of art is now felt throughout every class of the French community. During the last fifty years, art has been generally nourished by the governments of France; and the institution of elementary schools of art in every town of the kingdom, has developed a national taste against which the world even England—trembles to compete. This national taste is the result, first, of national industrial exhibitions; and, secondly, of the elementary art schools, to which allusion has been made. The schools of design which are now exhibiting in England, and the beneficial influence of which is only now beginning to make itself felt, are merely liberal imitations of the French national art schools. We say illiberal imitations, because our schools of design do not afford that free ingress and egress to all classes, without any payment whatever, which the French Government schools afford. But from the wonderful Hyde-Park Palace how many liberal ideas may we not hope to gather! Such a scheme as the Exhibition of the Industry of the World, originating with us, must inevitably lead us, at least, to do as much for the art-education of the general community as the poorer nations of Europe afford to their industrious classes.

CHAPTER II.

In treating of the effect of Industrial Exhibitions upon the manufactures and habits of a people, it is necessary first to understand thoroughly and clearly the conditions, as regards art and skill, in which they were when they first adopted the scheme of gathering their collective skill and taste under one great common roof. It is clear, in the first place, that France is in every way an exceptional instance. She excelled in taste and manufacturing skill at a very remote date. Even in the thirteenth century, her artizans were renowned in other countries for the superior skill and taste with which they manufactured goldsmith's work and stained glass, and for the beauty of their illuminated manuscripts. These excellences are matters of notorious history. We have

* Richard Guest's Compendious "History of the Cotton Manufacture."

* Hazlitt.

only to turn to the career of Jacques Cœur (under whose name a great agency is to convey the Parisian manufactures to the Great Exhibition), the great capitalist and merchant, to recall that unexampled brilliancy of industrial production, which in the olden time satisfied the luxurious habits and tastes of the nobles. Under Francis the First, however, the grandeur and inimitable graces which characterised the labours of the *renaissance*, showed manufactu ing skill in intimate union with art. Coming down gradually nearer our own times, we may every epoch in French history—deeply as her annals are stained with native blood and kingly debaucheries—is brightened with a national effort in favour of art-manufacture. The establishment of the silk manufactories at Lyons, in the year 1469; the excellences of the old looms of Paris, Beauvais, &c; Colbert's Gobelin tapestry establishment; the carpet manufactories of Savonnerie; the Marquis de Fulvy's porcelain manufactory (the first established in France), reared at Vincennes in the year 1738, and which was afterwards sold to the *fermiers généraux*, who transplanted it to the village of Sèvres, and laid the foundation of these inimitable productions known as Sèvres ware—these are data which give indisputable proof that the French people have been, for ages past, a people with a strong natural love of art. Yet the national aptitude was not developed by liberal institutions

Towards the middle of the seventeenth century, M. Chaptal, the historian of French industry, declares that France possessed looms only capable of producing the coarsest materials adapted to the wants of her population. Her fine cloths were imported from Spain and Holland; her best silks came from the Italian looms; other fabrics came from England, and Holland and Brabant supplied her with linens and lace. The advance of Colbert to power, however, changed the face of matters in this respect. The fetters were struck off from native manufactures; skilful foreign workmen were enlisted in the two great Indian companies were formed; exportation and importation—an extended interchange were encouraged by lessened duties; and a premium of five francs per piece was allowed on all new wools. These enlightened regulations soon filled the ports of France with foreign merchantmen, and gave a most healthful impetus to the industry of the country. If commerce owes its revival in France to the minister Colbert, its principal branches owe him more, inasmuch as he was the first to establish them in their respective spheres. He tempted the most distinguished foreign manufacturers to Paris, and by dint of liberal encouragement planted them in France, and set them to teach native artisans; and the result was, that within the short space of ten years 42,000 skilful clothworkers were settled in the provinces of the country

It is impossible to over-estimate the debt of gratitude due to the memory of Colbert from his successors. It was he who established the silk manufactures, and placed the celebrated painter Lebrun to direct these unrivalled productions. It was he who obtained from Louis XIV. an edict, dated 1664, setting apart the sum of one million (worth two millions in the present time) to encourage manufactures and maritime commerce; and it should fairly be added, that Louis entered into the enlightened views of his minister with unusual alacrity. It was Colbert who reared the Invalides, the Observatoire, and the gates of St. Denis and St. Martin. It was Colbert who opened the Royal libraries to the public, and instituted searches in all parts of the world for valuable works to complete the Bibliothèque Royal de Paris. His history is written in the fine monuments which adorn the capital of his country, no less than in the present proud position which the manufacturers of France occupy. He struck the fetters from enslaved industry, and bade the workman aspire. At his command, merchantmen spread their canvas once more to the winds; Art leant over the weaver's loom to trace upon the growing fabric tints and lines of beauty; and Science rose to give a purpose to the mechanic's skill.

Suddenly the merchants' sails were furled, the loom stood still, and the mechanic left his bench to the beating of drums. A musket was in the hand of every Frenchman; commerce for a while stood still to watch the conflict; but even in these times of strife and bloodshed, some homage remained for her. Art was used to pamper the sensualist, but never passed the threshold of the poor. Before the French Revolution burst asunder the whole social fabric, and left a chaotic mass to reorganise its discordant atoms on a more liberal basis, the beauties of art were the enjoyment only of the wealthy. No schools existed for the tuition of humble aspirants; no open hand was proffered to the struggling artist. Yet the tide of public favour was not turned in favour of art by the promoters of the Revolution, not by an upstart from the ranks of the people; but, on the contrary, by a noble, who was proscribed before he could carry his plans into effect

An appointment which immediately followed the installation of the Directory was that of M. le Marquis d'Avèze, in conjunction with MM. de Parny, de la Chablaussière, and Caillot, as manager of the Academy of Music, then called the Theatre of Arts

"We received," the Marquis tells us in a pamphlet on the subject, "this fine establishment in the midst of the artists' petitions for support, in the most wretched state—in a position, indeed, menacing immediate downfall. Thanks to the efforts of our management, which lasted for three consecutive years, we bequeathed this splendid theatre to our successors in a most satisfactory condition; and in that high road to success which it has constantly followed until the present time (1844).

"In the year V. of the Republic (1797), I had not yet quitted the Opera, when the Minister of the Interior summoned me to attend at the office of Commissioner to the Manufactures of the Gobelins (tapestries), of Sèvres (china), and of the Savonnerie (carpets). I had no need to stay long in these establishments, to perceive the misery in which they were plunged. The workshops were deserted—for two years the artizans had remained in an almost starving condition; the warehouses were full of the results of their labours, and no commercial enterprise came to relieve the general embarrassment. Scarcely can I depict the effect produced upon me by such a scene; but at that moment a sudden and luminous thought presented itself to my imagination, and appeared to console me for the miseries of the present in the hopes it offered for the future. I pictured to myself in the most glowing colours, the idea of an exhibition of all the objects of industry of the national manufactures. I committed my project to paper, I detailed the mode of its execution, and prepared a report addressed to the Minister of the Interior, which was written throughout by my own hand, and delivered by me to M. Laucel, then at the head of the section of Arts and Manufactures, in whose office the document in question should still exist. My report soon received the approbation of the Minister of the Interior, M. François de Neufchateau, who commanded me to carry it into effect by every means useful and suitable to the Government.

"The *château* of St. Cloud was then uninhabited and completely unfurnished; and this appeared to me the most appropriate and eligible spot for the exposition which I had projected, and likely to invest the exhibition with all the magnificence and *eclat* so necessary to attract strangers, and to diffuse the object and the glory of them in the remotest parts, which might mitigate the sufferings of our unhappy workmen. The *château* of St. Cloud was obtained without difficulty. I established myself there, and requested the attendance of MM. Guillamont, Duvivier, and Salmon, directors of manufactures. I explained to them the intentions of the Government, and found all these gentlemen ready to further this object with zeal and activity. In a few days, by their obliging exertions, the walls of every apartment in the *château* were hung with the finest Gobelin tapestry; the floors covered with the superb carpets of the Savonnerie, which long rivalled the carpets of Turkey, and latterly have far surpassed them; the large and beautiful vases, the magnificent groups, and the exquisite pictures of Sèvres enriched these saloons, already glowing with the splendid hues of Gobelins and the Savonnerie. The Chamber of Mars was converted into a receptacle for porcelain, where might be seen the most beautiful services of every kind, vases for flowers, in short, all the tasteful varieties which are engendered by this inexhaustible manufactory. In the centre of the saloon, surrounded by all these beauties, was a wheel of fortune, containing lottery tickets eventually to be drawn: every ticket was to obtain a prize of greater or less value; the price of each ticket was twelve francs. I had attained to this point when the Minister gave me an assistant in the person of M. Lessure, a young man of great merit, with uncommon zeal and intelligence. I had already, for some time, enjoyed the advantage of the services of that young architect of exquisite taste and distinguished talent. He it was who superintended the arrangement of the exposition; and when this was completed, I referred to the Minister to fix the day for its being opened. It was decided that this should take place in the month of Fructidor; but previous to that time a number of distinguished persons in Paris, and many foreigners, visited the exposition, and made purchases sufficient to afford a distribution to the workmen of the different manufactures, thus yielding a little temporary relief to their necessities. The Fête, during forthcoming exposition inspired the citizens of Paris with an desire to enjoy it as soon as possible; they anticipated with impatience the 18th Fructidor, the day fixed for public admission to St. Cloud. The country and was filled with elegant equipages whose owners graced the saloons of the exposition, when, in the midst of this good company, I received an official notice from the Minister to attend him immediately, and to defer the opening of the exposition. I obeyed the mandate on the morning of the 18th. I waited on the Minister, from whom I received an order to close the *château*. Already on the walls of our city was placarded the decree of the Directory for the expulsion of the nobility, with an order for their retirement within fourand-twenty hours to a distance of at least thirty leagues from Paris, and thus under pain of death. My name was not included, consequently, my immediate withdrawal was imperative. The barriers were strictly guarded, and it was impossible to pass them without the order of the commandant. My position was doubly painful: on the one hand, it was essential to obey the decree of the Government; on the other, I had an account to render of all the treasures in the *château* of St. Cloud. I found no difficulty in explaining my situation to the Minister and the commandant of the place, the Marshal Angereau. I requested him to furnish me with a sufficient force for the protection of the *château*, in which so many precious objects were deposited. He gave me a company of dragoons, under command of Captain Vatier, and ordered a passport for me, by means of which I could leave Paris and return to St. Cloud. I caused an inventory to be made in my presence of all I left in the *château*. I closed the gates and delivered the keys to M. Marchéau, the keeper, in compliance with the order of the Minister. I posted the military which had been granted to me around the *château*, and, my duties fulfilled, hastened to obey the decree of the proscription.

"Such is the true and exact history of the first idea of a National Exposition, and of the first attempt to realise that idea."

The succinct narrative of the originator of these exhibitions was written by the Marquis so late as the year 1844, in reply to the reports of MM. Challamel and Burat, in which the honour of their origin was accorded to François de Neufchateau.

The labours of the Marquis, however, in the cause of the industrial arts did not terminate with his compulsory retirement; for, on his return to Paris, at the beginning of the year 1798, he forthwith collected an exhibition of native art-manufacture, which filled the spacious house and grounds of the Maison d'Orsay, Rue de Varennes. It was to be expected that the specimens of manufacture he assembled would consist entirely of costly goods, inasmuch as manufactures of any excellence were not within the reach of the great body of the people. The masterpieces of manufacturing skill were, therefore, to be found exclusively in the palaces of the rich; and from these abodes of luxury he withdrew the gorgeous cabinet-work and marqueterie of Riesener and Boulle; the clocks of Leroy; the gorgeous typographical productions of De Thou and Grolier; Sèvres and Angoulême porcelain; the masterpieces of Vincent and David; the choicest fabrics of Lyons; and other costly products of the artist and the artisan. The exclusive character of the exhibition was the result of the wish, but of the condition of French society. He led the way which has been so faithfully and happily followed; he created in the hearts of the manufacturing population of France that enthusiasm for their calling—that anxiety for the excellence of their national manufactures, which has since distinguished them.

MM. Challamel and Burat have been guilty of a palpable injustice towards the Marquis d'Avèze, by remaining wholly silent upon the subject of his enlightened labours in the cause of art-manufacture, in their zeal on behalf of the accomplished De Neufchateau. The year 1798 was a most favourable one for an exhibition of native industry. Napoleon had achieved his most brilliant actions in Italy, and brought the lion had achieved his most brilliant actions in Italy, and brought the war to a successful termination; the spoils of war had been inaugurated with prodigal pomp, and it was happily suggested that the little collection in the Rue de Varennes should be copied on a grander scale. The Government, however, in the mind of the Marquis d'Avèze at the Grand, and more lately in Paris, determined to erect a "Temple of Industry" on the Champ de Mars. Here the triumphs of war had been celebrated, and here it was resolved that the nursling of peace should receive a national ovation: the olive should be intertwined with the blood-bespattered laurel; Lenoir should not be forgotten in the glory of the defenders of the *batterie des hommes sans peur*!

Augustin Challamel, in his "Histoire-Souvenirs de la République Française," vouchsafes not a word to the Marquis d'Avèze; but declares at once, and without preface, that only two of the *fêtes* of 1798 are worth notice, from the impulse which they gave to the industry and art of the country, viz that of the foundation of the Champ de Mars, and that of Liberty held on the 10th of August. At the first, M. Challamel tells us, François de Neufchateau put a very happy and useful idea into execution; but the writer dexterously refrains from naming the proposer of the idea upon which the consummation depended. Under the superintendence of De Neufchateau, M. Challamel continues, a fairy building was erected to the west of the national altar, containing long streets of stores and shops. This was the first public exhibition of French industry. By exciting emulation amongst native manufacturers, and appealing to their pride, they had been prevailed upon to send specimens of their workmanship from far and near. In the outset this exhibition was called "a fair;" but the appellation soon fell into disuse, the universal encouragement with which its establishment was met, soon gave it the complexion of a thoroughly national undertaking. On the eve of the opening of the exhibition, François de Neufchateau, attended by a jury, the civil dignaries, and the industrial population, held a meeting within the building, and delivered a speech beginning in these terms:—"We are no longer in those unhappy times when enslaved industry trembled to bring forth the fruits of her skill and ingenuity, when galling enactments, monopolising corporations, and fiscal burdens bowed down the inventive spirit; when art, become at once the instrument and the slave of despotism, helped to rivet the chains about the citizen, and owed success to flattery, corruption, and the humiliation of a shameful servitude"

This picture of commercial bondage is more forcibly touched upon in Jules Burat's Historical Essay. He tells us, for instance, that a special Royal enactment was necessary to secure to Lenoir, the celebrated mathematical instrument maker, the benefits of his skill. Monopolising corporations stood in the way of all inventors who did not belong to them. Thus, printed cottons and silks were so long kept out of France by the efforts of the corporations of silk and cotton manufacturers. Arin Argant's lamps are well known now throughout the world; but it may be interesting to note the fact, that his invention was well nigh destroyed, at first, by the corporations of ironfounders and locksmiths, because he was not a member of either of these societies.

Reveillon, who first introduced the art of painting paper into France, had to contend with the most vexatious impediments thrown in his way by the corporations of painters, engravers, and stainers of every kind, and only escaped these persecutions by obtaining for his establishment the title of "Royal manufactory," a privilege which eventually led to its destruction, after the breaking out of the Revolution. When the privileges of corporations could not be brought to bear upon inventors, Royal interests stood in the way. The most absurd and obnoxious monopolies were conceded to favourite subjects, regardless of the misery and vitiation in paying visits to the workshops and great factories of Paris, which their concession must entail upon the large, ramshackle, and ill-ventilated tenements of the operatives. Everywhere he was accompanied by promises of the future, and by an anxious solicitude for their prosperity. Whether from selfish or purely patriotic motives, is a question of debate; but that Napoleon always acted sympathetically with the people at large, cannot be doubted. He attended to their requests, and respected their wants, and called the public market the "Louvre of the common people," therefore he re-built and enlarged it. He declared "the rabble" to be the only aristocracy on which he could depend in critical times; and his internal administration of affairs demonstrates the sincerity of this conviction in his mind. He paid his acknowledgments to talent in a prompt and most complimentary manner. When he suddenly came across a man of rare abilities—as Fermaux, the founder of many fine factories—he would pluck the cross from his own breast, and decorate him in the presence of whoever might be in the way at the time. Instantaneous action was the secret of his power. He was as quick to execute as to resolve. He could not mind the word "impracticable." He had the faculty of seeing an entire question at a glance: and thus his rapidity of action seldom led him to commit errors of judgment. Instances of his judicial errors are rare; and, moreover, are so well repaired on the instant, that their evil effect is seldom palpable. During the commercial crisis under the imperial sway, while irritated by the news of maritime reverses, he ordered all English goods found in the country to be burnt. This command raised a loud depreciatory clamour, and he at once saw the hypocrisy of which he had been guilty. The reparation he made was material—about twenty-one millions were advanced to the industrial community

(To be Continued.)

THE ILLUSTRATIONS

Several of the illustrations which appear in this week's Supplement of the ILLUSTRATED LONDON NEWS, are duly noticed and described in our opening article. Subjoined is a list and description of the subjects not

They are as follows:—"M. Bruguet, whose name is European, in connexion with the improvement of watch and clock-making; Lenoir, to whose skill as a mathematical instrument-maker we have already alluded more particularly; Didot and Herhan, who exercised a direct an influence upon the improvement of printing. Dilk and Guerhard, whose painted china rivalled the beauty of that of Desarnod, described as the French Rumford: Conté, whose name is familiar to every artist, and to whom we are indebted for the application of machine-ruling to engraving; Clouet and Payen, who directed a vast chemical manufactory and Denys de Lust (Seine-et-Oise), who exhibited cottons spun to all degrees of fineness, from the most common to No. 110.

The second *fête* noticed by Augustin Challamel is that of Liberty This festival appears to have been almost exclusively devoted to a national and sumptuous acknowledgment of the grand results of science and art; and the trophies, which were at once its chief ornament and the conspicuous disgrace of the country (the masterpieces filched from Italy), were raised aloft in the streets to the wondering gaze of thousands The *cortège* was one of the most magnificent spectacles on record. As early as nine o'clock in the morning, the citizens who were to take part in the procession assembled along the left bank of the Seine, where the allotted

we have engraved for this Number, of which no account appears in the more regular narrative.

SHIELD.—ARMS OF ALL NATIONS.

The Shield engraved upon this page—copied from an enamel which forms one of the ornaments of the Fine Art Section—gives the arms of all those nations which indulge in the luxury of heraldry. This beautiful work was designed and executed by Mr. Buss, of Great Newport-street.

JEWELLED BOXES BELONGING TO THE EAST INDIA COMPANY.

The jewelled boxes, portion of the treasures shown by the East India Company, are of jasper. One is of exquisitely pierced work; the other is sculptured, enamelled, and set with rubies, not only in the flowers, but also in the border and sides.

CLOCK BY MESSRS MOORE.

The clock by Messrs. Moore, of Clerkenwell, possesses novel features in design; its chief novelty, however, consists in the rich enamelled ornaments which decorate the front, the pendulum, and the circles within which the figures numbering the hours are placed. The whole is very beautifully finished.

BROOCH FROM THE IONIAN ISLANDS

The Ionian Islands, it appears, have had a narrow escape of being totally unnoticed at the Great Exhibition, though standing in the remarkable position of being the only people under British protection, and somewhat specially noticeable as her Majesty's Greek subjects. It came to the knowledge of an Ionian (a distinguished advocate of his country's cause through the press) that the Lord High Commissioner of the Ionian Islands, Sir Henry Ward, had written to the Commissioners, declining any space in the building for the Ionians. Well knowing the skill and industry of his countrymen, as well as the richness of the produce of the islands, he lost no time in making a representation to the Royal Commissioners on the subject, who lent a ready ear, and immediately set aside a space for the Ionians. What was now to be done? There was no time to send to the islands, so he wrote off to several English noblemen and gentlemen who had served there; and the result was, that Lord Seaton and several members of his family, Lord Charles Fitzroy, and one or two others, manifested much solicitude on this point, and readily forwarded such articles of Ionian workmanship as were in their possession. These, though few in number, will, nevertheless, as specimens of embroidery and jewellery, as well as of silk in the raw and manufactured state, form a very interesting and not unworthy sample of what the Ionians might have sent to the World's Fair had they been made to understand what was expected from them.

The very elegant Brooch of Silver, of fine workmanship and of exquisite fancy, as might be expected from Greek taste, which we give of the full size, has been kindly contributed through Lord Seaton, by Miss Yonge, of Otterbourne, near Winchester. It is described as "Large Brooch of Silver," of fine workmanship, combining in the centre the Lion and Crown of England, the Protecting Nation, on a large medallion, with the seven medallions of the Seven Islands depending upon it.

The centre medallion represents the arms and emblem of the island of Corfu, "the Flower of the Sea"—a female figure supposed to be Corcyra, the daughter of Asopus, who was carried off by Neptune to the Islands; she is seated upon a rock, holding in the hand of her extended right arm an olive-branch. On one side of her is a cornucopia, denoting the fertility of the island, and on the other an ancient galley, emblematic of the commercial spirit and wealth of its inhabitants. This ship, which is rudderless, sometimes stands alone as the arms of the island, and has been also supposed to take its origin in the ship of Ulysses, which was fabled to have been transformed into a rock, which, somewhat of the figure of an ancient vessel, stands at the entrance of the harbour. The letters Κερ are the abbreviation of the ancient Κερκυρα (Corcyra).

The medallion on the right is marked by a tripod for Zante, and the letters Ζαθ the abbreviation of Ζακυνθος (Zacynthus).

The next to this on the right is the medallion of Santa Maura. The harp upon it symbolises its fame as the death-place of Sappho, the letters Λευ being the abbreviation of its ancient name Λευκαδια (Leucadia). Another emblem of this island is Bellerophon on a winged horse attacking the Chimæra, which it derives from its Corinthian colonization. The last on this side is Ithaca, marked with the head of its King, Ulysses, the letters Ιθα, being the abbreviation of Ιθακη (Ithaca).

On the right of the Corfu medallion is that of Cephalonia, the next island in magnitude, represented by Cephalus, the son of Mercury and Creusa, who, when condemned by the court of Areopagus to perpetual exile for having unwittingly killed his wife, Procris, came to this island. He is represented as reposing after the chase—a dart in his hand and his dog at his feet. The letters Κεφ are the abbreviation of Κεφαλληνια (Cephalonia), the ancient designation of the island.

Cerigo comes next. The letters Κυθ denote Κυθαιρα, the ancient Cythera, represented in the medallion by Venus, to whom the island was sacred, and who was fabled here to have had her birthplace and her domicile. The goddess is standing on her shell, drying her hair with the one hand, and holding in the other the famous apple.

Paxo, the smallest of the islands, comes last. Its sacredness to Neptune is denoted by his trident; the letters Πα are the abbreviation of Παξε (Paxo). This island is also represented by the helm or rudder of a ship within an olive garland.

FOUNTAIN BY THOMAS.—(SEE PAGE 364.)

ENAMEL.—ARMS OF ALL NATIONS.

ASPREY'S DRESSING-CASES, INKSTANDS, ETC.

The first is an elegant stand, of original design, in richly chased or molu, surmounted by an ink-glass in the form of an elaborately-executed vase, in or molu, with two figures blowing horns forming a pen-rest. The next article is an ebony casket, of superior workmanship and unique design, artistically arranged, with serpents upholding antique corals. The feet, handles, key, &c., are all elegantly and artistically wrought. The last is a jewel-casket or cabinet, also of original design, richly furnished, in or molu, set with malachite, arranged with drawers and folding doors, pierced and chased in relief, of superior workmanship.

STAND AND CASKET BY WERTHEIMER

This exquisitely wrought work of art is of the most *recherché* character, being inlaid with malachite, which harmonises perfectly with the ron or molu of which the casket is composed. The outline is very beautiful. The enrichments extremely varied, and fine in workmanship. The stand is quaint in style, and has also chains and festoons of metal work, inlaid with malachite, to correspond with the casket

WIDDOWSON AND VEALE'S TEA AND COFFEE SERVICE.

The tea service is of true Etruscan shape (the coffee-pot the celebrated Hamilton vase), and the ornaments are from Flaxman's designs to illustrate the "Iliad;" namely, "The Council of the Gods," "Discord casting his spear against Mars," "Neptune rising from the Ocean," "The Descent of Discord," "Venus, wounded, conducted by Iris to Juno," and "Minerva repressing the fury of Achilles."

MESSRS. COTTAM AND HALLEN'S IRON GATES

The iron gates exhibited by Messrs Cottam and Hallen, of Oxford-street, are fine specimens of ornamental gates for a park, in the style of those of elegantly wrought iron work made about a hundred and a hundred and fifty years since, and which adorn the entrances to many of the old mansions of England. One great merit of these gates is, that they can be made at a reasonable rate as compared with the wrought iron-work.

PERFORATED STONE PANELS.

The perforated stone panels we engrave are good examples of the patient labour of the natives of the East, and are exhibited by the East India Company.

MR. WEBB'S CANDELABRA.

The candelabra displayed by Mr. Webb, of Bond-street, are very fine in design and execution, in the Venetian style of the sixteenth century. The carving is bold and effective, and the or molu branches are well arranged and beautifully chiselled.

SIDE OF A LIBRARY.

The Chimney-piece and Bookcases intended for the side of a library, of which we have engraved an Illustration, are contributed by Messrs. Holland and Sons, of London. They were executed from the designs, and under the superintendence of Mr. T. R. Macquoid, and form a very first-rate example of carving; and, allowing for some degree of ponderosity, owing to the nature of the material, an excellent specimen of design in the Italian or *cinque cento* style. The whole is composed of walnut wood, and the details are admirably wrought out. The introduction of green marble panels and gilded perforations gives richness and colour to the general effect. The size is about twenty feet long, by thirteen feet high. Let the visitor contrast this with the Kenilworth buffet, exhibited by Messrs. Cookes and Sons, of Warwick, and placed in the Fine Art Court, and to which we purpose paying special attention in due course, and he will find excellence of the highest character in each, whilst in every other respect there is scarcely a point of similarity. Going from these to the Austrian apartments, as already recommended, a very distinct idea of three kinds of carving will be obtained, and the lesson learned will not be without its uses.

THE COLEBROKE DALE COMPANY'S RAILING FOR A TOMB

The original of this was designed and erected for that of the celebrated Beckford, author of "Vathek," at Bath. It is of a simple and elegant character, standing about two feet and a half high. This casting affords one of many gratifying examples of the progress made by this country within the last few years in this important and elegant branch of decorative art.

MESSRS. JACKSON'S CARTON PIERRE CORNICE.

This cornice gives a good idea of the elaborate character of the examples of *carton pierre* ornaments exhibited by Messrs. Jackson. As a specimen of modelling, it is perfect, the indentions being well marked, and the forms at once graceful and appropriate.

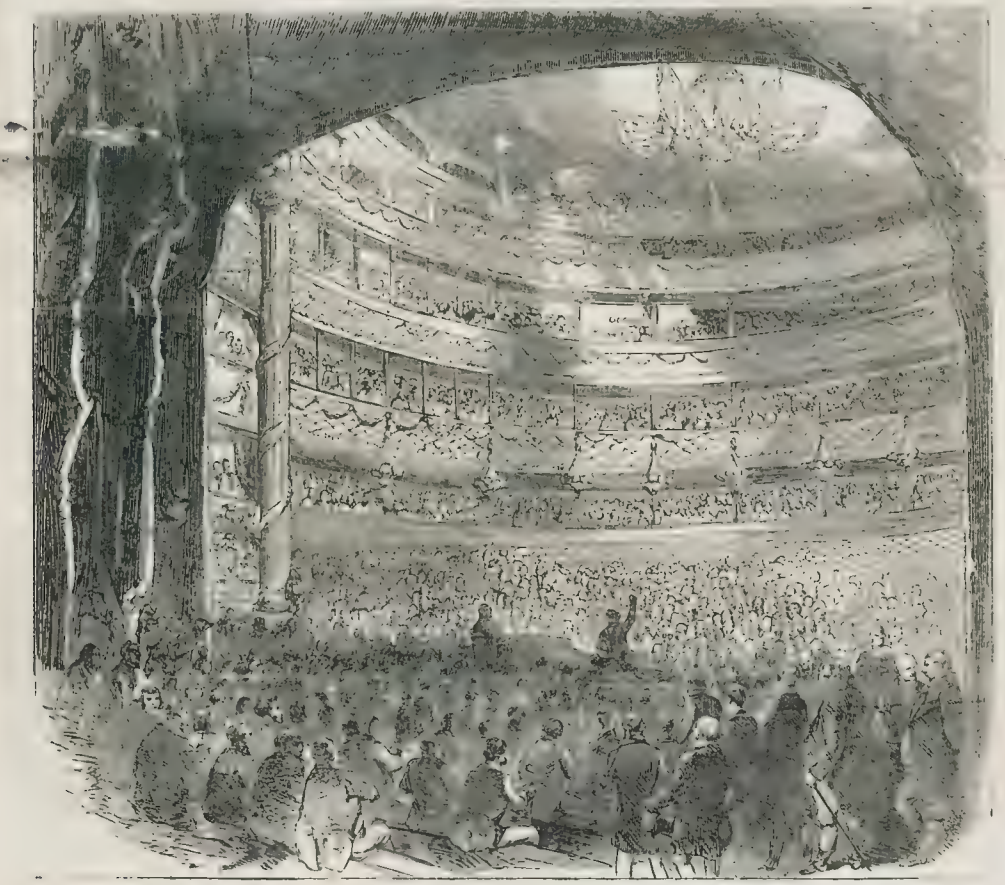
THE DEFEAT OF THE GOVERNMENT ON THE INCOME-TAX.

Had the significant and signal defeat of the Government upon the question of the renewal of the Income and Property Tax taken place at any other time than the present, when men's minds are pre-occupied with the Great Exhibition and all that relates to it, we should have had a regular Ministerial crisis—if not in Downing-street, most certainly in the clubs and in the newspapers. But, although less has been said and written upon the matter than might have been expected under other circumstances, the question is not the less important. The Russell Ministry has received a new check, and, at the same time, a new warning that Sir Charles Wood, whom it obstinately insists upon retaining in office, will bring about its downfal, unless he be replaced by a more popular and efficient financier, or compelled to change his course in deference to public opinion and the real necessities of the country. Were it not for the Chancellor of the Exchequer, and his past acts of glaring incompetency, the Ministry, with all its faults, might have enjoyed a respectable character. But, with Sir Charles Wood at the head of a department at all times important, and at the present time more particularly so, the Ministerial weakness is rendered continually apparent. No general virtues in a Government can atone for defects in its fiscal policy. To mismanage the financial affairs of a great nation, is the worst of all faults which a Ministry can commit.

Until the adverse vote of Friday, the 2d inst., compelled them very reluctantly to change their tactics, Lord J. Russell and Sir C. Wood invariably refused to listen to any suggestion for the modification of the Income and Property Tax. Because Sir Robert Peel, who was a great Minister, had asserted that it was impossible so to re-adjust the burden as to make it fall equitably, Lord John Russell, who is not a great Minister, was to affirm likewise; and his *nonchalant* Chancellor of the Exchequer found in Sir Robert Peel's obstinacy in this respect, a justification of their own. They entrenched themselves behind the precedent of their illustrious predecessor, and in imitating his faults seemed to flatter themselves with the notion that they would acquire credit with the country for some portion of his ability. Sir C. Wood made himself particularly conspicuous in his unreasonable opposition to all modification of Sir Robert Peel's tax. At the first hint that some change was not only possible, but highly desirable, the right honourable gentleman raised a loud whoop for the public creditor, and the necessity of keeping faith with him—as if he would have persuaded the public that the national solvency depended upon professional men of £400 or £500 per annum being compelled to contribute as large a percentage to the revenue as capitalists deriving the same income from realised property. Upon that hinge, though



GREAT PROTECTIONIST DEMONSTRATION IN PRUSSIA'S LANE THEATRE —SEE NEXT PAGE.)

Sir Charles Wood, turned the fortunes of Great Britain. Upon that corner-stone the whole edifice of our national engagements was raised; and to loosen it, was to bring down the whole fabric about the ears of a bewildered and ruined people! So firm a hold did this unaccountable delusion take of the Ministerial mind in general, that, even so lately as Monday last, when Lord John Russell expressed his formal but sorrowful consent to a Parliamentary inquiry into the operation of the Income-tax, his Lordship could not entirely disembarrass himself of Sir Charles Wood's tribulations with respect to public credit. "Although," said his Lordship, "it is, in my opinion, very inexpedient so far to place such a tax in jeopardy as to make it last only for a year, yet I cannot suppose that the majority of the House which agreed to that motion (the motion of Mr. Hume) had in view any intention of placing in jeopardy the public credit of the country." Of course it had not. The question of the public credit had nothing whatever to do with the matter in debate; and his Lordship, in deprecating an attempt to imperil the punctual payment of the dividends, which no one ever dreamed of, was either afflicted with the nightmare, which really seems to have set upon the breast of poor Sir Charles Wood, or he purposely raised a false alarm to mystify a few waverers, and probably filch a chance and slender majority on some future occasion. However, the Government has consented to take the tax for a year, because it was obliged to accept those terms or go out of office. It is to be hoped, therefore, that we shall hear no more, in the meantime, of this cry of "Wolf! wolf!" where there is no wool, and that the inquiry into the whole operation of the tax will be conducted in a fair and able manner; in order that when the Budget of 1852 is brought forward by the present, or another Ministry, the country may have something better to rely upon than the *ipse dixit* of the late Sir Robert Peel, that the Property and Income Tax cannot be more equitably levied than it is at present; or the cuckoo-like repetition of that opinion by men whose indolence is suits to shelter themselves behind the authority of their predecessors.

The weight of public opinion is, as we have often had occasion to observe, decidedly in favour of raising a portion of the revenues of the State from direct taxation. It is possible, and indeed probable, that this Property and Income Tax may become a permanent source of revenue in this country; and that future Ministers will find it not only the most advantageous, but the most popular course, to make it the means by which all taxes that yet remain as burdens upon the health, the morals, and the industry of the people, may be repealed. But its permanency will, of course, depend upon the general prosperity of the country, and upon the issue of the great experiment whether the reduction of anti-commercial and anti-industrial taxation, even when producing large nominal sums to the Treasury, may not be followed by increased revenues, so as to render it possible to diminish or perhaps forego a Property-tax. In the meantime, it is obvious that some sort of a Property and Income Tax must be retained; and Parliament having decided that the tax, in its present form, shall be granted for a twelvemonth only, there will be ample opportunity for eliciting the opinions of experienced and otherwise competent persons, upon the practicability of an equitable adjustment of the burden. The two great points of inquiry will be—first, whether property and income of a less amount than £150 per annum should be taxed; and, secondly, whether precarious income, dependent upon health, strength, sanity, and life, should not be rated at a smaller percentage than realised property, which is not imperilled by any such unhappy contingencies? Without reason, and for the purpose of catching a popularity, which at the time was very useful to a man in his position, Sir Robert Peel committed an injustice upon all those incomes of more than £150 per annum, by freeing from the operation of the tax all those who possessed less. He prevented the opposition of the more numerous class, and set at defiance the complaints of the whole professional and trading body—those very classes which a Minister so wise as he was should have taken especial care to conciliate by his justice and moderation. Upon this point, it is to be presumed that the Parliamentary inquiry now about to commence will not be tied by what Sir Robert Peel did or said. Of this we are confident, that the tax cannot be made permanent unless it be made impartial, and unless every man who possesses property, whatever its value may be, shall be assessed accordingly. It is an outrage against common sense, as well as against justice, that a struggling clerk with £160 per annum derived from his labour should be mulcted of nearly £5 per annum, while the man with £4500 snugly invested in the Three per Cents should pay nothing.

As regards the second point, upon which so many difficulties have been started by the fertile obstinacy or the assiduous indolence of men in office and their supporters, we apprehend that the committee, which will be the result of Mr. Hume's success in outvoting the Ministry, will find no insuperable obstacles in the way of doing justice to all parties, and of satisfying the earners of income without doing violence to the owners of property. We are evidently on the eve of a new era in national finance; and the "public credit," for the support of which Lord John Russell and Sir Charles Wood expend such unnecessary alarm, will be best maintained by imposing no taxes that are not necessary, and by making all necessary taxes so equitable as to enlist and not repel the sympathies of the people.

SOUTH ESSEX ELECTION.—SIR W. BOWYER SMITH is prosecuting his claim to the representation of this division.

SIR JOHN BARROW'S MONUMENT.—The restoration of this beautiful tower, which was struck by lightning in January last, is now nearly completed. Fortunately, the damage so tained was confined to the summit, the main body of the tower having totally escaped injury. The estimated cost of the repairs is £120

FRIENDLY SOCIETIES.—From a return printed by order of the House of Commons, it appears that, in 1850, £1000 was allowed as the salary to the Registrar of Friendly Societies, and £3000 as salaries of clerks. The amount of fees received by the registrar and accounted for by him, was £5073 3s. 6d.; and the amount paid out of the Consolidated fund was £2528 8s. 6d.

PUBLIC INCOME AND EXPENDITURE.—The Government balance-sheet for the year ended the 5th April last has been printed. On the 5th April [illegible] stances in the Exchequer were £8,764,939 13s. 11½d., and on the [illegible] they were £7,879,671 16s 8½d. The excess of income over the expenditure in the year was £2 996 ,81 2s 4d

OPENING OF THE NEW LECTURE-HALL IN DUBLIN.—The spacious and exceedingly handsome Lecture-hall of the Dublin Mechanics' Institute was opened on Monday night with a grand soirée. The attendance was most numerous and respectable, the body of the hall, other tables for refreshments were [illegible] by members of the Institute and their friends, and the friends of their friends; the galleries were also well filled, indeed densely crowded, by members and visitors, including a [illegible] whole presenting as respectable, intelligent, and intellectual-looking an auditory as could be found in any other city in the empire. A number of influential citizens were assembled on the platform, and took part in the proceedings. The hall was brilliantly lighted and tastefully decorated for the occasion, and, altogether, the scene was one of the most pleasing and gratifying description. The enjoyments of the evening were diversified by a concert. Among those present were the Right Hon. the Lord Mayor, Isaac Butt, Esq., Q.C., Thomas O'Hagan, Esq., Q.C., Samuel Ferguson, Esq., barrister; William R. Wylde, &c.

THE LONDON AND CHARING-CROSS OMNIBUS GUIDE AND CARRIAGE MAP.—[illegible] towards the simplification of our [illegible] public from hackney carriage imposition, [illegible] acceptable to foreigners and country visitors, as also to the [illegible] of the metropolis. The appearances of the present work is, therefore, [illegible] since it provides the above desiderata in the simplest and [illegible] form. It contains upwards of a hundred fac-simile portraits of the metropolitan and suburban omnibuses; with their names, routes, fares, and [illegible] spaces they pass near, &c.; and, in addition, a beautiful copper plate map of London, ingeniously contrived to show accurately the distances, and consequently the cost of [illegible] the metropolis. This map is also published separately, [illegible] English and French languages, an important [illegible] to our foreign visitors. The omnibuses being engraved fac-simile, [illegible] all the indications of their routes, &c., cannot fail to be also a great acquisition to the cosmopolitan crowds of visitors to the Great Exhibition.

TRADE AND SPADE.

(See the Illustration upon the preceding page. For the Report of the Proceedings, see the ILLUSTRATED LONDON NEWS of last week, page 356.)

BETWEEN two friends in days of old
A bitter strife began.
And Father SPADE with Brother TRADE
Disputed man to man.
"You're vain, undutiful, and prond,"
Said SPADE, with flashing eyes.
"You earn your thousands while I starve;
You suck my children's cries.
You ride in state with lordly looks;
You dwell in bower and hall;
You speak of me reproachfully,
And prosper on my fall.
So from this hour, in shine or shower,
We'll learn to live apart.
I ruled the earth ere you were born—
I cast you from my heart."

And TRADE lost temper in his pride;
He utter'd words of scorn:
"You do not know the ways of man.
Amid your sheep and corn,
You doze away the busy day,
Nor think how minutes run:
Go, put your shoulder to your work,
And do as I have done.
You've all the earth to yield you wealth
Both corn and pasture land;
I only ask a counting-house,
And room whereon to stand.
And from this hour, in shine or shower,
I'll learn to live alone;
I'll do without you well enough—
The world shall be my own!"

And thus they wrangled night and day,
Unfair, like angry men,
Till things went wrong between them both,
And would not right again.
But growing wiser in distress,
Each grasped the other's hand;
"'Twas wrong," said SPADE, "to rail at TRADE;
He loves me in the land."
And TRADE as freely owned his fault:
"I've been unjust," he said,
To quarrel with the good old man
Who grows my daily bread.
Long may we flourish TRADE and SPADE,
In city and in plain!
The people starve while we dispute—
We must not part again."
And all the people sang for joy,
To see their good accord,
While SPADE beneath him made all his sons,
And piled his plenteous board.
He fed them on the best of fare,
Untax'd the foaming ale,
And prayed on England's happy shore
That TRADE might never fail.
And busy TRADE sent fleets of ships
To every sea and strand,
And built her mills and factories
O'er all the prosperous land.
And so we'll sing God save the Queen!
And long may Brother SPADE
For sake of both the rich and poor,
Unite with Brother TRADE.

CHARLES MACKAY.

[We shall publish next week the Music of this Song—composed expressly for this Journal by Mr. HENRY RUSSELL.]

FOREIGN AND COLONIAL NEWS.

FRANCE.

The fête on Sunday last, in commemoration of the inauguration of the Republic, passed over without the least disturbance, not only in Paris, but throughout the departments, notwithstanding the fears with which the alarmists pretended to view the approach of the 4th of May.

In Paris, the weather greatly favoured the enjoyment of the festival; and the great feature of the scene presented on the occasion inspired the witty Parisians with the appropriate title of the *Fête des Parapluies* for the Republican anniversary of 1851.

The decorations in the Champs Elysées, the Place de la Concorde, the vicinity of the Madeleine, and of the National Assembly displayed that artistic character and taste which our neighbours always infuse into grand festive displays.

The principal avenue of the Champs Elysées was lined on either side with colossal statues elevated on pedestals, of Pujols, the mechanist, who is said to have first applied steam to machines, in the reign of Louis XIV.; and of Jacquard, the inventor of a new kind of loom in the reign of Napoleon; of Pierre Corneille and Molière, of Nicholas Poussin, and Jean Goujon, the sculptor, in the reign of Charles IX.; of Matthew Molé and Cardinal Richelieu; of Jean Bart and Duguay-Trouin, both naval commanders of distinction under Louis XIV.; of Jean Hachette, the heroine of Beauvais under Louis XI.; and of Joan of Arc; of the great Condé, the conqueror of Rocroy, under Louis XIV.; of Turenne, the conquer of Mulhausen; of Marshal Ney, the "bravest of the brave;" and General Kleber, the conqueror of Mellopolis. While at the *rond* point on the fountain was a colossal statue of France, holding in her hand a garland of laurels. The Chamber of the Madeleine and the *façade* hung with tapestry of crimson and gold, lamps being suspended from the columns. At the angles of the *façade* were two colossal statues representing Faith and Hope.

On the middle arch of the Pont de la Concorde, and in front of the National Assembly, was placed a colossal group, representing the Genius of Navigation, with tritons and sea-horses, surmounting a mass of rocks, with verdure in the interstices, having their base in the river, and divided by cascades, one of which fell from a height of more than sixty feet.

The *façade* of the Assembly was enlarged by two circular galleries, extending to the quay, and terminating in pavilions.

The splendid effect, however, anticipated at night, from these preparations, was all neutralised by the rain; for the illuminations and fireworks were literally "put out" by the inclemency.

On Monday the President of the Republic attended the anniversary funeral obsequies of the Emperor, at the Invalides; many of the old soldiers of the Grand Army, and a large number of distinguished officers being present; amongst them the Emperor's brother, Jerome Buonaparte.

The Government met with a little check in the Assembly on Monday, having been refused a small credit on account of Commissaries to the Legion of Honour. The proposition was defeated by 361 to 345.

The committee sat on Tuesday to take into consideration the proposition of M Basse, interdicting the sale of newspapers in the public streets. The Minister of the Interior opposed, because no harm could arise from such sale, if under the authority of the Government; besides which, the suggested measure would throw out of employment from 1800 to 2000 persons.

M. Emile de Girardin has put forth two strange statements in the *Presse*. First, that in March, 1848, General Changarnier proposed to M. Ledru Rollin, Minister of the Interior at that time, that if 12,000 men were given to him he would successfully invade England, and cause a Republic to be proclaimed. Secondly, M de Girardin insinuates that General Changarnier and General Cavaignac had entered into a conspiracy, by which the latter was to be made Dictator, and that they were fully prepared, on the 15th of June, 1848, for the scenes of blood that took place on the 23d, 24th, 25th, and 26th of that month, which were intended to facilitate the object in view. M. de Girardin concludes the article by calling upon General Changarnier to deny these facts if he can. Many persons capable of forming an opinion deem these revelations to be only the hallucinations of a disordered mind. At all events, General Changarnier and General Cavaignac remain silent under the charge thus published by M. de Girardin.

PORTUGAL.

Accounts from Lisbon to the 29th, and Oporto to the 30th ult., represent an extraordinary change as having taken place in the aspect of affairs.

General Saldanha, on his first approach to Oporto, had been received with such coolness that he withdrew in disgust, and commenced making his escape from the country through Galicia, was recalled next day (the 25th ult.) by a general revolt of the military in garrison at Oporto in his favour.

The Count de Thomar's Ministry immediately resigned. The revolt at Oporto was followed by a similar demonstration in favour of Saldanha at Coimbra, in which the King was obliged to acquiesce, and thus Saldanha has in every respect become "master of the situation."

On the resignation of Thomar, the Queen sent for the Duke de Terceira, who was with the army under the command of the King. Saldanha objects to Terceira, and it is asserted at Oporto that he caused a message to be sent to the Queen, giving strict orders that it should be respectfully addressed to her Majesty, which was to the effect "that the Duke of Saldanha did not draw his sword merely to allow the Count de Thomar to return at the head of the Government six months hence, and that the prime minister ought to be the choice of the majority of the nation. The Duke of Saldanha entered Oporto on the 29th, the civil and military authorities coming out with a few followers. Nothing could equal his triumphal entry into that town. Nearly the whole population of the place went out three leagues to meet him. They strewed the road with flowers, and the windows of the houses were covered with waving damask. The King was retreating on the capital. Part of his body-guard joined Saldanha at Oporto on the 29th.

GERMAN STATES.

Advices from Berlin of the 6th instant mention that the opening of the Federal Diet had been postponed until the 15th; and that it was probable it might be again postponed to the close of the month.

WEST INDIES AND MEXICO.

The West Indian and Mexican mails, with dates from Jamaica of the 19th ult., and Vera Cruz of the 6th ult., have come to hand by the *Great Western* steamer, Captain Woolf, which reached Southampton on Thursday night.

From Jamaica the accounts of cholera are, on the whole more favourable, and the medical officers of the St. George and Metcalf parishes had been able to volunteer their services for other districts. In some parishes thanksgiving meetings had been held for the abatement of the disorder.

From Mexico the intelligence is chiefly of interest to the Bondholders, to whom it will be satisfactory to learn that their debt is to be paid in three instalments, viz.—on the 1st of January and the 1st of July, 1852, and the 1st of January, 1853.

UNITED STATES.

According to the advices of the 23rd ult. from New York, rumours of change in the Administration were rife and gaining credence; and Mr. Webster's resignation was spoken of as probable. Indeed, the language employed by Mr. Webster himself, in a speech which he delivered in Boston on the 22nd ult., seemed to imply his own expectation of a speedy retirement from office. Whether such a course will prove to be the result of a disagreement between the President and his advisers, or a desire on the part of Mr. Webster again to take a more active part in the political arena, remains to be seen.

An extra session of the legislature of New York was about to be holden, having been ordered by the Governor, in order to decide some important questions of internal policy.

A most severe storm had occurred on the coast of New England, commencing on the evening of the 15th ult., and continuing for two or three days. It caused extensive loss of life and property.

From California we learn that a most destructive fire had occurred at Nevada city, which had destroyed property to the amount of 1,000,000 dollars. This, with the continued drought, will, for a time, increase the difficulties in California.

The minister of the republic of Nicaragua had addressed a letter to the New York press, intimating that the reports of recent acts of violence in that province, and of collisions between the English and American residents, are much exaggerated. Sir Henry Bulwer had returned to Washington, and it was said that discussions relative to Nicaraguan affairs would be forthwith resumed between his Excellency and the United States government.

The public rumours in reference to the apprehended Cuban invasion are greatly exaggerated.

Despatches received by the American government from the Hon. Mr. M'Curdy, U.S. *Chargé d'affaires* at Vienna, under date of March 25, state that the Austrian government had refused the application of the Sultan for permission to release Kossuth and his companions from confinement. Permission was granted in reference to all except Kossuth and eight or ten others. This decision was communicated before intelligence reached Vienna respecting the recent decision of the American government, to address another more urgent appeal to Austria on this subject.

INDIA.

The usual monthly accounts have been received from Bombay, dated April 3, and Calcutta, March 24.

Lord Dalhousie arrived at Peshawur on the 8th of March, and left it on the 17th for Lahore, on his way back to Simla, where he will pass the summer. His Lordship has displayed his characteristic industry and energy in his progress up the Indus. He pitched his tent at Kalabagh, where the river intersects the Great Punjaub salt range, which Dr. Fleming and Mr. Purdon are now engaged in exploring and surveying. The Governor-General received their provisional report, whilst at Kalabagh; also the report of the Indian naval officer, Lieut. Grounds, who, charged with the survey of the Indus in so far as steam navigation is practicable in its upper waters and tributaries. A plan for organising a mounted armed police, to keep the Waziree and other hill tribes on the Kalabagh side of Kohat in order) had been devised by his Lordship.

There were intimations that an order is about to be issued, forbidding officers, civil, political, military, or otherwise, to have their wives and families with them when on duty beyond the Sutlej.

Some convicts confined in the prison at Dera Ghazi Khan, on the Indus, recently surprised their guards and escaped, to the number of twenty-six. Many were shot whilst taking to their heels. Major Jacob, with the Scinde Irregular Horse, is in charge of parts of this district.

Advices from Madras, with the *Hastings*, was at Madras, where he was to be guest of Sir Henry Pottinger.

CHINA.

The China mail, of Feb. 26th, brings news that the rebellion in the Canton province had progressed so far as to threaten the throne of the newly-installed Emperor

A Chinese, declaring himself to be one of the murders of Captain De Costa, of the Royal Engineers, and of Lieutenant Dwyer, had given himself up to the Hong Kong magistrates; but it was doubted whether he was one of the party who committed the murder.

The Peninsular and Oriental Steamer *Canton*, plying between Macao and Hong Kong, was run on a rock in the China seas, and it was feared would prove a total wreck

The *Europa* had arrived at Hong Kong from the Arctic regions, where its search after Sir John Franklin had proved wholly unsuccessful.

NEWSPAPER STAMP DUTY.

THE ATTORNEY-GENERAL *v.* BRADBURY AND EVANS.

On Wednesday, in the Court of Exchequer, this cause which came before the Court as a special case, was argued. It arose out of an information filed by the Attorney-General against Messrs. Bradbury and Evans, the well-known printers of Fleet-street, to recover penalties on account their having published and printed a certain newspaper, called *The Illustrated Times of Current Events*, on paper not duly stamped according to law, as required by the statute in that case made and provided. The defendants pleaded *nihildebet*. The special case, which was framed by order of Mr. Baron Parke, stated that the alleged newspaper was a paper containing, amongst other things, "public news, intelligence, or occurrences;" that it was issued and published "with intervals," that the paper not duly stamped. if any stamp was required, for the purpose of being circulated and made public by sale in the ordinary way to any person desirous of purchasing the same; and that it was so printed and published by them periodically, and at intervals not exceeding twenty-six days between the publication of every two numbers of such paper, and did not exceed two sheets of the dimensions specified in the schedule A to the statute 6th and 7th Will. 4, cap. 76, and was published for sale at the price of twopence. The case then stated the question raised for the opinion of the Court was, whether the said paper so printed was a newspaper chargeable with the duties charged upon newspapers by the above statute? According to the schedule A, "Any sheet or sheets provided that every sheet or other piece of paper whereon any newspaper should be printed, shall be subjected to the stamp of 1d. The following definitions were then given of what should be deemed and taken to be newspapers charged with duty: viz. any paper containing public news, intelligence, or occurrences printed in any part of the United Kingdom, to be dispersed and made public; also, any paper printed in any part of the United Kingdom, weekly or oftener, or at intervals not exceeding 26 days, containing only, or principally, advertisements; and, also, any paper containing any public news, intelligence, or occurrences, or any remarks or observations therein, printed in any part of the United Kingdom for sale, and published periodically, or in parts or numbers, at intervals not exceeding twenty-six days between the publication of any two such papers, parts, or numbers, when any of the said papers, parts, or numbers respectively should not exceed two sheets, or should be published for sale at a less sum than 6d., exclusive of the duty.

The Attorney General, with whom was Mr. Crompton, now appeared on behalf of the Commissioners of Inland Revenue, and argued that the publication in question was liable to stamp duty, under the five definitions of the schedule to the statute 6 and 7 Will. 4, cap. 76.

Mr. Peacock, for the defendants, contended, that this being a statute imposing a duty on the subject, on that principle the schedule ought to be looked at as a whole, and, if the special words of the latter clause should be found to control and qualify the more general language of the first, the Court, on the well-known rule of the construction of statutes, ought to decide the question as to give effect that modification. If this were not so, then every book containing the narrative of any intelligence or occurrences whatsoever would be subject to the stamp-duty.

The Lord Chief Baron said, that, as the case was one of great importance, the Court would take time to consider before giving its judgment.

CANTERBURY ASSOCIATION

On Thursday, the Canterbury Association gave a public breakfast, at the West India Import Docks, to the emigrant labouring families and their friends proceeding to their settlements, and a dinner to the-working classes emigrating to the colony. Lord Lyttelton occupied the chair.

After the usual loyal toasts had been given, the chairman proposed success to the Canterbury settlement, and the health of the departing colonists," observing that they must go prepared to struggle with what was difficult, and battle with what was evil, as well as to enjoy what was prosperous, and cultivate what was good; and, that although no positive communications had been received from the last ships despatched, still all that had been heard respecting them had been favourable. He was satisfied, the fundamental principles of the enterprise being good, that, if it was not attended with success, the power of England as a [illegible] nation had departed from her

The toast with several others was duly honoured.

Before breakfast, Lady Lyttelton christened one of the emigrant ships—the *Canterbury*.

THE BRITANNIA-BRIDGE.—There is a singular process being carried on at present on this erection, namely, roofing the tubes, so that the tops be kept from the wet, and the contraction and expansion of the iron be checked. A complete ridge is placed over both tubes, with a walk in the centre, and the framework is all covered over with canvass, rendered impervious to the wet. It will require about 7000 square yards of canvass to complete the work, and the contract for supplying the whole has been taken by our townsman, Mr. Griffith Davies, draper.—*North Wales and Bangor Chronicle*.

POLISH AND HUNGARIAN REFUGEES.—On Sunday last twelve of the refugees who recently landed at Liverpool from Turkey arrived in [illegible]. The Liverpool committee are distributing the refugees in the [illegible] towns of [illegible], and they have forwarded those twelve [illegible] request the [illegible] Hungarian freedom will raise funds for their [illegible] until able to support themselves. A meeting of the working classes was held in the Saxony, the usual meeting place of the Chartists, on Tuesday evening, at which the twelve refugees were present. They are all young [illegible] of considerable intelligence, and most of them well educated. [illegible] are handicraftsmen, and the rest have been students at [illegible]. They were well received, and a subscription was started for the [illegible].

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

MERCANTILE MARINE ACT.

Lord STANLEY presented petitions from Liverpool and Shields (the former signed by over 600 shipowners, shipmasters, and seamen of this port), complaining of the vexatious restrictions to which they are subjected by the Mercantile Marine Act.

Earl GRANVILLE said the portions of the act complained of were undergoing the consideration of the Government, and a bill would be introduced into the House of Commons for the purpose of carrying out some modifications of the measure already decided upon.—Adjourned.

HOUSE OF COMMONS.—MONDAY.

PROPERTY-TAX POLICY OF THE GOVERNMENT.

The House having gone into committee on this bill, Lord J. RUSSELL took the opportunity of informing the House of the course which the Government proposed to pursue, in consequence of their defeat by a majority of fourteen on Friday night, on the motion of Mr Hume for limiting the renewal of the Property-tax to one year only, instead of three. Mr Hume had stated, as the foundwork of his motion, that his object was that the tax might be made more just and equitable than it now was, in a select committee to be appointed for the purpose. He did not agree in the proposition of his hon. friend, nor did he now agree with him that it was desirable to have such an inquiry. The House, however, had decided otherwise, and it became the duty of the Government to consider what course it would pursue. Now, although he felt it was very inconvenient to place such an amount of taxation upon such a precarious footing, yet he could not suppose it to be the intention of the House to place the public credit in jeopardy for the House had always shown itself careful of the public credit, and he therefore thought it right for the Government to consider whether it should adopt the resolution of the House. He was told that there was a general impression in the public mind that the tax might be made more equal. To this he had replied that Mr. Pitt and Sir R. Peel had revived it a different conclusion. He was answered by the argument, that if those conclusions should be supported by an inquiry, the country would be better satisfied that the inequalities of the tax were inevitable; and if otherwise, they would then have the tax in a more equitable shape. The decision of the House, then, being contrary to the opinion of the Government as to the desirableness of an inquiry, he would neither refuse nor attempt to evade an inquiry, which would be conducted by men who were leaders upon financial matters in that House. The Government being thus prepared for a full and fair inquiry, another question arose. If the Income-tax were given for one year only, were they to proceed with the financial arrangements of the Chancellor of the Exchequer, all of which had been agreed to by the House? He should be very reluctant to forego the repeal of the window duties, which were not only a financial burden but a great social evil, and also of the timber and coffee duties: but, in order to carry these reductions into effect, it must be made clear to the Government that no further deficiency would be made in the Income-tax, and no other breaking in upon the finances of the country, which might have the effect of disabling the Chancellor of the Exchequer from submitting public credit. He hoped, therefore, they would pass the Income-tax Bill without further modification, and that the whole revenue of the country might be covered to them if they were to carry out the reduction announced by the Chancellor of the Exchequer.

Mr. HUME hoped the tax would be granted with as few alterations as possible during the present year; but he could not allow the understanding to extend to any control of the taxation of the country

Mr DISRAELI said, as the lease of the tax was now only for one year, he hoped they would avoid interfering with its details as much as possible; but he reserved to himself the right of re-considering the other financial arrangements of the Government in reference to the new position which it now occupied.

Colonel SIBTHORP and Lord JOCELYN severally postponed for the present the amendments of which they had given notice

After a very desultory conversation, the first clause was agreed to.

The subsequent clauses were also agreed to, and the House resumed.

OFFICIAL SALARIES REDUCTION.

On the motion of the House resolving itself into a committee of Supply.

Lord J. RUSSELL stated the reductions which the Government had undertaken to effect, in accordance with the recommendation of the Select Committee on Official Salaries. With some of the recommendation the Government intended to comply; and where it was not intended to acquiesce, he stated the reasons for their dissent from the recommendations of the committee. The chief reductions which they agreed to were the following:—It was proposed that the salaries of the Lords of the Treasury from £1200 to 1000 per annum; the Secretaries, from £2000 to £1000; the offices of the Paymaster of the Forces and Vice-President of the Board of Trade would be permanently united. The salaries of the Lords of the Admiralty should be reduced from £1200 to £1000 per annum. He had already announced to the House the reductions in the judicial salaries; and, with respect to diplomatic allowances, he would say that the representative of this country of Paris (who was still to retain the dignity of ambassador) was to have only £8000, instead of £10,000 per annum. Turkey was also still to have an ambassador. In whose case the salary would be one thousand. The ambassador at Vienna had been converted into an envoy, and some retrenchment was thus effected. The proposition was made in the present unsettled and difficult state of affairs, owing to the disturbed state of Continental politics. In Italy, however, one of the missions now maintained might be dispensed with, and he thought also that the Minister at Florence might act as diplomatic agent at Rome, should an official intercourse be established between the Court of St. James's and the Vatican. The noble lord concluded by impressing upon the House that it was most important to those foreign missions, that the work should be done well, than it should be done cheaply

After a short discussion, the subject dropped.

HOP DUTY.

Mr. FREWEN then moved, as an amendment to the motion for going into Committee of Supply, that a humble address be presented to her Majesty, most respectfully to inform her Majesty that great distress still exists in those districts of the county of Sussex where hops are grown, and that it will be quite out of the power of the hop-planters in that county to pay the Excise duty on the crop of 1850 during the present year.

The CHANCELLOR of the EXCHEQUER thought the system of credit to the growers of hops had been carried to such an extent already as to render that branch of agriculture a sort of gambling speculation.

Lord J. RUSSELL said, it appeared to him to be a most extraordinary proposition that gentlemen who had sold their hops and got the money in their pockets should now ask the House to aid them in avoiding payment of the duty. He hoped the House would not listen to such a proposition.

Mr. FREWEN said, as his hon. friends on the Opposition side of the House were not prepared for his motion, he would not divide the House upon it.

The motion was then negatived without a division, and the House went into committee of supply on the navy estimates, but no votes were taken, it being midnight at the time of doing so.

The report on the Practice and Process (Ireland) Bill was received, and the Appointment to Offices Bill was read a second time.

Adjourned at half-past twelve o'clock.

HOUSE OF LORDS.—TUESDAY.

Lord STANLEY presented a petition, praying that the registration of Assurance Bill might not pass without great modification. He did not altogether agree with the petitioners; but thought the petition should be referred to the committee to which the bill had been referred.

Lord CAMPBELL defended the bill; after which the petition was laid upon the table.

The Earl of HARDWICKE, in moving for papers, called attention to the new regulations for the retirement of naval officers, and he hoped it would not be much further put off with respect to the arrangement under which officers were to be transferred from the active to the retired list.

After some discussion, in which the Earl and Earl MINTO defended the arrangement, and it was condemned by Lord STANLEY and other noble lords, the motion was agreed to.—Adjourned.

HOUSE OF COMMONS.—TUESDAY.

THE IRISH POLITICAL PRISONERS IN VAN DIEMAN'S LAND.

Mr. ANSTEY asked the Under-Secretary of State for the Colonies whether he had received any information from his Excellency Sir William Denison, the Lieutenant-Governor of Van Diemen's Land, on the subject of the recent withdrawal of tickets of leave formerly granted to Messrs. M'Manus, O'Doherty, and O'Donohue, and the removal of those gentlemen, for certain terms of imprisonment, to the penal settlement of Port Arthur; whether the reasons in support of it were adopted at the arbitrary command of the Lieutenant-Governor, and in contravention of the decisions of the proper magistrates upon the cases of alleged infraction of discipline; and, if so, by what authority in justification of such measures; and whether the correspondences on those subjects would be laid before the House? The hon. and learned member said, that on the arrival of these exiles they received conditions which were to learn upon their parole, but in the opinion of legal men, were them perfect liberty of locomotion. They, used their license to go to see Mr. Smith O'Brien. O'Donohue was taken ill and refused to bail. The other two were taken before the magistrates, and their range of having exceeded the limits of their districts. The point was argued, but, as it was one of doubt, one of the magistrates recommended a compromise, and suggested that the prisoners before him should give their word of honour not again to pass beyond his limits. This compromise was agreed to in the cases of M'Manus and O'Doherty. O'Donohue, being ill in bed, was not brought before the magistrates. But after this, a reprimand was addressed to each of these magistrates by the Lieutenant-Governor, and the tickets of leave were revoked. These exiles were immediately arrested, and sentenced to three months' imprisonment in the penal settlement of Port Arthur. These were the facts of the case

Mr. HUME said that he had no observation to make to the statement of the hon. and learned gentleman, as he could neither confirm nor contradict it; but he must say that an exparte statement, upon asking a simple question in the House, was highly inconvenient. It was true that tickets of leave had been granted to the three prisoners mentioned, and that the Lieutenant Governor, had thought it his duty to wit draw that indulgence. He would read to the House a passage from the despatch of the Lieutenant-Governor, which was to the effect that he was obliged to withdraw the indulgence granted to the three prisoners, in consequence of their acting in direct violation of the conditions imposed on all ticket-of-leave holders, that there was direct evidence brought before him that the three prisoners left their districts without leave, and after having been warned; and that, therefore, he was obliged to withdraw their tickets of leave. If these men had violated the known conditions on which their tickets of leave were granted, on them, and not on the Government, should rest the consequences that necessarily follow. He (Mr Hume) had not the least objection to lay on the table a copy of the despatch from which he had given the extracts to the House

Mr. ANSTEY gave notice that, on the first supply night, he would move a vote of censure on the Lieutenant-Governor of Van Diemen's Land.

METROPOLITAN SEWERS.

Sir B. HALL asked Viscount Ebrington, from how many and what districts of the metropolis the sewers-rate of sixpence in the pound, recently ordered, was to be collected; what sum that rate would produce; whether the several rates were to be expended in the districts from which they were collected; what new works were proposed; and whether such works were to be completed before the present commission expired; and, if not, what portions would be completed; and whether any part of the extraordinary amount about to be levied was to be applied to payments of ensuing liabilities; and, if so, how much was to be so applied?

Lord EBRINGTON replied, that the sewers-rate had been levied on only eight districts, and the sum proposed to be called out was £110,000 on a rental of upwards of £4,000,000, the respective sums levied would be expended on these several districts, except the expenses of the central office, which would be general. The new works were the new system of drainage on the south side of the Thames, and the other north of the Thames, with a number of smaller works. The present commission would expire in the first session of Parliament; and he concluded that the present commissioners would be relieved from their labours. He could not say whether any portion of the works were completed. Since the last accounts were presented by the commissioners, seven or eight miles of sewers had been made.

THE ACCIDENT ON THE CHESTER RAILWAY.

To a question from Mr. Leeh, Mr. LABOUCHERE said that an inspecting officer had been sent down to inquire into the cause of the late accident on the Lancashire and Cheshire Junction Railway and it would be that officer's duty to investigate the cause, an report to the Railway Commission. He (Mr. Labouchere) could not express an opinion relative to the cause of this accident until after he should receive that report.

THE MERCANTILE MARINE ACT.

Mr. DISRAELI gave notice, that on an early day he would present a petition from 6000 of the masters, mates, and mariners of Liverpool, praying for extensive modifications in the Mercantile Marine Act.

PAROCHIAL RATES.

Mr GRANTLEY BERKELEY moved, that on Tuesday next the House should resolve itself into a committee of the whole House, to consider the following resolution:—"That, in alleviation a portion of the burdens from which the agricultural interest is at present suffering, [illegible] the payment of parochial poor-rates, varying in many instances from 6s., 7s., 8s., 9s., to 12s. 10d. in the pound, it will be necessary to substitute an equal rate for poor-rate, in England and Wales, not exceeding 4s. in the pound, and subject to local government."

Captain HARRIS seconded the motion

Mr. E. BAINES said that the real question raised by the motion was, whether the poor of Ireland were to be supported by a national rate—a proposition which he was glad to find had never received either counte nance or support at the hands of Parliament; and to which he hoped the House would not in the present instance acquiesce. He denied that the plan, if carried out, could be of the slightest benefit to the agricultural interest, for there were at the present time about 5000 parishes or townships of an agricultural character, in none of which did the rating exceed 2d to 3d. in the pound, and those 5000 do rate the poor, member proposed to benefit by raising their rates to 4s. 6d. in the pound. A scheme so grossly unjust as this he trusted the House would not tolerate. It was a rash and ill considered scheme, as was evident from the fact that the rate of 4s. 6d., which he proposed to be the maximum, would not produce within £2,000,000 of the sum expended in poor's rates in the last year. Thus, if his scheme were to be adopted, the poor must starve, or the Consolidated Fund must supply the deficiency, to which proceeding every hon. member of that House would be on principle opposed.

Mr. GRANTLEY BERKELEY then withdrew his motion.

DUTY ON SPIRITS IN BOND.—DEFEAT OF THE GOVERNMENT.

Lord NAAS then moved that the House do resolve itself immediately into a committee of the whole House, to take into consideration the present mode of levying the duty on home made spirits in bond. The noble Lord said his object was the same he had in view on the 2d of last June, when it had been defeated on the third reading by the narrow majority of one. At present, the duty was charged on the spirits at the worm's end, and the result was that the distiller lost by evaporation and other causes a large per centage upon which the duty was then paid. On foreign spirits the duty was paid on the quantity taken out of bond. That was the whole case, and the home distiller only sought to be placed in this respect on the same footing as the foreign and colonial distillers.

Mr. E. B. ROCHE seconded the motion

Mr. WILSON, the CHANCELLOR of the EXCHEQUER, and Lord J. RUSSELL opposed the motion on the part of the Government.

Mr DISRAELI was astonished that the success of the trade should be made a reason for still subjecting it to unjust regulations and duties. He sincerely hoped that the screwing system, resorted to by officials against any modelling of taxation, would, in the present instance, receive another check. (Loud cheering)

The House then divided, when the numbers were—

For the motion	169
Against it	170

The SPEAKER, in the midst of tremendous cheering, gave his casting vote, according to the courtesy usual on such occasions, against his own party, in favour of the motion of Lord Naas

On our return to the gallery, we found

Mr ROEBUCK on his legs, contending that the House of Commons had now assumed the functions of the Government, and that Lord J. Russell was no longer able to govern the House, he should, according to the spirit of the Constitution, decline to live any longer upon sufferance and continue in the position where he now held.

Lord J. RUSSELL said the hon. and learned member had a perfect right to tender his advice with respect to the public service; but he (Lord J. R.) must claim for himself the right of judging of his position, and of acting accordingly, however much he might be obliged to the hon. and learned gentleman for his advice. He had not shown such an anxiety to keep office as to render it necessary that the hon. member for Sheffield should become his monitor. The noble Lord then proceeded to contend that at the various defeats sustained by the Government were, in point of fact, victories, on the that it required a little time and consideration to see them in that light

The House then went into committee, and

Lord NAAS moved a resolution upon which to found a bill to make the required alteration.

The gallery was cleared for a division, but none took place; and on our return we found

Mr. HUME on his legs, contending that it was unfair to press for a second division after many hon. members had left the House

Lord J. RUSSELL said he was perfectly justified in taking the second divisions: the question had been carried only by the casting vote of the Speaker, who had, in conformity with the usage in such cases, voted for the motion, in order that it might receive further consideration.

Mr FARNHILL moved that the chairman report progress, which after some discussion was agreed to, and the House resumed.

ST. ALBAN'S ELECTION.

Mr. E. ELLICE moved for leave to bring in a bill for appointing commissioners to inquire into the existence of bribery in the borough of St. Albans. The hon gentleman read portions of the evidence taken before the committee, in order to show that systematic bribery had prevailed at elections for that borough, and to such an extent as to call for the interference of the house.

Mr. CORBET moved as an amendment, after the words "St. Albans," to add the words "and of bribery, treating, and corruption in the Falkirk district of burghs.

The original question was then withdrawn.

The amendment was then withdrawn.

Motion agreed to half past one o'clock.

HOUSE OF COMMONS.—WEDNESDAY.

The House sat from noon to six o'clock.

AUDIT OF RAILWAY ACCOUNTS.

On the motion for going into committee on the Railway Audit Bill, Mr. LABOUCHERE said, that, though he thought the bill would not be productive of much good, yet he would not oppose it. He hoped the committee that its details might be considered. He did not approve of the principle of the bill, because he thought that a railway audit, to be useful should be continuous, and should also be wholly independent of the railways. He should refrain from bringing in any bill to carry out his own views, for he feat that the railway interest in that house was too powerful for him to contend with: while, on the other hand, the public would not applaud him for bringing in a bill, but look for support in public opinion to bear up against such powerful influence.

Mr. B. DENISON thought the plan his own was which stood, above all others.

Mr. HASTIE moved as an amendment, after the words "St. Albans," to add the words "and of bribery, treating, and corruption in the Falkirk district of burghs."

After a very desultory discussion, Mr. LOCKE said the bill was prepared by a committee, deputies from the shareholders of the various railway companies, and was therefore entitled to great consideration.

Mr. CHAPLIN moved, as an amendment, that the bill be committed that day six months

After some further discussion, [illegible] Mr Chaplin was negatived by a majority of [illegible]

The House then went into committee on the bill.

On clause 1, which prescribes a certain scheme of railway audit, Mr. BERKELEY DENISON moved an amendment, the effect of which was to negative the clause.

On a division, the original clause was carried by 81 to 60.

The Committee was occupied until half-past five o'clock in the discussion and disposal of the next six clauses, many verbal amendments being introduced, and much diversity of opinion expressed by members recognised as railway authorities, as to the chance of the bill proving efficacious in the way of detecting and preventing mal-administration On arriving at the eighth clause, progress was reported, and the House resumed.

HIGHWAYS (SOUTH WALES) BILL.

The amendments made in this bill were considered and agreed to.

LODGING-HOUSE BILL.

This bill, on the motion of Lord ASHLEY, passed through committee

ADVERTISING VANS AND BARREL-ORGANS.

Colonel SIBTHORP moved that the report of the instructions to the Commissioners of Police, relative to the obstructions occasioned by the advertising vans and large barrel-organs, in the public streets of the metropolis, be forthwith made.

Sir G. GREY said, as far as he could understand, a copy of the report in question was laid before the House on the first day on which they re-assembled after the Easter recess. If it had not been printed, it was no fault of his. The police had received instructions to act within the law in the removal of street obstructions.

Colonel SIBTHORP: I move that those instructions be printed.

Sir G GREY:—You must give notice of that motion

COMMON LODGING-HOUSES.

Lord ASHLEY obtained leave to bring in a bill for the regulation of common lodging houses,

ST. ALBAN'S ELECTION.

Sir G. GREY appeared at the bar, and stated that the address of the House on this subject had been presented to the Queen, and that she had been graciously pleased to issue a Royal proclamation, offering rewards for the apprehension and detention of Waggett, Heyward, Skegg, and Parchmore, who have hitherto eluded the service of the Speaker's warrant.—Adjourned.

HOUSE OF LORDS.—THURSDAY.

The Exchequer Bills Bill, the Stamp Duties Assimilation Bill, and the Indemnity Bill, were each read a second time.

On the motion of the Earl of CARLISLE, the Apprentices and Servants Bill was read a third time and passed

The Administration of Justice Improvement Bill, and the Registration of Assurance Bill, were each referred to committees.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

CEYLON

Mr H. BAILLIE postponed to Tuesday next his motion for a vote of censure on the Government, for having, through Earl Grey, the Colonial Secretary of State, approved of the administration of the Government of Ceylon by Lord Torrington.

WOODS AND FORESTS

Lord SEYMOUR gave notice that on Monday next he would move for leave to bring in a bill for the better regulation of Crown land revenue, public works, and buildings, &c.

REPEAL OF THE MALT-TAX

Mr. CAILEY moved for leave to bring in a Bill to repeal the Malt-tax. He had hoped, he said, that he would not have again been called upon to bring forward the claims under the notice of the House: he had hoped that if no other Member had taken up the subject, that at least Government would have turned their attention to it. The situation of the country in this respect was not much better than it was last year; the times of bliss and prosperity prophesied by the Free-Traders were just as distant as ever; and of all classes of her Majesty's subjects, the agriculturists were labouring under the greatest distress. Her Majesty had noticed this distress, but her Ministers had done nothing to remove it. He had found himself equally unable to vote for the re-imposition of the Income-tax for three years, and for its application. In the division on the window tax he had taken no part whatever. It was notorious that the beer consumed in the metropolis and throughout the kingdom was of greatly adulterated, and it was manifest that that adulteration was caused by the heavy tax which was imposed on malt. Sir Robert Peel had said that if the Corn laws were repealed, the Malt-tax must be abolished, and Sir James Graham, and other hon. gentlemen, had used a similar opinion. The hon. member for the West Riding of Yorkshire placed the repeal of the Malt-tax at the head of the Budget which he published some time ago; yet he, and several members who entertained the same views, when the motion was brought forward last year, thought discretion the better part of valour, and did not appear in the division.

After a discussion, in which the CHANCELLOR of the EXCHEQUER and Lord J. RUSSELL opposed the motion, the House divided, negativing the motion by a majority of 321 to 122

THE INCOME-TAX

On the motion of Mr. HUME, a select committee was appointed to inquire into the present mode of collecting the Income-tax and Property Tax, and to consider whether any other system of levying it, so as to render the tax more equitable, can be adopted.

THE KAFFIR WAR.

Lord J. RUSSELL having moved the nomination of a select committee to inquire into our relations with the Kaffir tribes of South Africa,

Mr. HAWES complained that the Government were being excluded from the committee

After much discussion, in which Mr KEOGH, Mr. SADLEIR, and other members from Ireland complained of the systematic exclusion of Irish members from select committees.

Lord J. RUSSELL consented to the addition of three Irish members (the number asked for) to the committee.

Mr. KEOGH, however, moved the adjournment of the debate, which was negatived by a majority of 131 to 16; and the committee was subsequently nominated

The House adjourned shortly before two o'clock.

NAVAL AND MILITARY INTELLIGENCE.

SCHEME OF RETIREMENT FOR FLAG-OFFICERS, CAPTAINS, COMMANDERS, AND LIEUTENANTS IN THE NAVY.

The Admiralty have just pub lished a new scheme of retirement for flag-officers, captains, commanders, and lieutenants of the navy. The following is a summary of it:—

ADMIRALS: The number of admirals is at present fixed at 150, exclusive of admirals of the fleet. Their Lordships propose that the number shall be reduced to 98, exclusive of admirals of the fleet; of these 98, 21 to be admirals, 37 vice-admirals, and 31 rear-admirals. They propose that this reduction should be effected—1. By removing to permanent half-pay those now on the active list who, under the order in council of June 30, 1847, have not served for their flag. 2. By the creation of 10 retired service pensions of £1200 each, to be awarded to flag-officers on the active list who are either above 70 years of age or are physically incapable of further service. These pensions not to be held in addition to the good service pension. Such officers to be placed on the retired list, and vacancies occasioned by death to be filled up from the active list. These arrangements the number of admirals will be reduced to 99, or to within one of that number

CAPTAINS.—The number of captains was fixed by the retirement of 1846 at "not exceeding 500." But the number of 500 is not now complete, the full number not having been filled up, in consequence of some not having served sufficiently. My Lords propose that the number of captains on the active list should be fixed at 450. It is proposed that the reduction to 350 shall be effected—1. As vacancies occur in the active list of flag officers, the captain first in seniority, who has served for his flag, will be promoted (reserving her Majesty's undoubted right of selection). Those captains who rise to their flag, and who have not served, will be placed on permanent half-pay, retiring in rank as at present, but with the half-pay of rear admirals. 2. By keeping open the retirement of 1846 to the number of 200, until the list of captains is reduced to 350. The retirement to be at the rate established by retiring one in two vacancies until it be reduced to 100, and by permitting captains who are above 55 years of age, and who have been on the captain's list for ten years, to be placed on the retired list. By varying the rate of promotion as it is now in force, of one in three, until the number is reduced to 380. Their Lordships propose to promote by seniority 90 commanders to the rank of captain after five years' service as permanent half-pay Of these 50, 20 to be selected in the current year and 10 in each succeeding year, until the number reaches 90, when the vacancies occasioned by death to be filled up.

COMMANDERS.—The number of commanders on the active list of April, 1851, was 1200. My Lords propose that the active list should be reduced to 600 This resolution should be effected—1. By the selection of 80, each year proposed. 2. By increasing to 100 the list of commanders permitted to the rank of retired captain under the order in council, 30 Jan. and keeping such retirement open until the number of commanders on the active list is reduced to 450, as proposed. 3. By placing on permanent half-pay all commanders who have not served afloat, or in the packet or revenue service, within 20 years, or who are physically incapable f service; and by continuing to remove from time to time such officers from the active list to permanent half-pay. 6. By observing the promotion of one in three, as now in force, until the number on the active list be reduced to 450

LIEUTENANTS.—The number of lieutenants on the active list on 1st April, 1851, was 2147. The Lords of the Admiral propose to reduce this number to 1200. They recommend, firstly, the promotion of 50 by selection, as above proposed. 2. To place on permanent half-pay all lieutenants who have not served afloat, or in the packet or revenue service, within 20 years, and all such as are physically unable to serve, and from time to time to remove such officers from the active to the permanent half-pay of each rank. 3. By observing the rate of one in three should be kept, until the number on the active list be reduced to 1200, as proposed.

LAUNCH.—The *Valorous*, a large class steam man-of-war, was launched from Pembroke on Wednesday week. The ceremony of naming was performed by the lady of Colonel Ellis, R.M., commandant of the garrison. The day being fine, there was an unusually large number of spectators present. The following are her principal dimensions:—Length over all, 245 ft. 3 in.; ditto between the perpendiculars, 210 feet; ditto of keel for tonnage, 180 ft. 6½ in.; breadth, extreme, [illegible] ft. 4½ in.; ditto, moulded, 35 ft. 0½ in. depth [illegible] ft. 6 in.; burthen in tons, 1257 tons.

OPENING OF THE GREAT EXHIBITION.—SKETCH IN HYDE PARK.

OPENING OF THE GREAT EXHIBITION.

WE this day present our readers with several additional pictures of the Great Industrial Festival of the First of May, by which means we are enabled to place upon pictorial record some of the most interesting and impressive phases of the memorable event.

HYDE PARK.

Our first picture shows a portion of the vast assemblage of persons collected at the entrance of Hyde Park to greet the advance of the Royal procession. The long stream of carriages, which had been flowing uninterruptedly along the whole line of route from Long Acre and Regent Circus towards the Exhibition from as early an hour as half-past nine, was accompanied by a large body of pedestrians, whose ranks were swelled as they approached Hyde-park Corner. There they were met by crowds thronging from Knightsbridge and St James's; and every one seemed impressed with the belief, that, of all the localities, that inside the screen and gate of the Park was best fitted to afford a view of the Royal *cortège*. From a very early hour, the vantage-ground surrounding the statue of Achilles was taken possession of by a band of the more resolute and patient of the sight-seers, and of this scene the Engraving presents a most characteristic picture.

Altogether, the scene at this point was a concentration of eager expectancy. The lower windows and gardens of Apsley House were filled with observers. The roof of the Park Lodge also contained its full share of spectators; and even the ward-room windows of St. George's Hospital were made posts of observation, from which beauty and fashion might gaze upon the gorgeous ceremonial by which the World's Fair was to be inaugurated.

It is stated in the *Morning Chronicle*, from a calculation made by persons interested in arriving at the facts, that, if the carriages had been placed in a direct line, they would have extended over a space of nearly twenty miles. Of the vehicles which arrived at the Park gates up to twelve o'clock at noon, there were 1050 state carriages and carriages of noblemen, &c.; 800 broughams, 600 post and hack carriages, 1500 hack carriages and cabs, 300 clarences, and 300 vehicles of other descriptions.

The next scene shows the

ARRIVAL OF VISITORS AT THE SOUTH FRONT OF THE BUILDING.

The setting-down of company at the southern front of the Great Building was thick and fast throughout the morning. Here the holders of "season tickets" were admitted. The entrance at the north end of the transept was reserved for her Majesty and the Court; and this point will in future be styled "the Queen's Entrance."

The next scene takes us to the

INTERIOR OF THE GREAT BUILDING,

Sketched at the intersection of the nave and transept, and showing a bevy of fair visitors, to whom the best places were accorded, upon the chivalrous principle of *honneur aux dames*.

The *coup d'œil* was, as may be imagined, extremely brilliant. All about the square reserved for the proclamation ceremony (says a contemporary) was ranged the gaily-dressed throng of expectant company. Here they sat and stood in serried files of gaily-tinted colour; there they rose into pyramids and ledges, clustering upon the irregularly-constructed platforms. Above towered the spacious galleries, sweeping away into long vistas of symmetrically-disposed lines, bright and garish with never-ending changes of colour and costume, and fluttering with the waving handkerchiefs, ribbons, and scarfs which flickered down the long ranks of richly-dressed ladies.

There is no decoration which a building can possess which equals that presented by a vast and well-arranged assemblage of people. Living masses convey to a great structure a character of animation which no inanimate objects, however beautiful, can supply. The long lines of faces, lighted up with excitement, the varieties of expression, the diversities of dress and ornament, of themselves furnish subjects for inexhaustible reflection; and when these are so disposed that the fairer portions of humanity have the precedence and occupy the first rank, the scene presented appeals directly to the gallantry and enthusiasm of the spectator. The seats which on either side lined the nave and its galleries were reserved exclusively for ladies; and thus, standing in the centre of the Building, one could see stretching from that point east and west, north and south, long lines of elegantly-dressed women, the verge and binding of an assemblage which comprised not less than 25,000 people.

VISIT OF THE COLONIZATION LOAN SOCIETY'S EMIGRANTS TO THE GREAT EXHIBITION BUILDING.

This Association has just despatched another ship, the *Blundell*, with about 240 assisted emigrants of a very superior class. Among the young single women is a very interesting girl, a daughter of Thom, the poet the friends who raised a subscription for the family of that gifted and unfortunate man, having considered that they could not better dispose of the sum intended for this daughter than by placing her under Mrs. Chisholm's care. On the 29th ult., the whole body of emigrants having memorialised Prince Albert for leave to view the Crystal Palace before sailing, were permitted, by an express order from Buckingham Palace, to march in a compact body, under the care of Mrs. Chisholm, through and round the Central Avenue, where our Artist took the sketch which appears in the opposite page.

The memorial is simple and touching:—

"To the Commissioners for the Exhibition of Industry.

"The memorial of the undersigned emigrants, under the auspices of the Family Colonisation Loan Society, respectfully showeth, that your memorialists are about to emigrate to Australia, in some cases to join their relations, in others to seek employment in the rugged work of colonisation, in all with the hope that they may take out with them so much of their country's spirit of improvement as may contribute, in some degree, to secure the foundation of communities which may hereafter reflect honour on the British name. That they had hoped, before leaving their native shores for ever, to have had the gratification of witnessing the crowning act of her civilisation, enterprise, and hospitality in the Exhibition to which she has invited the contributions of the industry of every nation on earth. That the ship *Blundell*, by which their passage is engaged, is fixed to sail from Gravesend on May the 4th; and that up to that day the charge for admission will be £1 for each person.

OPENING OF THE GREAT EXHIBITION.—SOUTH ENTRANCE.

OPENING OF THE GREAT EXHIBITION.—SKETCH IN THE NAVE

"Your memorialists respectfully request, that you will be pleased to grant them an order for admission within the first three days of the Exhibition, at the rate of 1s. each. Should you extend this favour to your memorialists, the gratifying recollection of an Exhibition of such unprecedented importance will ever be associated in their minds with the kind consideration of the Royal Prince, the noblemen and gentlemen to whom the responsible office of control has be[illegible]

On the 2d May, a farewell group meeti[illegible] Right Hon Sidne[illegible] and Robert Lowe[illegible] South Wales[illegible] [illegible]ptly after [illegible] Esq., publicly presented Mrs Chis[illegible] with an address of thanks, which [illegible] at that purpose by the emigrants on board [illegible]

The Earl of Ashburton has, in addition to a donation of £200, become an annual subscriber of £100 to this society.

HER MAJESTY'S THEATRE.—DON GIOVANNI.—GRAND EXTRA NIGHT.—It is now officially announced that a Grand Extra Night will take place on THURSDAY NEXT, MAY 15th, when will be presented (for the first time this season) Mozart's chef d'œuvre, DON GIOVANNI. Don Giovanni, Sig. Lablache, Il Commendatore, Sig. Tagliafico, Leporello, Sig. Lablache. Donna Anna, Mme Pleyel; Donna Elvira, Mme Castellan; and Zerlina, Mme Sontag. In the Ball Scene Mdlle Carlotta Grisi will dance a Pas Seul, and Mdlle Ferraris with James Mozart's celebrated "Minuet and Gavotte," with various Pas, introduced in the Ballet Divertissements, in which Mdlle Cerrito, Mdlle Amalia Ferraris Millère, Mdlle Desmonts, Mdlle Rosati, Mdlle Amalia Ferraris, Mdlle Adeline Plunkett, Mdlle Marie Taglioni, Mdlle Cerrito, Dantone, Pasquale, M Charles, M Ehrke, and M Paul Taglioni will appear.

THEATRE ROYAL, DRURY-LANE.—Lessee and Manager, Mr. [illegible] MONDAY MAY 12 and during the week will be performed [illegible] Wednesday, and the Alhambra or, the Three Moorish Princesses on Thursday, Friday, and Saturday. Characters—Abdallah, Mr. Bennett; Selim, Mr. Bland; Alcanzor, Mr. Wallack; Zamet, Mr. Ryder; Zamet, Mr. Ryder; Zamet, Mr. Ryder

public their private dwellings, filled with valuable objects of taste and elegance—if they allow their lawns, parks, and gardens, to be trodden by the feet of the grateful public, it is surely in bad taste, to say the least of it, that the Lord of Glenlyon and Glen Tilt should shut the sight seer from his wildernesses, and prevent the tourist from scaling his barren mountain-tops, and from enjoying on those sublime pinnacles the spectacle of a natural magnificence, which costs him nothing, and which ought to be as free as the sun on the mountain to all men. But we only mention the Duke of Athol *en passant*, and trust that the next time the public have occasion to speak of him will be in terms of congratulation—that he has learned to be just, if not to be generous. In the meantime, the respectful gratitude of the public is due to the men who have no legal obligations to compel them to regard the rights or enjoyments of their fellow-creatures, but who stretch a point, on occasions of festivity like the present, to show their sympathy with the crowds of toiling men who are less fortunate than themselves in the possession of worldly wealth and its attendant advantages.

COURT AND HAUT TON.

THE COURT AT BUCKINGHAM PALACE.

Her Majesty the Queen has set a brilliant example to the aristocracy during the past week, an uninterrupted succession of festivities have taken place at Court since the Great Festival on Thursday week.

On Tuesday the following gratifying announcement, under authority of the Court newsman, appeared in the daily papers:—"It is understood that the Queen intends to give a third state ball in the month of June next; and that, for the encouragement of trade, her Majesty has resolved that it shall be a fancy ball. The costume will be the full dress of the Court of Charles II., from the Restoration, in 1660, to 1685. The choice of dress will not be limited to this country, but will include the Court costumes of that period of other European countries."

On Monday her Majesty presided at a Privy Council.

THE DRAWINGROOM.

The Queen held a Drawingroom (the second this season) on Tuesday afternoon, at St. James's Palace. Her Majesty and his Royal Highness Prince Albert arrived at two o'clock from Buckingham Palace, attended by the Royal suite, and escorted by Life Guards.

Their Royal Highnesses the Prince and Princess of Prussia, and Prince Frederick William of Prussia, his Royal Highness Prince Henry of the Netherlands, and his Serene Highness Prince Edward of Saxe-Weimar, attended the reception.

The Queen and Prince Albert were attended by the Mistress of the Robes, the Countess of Gainsborough (in waiting), the Duchess of Norfolk, the Marchioness of Ormonde, Countess of Charlemont, the Viscountess Canning, and the Viscountess Jocelyn, Ladies of the Bedchamber; the Hon. Eleanor Stanley (in waiting), the Hon Beatrice Byng (in waiting), the Hon. Amelia Murray, the Hon Matilda Paget, the Hon. Lucy Kerr, the Hon Frances Macdonald, and the Hon Mary Seymour, Maids of Honour; and a full Court.

Her Majesty wore a train of buff watered silk, having flowers of white and yellow spreaded on it. The train was trimmed with silk, yellow ribbon, and bunches of lilac, ornamented with diamonds. The petticoat was of white satin, with an upper skirt of blonde, trimmed with bunches of lilac and tulle, and ornamented with diamonds to corre-pond with the train. The head-dress was formed of diamonds and feathers, and a wreath of lilacs

The Princess of Prussia wore a train of blue silk, brocaded with silver, and trimmed with bouquets of flowers, with diamond ornaments. The stomacher was also decorated with brilliants. The petticoat was of white watered silk, trimmed with flowers, to correspond with the train. The head-dress was composed of diamonds and feathers wit. flower-

The diplomatic circle was very fully attended, and several distinguished foreigners had the honour of presentation to her Majesty. In the general circle the presentations were neither numerous nor remarkable. After the drawingroom the Queen and the Prince Consort, with their illustrious guests, returned to Buckingham Palace.

THE STATE BALL.

The Queen gave a State Ball on Wednesday evening at Buckingham Palace to a most brilliant Court, invitations having been issued to above two thousand one hundred

At half-past nine o'clock the nobility and gentry began to arrive at Buckingham Palace. The diplomatic corps, and the Gentlemen of the respective Embassies, foreigners of distinction, the Cabinet Ministers, and other high functionaries of State, Privy Councillors, the Ladies and Gentlemen of the Households of the Queen, Prince Albert, and the members of the Royal Family, and the Queen's Aide-de-Camp, all alighting at the garden entrance of the Palace, while the general circle of visitors entered by the Grand Central portals.

The whole of the illustrious guests were ushered up the Grand Staircase to the State Saloons, which were illuminated with the greatest brilliancy and splendour; and to these were added, on this occasion, the Garter Throne-room, adjoining apartment leading into the south end of the magnificent Picture Gallery, and affording increased accommodation to the throng of company.

The ball-room was prepared as on former occasions, a quadrille band being stationed in an orchestra elevated within the alcove, reserved seats for the occupation of her Majesty and her circle being arranged on one side of the saloon. A second band—from the Throne-room—was also prepared for dancing in a quadrille band placed within the Throne alcove, and reserved seats being elevated down the east side of the apartment. Both ball-rooms and all the state saloons, together with their approaches, were decorated with exotics and choice shrubs and flowers, tastefully arranged in the angles and recesses. The Picture Gallery united the two ball-rooms, and here the company assembled on their arrival, until the entrance of her Majesty.

His Royal Highness Prince Henry of the Netherlands arrived at ten minutes before ten o'clock.

Precisely at ten o'clock, her Majesty the Queen and his Royal Highness Prince Albert entered the White Drawingroom, from the Royal Closet, and passed on to the Grand Saloon, which was then opened from the Picture Gallery, and the assembled company followed her Majesty and her august circle into the Ball-room.

Her Majesty and his Royal Highness were accompanied by their Royal Highnesses the Prince and Princess of Prussia, Prince Frederick William of Prussia, and Prince Henry of the Netherlands.

The Queen wore a blue silk dress, with three skirts of blue and white tulle, trimmed with branches of apple blossoms ornamented with diamonds. Her Majesty's head-dress was formed of a wreath of apple blossoms ornamented with diamonds.

Her Royal Highness the Princess of Prussia wore a dress of white tulle over white satin, trimmed with white satin ribon and bunches of flowers, and ornamented with diamonds. Her Royal Highness wore a wreath of geraniums as a head-dress, and diamond ornaments.

The dresses of the ladies were new for the occasion; and the gentlemen were in full dress, the members of the different orders of knighthood, British and foreign, wearing their respective insignia. The Duke of Wellington and the Marquis of Londonderry both were the order of the Black Eagle of Prussia.

The Lord Chamberlain having conducted her Majesty to the ball-room, a quadrille was formed, and her Majesty opened the ball with his Royal Highness the Prince of Prussia; the second being his Royal Highness Prince Albert and her Royal Highness the Princess of Prussia. His Royal Highness Prince Henry of the Netherlands and the Duchess of Argyll joined in the quadrille.

Juillien's orchestra was in attendance, and afterwards performed quadrilles and waltzes.

Dancing was then commenced in the Throne-room, the first dance being a quadrille—"Ariadne" (Lord Hagerstoll).

The orchestra consisted of thirty performers of eminence, among whom were Messrs. Deloffre, Mellon, Newsham, Ball, Hausmann, Pilet, Remusat, Baddeley, Sinclair, Saunmann, and Winterbottom; and was conducted by Mr. Bocsé (Master of the Band of the Scots Fusilier Guards).

Refreshments were served to the company throughout the evening in the Green Drawingroom.

A State Supper was served in the principal Dining-room, the repast comprising every rarity and delicacy.

PROPOSED RIDE THROUGH KENSINGTON-GARDENS.—On Tuesday morning a very numerous deputation of gentlemen, representing the inhabitants of Kensington, Bayswater, and Paddington, headed by Archdeacon Sinclair and Mr Evans, M.P., and accompanied by Lord Robert Grosvenor, M.P., had an interview with Lord Seymour, at the Office of Woods and Forests, for the purpose of strongly protesting the threatened plan of carrying a continuation of Rotten-row into and across Kensington-gardens. The deputation waited on his Lordship on the serious inconvenience of making an innovation such as that apprehended upon the rules by which the Royal permission to enjoy these noble pleasure-grounds has hitherto been judiciously limited. They dwelt upon the total interruption that would result from it of the seclusion which had been enjoyed by all the frequenters of the Gardens, of every class, and from all parts of the metropolis upon the breach of that security which ladies, invalids, and children have been accustomed to find in its walk; upon the interruption of the congenial quiet for which the artist, the literary student, and even the man of business, weary with the cares of his daily engagements, sought in its woodland retreats. His Lordship received the deputation with much courtesy, and heard their representations with attention. At the conclusion, the deputation urged his Lordship not only to assure them, as he had already done during the interview, that the measure should be only temporary during the continuance of the Exhibition, but that, considering the strong feeling entertained throughout the neighbourhood and by the public, his Lordship would reconsider the question. His Lordship bowed, and the deputation withdrew. The deputation afterwards assembled at the Ship Hotel, Charing-cross, to concert measures for carrying out the objects of the deputation.

CHURCH, UNIVERSITIES, &c.

OXFORD.

There will be an election at Wadham College to a scholarship, on Monday, the 30th of June next. Natives of Great Britain under nineteen years of age are eligible, and the founder's kindred are entitled to the preference. Candidates are requested to call on the Warden on Wednesday, June 25, at four o'clock, bringing with them certificates of their parent's marriage, and of their own age and baptism, as well as testimonials of good conduct.

An examination will be holden in Exeter College on Monday, June 2, for the purpose of electing to four scholarships. 1st and 2d. Open to all persons above the age of sixteen, and who, if members of the University, have not exceeded two years from their matriculation. 3d. Limited to persons born or educated in the county of Devon. 4th. Limited to sons of clergymen resident in the county of Devon, and who will not have exceeded the age of nineteen on the 30th June next, with preference to kin, if any, of the late Rev. Thomas Howse, rector of Hunsdon. The last is tenable for seven years. Candidates are required to call on the rector on or before Saturday, May 31, and to bring with them their baptismal certificate, testimonial of good conduct, and, in case of their being candidates for either of the last two scholarships, proof of their being duly qualified according to the limitations above stated.

CAMBRIDGE.

The Vice-Chancellor has received the following communication from the provost and scholars of King's College, with the corporate and common seal of that society affixed:—"Whereas the undergraduate fellows of King's College, in the University of Cambridge, have, in the exercise of an ancient and acknowledged privilege, been accustomed to claim and receive the degree of Bachelor in Arts, in the Senate-house of the said University, without having passed any of the previous examinations required from the undergraduates of the other colleges: we, the provost and scholars of King's College aforesaid, having taken into our consideration the objections that naturally attach to any such diversity of discipline, and being at the same time desirous of establishing a more perfect system of discipline within the limits of this our College and University, do by these presents, duly sealed with our corporate and common seal, voluntarily surrender and relinquish for ourselves and our successors for ever all such peculiar privilege and claim as is hereinbefore mentioned, and we do hereby relinquish all right and title whatsoever to be exempt from the ordinary examinations of the University aforesaid on the part of all such scholars as shall be admitted in this our college after the date of these presents. Provided, lastly, and it is hereby distinctly understood and declared, that nothing hereinbefore contained shall be considered, deemed, or taken in any way to surrender, waive, compromise, or invalidate the composition existing between the University and King's College, which, we hereby affixed our corporate and common seal, confirmatory of this our act, this first day of May, in the year of our Lord one thousand eight hundred and fifty-one."

UNIVERSITY OF LONDON.

The annual public conference of degrees, and presentation of honours and prizes, by the Chancellor and Senate of the University of London, was held on Wednesday, in the library of the University College. This is the second instance in which this ceremony has taken place in public. There was a numerous assemblage, including many ladies. The following members of the Senate were present:—The Earl of Burlington, Chancellor of the University; J. G. S. Lefevre, C.B., Vice-Chancellor; Lord Monteagle; Lord Overstone, Mr. Bacot, Dr. Billing, Professor Brande, Sir James Clark, Professor Hall, and Mr. Hallam, Sir C. L. Hammick, Bart., Dr. Hodgkin, Dr. Jerrard, Right Hon. T. B. Macaulay, Mr. Rideal, Professor Lindley, Mr. Warburton, Mr. G. C. Lewis, &c.

The Chancellor having taken his seat,

Mr. Rothman, the registrar, read a brief report, from which it appeared that during the past year, 190 candidates had been admitted to matriculation; of that number, twelve had distinguished themselves for honours in mathematics and natural philosophy, of whom one had obtained an exhibition; nine had distinguished themselves in classics, of whom one obtained an exhibition; eight had distinguished themselves in chemistry, of whom one had obtained a prize, five in zoology, and two in botany. Twenty-three candidates had passed the first examination for the degree of Bachelor of Medicine. Six had distinguished themselves in anatomy and physiology, six [illegible] materia medica and pharmaceutical chemistr[illegible] candidates had passed the examination for the degree of Bachelor of Medicine, of whom four had distinguished themselves in physiology and comparative anatomy, five in surgery, five in medicine, and one in midwifery. Three candidates had passed the examination for the degree of LL.B., of whom two had distinguished themselves in jurisprudence, and one in conveyancing. Fifty-eight candidates had passed the examination for the degree of B.A., of whom one had obtained a University scholarship in mathematics and natural philosophy, five had distinguished themselves in classics, three in annual physiology, and one in botany. Five gentlemen had passed the examination for the test of Scripture and Scriptural history, of whom two obtained prizes. Ten in all had passed the examination for the degree of M.A., of whom one had obtained the gold medal for his attainments in mathematics and natural philosophy, and one for logic, and mental, moral, and political philosophy. Thirteen candidates had obtained the degree of M.D., of whom one had obtained a gold medal for his commendatory oration to the Chancellor, and one

EXHIBITION OF THE ROYAL ACADEMY.

We may safely characterise the present Exhibition as one of more than average merit. It is, however, hardly up to some very recent exhibitions in the same room, and, if we regard it as a vigorous effort made by British artists to represent the [illegible] we cannot but pronounce it [illegible] satisfactorily as not up to the mark. Our manufacturers and our artisans, our workers in wood and metal, have done more at the Crystal Palace than our painters and sculptors have done at the National [illegible]

[illegible] failure is to be accounted for in [illegible] ways. Some of our best artists are no longer young, and ill-health and other engagements have interfered with the completion of pictures intended for the Exhibition. Turner, we are sorry to find, has passed his [illegible] year, and has not sent a single picture. Mulready, the pride of our school since Wilkie's death, has been content with the exhibition of a small picture, painted some forty years ago. Webster has been so unwell that he has been unable to add a pencil [illegible] to his many (because unseen at home) is represented by a few water-colour drawings; the large picture, on which he has been long engaged, being reserved for a separate exhibition during the present season. The deficiencies in the Sculpture-room will be accounted for by the absence of the two Westmacotts, and by our ample contributions to the Crystal Palace, where we shall see in portrait busts what witness the two statues of [illegible] Westmacott. Mr. [illegible] Dr. Jenner [illegible] Jenner's content in [illegible] sculpture, [illegible] on Horseback [illegible] away the palm [illegible] without a rival of any consequence.

The chief alteration in the arrangement of the present Royal Academy Exhibition is the retention of architectural drawings from the architectural rooms, and the admission in their stead of [illegible] Architectural drawings do not require a very strong light, even to be seen to the best advantage, but our [illegible] has evidently thought otherwise, for in the present exhibition there is not a single contribution from the architects who have obtained the honours of the Academy. Nothing from Sir Robert Smirke and his brother, Mr. Sydney Smirke, nothing from Barry, [illegible], or Hardwick. Our readers will remember the division of the Academy into three great rooms, of which the largest and best is the east room, facing the portico of St. Martin's Church. In this room the post of honour is given to a poetic head of "Ippolita Torelli" (136), by the new President, Sir Charles Eastlake, and the other posts to Maclise and Stanfield, to Leslie and Landseer, to Ward and [illegible]

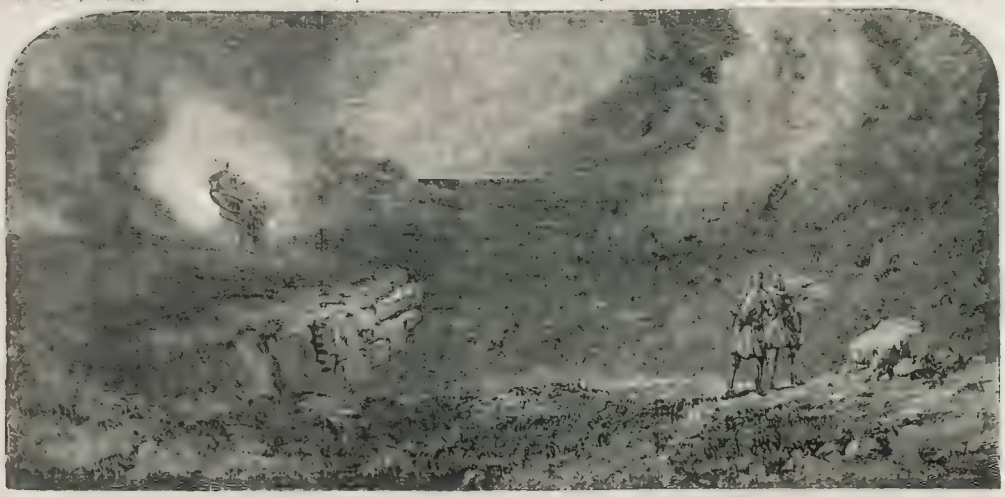
The picture in the Exhibition which shews the greatest fertility of invention, and the most marvellous dexterity in the execution of its details, is Mr. Maclise's large picture (67), called "Caxton's Printing-office in the Almonry at Westminster." The artist's description of this picture is as follows:—

"The designer, the illuminator, the wood-engraver, and the book-binder all worked at their several trades in the office of the first English printer; combining with the compositors and pressmen (as here represented) to achieve the first complete book published in England. Caxton (behind whom stands Wynkyn de Worde) is exhibiting to his patron, Edward IV., a proof sheet of that famous production, 'The Game of Chess.' The other historical persons introduced are the Queen, Elizabeth Woodville; her daughter Elizabeth, afterwards wife of Henry VII.; the young Princes, the King's brothers, Richard and Caxton's friend; and the Abbot of Westminster, John Esteney. The scene, so memorable in the history of English literature and civilisation, took place in the Almonry, at Westminster."

EXHIBITION OF THE ROYAL ACADEMY.—"BENVENUTO CELLINI GIVING INSTRUCTIONS TO HIS ASSISTANT, BERNARDINO," PAINTED BY S. A. HART, R.A.

Mr. Maclise is better with pencil and colour than he is with the pen. In this picture he has surpassed all his former efforts, his "Hamlet" not excepted. There is less mannerism of attitude and fewer distorted features than we can remember to have seen in his other works. He has wrought the whole in contact with his subject, and satisfies the mind with the completeness and accuracy of the whole. Antiquaries, too, are pleased. The newly printed sheet just laid before the Monarch looks as if it had been torn from the choicest Caxton in the British Museum. The very printing-press seems a veritable machine; while the bill of the great printer, copied from a unique original in the Douce Museum is given with a deceptive accuracy sufficient to induce a collector of curiosities to tear it from its post. The copyright of this fine picture was bought at the private view by Messrs. Graves, of Pall Mall; and the picture itself will be in the engraver's hands as soon as the Exhibition closes.

The picture which Her Majesty and Prince Albert liked best, and which her Majesty expressed a wish to purchase, was Mr. E.



[illegible] OF THE NATIONAL INSTITUTION.—MACBETH.—PAINTED BY F. X. HEINMANN.—SEE PAGE 384.

EXHIBITION OF THE ROYAL ACADEMY.

EXHIBITION OF THE ROYAL ACADEMY. "HE WAS A MIGHTY HUNTER BEFORE THE LORD." PAINTED BY A. COOPER, R.A.

Mr. Ward's principal contribution (185), representing "Queen Marie Antoinette in the Prison of the Temple, obliged to . . d the coat of her h . . . d Louis XVI. while he was asleep, in order that he might not be obliged to wear a vest in holes." As the "Caxton" is Mr. Maclise's best work, so is the "Marie Antoinette" Mr. Ward's best picture. He has told his story (we have engraved the picture at the foot of this page) with truthful simplicity and beauty. The expression on the Queen's face is that of resignation and contentedness. Then how charming is the incident of the Dauphin mending his shuttlecock; and no less charming the incident of the Dauphiness attending to her few flowers; while the incident in the background, picturing the joviality of a guard-room comes in appropriate contrast with the tranquil group in the foreground.

Her Majesty evinced her fine sense of art in wishing to possess this picture, but her wish has not, we hear, as yet been gratified. There were at least six candidates for the picture before her Majesty in point of time, and the picture had actually been sold and paid for. What was to be done? The actual purchaser — a Lancashire manufacturer of taste and liberality — was willing to surrender, but his wife was not. Her Majesty, we believe, was not . . . sed at hearing of the difficulty which . . terfered with her possession of the picture. The Queen has many pictures by the best masters, ancient and modern — the Lancashire manufacturer has comparatively few, and this was a picture of which his wife had watched the progress, from the infancy of the commission to the completion of the frame. We believe, however, that her Majesty will finally possess the picture.

We need hardly remind many of our readers, that to pick up a really fine picture by a known artist, the private view of an exhibition is generally six months too late. The studios of our artists are visited by scores of patrons, chiefly successful manufacturers from Lancashire and Y . . . ire, who know a good picture when they see it on an artist's easel, though they do not know so well . . . ent master at Christie and Manson's. These wealthy manufacturers give liberal commissions, and pay liberally and promptly. Artists can hardly stand in need of better patrons. Mr. Ward, it is true, might prefer seeing his picture at Buckingham Palace to seeing it at Borrowdale Lodge, near Preston, in Lancashire; but he cannot complain, nor does he, we are sure, of the patron from whom he received his commission. The two great patrons of modern British art were in trade. The munificent Mr. Vernon was a dealer in job-horses, and Mr. Sheepshanks is a retired Leeds clothier.

As we walk round the Exhibition, in the manner in which the Duke of Wellington examined it at the private view—in the way, indeed, in which the Duke views all exhibitions—according to the numbers in the catalogue, our eyes are arrested by a magnificent church interior from the pencil of David Roberts; by two girls at full length, a cabinet picture by Mr. Herbert, most marvellous for its truth of portraiture, and the almost deceptive character of its details—the piano might be wheeled out of the canvas, and the carpet seems . . . ging beneath the tread. Then Mr. Hart's warmly painted picture . . . upon the opposite page), of Benvenuto Cellini giving instructions to his assistant, . . . ts our attention. The . . . as Bernardo Manellini, of Mugello, and the sketch which he holds in his hands is the model for the bronze group of Perseus, which still existsin . . . zza del Gran Duca, . . . The head of Benvenuto is full of power, though somewhat judg . . . . . Watson Gordon's clever three-quarter portrait of Pro . . . W . . . t is next be . . . ad then Mr. . . . . the . . . painted in the best manner of Sir Hen . . . w . . . e on a cross between Velasquez and Joshua. W . . . a crowd) Mr. M . . . so's "Caxton," . . . bed. Then Mr Herbert's study for the "Judgment of . . . sober grandeur of thought; while Mr. Maenee's full-length of Dr. Wardlaw, a picture . . . .

EXHIBITION OF THE ROYAL ACADEMY. "QUEEN ELIZABETH."—PAINTED BY E. M. WARD, R.A.

Dyce's "Lear and the Fool" offends it from an entire misapprecia-tion (so little looked for in Mr. Dyce) of the meaning of the poet. One of Mr. Edwin Landseer's "Monarchs of the Glen" next demands our notice. Then his brother Charles's "Cromwell, attended by Fairfax, reading the contents of the King's cabinet after the Battle of Naseby," is found meriting examination. Than Eastlake's female head, already noticed, detains our willing feet; while turning our head upward we find a magnificent Edwin Landseer, "*group generis*" — a series of asses' heads painted for Mr. Cubitt. Next we are detained and delighted with Leslie's "Falstaff personating the King," so full is the *Falstaff* of humour, worthy of Quin, or Henderson, or Dowton, the famous impersonators of the character. The two Judges —Talfourd, by Pickersgill; and Earle, by Grant—never demand a share of attention—Talfourd looking very much as unlike a Judge as a poet, and Earle looking almost as wise as Thurlow, who was said to have looked wiser than any man was ever wise. Here a charming landscape by Creswick—that true disciple of Gainsborough—that true representator of English scenery—forces us to be covetous; while, at the next step, another interior, by David Roberts, and Edwin Landseer's "Titania and Bottom," make the same demand upon us, as we give up unwillingly even the very wish of further possession.

We have engraved a very interesting scene painted by A. Cooper, R.A.:—

"He was a mighty hunter before the Lord."
"Wherefore it is said, Even as Nimrod, the mighty hunter before the Lord!"

* * * * *

"And builded Nineveh, and the city Rehoboth, and Calah." Gen.x. 9, 11.

Here the Arab is relating the history of "the Great City," and the renown of its mighty men, as pictured upon the walls; and the listeners are evidently riveted by the wondrous tale.

FINE ARTS.

"MACBETH" Painted by E. J. NIEMANN.

This is one of the painter's best contributions to the Exhibition of the National Institution, now open at the Portland Gallery, in Regent-street. Mr. Niemann has chosen from the wondrous play of our great Bard the third scene in the first act, wherein *Banquo* and *Macbeth* see the *Weird Sisters*, and the former asks:—

What are these,
So withered and so wild in their attire,
That look not like the inhabitants o' the earth,
And yet are on't?

The subject has been cleverly treated by the painter; the supernatural light in the horizon, as well as the mystic flame that plays about the prophetic greeting of the witches, are admirably managed, and allow with great effect the desolation of the blasted heath, and the chasm in the centre The picture is, altogether, one of the most successful works in the collection.

THE THEATRES.

HER MAJESTY'S.

The return of Madame Sontag, last Saturday night, as *Maria*, in Donizetti's "Figlia del Reggimento," was signalised by the presence of a brilliant assemblage of Royalty, rank, and fashion. Her Majesty and Prince Albert, accompanied by the Prince and Princess of Prussia and Prince Frederick of Prussia, honoured the performance with their presence; and the Duchess of Kent occupied her box. The welcome given to Madame Sontag was most enthusiastic; and this wonderful vocalist, who is the full possession of her brilliant powers, received by the cordial reception, sang to perfection. In no character is Madame Sontag seen and heard more advantageously than in *Maria* (she has made the part entirely her own. She gives with consummate skill the most animated portraiture of the Vivandière of the 11th Regiment, without losing sight for a moment of the most feminine delicacy. She steers equally clear of frigid puritry and of coarse vivacity. Her *Maria* is gentle, affectionate, and lively; she does not address *Tonio* with the air of a vixen; and in her fine dress *Maria's* regimental action is still retained with lascivious *panchero*. As for the vocalisation, nothing can be more perfect. Her avalanche of roulades in the amazing season includes every known intricacy and something more; her cadenzas are the triumph of refined skill. The audience to demand the repetition of ovations which Sontag's *Maria* produced on Saturday, and again on Tuesday on the repetition of the opera; no amount of *furore* could be deemed an excess for such a matchless performance. The air of "Rataplan" is recognised as one of his most happy declinations. As the lentish lover in the first act, and the elegant officer in the second act, he is equally remarkable; whilst the music is admirably drawn out in his sweetest notes, launching on A with the utmost certainty, and reaching B flat almost as nicely. The *Sulpizio* of Frederick Lablache is quite artistic: the bumpkin to exaggerate resists like a consciencious actor, and the *ensemble* of the piece is therefore a pleasant whole.

The fanciful of Carlotta Grisi in "La Tirandaine," on Saturday night, evidently delighted the Royal visitors as it enchanted the audience by its irresistible piquancy and grace.

On Thursday night, after many disappointments, Signor Alary's new three act comic opera, entitled "Le Tre Nozze" (the Three Marriages), was produced with the greatest success The sparkling production was originally brought out at the Théâtre Italien in Paris, on the 20th of March last, under Mr. Gumbert's management, and it was played with the greatest enthusiasm until the close of the season. The cast here is precisely the same as in Paris, namely—*Luisa*, Mdme Sontag; *Teresa*, Mdme. Castellani; *Marchese di Rovi*, Mdlle. Nantier Didiée; *Il Cavaliere di Villafranca*, Signor Gardoni; *Crisco*, Signor Ferranti; *Il Barone d'Arcisos*, Signor Lablache

The hero of the comical libretto is a certain *Baron d'Arcisos*, or the *Baron of Vinegar-cruet*: in *Crisco* there is an intriguing *Figaro*; and in *Vespina*, a sharp soubrette, to defeat the plans of an ambitious lady mother, the *Marchese*, and the pretensions of the privilege *Arcisos* to the hand of the charming *Luisa*, beloved by the *Chevalier*. Moltrè's "M. de Pourceaugnac" has supplied Angelo Bertolazzo with the dramatic subject, and he has carried out the conceit cleverly. A cheerful chorus opens the drama, which passes in Spain The plan of operations by the lovers and their accomplices arranged, and when the *Baron* arrives, *Luisa* and *Vespina*, disguised as gypsies, try to alarm him. He presents himself, however in full dress, to the future stepmother; but he is bashful and timid, and, like *Don Pasquale*, is frightened to death at the *rôle à lui* with his intended *Luisa* who is commencing instruction in the amorous accomplishments necessary to win her hand and heart as a finished gentleman, and one of the most droll scenes imaginable takes place. Conceive Lablache taking lessons in language, and in dancing from Sontag, and finally the Lesbian of bass singing the polka, with his pandorous yet graceful agility. The tortured *Baron* is still more vexed by *Vespina*, disguised as a Venetian lady, claiming him as her own, with an affiliation case in prospect The *Chevalier* as a haughty Spaniard challenges the *Baron*. As in the "Marriage of Figaro" of Mozart, a nocturnal scene puts an end to the *imbroglio* and to the *Baron's* miseries, by so compromising the *Marchesa's* reputation, that she is too delighted to accept the *Baron* for herself, and assign her daughter *Luisa* to the *Chevalier*; whilst *Crisco* and *Vespina*, according to all the laws of ancient comedy, join hands, thus making "The Three Marriages."

Here is surely a novel in the dramatic trade and construction of the piece, but it is very neat and the whole gives a deeper zest with tact, to enable it to compete with the old, hackneyed pieces of the day. Signor Alary's "Le Tre Nozze" is a bouffe." Signor Alary has been long distinguished as a professor of singing; he was the master of Marie for some years. Alary's compositions, both sacred and secular, have been frequently heard in the concert-room, but the "Tre Nozze" is his first essay in opera. As in most of the early efforts of young composers, his individuality of style is not yet matured, but he thoroughly understands the nature of voices, and his music is, therefore, essentially vocal. Many themes are extremely familiar to the ear; but "these are old friends with new faces." If only to hear the clever duo for the two basses, Sontag and Castellani, the bantag's varlet ons on the subject of the polka as a rondo finale, the "Tre Nozze" would ensure listeners. Lablache was not recovered from his indisposition, but exerted himself strenuously. His *Arcisos* is quite a new creation The new baritone, Ferranti, is mercurial and dramatic; but, as he had the influenza, we cannot yet judge of his voice. A pretty tercetto, sung by Sontag, Gardoni, and Bertrand, was encored, and a similar compliment ought to have been paid to a septet, in the last act (unaccompanied), a charming specimen of part writing. There is breadth and power in the *finale* of the second act; and there is an elegant duo for Sontag and Gardoni, with violin obligato and harp accompaniments Sontag was rapturously encored in the *finale*, one of her most brilliant and fascinating vocal display. Overtures were bestowed on the six principals, and finally, at the call of the house, the composer was led on by Sontag and Lablache.

Next Thursday, Mozart's "Don Giovanni" will be given, with a powerful cast.

ROYAL ITALIAN OPERA

The partiality manifested by her Majesty and Prince Albert for the great lyric productions of Meyerbeer, was evinced last year by commanding three successive performances of the "Huguenots," the "Prophète" and "Robert le Diable" The presence of the Royal amateurs at the last-mentioned representation was, however, prevented by the melancholy death of Sir Robert Peel The indications of Hamlet caused a change of opera on the 19th ult., when "Robert" was to have been presented; but last Saturday night, there was no curtain for Her Majesty and Prince Albert, accompanied by the Prince and Princess Prussia, and Prince Frederick of Prussia (as on the opening of the Exhibition, when the "Huguenots" was performed), were enabled to witness [illegible] of "Robert le Diable" over [illegible] was fully and fashionably attended. The accompanied trio in the cavern scene, so superbly sung by Grisi, Tamberlik, and Formes, was enthusiastically encored as usual. The Queen and her illustrious visitors remained until the curtain fell on the closing scene, frequently applauding the artists.

Last Saturday night, Auber's "Masaniello" was given for a second time; and the acting and singing of Tamberlik, in the part of the fisherman-king, and in *Roberto*, with the most vivid recollection of Nourrit and Dupres in the same characters, justify us in stating that the Italian tenor has never been surpassed, if approached. With the most pure and refined school of singing, Tamberlik combines a thrilling power in the expression of strong emotion: he tases his hearers by storm in the vehemence of excitement. This truly great tenor has now completely won his public.

On Thursday, for the extra night, Rossini's "Donna del Lago" was revived with Grisi as the *Lady of the Lake*; Madame Castellan, *Allan*; Signor Bianchi, the new basso, *Douglas of Angus*, Signor Soldi, *Serano*, Mdlle. Angri, *Malcolm Graeme*; Tamberlik, *Roderick Dhu*; and Mario, *James V.*, disguised as *Uberto*. Sir Walter Scott's poem has been a great inspiration for Rossini; his copious fancy and inexhaustible flow of melody are strongly manifested throughout the score. The *couleur locale* is ingeniously noted in the imagery: the poetry of *Ellen*—the chivalric ardour of *Malcolm*—the dignity and feeling of the disguised *King* the fiery ardour of *Roderick*—the stern sentiment of *Douglas*—the warlike cries of the clans—the Gaelic enthusiasm of the bards—are depicted with wondrous skill and effect; the poet's creations have been realized by the musician with kindred feeling, and the land of the mountain and flood is before us in picturesque beauty. The lovely melody of "Tanti palpiti," is absolutely enchanting, and is intimately associated with every advent of the "Lady of the Lake;" the theme being interwoven by the composer with masterly ingenuity. The finale of the first act is a noble conception of vocal and instrumental worth; the genius of Rossini. *Roderick Dhu's* march, blended with the separations of the bards, and both themes worked out in one gorgeous *ensemble*, are exciting and sensational strains This finale, as the class exhibit through the years, and the mountain tops covered with armed warriors, always creates a prodigious sensation The execution was very fine. Tamberlik was encored in his *aria d'entrata*, and Mario in the "Io ti vidi" of the last act. The new tenor has a very commanding stage figure, and made a favourable impression on the audience.

HAYMARKET.

The comedy produced on Saturday was from the pen of Mr. Douglas Jerrold, and proved to be in three acts. It is an exceedingly brilliant dialogue-piece, full of what are technically called character-parts, and consequently well deserving of a prolonged success. The title of it is "Retired from Business," and the action proposes to take place in Pumpkinfield, a village divided into two classes and parties, the "bill-stickers" and the "bill-posters," or retired merchants and shopkeepers Either have lately come a retired greengrocer and his wife—the *Pennywaights* (Mr Lambert and Mr. Stansfield), with their daughter *Kitty*. These seek an introduction into fashionable life by means of the *Peglins* (Mr. Rogers and Mr. Caulfield), retired dealers in Russia tallow, whose son *Paul*, being sentimental, has more brains than he knows what to do with, and muses for a certain *Virginia*, whom he had met in the Isle of Wight. This *Virginia* proves to be none other than *Kitty* herself, but the contrivance is opposed on both sides, and the parties get into bad scrapes in consequence. We have to do with a *Captain Dunn* (Mr. Webster), and a *Lieutenant Tuckle, R.N.* (Mr. Wallack), fast friends of two years' standing—the latter a fine hearty fellow, capable of any sacrifice. The former has a name, and a service, from which, however, he escapes. A *Mr Woodbine* (Mr. Howe), the nephew of *Mr. Creepmouse* (Mr. Buckstone), an army tailor, with military notions, and fond of apeing the "Iron Duke," having fallen in love with *Any Green* (Miss Reynolds) she finds her situation of governess no longer tenable Matters, however, are not much mended in her uncle's house, for here she meets with *Creepmouse*, who endeavours to induce her to seek her fortune in Russia. However, nowhere is there temptation, and forbids the issue at the cost of his own safety; for he is bound to *Creepmouse* in an obligation to repay £500. In this distress *Lieutenant Tuckle* interposes, and insists on applying some prize-money due to him in discharge of the debt. Armed at this, *Creepmouse* feels his "iron" melt to "butter," and consents to the happiness of an parties. The dialogue of this comedy is its sheet-anchor, and this is everywhere pungent and sparkling—full of satire, and yet informed with a kindliness of feeling, which shows that, while the author has "made his forehead strong as brass" against the abuses of privilege, he sympathises with all that is wise and good in humanity. The good feeling of this drama is as conspicuous as its wit. At the fall of the curtain the plaudits were unanimous, and the author, in obedience to a universal call, bowed from a private box

OLYMPIC.

Scribe's comedy, now performing at the St. James's, has been translated almost literally, for the Olympic, under the title of "The Ladies' Battle," and was produced on Wednesday. It is not necessary to repeat the plot. Suffice it, that Mrs. Stirling played the *Countess d'Autreval*, Miss Louisa Howard, *Léonie*; and Mr. F. Robson, *Henri de Mauprat*. The part of Mr. Leicester Buckingham, as the due course of histrionic honour, was confided the whimsical character of *De Gruyton*, and well was the confidence justified. The piece was successful.

PUNCH'S PLAYHOUSE.

The New Strand Theatre has ventured another novelty, "Taking the Census." The title explains the object. The house is taken by storm, and a bustle is promoted in the different floors by the said "taking," to the air yance of a *Mr Zimmerman Mag* (Mr. Tilbury), a literary man engaged in a ponderous compilation.

Preparations are made at the theatres for the foreign visitors to the Exposition.

DRURY-LANE has revived the pantomime of "Good Queen Bess," which, with slight alterations of the cast, is likely to become attractive anew. Mr. W. Payne is *Lord of Leicester*, and the Lauri family substitute the Danish in the harlequinade department.

The SURREY attempts a novelty, directly entitled "The Great Exhibition of 1851;" consisting principally of letting apartments to the foreigners, with certain lovers are admitted to their mi-tresses in the disguise of a Chinese mandarin, an Egyptian Prince, and a great Indian King. The parties are actually engaged at a minor. The thing is, of course, broad farce, and pleased a mixed audience

MISS GLYNN.—Some weeks since, we announced the engagement of Miss Glynn, a young singer of both great promise and accessible, as performer of some of her greatest characters, and, subsequently, at the Amphitheatre, Liverpool, with great success. At the two former places, such was the impression she produced, that she was immediately engaged for the provincial theatres of Liverpool. On the 1st and 3d inst., accordingly, she read, at the Queen's Rooms, Edinburgh, the tragedies of "Antony and Cleopatra" and "Henry VIII." Next Monday we find her announced as the former at Glasgow

Scribe's celebrated *comedie* of "Une Chaine" will be produced for the first time in this country at the St. James's Theatre, on Monday evening, in which M Regnier will sustain his original *rôle*, supported by Mdlle. Judith, M. Lafont, and Mdlle. St. Marc

GALLERY OF ILLUSTRATION.—Their Royal Highnesses the Prince and Princess of Prussia, the Princess Louise, attended by the Countess Louise Oriolla, Countess A. de Harke, Count Goltz, Count Pückler, Count Redern, and his Excellency Baron Bunsen, honoured the above gallery with their presence on Thursday morning

MUSIC.

SACRED HARMONIC SOCIETY.

The performance of Mendelssohn's "Elijah," on the 2d instant, under Costa's direction, has been admitted on all hands to have been the most finished execution of this work that has taken place in London. Except in a few parts, it cannot be enabled to show to the foreign visitors what could be accomplished by an amateur society, assisted by a select body of experienced professors. The difficult and elaborate choruses, accompaniments, and the noble overture, were all played with unerring precision and the utmost delicacy in the observance of light and shade, whilst the word-painting in the choral singing was beyond all praise

To Miss Catherine Hayes was allotted the principal soprano part; she was heartily welcomed after her recent lyric triumphs at Rome. Miss Rina Birch sang in the duo, "*Zion spreadeth her hands*," "Lift thine eyes;" and in other concerted pieces: the marked improvement in her style must not be overlooked. Misses Dolby and Williams divided the contralto pieces with their well-known skill. Mr. Sims Reeves was the tenor as of yore. He has first appearance since his return from Paris, and he was cordially received. Herr Formes's present version of the prophet music, whilst it retains its pristine energy, is characterised by more refinement in the delivery.

Such was the effect of the *ensemble* on the enormous auditory which filled it to hall, that it has been resolved by the committee to repeat the oratorio on the 16th and 23rd inst., with the same *artistes* in the chief parts.

THE MUSICAL UNION

In the course of the season, in consequence of the daily arrival of celebrated *artistes*, the director has resolved to give extra *matinées* for their *débuts*. The first of these meetings took place on Tuesday, at Willis's Rooms, when Herr Laub, the violinist from Prague; Herr Mengal, violoncello; Lyle, flute; Herr Pauer, the pianist, from Vienna; and Herr Reichart, first tenor of the Imperial Chapel in Vienna, made their appearance. The scene comprised Mozart's quartet in C, No 1 executed by Laub (violin), Deloffre (second violin), Hill (tenor), and Menter (violoncello); Mendelssohn's trio in D minor, played by Pauer, Laub, and Menter; and Beethoven's grand sonata in A flat, performed by Laub, Menter, and Pauer. The German tenor sang with taste and feeling some of his national *lieder*. The new pianist has immense execution and poetic feeling, but his style lacks that contrast and individuality in distinguishing it as a first-class player: he was Kapellmeister at Mayence, and is the composer of an opera. Laub and Menter must be at once characterised as unexceptionable artists, bright meteors, that will shine in art's magnificent firmament with have the faculty of thrilling their hearers by more than ordinary gifts and acquirements. The violinist is from the Prague Conservatoire, and is not yet in the year of age His style reminds us of the Italian school, combining with it a profound passion of Ernst. There are all the elements of a grand player in Laub. His mechanism is surprising, his intonation is faultless, and his feeling pure, refined and impassioned. His reading of the Vieuxtemps Caprice, Op. 11, in A, developed his fine attributes in phrasing in the cantabile, whilst in the variations of the *tema* his great executive skill was placed beyond a doubt. In the quatuor he was essential leader, owing to a severe attack of influenza; but in the trio and so-o. warmed by the applause of the audience, he displayed the qualities which make a star of the first magnitude. Equally great was the sensation excited by Menter, whose command of the finger-board is quite miraculous. His tone is rich, round, full, and his playing will be contrasted favourably with the polished elegance of Platti. Each artist has his specialty, and amateurs will discuss the capabilities of both players, with the effect produced on different temperaments. That Herr Menter is one of the greatest of violoncellists, is indisputable.

The third meeting will take place next Tuesday, and the next extra concert on the 20th instant.

LONDON SACRED HARMONIC SOCIETY.

A selection of sacred music, consisting of anthems, psalms, chants, airs, and organ pieces, by Bach, Talbs, Farrant, Handel, Crotch, Purcell, Kent, Asamayr, C. E. Horsley, Mehul, Dr. Elvey, W. L. Phillips, Weldon, G. Washbourn, Morgan, Croft, Foster, Lord Mornington, &c., was given at Exeter Hall, on Wednesday night, under the direction of Dr. Elvey, who officiated in the absence of Mr Surman, from indisposition. There were three accomplished organists on this occasion, Messrs J. L. Hopkins, G. W. Morgan, and Mr. Jolley. Mr. Blagrove was the leader of the band.

ROYAL SOCIETY OF MUSICIANS.

It had been the annual custom to give a public morning rehearsal, and an evening performance of Handel's "Messiah," at the Hanover Rooms, in aid of the funds of the above society, but this year an alteration has been made in the arrangement; on Monday morning Haydn's "Creation" having been executed, with Misses Birch (nee), Messrs. Lockey and Phillips, as chief vocalists; and, on Wednesday night, the same work was repeated, with Miss Louisa Pyne, Mr. Donald King, and Herr Formes as principal singers: Mr. W. S. Bennett being the conductor at both performances. The annual subscribers to the society have this year a reason to hope for an addition to the funds, as all the *artistes*, vocal and instrumental, give their gratuitous services.

HERR MOLIQUE'S CONCERT.

Herr Bernhard Molique, the celebrated composer and violinist, commenced on Wednesday night, at the Queen Anne-street Rooms, the first of a series of concerts of chamber music (after the manner of those with Spohr's quartet in A minor, Op. 74, played by Molique and Herr Schmidt (first and second violins), Mr. Mellon (tenor), and Signor Piatti (violoncello); the same artists also executed Molique's MS. quartet in B flat, a composition that must advance the fame of the writer, being full of novel and beautiful devices and contrasts Three new melodies for violin and pianoforte by Molique, and executed by Herr Molique and Mdlle. Molique, are also charming conceptions. The marvellous mechanism of Molique in one of Bach's fugues won universal admiration. Mdlle. Molique, in Beethoven's sonata in C sharp minor, proved that she was a most accomplished pupil of the same school. The quartet in C minor, by Mozart, was the violoncello duo, or rather duel, between Piatti and Menter, the champions of the Italian and German schools. They played one of B. Romberg's works, and both were rapturously applauded, although the decision as to their respective pretensions was overruled in conversational groups We see no necessity to institute invidious comparisons, both being truly great artists, and it would be very easy to point out quantities personal to each player

The vocal gleanings at this *soirée* were unusually good and interesting. Herr Stigelli, of the Royal Italian Opera, is a singer of infinite taste in German *lieder* Mdlle. Bertha Johansen, from Copenhagen, a pupil of the Roman (not ancient by the way) than the Dane; she has Italian passion with northern science. She was a great *danseuse* in Germany, but, like Lind, has abandoned the stage for the concert-room. Her voice is an exceedingly pure soprano in quality, and she will be right welcome to this country

Herr Böhm, the eminent flautist, will appear at the next *soirée*, on the 21st inst

MUSICAL EVENTS.

The musical meetings next week are, the 11th Philharmonic Concert on Monday, at which Sivori will perform; and on the same evening, Mr. John Parry's "Notes," at the Music Hall, the third meeting of the "Musical Union" on Tuesday, and Miss Braham's evening concert; the sixth meeting of the Beethoven Quartet Society on Wednesday; and on Friday, at Exeter Hall, the performance of Mendelssohn's "Elijah," by the Sacred Harmonic Society.

Mr. Wely, the clever violinist, gave a concert last Monday evening, at St. Martin's Hall. He played Spohr's dramatic concerto, No. 9, and Mendelssohn's only violin concerto. Mr. and Mrs. Wesse, Miss Mira Grieshaus, and Mr. F. Bodda were the vocalists. Mr Willy also led in Beethoven's quartet in C, assisted by Mr. Hill, Weslake, and Hausmann; and with Lindsay Sloper (piano) and Herr Hausmann (violoncello) executed Mendelssohn's trio in C minor. In this great amount of labour Mr Wely must have experienced little fatigue.

Mr. E. J. Turner, assisted by Miss Dolby, Miss Poole, Miss Watson, Mr. Leffler, and M. Ballet, gave a concert on Tuesday, at the Hanover-square Rooms, in lieu of the Wednesday evening concert; the 6th morning concert having, at the Hanover-square Rooms

The concert of M. De Sauzet, and Verdavaine took place on Friday, at the Queen Anne-street Rooms

In the seventh meeting of the Amateur Musical Society took place last Monday, at the Hanover Rooms.

The Lockwood family, three clever pupils of Mr. F. Chatterton, gave a harp recital on Thursday evening at the Hanover Rooms, assisted by their teacher, and the Misses Cole, as vocalists.

JULES JANIN.—This distinguished *feuilletoniste* of the *Journal des Débats* has arrived in town, and is one of the writers in the French ILLUSTRATED LONDON NEWS—the first Number of which appeared last Saturday. Jules Janin has been too intimately connected with "Fine Arts" in France, not to be specially welcomed here by the "Fine Arts" and can return to your friends in England. The meeting will last two days, and, irrespective of the match, promises to be very gay indeed. The Hath purse for Thursday and Friday, and have published an unusually good list; we have no doubt they will be well supported. To these meetings succeed the monster gathering on Epsom Downs, on Tuesday next, and the Derby on Wednesday week, when we can promise our readers that its pre-eminence will be more than maintained.

TATTERSALL'S.

MONDAY.—The setting on the Chester events, rendered disagreeably remarkable to three or four betting men, and to some hundreds of "contributors," by the "shutting" of the most extensive of the "H" division, prevented any extensive transactions on future events; and, as a consequence, the averages will suffice.

NEWMARKET SECOND SPRING MEETING.—TUESDAY.

HANDICAP SWEEPSTAKES of 10 sovs. each.—Duke of Bedford's Westow (F. Butler), 1. Mr. Gurney's St. Fabian (Pettit), 2.

MAIDEN, 50 Mr. Payne's Gladiole (Chatman), 1. Duke of Bedford's Santiago (F. Butler), 2

FIFTY POUNDS.—Duke of Bedford's Westow (F. Butler), 1. Mr. Stephenson's Brother to Willingham (G Mann), 2

FIFTY POUNDS.—Mr. Delamere's Guy Mannering (Bartholomew), 1. Lord Exeter's Cane (Norman), 2.

WEDNESDAY.

SWEEPSTAKES of 50 sovs each.—Lord Exeter's Nutshell (Norman) walked over.

CHAMPION STAKES of 50 sovs each.—Duke of Bedford's Santiago (Pettit) walked over

HOCKEY CLUB PLATE of £30.—Lord Exeter's Nuteraker (J. Mann) walked over.

HANDICAP PLATE of 50 sovs.—Colonel Peel's f. by Slane, out of Palmyra (T. Smith), 1. Mr. Hirst's Beatrice (Chatman), 2.

THE SUFFOLK STAKES of 15 sovs each.—Mr. Morrie's c. by John-o'-Gaunt dam by The Soldier (F. Smith), 1 Captain Lowther's King Crab ring (Hammond)

SWEEPSTAKES of 10 sovs. each.—Mr. W. Etwall's Knight of the Thistle (Rogers), 1 Colonel Peel's Black Sea (Chapman), 2.

THURSDAY

HANDICAP PLATE of £30.—Abdallah, 1. King of Oude, 2.
SWEEPSTAKES of 10 sovs each.—Pelerine filly, 1. Bay Middleton filly, 2.
SWEEPSTAKES of 10 sovs each.—Mountain Lass, 1. Malibran colt, 2.

THE GREAT EXHIBITION.

THOUGH the triumphant inauguration of the Great Exhibition has been performed, and is of the past; and though its attendant splendours and attractions, being but ephemeral and ere this shorn of the gloss of novelty, have become familiar as "household words," points of public interest connected with the further history and progress of the vast undertaking are, we still conceive for some period, of sufficient importance, we believe, to render frequent notice of them acceptable to our readers

Apart from the comprehensive yet minute examination of the great glass treasure-house which we have promised to illustrate with our full resources, the visits of her Majesty, the arrangements, &c. of the Executive Committee to enhance the advantage and utility of the store of wonders with which they are entrusted—the admission of the masses both from abroad and home, of working men who some twelve days hence will review (in many instances) the results of their sleight-of-hand and skill of brain—the numberless festivities, interchange of hospitalities, &c., all in relationship with the Great Exhibition, will doubtless furnish us with gossip of no ordinary interest. The Queen and Prince Albert, Prince A fred, and Princess Alice, and her Prussian Royal guests, made their first tour of inspection on Saturday, the 3rd inst., having arrived shortly before ten o'clock, and remaining until nearly mid-day. The Royal party visited both the Foreign and British sections, and through a very proper feeling of decorum from the great body of those present, her Majesty and friends were enabled to move about through all parts, without intruding observation. One incident may be mentioned illustrative of the unostentatiousness with which her Majesty and party inspected the several divisions, in one of the son h galleries, an exhibitor, who has erected a very extensive and musical array of runthrough, would have reversed it the Royal party entering the barrier which su rounds his cases. Upon the explanation of an attendant, the Queen and her friends were allowed to approach as near as they desired; and after several inquiries, answered in a bluff and hearty tone by the exhibitor in question, the Royal visitors proceeded on their route. The gentleman whom they had just left supposed it at this apparently trifling incident he has considerably enlarged his business. "Who the lady was?" and, on being enlightened, burst into an exclamation of dismay and self-reproach at his inability to recognise an opportunity for which he had been specially waiting, namely, that of seeing and speaking to his Sovereign Little Prince Alfred, too, when the Royal party were passing Messrs De la Rue's envelope machine, on the ground floor, was offered an envelope, which he refused On account, unless his loyal mother gave him permission. He was as may be surmised, accorded to him.

On Wednesday, the 7th inst., the same Royal visitors, save that the Prince of Wales and the Princess Royal were in lieu of them, the Prince Alfred and Princess Alice, arrived at the main transept entrance an hour before the general public had assembled. Her Majesty and party this time proceeded to examine the ground-floor compartments on the south side of the Exhibition. The Indian, Canadian, and colonial departments engaged much of her time; as also the hardware avenues and divisions The Queen, with her consort, then passed through the transept, and, after a brief survey of the progress of the French spaces, went out at one of the side doors in the foreign nave. So thoroughly gratified, let us add, were her Majesty and the Prince with the arrangements of the Executive Committee for the great ceremony at the opening, that a letter especially expressive of their joint satisfaction was despatched, we hear, to the chairman on the afternoon of the 1st inst

The sale of the season tickets still continues steadily to advance towards £90,000 On Friday and Saturday some five hundred visitors paid their guinea admission each day On Monday, the first day at five shillings, the receipts at the doors reached £1600; and on Tuesday and Wednesday, upwards of £2000

On Thursday upwards of 8000 visitors also paid their entrance-money: the financial success therefore, is not to be questioned, and the authorities themselves hope that, after the discharge of every liability, the Crystal Palace may be presented to the country, and a large sum funded profitably for future exhibitions. Let us remember that the influx of visitors has come in the face of unpropitious cold and wet weather

The council of chairmen of the jurors of the Exhibition assembled for the first time in the Bui ding on the 5th instant. There were present:—Class 1 Sir H. de la Beche, C B ; class 4, Professor Owen; class 5a, the Earl of Jersey; class 5, Baron Charles Dupin; class 9, Mr Phillips, M.P.; class 10, Sir David Brewster; class 10a, Sir R. H Bishop, class 11, Sir James Anderson; class 12, Dr. Scarlandi for Professor Hermann; class 13, Mr. George T. Kemp; class 14, Count von Hamerle; class 15, Mr Fairbairn, M.P.; class 16, Sir Charles Lemon, Bart.; class 17, Mr. Cubitt; class 18, Hon. Col. George Anson; class 17, his Excellency M Van der Weyer; class 19, Mr. Henry Tucker, class 19, Dr. Bowring; class 20, Mr William Felkin; class 22, the Hon. Horace Greeley; class 23, Mr. Gibbs; class 26, M. Adam Chevalier de Burg; class 28, M. Raymond de la Sagra for Senor Don Joaquim A forao; class 29, Viscount Canning; class 30, Herr von Viebahn Viscount Canning occupied the chair at the meeting. Dr. Lyon Playfair, Mr. Lloyd, and Lieutenant Ward attended.

The Executive Committee have been studying various measures to extend the instructive features of the entertainment, especially in the case of large classes of the rising generation. Professor Cowper, of King's College, has taken a worthy part in the movement, by commencing a series of lectures in the pupils' room in the Building and its contents. Education, certainly, of a very important character will, it questionably, be evolved.

The hour for closing the Building will probably be deferred as summer advances, until eight o'clock: the summons to depart on both Wednesday and Thursday was not announced until near seven. Musical performances are also to enhance the public pleasure On the first Monday in May, a performance selection from the "Messiah" was exquisitely rendered on Mr Willis's large organ, at the western end, which is not yet fitted with half its stops. Offers have been made by one of the best French military cavalry bands to specially come over, and contribute their services.

From the return of the total number of packages of goods received from foreign countries and from colonies for the local construction of the Exhibition, 11,000; but the arrivals out of doors continue to take place from all parts—from France, Belgium, Prussia, Holland, and the Hanseatic States; there are also consignments to the East India Company, some from New South Wales, the United States, and between 30 and 40 cases from Sydney and New South Wales Those countries that were behindhand with their preparations at the opening, are putting forth all their powers to array their respective properties. Russia alone seems neglected, but France is displaying her choice selection of the Sèvres china, the Gobelin and Aubusson tapestries and carpets. The Turkish contributions in the Exhibition, and a gaudy assist to dispel the bewilderment which the hue catalogue throws over one.

Due notice is to be given to exhibitors of a special day, when her Majesty will honour inspection of the various articles, receiving from exhibitors themselves any information which her Majesty may wish. Practical festivities, by the local committees, by the home exhibitors to their foreign rivals, are talked about: certain it is, that the council of Chairmen at the Metropolitan Commission have resolved to invite the foreign commissioners, the foreign ambassadors, and the Royal Commission, Executive, and their staff, and the British exhibitors to about to give a dinner to M. Kiss, of Berlin, the author of the "Amazon," in admiration of his genius. Suggestions have been made to the great Dry Goods panies, to worthily celebrate this epoch in the annals of commerce and trade of the great English metropolis. The police arrangements outside the Building for the admission of visitors are perfectly satisfactory, far more so than those assumed even by Mr. Commissioner Mayne for either of the days when the Building on the opening day. From Paris, from Vienna, and from Berlin have arrived the vigilant "Daniel Forester" of those capitals, to attend the interests of the *chevaliers d'industrie* from abroad Mr. Joseph Nash, of the old Water-Colour Society, has had the honour of presenting two pictures, illustrative of the inauguration, to the Queen and Prince Albert. Her Majesty, who was much gratified with their grace and fidelity, was pleased to retain them by purchase. Two of the most remarkable writers of the English and French capitals have touched with their genius the opening and Prince Albert. The Crystal fountain played jets of *eau de Cologne* and water; and that in the Austrian suite of rooms, by M. Leistler, there was, and is, a very small fountain, which throws up genuine *eau de Cologne*. Messrs. Rimmel, of Haymarket, have had a so a fountain of *aqua d'ora*.

The beautiful canopy, which still remains, 32 feet square, with the corners taken off, was suspended over the throne, at a height of 30 feet, divided on the under side into 12 compartments, each 8 feet square, and four bands divided diagonally from point to point; each compartment is fluted from the centre with blue silk, and has a star of Brunswick (d.l.). Where they meet, round the circular side of the canopy, is a drapery of blue fringe, with blue and white silk ornaments, and ropes drapings of blue and white silk. The under surface is ornamented by a cornice with gilt mouldings; and upon the *fascia* a bold enrichment of laurel leaves, gilt, upon blue ground, and a plume of blue and white ostrich feathers at each angle

Messrs Jackson and Graham, of Oxford-street, arranged the whole of these fittings. The carpet upon the dais, upon which the chair of state was placed, was the one her Majesty was pleased to accept from the 100 lady artists. The whole of the crimson cloth for the decoration of the dais canopy was furnished by Messrs Walker and Co, of Leeds. Messrs. Treloar supplied the cocoa nut fibre matting, laid down the centre and side passages. The order to supply the material was given on the 28th ult., and before four o'clock upon the same day the whole quantity, exceeding a mile in length, was delivered at the Building.

The Marquise de Livry died on the 1st instant, at the Château de Lasson (Calvados). She belonged to one of the oldest families in France. Her father who was a captain in the service of Louis XVI., was guillotined, and she was detai ed in the prison of St. Lazare, and only avoided a similar fate by making her escape in disguise

On Tuesday week, six bullocks entered the back-door of the Lamb Inn, in Lewes, passed along the passage, the bar-door, which was open, and out into Fisher-street. There was no one in the bar at the time, and it was fortunate they did not take a fancy to locate themselves amongst the wines, foreign spirits, beer, and tobacco," to say nothing of decanters, glasses, and other frail ware therein contained. As it was, no damage was sustained.

EPITOME OF NEWS, FOREIGN AND DOMESTIC.

The following new order has just been issued by the Lord Chancellor:—"It is ordered that, before any letters patent for inventions shall be passed under the Great Seal, there shall be deposited with the Privy Seal bill, at the Great Seal Patent-office, a certificate by the Attorney or Solicitor General, that an ontire description in writing or drawing of the invention has been filed with them, or one of them. Dated the 2nd May, 1851.—(Signed) TANNO, C.—Great Seal Patent-office."

Advices received from New Zealand, dated Wellington, the 24th of December, state that the *Sir George Seymour*, *Ravensdyke*, and the *Charlotte Jane*, three out of four of the vessels despatched by the Canterbury Association in September last, had arrived at Port Lyttelton. The remaining vessel, the *Cressy*, had been spoken with off St Paul's, at the end of November.

Mr. T. G. Baring, son of Sir F. T. Baring, Bart., late private secretary to Mr. Labouchere, succeeds Mr. Henry Brand as private secretary to Sir George Grey, at the Home Office. Mr. Samuel Whitbread will continue to act as private secretary, as before, without any public salary.

The following new and important Custom-house regulations came into operation on and after the 5th day of May instant:—No goods are to be required in future on bills of sight for the landing and examination of foreign goods, and the practice in force under the 8th and 9th Vict., cap. 86, sec. 99, of restricting the claims for drawback on such goods to three months from the date of the payment of duty, is to be discontinued, and the Solicitor of Customs is to prepare a clause for amending the law accordingly

Amongst the recent additions to the Marylebone Cricket Club have been the Marquis of Drogheda, Lord Vivian, Lord Maas, M.P., Lord Bateman, the Hon Ernest Dimcombe, Lord Stanhope, and Mr Baggs, M P. The Earl of Stamford and Warrington has been nominated president for the year ensuing, in the room of Lord Guernsey, retired

By the gracious permission of her Majesty the Queen, the privilege of admission to the Royal pleasure grounds at Kew will be considerably extended during the present summer season The arrangements for this purpose have not yet been completed, but they will be published in a few days

Information has been received by the police of a robbery committed in an office at 8, Broad-street-buildings, City, of diamond ornaments to the value of £400. It is not known in what manner the robbery was committed.

The foundation-stone of a new Town Hall and Exchange was laid in Liverpool, on Thursday week. The building will have a front of 40 yards long, and will extend 50 yards in depth

On Sunday morning, about ten o'clock, Captain R. Maddan, of the brig *Prosperity*, of Cowes, was being rowed on shore from his vessel in the Thames, lying in the Pool, for the purpose of landing at Shadwell, when the boat got foul of a mooring chain, and instantly capsized. The apprentice, Robert Hunter, clung to the chain till assistance reached him, and he was rescued; Captain Maddan sank, and was drowned

On Saturday, the members of the Royal Academy of Arts gave their anniversary dinner, at their apartments in Trafalgar-square, which was attended by a numerous assemblage of guests of the first rank and talent, among others were his Royal Highness Prince Albert, the Lord Chancellor, the First Lord of the Treasury, the Secretaries of State for the Home, Foreign, and Colonial Departments, the Secretary at War, the Lord Steward, the Lord Chamberlain, the Speaker, the President of the Board of Trade, the Chancellor of the Exchequer, the First Commissioner of the Land Revenue, the Belgian, Danish, Portuguese, Sardian, and Prussian Ministers, the Lord Chief Justice of the Queen's Bench, &c

The *Sacramento* (California) *Transcript* says:—"An Englishman, Charles James Joseph Richard Haithead, was shot near Murphy's diggings ten days since. He is not known who did the deed, but it was decidedly done for the purpose of robbing him. It is said that he still had not make more than five dollars by the operation. Haithead was formerly from Bedford, where his friends reside, but had been engaged in Boston as a machinist for five or six years previous to coming to California, two years ago"

On Saturday evening last, Sir James Duke, Bart., M.P., gave a splendid entertainment at his mansion, Merchant's Quay, to the common council of his ward, and several other influential gentlemen of Farringdon Without

On Monday night, the schooner *Fife*, of Exeter, H. Dare, from Exeter to Newcastle, while off Beachy Head, was run down by a Dover steamer. Sir Edmund immediately, and saw it to his satisfaction, that the crew had just time to push off one of the boats and throw a few clothes into it previous to leaving the ill-fated schooner. The crew were picked up by brig *Jason*, of Bermuda, and were landed at Hastings on Monday. The *Fife* was engaged in the coal trade

A farmers' club for the Carlisle district was established at the Athenæum on Saturday last, the High sheriff in the chair.

Sir James Emerson Tennent has resigned the governorship of St. Helena Various considerations have weighed with him in taking this step, with domestic concerns have a large share.

For the representation of the Isle of Wight, Captain Hammond has issued an address, in which he says that his principles are Conservative; that he is "a firm Protestant; feeling deeply interested in the Church Establishment; a strong supporter of the agricultural interest, and opposed to unlimited Free Trade." Mr. C C Clifford, who had announced himself a candidate, on Liberal and Free-trade principles, has intimated his intention of not contesting the election. In his stead, however, Edward Dalton Clifford, of St Helens and Niton, in the island, who is a great landowner as well as a liberal proprietor, and who has evinced much interest in the poll as a Free-trader and liberal, has presented himself as a candidate

R. Cornwall Legh, Esq., of the Colonial office, is appointed Assistant-Secretary to the Government of Malta. W. H. Thornton, Esq., Auditor of the Accounts for Malta, and Companion of the order of St. Michael and St. George, is appointed one of the officers of that order, to reside at Malta. The 69 officer of the order is resident at Corfu.

James Douglas, Esq., chief factor of the Hudson's Bay Company, is appointed Governor of Vancouver's Island

At an evening party in Aberdeen, recently, it was proposed to dispose of the belle of the room by lottery. Twenty tickets were immediately sold at a fixed price. The joke ended not here. The fortunate adventurer has since married the lady

A new town-hall, custom-house, post-office, and inland revenue office are about to be erected in Belfast

It is understood that Mr. Upjohn, the arbitrator in the dispute between Mr Hudson and the Newcastle and Carlisle Railway Company, has made his decision, and awarded to the Carlisle Company the sum of £3000, in place of the £38,500 claimed by that company. The £3000 is the balance of the original earnings of the line, against which Mr. Hudson is to be allowed the sums paid by him on account of construction, and which exceed the amount awarded

On Monday, a return to Parliament was published, from which it appeared that in the year ending the 9th January last, the duty was paid on 1,852,985 gallons of proof spirits for home consumption in the United Kingdom. the duty paid was £3,548,607 19s.

The Stockholm and Christiania journals state, that on the 18th ult. shocks of earthquake were experienced in Sweden and Norway. They extended as far as Stockholm on the one hand, and to Forrgrund, in Norway, on the other. In upwards of ninety towns and villages the shocks were felt. In every place they were four in number, rather sharp, and were accompanied by a noise resembling that of carriages driving with iron bars passing rapidly over an uneven pavement. The shock took place everywhere at the same time—a quarter-past twelve: they were over in about ten minutes Nowhere did the thermometer undergo striking variations; but it was raining slightly, and the temperature was rather warm.

A skeleton of the ancient Scotch elk was discovered the other day, in boring for coal, in the Duke of Hamilton's property at Kilbride, near the bed of moss, about six feet below the surface. The skeleton appeared to be lying on its face, inverted on the clay which immediately overlies the rock to the depth of four or five feet. The antlers measured from tip to tip nine feet and a half, and, in attempting to remove the bones, the greater part crumbled into dust, however, the crown of the skull and the root of the antlers are quite entire and unbroken; their span extend six feet and a half asunder, and their blades measure nine inches broad.

A wolf, a few days ago, furious with hunger, caused great terror in certain communes of the department of the Oise (in the north of France), by attacking every animal and person it met. Upwards of sixty old men, women, and children were assailed, and all were more or less seriously injured. The wolf was at length shot in the face. Now, it was fought with it for a quarter of an hour; his flesh was cruelly lacerated. Some of the victims died shortly after. The animal was then pursued by several persons armed with guns, and was shot.

We find the following in the *Salut Public*, of Lyons:—"The situation of the silk weavers in this city becomes every day worse and worse. With many of them embarrassment has become misery, and privation hunger. At Lyons such a state of things cannot be pro onged, and we have the greatest satisfaction to announce that measures have been already realised or proposed to assist these unfortunate workmen."

The *John Wesley*, Captain Buck, employed for the last four years in connexion with the Methodist mission in the Pacific Ocean, arrived at Plymouth last week. She had a quantity of oil on board, and, also, &c., from the Friendly Islands, presented to the Wesleyan Society, and seven boxes of natural curiosities from New Zealand for the Great Exhibition. She was freighted home by the Rev. Archdeacon W. Williams, his wife and family, and is accompanied by a converted New Zealand chief, Thompson Rauparaha

While Jenny Lind is pursuing her successful career over the American continent, she is giving rise to a perfect mania amongst the curiosity mongers for the furniture and objects used by her in her different residences. These "relics" have produced enormous sums at their sale; and, up to the present time, the sum realised is estimated at between £3,000 and £4000.

The collector of the port of New Orleans is prosecuting every vessel arriving with an excess of passengers over the number allowed by law. Several heavy penalties have been paid. In the case of the British ship *Virginia*, sued for having an excess of 23 passengers, the captain paid something over 1250 dollars.

We learn that Mr. Lough has already received a commission to execute in marble his colossal group of the Archangel Michael, as soon as the exhibition closes.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED

THE EARL OF COTTENHAM.

CHARLES CHRISTOPHER PEPYS, Earl of Cottenham and late Lord High Chancellor of England, one of the most eminent equity lawyers this country has produced, was the second son of Sir William Weller Pepys, Bart., a Master in Chancery, by his wife Elizabeth, eldest daughter of the Right Hon. William Dowdeswell, Chancellor of the Exchequer.

Charles Pepys was born the 29th of April, 1781; and, after the usual routine of an university and legal education, he was called to the Bar by the hon. society of Lincoln's Inn, the 22nd November, 1803, and obtained a silk gown in 1827. In 1830 he was appointed Solicitor-General to Queen Adelaide; and in 1833, Solicitor-General to his Majesty. From 1831 to 1835 he represented Malton in Parliament. He became Master of the Rolls in 1834; a Commissioner of the Great Seal in 1835; and Lord Chancellor for the first time in 1836, when he was created a peer by the title of Baron Cottenham, of Cottenham, in the county of Cambridge. His Lordship retained the Seals till 1841, when he retired with his party. He was reappointed Lord Chancellor in 1845, and continued to hold that high office, until ill-health caused him, in Easter Term, 1850 to resign it. In 1845 his Lordship married the baroness of his family, on the demise of his eldest brother, Sir William Weller Pepys, the second baronet.

As a lawyer, a judge, and a statesman, the talents of Lord Cottenham were more sound than brilliant. His fame rests upon his great knowledge of, and power of applying those principles of equity which form the basis and the guide of our Chancery law. His decisions are reckoned among the clearest and the best that have emanated from the Court of Chancery.

His Lordship married, the 30th June, 1821, Caroline Elizabeth, daughter of William Wood, Esq., a Master in Chancery, by the late Sarah Dalbiac, his wife, a lineal descendant of Sir Richard Dalbiac, Bart. By this lady, who survives him his Lordship leaves six sons and six daughters. His eldest son, Charles Edward, now second Earl of Cottenham, was born 30th April, 1824.

The late Peer, who was created Earl of Cottenham in June, 1850, died at Pietra Santa, in the duchy of Lucca, on the 29th ult.

THE EARL OF BANTRY.

RICHARD WHITE, EARL OF BANTRY, Viscount Bearhaven, and Baronet and Baron Bantry, of Bantry, county Cork, in the peerage of Ireland, was the eldest son of Simon White, Esq., and grandson of Richard White, Esq., of Bantry. He was born 6th August, 1767, and, succeeding to his grandfather's estates, he was created a peer as a Baron in 1797, a Viscount in 1800, and an Earl in 1816. His first elevation to the peerage was in consideration of his exertions in repressing the menaced French invasion at Bantry Bay in 1797. He was presented at the same time with a gold medal by the city of Cork.

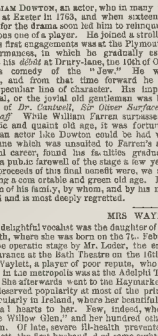
Lord Bantry married, in 1795, Margaret Anne, daughter of William, first Earl of Listowel; and by her (who died in 1838) he leaves, with other issue, an eldest son and successor, Richard, now second Earl of Bantry, born 26th Nov., 1800, who married, in 1836, the Lady Mary O'Brien, third daughter of William, Marquis of Thomond.

The late Earl of Bantry died at Glengariffe Lodge on the 2nd inst.

HENRY BROMLEY, THIRD LORD MONTFORT, D.C.L.

THIS nobleman, whose death occurred on the 10th ult., was lineally descended from the famous lawyer, Sir Thomas Bromley, Lord High Chancellor in 1579. He succeeded to the family honours, on the death of his father, in 1798, and had, consequently, enjoyed the peerage for fifty-two years. His Lordship was born 14th May, 1773, and married twice: his first wife, Elizabeth, daughter of John Watts, Esq., died in 1847; his second, Ann, daughter of Sir William Burgdorn, Esq., of Upton Bishop, county Hereford, still survives, by neither of whom he has issue. The barony of Montfort is, consequently, extinct.

VISCOUNT NEWRY.



FRANCIS JACK NEEDHAM, Viscount Newry, the eldest son of Francis Jack, present Earl of Kilmorey, by his wife, Jane, daughter of George Gunn, Esq., of Mount Kennedy, county Wicklow Viscount Newry was born on the 2nd February, 1810. He married, the 29th July, 1839, Anne-Amelia, eldest daughter of the late Hon. Sir Charles Colville, G.C.B.; and leaves, with other issue, a son, Henry Colville, born in 1844, the Viscount Newry. The heir to the county of the county of Down, and

who represented Newry in Parliament since 1841, died at his residence in Grosvenor-crescent, on the 6th inst.

WILLIAM DOWTON.

WILLIAM DOWTON, an actor, who in many parts had no rival on the stage was born at Exeter in 1763, and when sixteen was articled to an attorney. His taste for the drama soon led him to relinquish he ar my profession for the more perilous one of a player. He joined a strolling company at Ashburton, and one of his first engagements was at the Plymouth theatre, where, as a country performances, in which he gradually established a reputation, Mr Dowton made his *début* at Drury-lane, the 10th of October, 1796, as *Shesa*, in Cumberland's comedy of the "Jew." He was soon after cast for a somewhat actor, and from that time forward he ever maintained his pre-eminence in a peculiar line of character. His impersonation of the sleek, the sensual, the jovial old gentleman, was inimitable. He was unrivalled in the parts of *Dr. Cantwell*, *Sir Oliver Surface*, *Sir Anthony Absolute*, *Sir John Falstaff* While William Farren surpassed all others in the representation of caustic and quaint old age, it was fortunate for the great cast of the stage that an actor like Dowton could be had who could so admirably unde take the line which was unsuited to Farren's art. Dowton, after a long and successful career, found his faculties gradually decline, and he, consequently, took a public farewell of the stage a few years ago, at Her Majesty's theatre. The proceeds of this final benefit were, we are happy to say, the means of his passing a comfortable and great old age. He acquired, a few days since, in the bosom of his family, by whom, and by his numerous friends, he was much beloved and is most deeply regretted.

MRS WAYLETT

THIS delightful vocalist was the daughter of a Mr. Cook, a respectable upholsterer at Bath, where she was born on the 7th February, 1806. After being introduced for the operatic stage by Mr. Loder, the eminent musician, she made her first appearance at the Bath Theatre on the 16th March, 1815. In 1818 she married Mr. Waylett, a player of poor repute, who proved a bad husband to her. Her *début* in Lue metropolis was at the Adelphi Theatre in 1820, and was very successful. She afterwards went to the Haymarket; and for many years enjoyed great and deserved popularity at most of the principal theatres in Great Britain, and particularly in Ireland, where her beautiful style of singing Hibernian melodies won a hearty welcome for her. Few, indeed, who listened to her "Kate Kearney," "The Willow Glen," and her hundred other such songs, could withstand the charm. Of late, severe ill-health prevented her from being actively engaged. Waylett, the first husband, died some eight or nine years ago, and she had married, second, Mr. Alexander Lee, a gentleman most respectably connected with the musical profession. She died on the 26th ultimo, at her residence, 6, Newton-terrace, Kennington-green.

WILLS.—The Lord of Lord Langd [illegible] ministered to in Doctors' Commons by [illegible], [illegible] Archbishop of Canterbury, Lordship on a sheet of note paper, and contained a few words bequeathing the whole of his property, real and personal, to her Ladyship, appointing her sole executrix, and also guardian of the person and fortune of his daughter. It bears date in 1838, being two years after the birth of his daughter: the effects liable to probate duty were valued at £20,000. The will of Sir East George Clayton East, Bart., has been proved, and a duty paid on £40,000 personal property; that of [illegible], Esq., at£140,000; and that of the Rev. I. C. Fowell, at £19,000.

IRISH EMIGRANTS LEAVING HOME.—THE PRIEST'S BLESSING.

THE DEPOPULATION OF IRELAND.

The Census Returns, when published, will enable us to ascertain, in some degree, the extent of the combined ravages of famine and pestilence, in the first place, and of despair and emigration, in the second, in the depopulation of Ireland. But even these returns, authentic as they will be, cannot be complete; for the emigration that has gone on since the census was taken, and which still continues, will compel the statist to make large deductions from the amount which the census will yield, if he wish to ascertain the real number of the Irish people. The annals of the modern world offer no such record as that presented in the history of Ireland, since the memorable and deplorable years of the potato famine, and of the pestilence that followed in its track. The splendid emigrant ships that ply between Liverpool and New York, and which have sufficed in previous years to carry to the shores of America an Irish emigration, amounting on the average to 260,000 souls per annum, have, during the present spring, been found insufficient to transport to the States the increasing swarms of Irish who have resolved to try in the New World to gain the independence which has been denied them in the old.

"Emigration," says a letter dated a few days back, "is proceeding to an extent altogether unprecedented; but much less, in proportion, from Ulster than the other provinces. From most of the southern counties, the small farmers are hastening in vast numbers; and even in Leinster the mania for emigration prevails far and wide. The results from America are far greater in amount than in any previous year, and considerable sums are paid by the banks and by private commercial establishments, from day to day, on orders from the United States. From some districts in Ulster, numbers of the smaller tenantry are taking their departure. From one of the principal estates in Monaghan nearly one thousand persons of the cottier class are about to be sent to Canada at the expense of the landlord, who, it is stated, has made arrangements for providing them with a comfortable passage, and some small allowance of money to each family after reaching the port of their destination."

The number of emigrant vessels proceeding to America direct from Irish ports is quite unprecedented, and its cause is of the most extraordinary character. In the time. Within eight days, the following eleven vessels, carrying 1568 passengers, sailed from the single port of Cork:—The *Dominique*, for Quebec, 150 passengers; the *Don*, for New York, 160; the *Lockwoods*, for New York, 250; the *Merchants of Bute*, for Quebec, 120; the *Sara*, for Boston, 104; the *Sobany*, for New York, 195; the *Try Again*, for Quebec, 130; the *Favourite*, for Boston, 121; the *Clarinda*, for New York, 100; the *Swift*, for Boston, 120; the *Field Marshal Radetzky*, for New York, 88 passengers. In addition to those vessels, the *Jackdaw* went down the Cork river, on Tuesday, with 100 paupers on board, from the Kenmare Union-house.

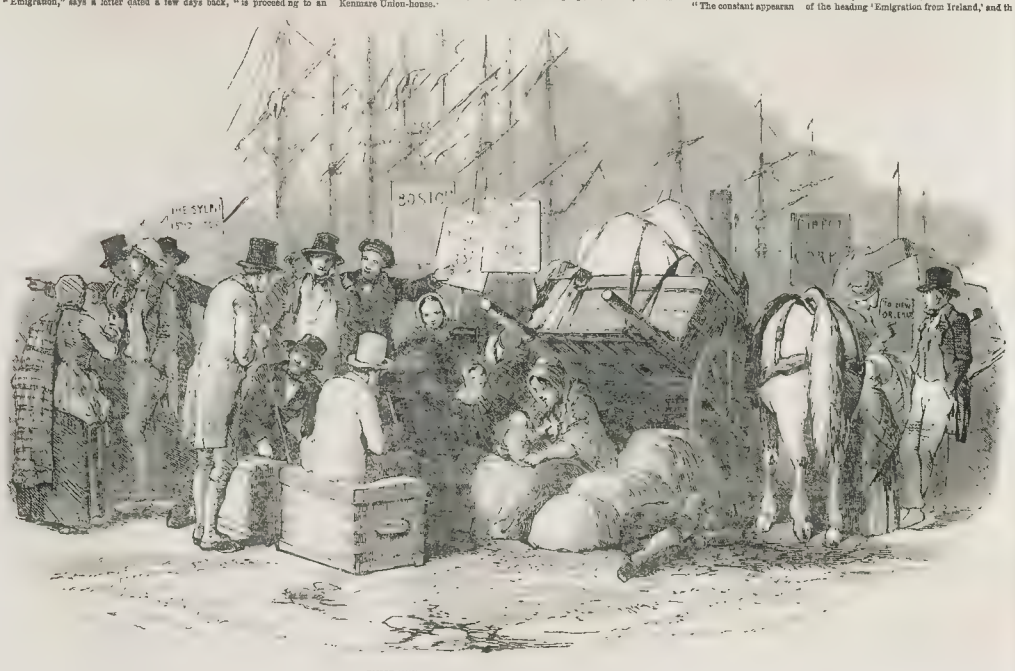
But what is most remarkable is, that, while this enormous emigration is going on, leading to a fear in some parts of the country that sufficient people will not be left to cultivate the land, the owners or mortgagees of Irish estates continue to evict their tenantry with as much rapidity as ever. The *Galway Vindicator* states:—"There were 195 ejectments entered—12 at the suit of the trustees of A. H. Lynch, one of Mathew S. Conyngham, and 181 were brought by the Law Life Insurance Company; and of 183 entries of civil bills, 87 were at the suit of the Insurance company. With the exception of three or four, the ejectments were all undefended. They were despatched at the rate of one each minute; so that, taking an average of five souls to each family ejected, we will have 300 per hour, and in the entire 905 human beings cast upon poor-house relief."

The same journal estimates the total evictions in Connemara during the present season at upwards of 4000. In Limerick and Kerry the same system is carried on; the evicted remaining in the union workhouse until remittances arrive from their friends in America, when they shake from their feet the dust of their native land, and rejoin their friends and relations across the Atlantic.

The following letter from our Correspondent in Cork—accompanying a series of Sketches, which we have engraved for our present Number—gives the latest information upon this interesting subject:—

(*From Correspondent at Cork.*)

"The constant appearan of the heading 'Emigration from Ireland,' and th

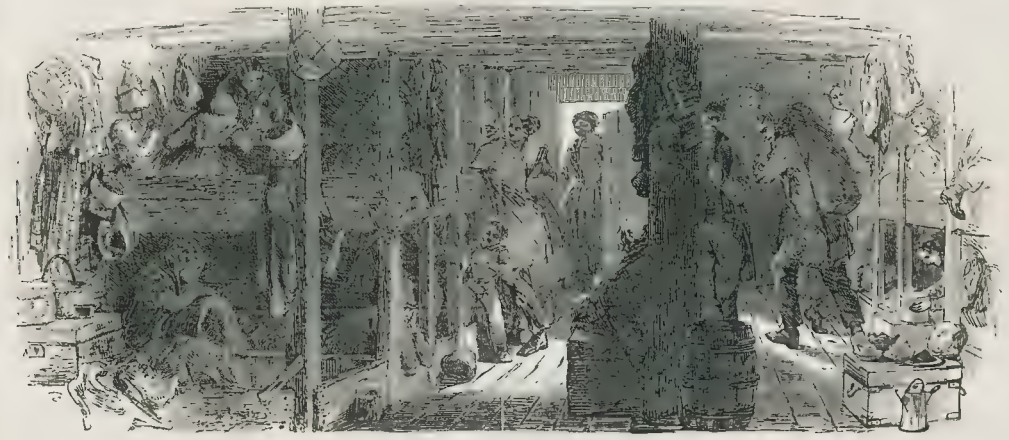


EMIGRANTS ARRIVAL AT CORK.—A SCENE ON THE QUAY.

THE EMIGRATION AGENTS' OFFICE—THE PASSAGE MONEY PAID.

no less constant stream of well-clad, healthy, and comfortable-looking peasantry in our streets, induces me to send you the accompanying sketches and communications on that subject.

"Upon reference to notes and papers of my own, and to information afforded me by the emigration agents here, I am disposed to think that about the middle of May the great emigrational torrent ceases to flow from these shores. Looking backward for the last month, I find that, during the week ending April 11, the greatest rush for the season took place. The numbers who left Cork that week could not have fallen far short of 1500 souls, and this with the emigration



EMIGRATION VESSEL.—BETWEEN DECKS.

of the other ports of Limerick, Waterford, Dublin, and even of Belfast, will give us an approach to 5000 weekly leaving the country. Large as this number may appear, it is well known that it is considerably below the mark when the departures for Liverpool are included. One agent informed me that he himself had booked 600 emigrants in four days, and yet he is but one of the many agents who are to be met with not alone in the large towns and seaports, but even thickly scattered through each county town and village throughout the country. In England you can have but little conception of the sufferings of the poor Irish emigrant from the time he first announces his intention of leaving home

DEPARTURE OF THE "NIMROD" AND "ATHLONE" STEAMERS, WITH EMIGRANTS ON BOARD, FOR LIVERPOOL

to his final departure; nor, indeed, can it be understood even in this country, except by those who make it their business to investigate the subject. Impressed with this belief, and being desirous of witnessing some of the partings of the emigrants from amidst the scenes of their youth, I took, a few days since, a run to the southwest of the county, from whence the great stream pours into the city of Cork. In my ramble I fell in with a clergyman, who was there on his way to take leave of a large number of his parishioners, who were then packing.

Some perhaps feel more severely the departure of the peasantry than the Roman Catholic clergy; as from them, and them alone, it may be said, comes the sole means of support which they receive. Yet none take a more active part in seeing them safely out of the country, or have looked more closely to the interest of those they leave behind, than these same clergy. Hundreds, even though their revenues are reduced, in most cases, to one-half, and in some to one-third. In company with one of these humble but exemplary men, I came to a sharp turn in the road, in view of that for which we sought, and of which I send you a sketch; namely, the packing and making ready of, I may say, an entire village—for there were not more than half-a-dozen houses on the spot, and all their former inmates were preparing to leave. Immediately that my friend was recognised, the people gathered about him in the most affectionate manner. He had a word of advice to Pat, a caution to Nelly, a suggestion to Dick, and he made a promise to Dan to take care of the "old woman," until the five pounds came in the spring to his "Reverence" to send her across to America. There ensued a scene of tears and lamentations, which must have softened a much harder heart than mine or that of the priest. He stood for awhile surrounded by the old and the young, the strong and infirm, on bended knee, and as turned his upturned eyes towards heaven, and asked the blessing of the Almighty upon the wanderers during their long and weary journey. Many were the tears brushed quietly away from the sunburnt cheeks of those who there knelt, and had implicit faith that the benediction so fervently and piously asked, would be vouchsafed to them.

It was not pleasant to linger amid a scene like this; so, to dispel our sadness, we took a last farewell of the group, and set off. We found ourselves upon the road to Kenmare, and in the midst of a train of from 200 to 300 men and women, boys and girls, varying in age from ten to thirty years. They led most picturesque in their gay plaid shawls and straw bonnets, and were all on their way to Cork, to go on board the emigrant ship.

"Upon inquiry, I was given to understand that this was but one of the many groups sent from the main-house through the country, and at the expense of the ratepayers. This, though an expensive process, is better than to leave them to pine and perish with want, as in the too wretched union of Kinrush, yet it would be also much young blood sent from amongst us, and that too, as a gentleman, an extensive farmer in the county of Kerry, told me, at a period when it is found difficult to obtain hands to do the necessary farm-work. I also found at an extent had this early and very emigration mania been carried in the county of Kerry, that this gentleman told me that he had been obliged even this early to engage farm labourers at 10l. per-annum, in the county of Cork, to take in his harvest in the county of Kerry during the coming season. Moreover, he stated that he was not the only one in the county who would be obliged to have recourse to the same means of procuring labourers. It would be strange, indeed, that Ireland, who, at one time, was able to supply with her superabundant labour the [illegible] England and Wales, should be obliged to seek in the En. lish and [illegible] for hands to do her work. Yet it is quite possible that such a thing [illegible]

Having seen sufficient of the country, I turned my steps towards the city, and upon my arrival there, first sought out the house of the strangers who frequently are obliged to remain in lodging-houses from one to five or six days, according to circumstances. I can assure you that it is not exaggerating, as the object misery of these miserable "lodging-houses for emigrants." It is no unusual thing to thrust from twenty to forty persons, of all ages and both sexes, [illegible] expected to find repos[illegible]

vided by the proprietor with some sort of covering he is charged irrespective right; should they bring their own bed-clothes, they pay twopence; and those who are content to sleep on the straw, without divesting themselves of their rags, pay one penny.

"For standing-room we pay may breakfast or dine—for it cannot be called accommodation the charges are pretty much on the same scale. On the whole, it is fortunate that the great business of emigration is now concentrated within the setting-in of the warm weather, otherwise these lodging-houses, from their overcrowded state, as well as from the accumulated amount of filth in them, would be the nucleus of pestilence, and dangerous to the health of the surrounding [illegible]

"Several years since, when landing for the first time on the French shore, I felt much harrassed by the unfeeling persecution of the hotel-touters; but little did I dream of ever seeing the leading system in such a fearful extent as it now is in Ireland; for no sooner is the red plaid of an Irish emigrant girl, or the unbuttoned swirl-collar of a Kerryman recognised, that she or he instantly beset by those harpies or mancouvers. It is sometimes impossible to escape, except by main force, and by the aid of the police. The latter are daily thanked by the bench of magistrates for their exertions in this respect.

"The accompanying is a sketch of a party of emigrants who have arrived on the quay from a long journey, in some cases close upon one hundred miles—They are stretched and many of them are sleeping upon their small store of [illegible] ments' repose. This, and the companion sketch of the row at the office-door, were some of the emigrants are seen paying their passage money, will show [illegible] extent to which the system of emigration has arrived, and their interference, and from which they are only obliged to desist upon the application of superior force.

"Having thus shown you what was picturesque in the passage of the group of emigrants from the home of their infancy to the office of the emigration agent who provides them with a ship direct from the port, it may not now be out of place if one to send you a sketch of the same group on board the vessel, accompanying [illegible] and which I trust will readily explain the more in which these vessels are [illegible] up, and where each party gets so many square inches to her or his share of ship, as the case may be. If any one has the curiosity to [illegible] the [illegible] woman, and child are obliged to huddle together like pigs at a fair. But then the ship is partitioned, divided, and formed exactly according to the strict letter of the law; and none can possibly feel aggrieved, except it be one of them without being instantly struck with the chances that appear of the complete demoralisation of the whole group; and what is worse, the certain fate that awaits them when the hatches are all closed, and the ship heaves and labours in the storm, can be much better imagined by others than described by me. The answer given to a party who, upon seeing the way in which their scanty provisions were left to rot and rumble about, asked if even a plank in the shape of a table was not to be provided for them, was, 'Coe them up with it, indeed! How be off ye're for a table.' And yet this man is known to be a kind, generous-hearted man in other respects.

"Any inquiry or remonstrance is answered by the allegation, that all is according to the Act of Parliament. The Act as directs it; to that you will [illegible] what little chances of extra comforts the emigrant has who emigrates [illegible] smaller vessels belonging to men, some of whom are making lordly fortunes by their new trade.

"Having now shown you so much of what appertains to those who sail from this port direct to America, nothing remains but to send you a sketch of the departure of the steamers for Liverpool, which, generally, of late, have been crowded to suffocation, owing, perhaps, as much to the cheapness of the fare caused by the steam boat opposition for some time back, as to a better understanding of the emigrant that they will be better provided for in the way of a stay in Liverpool, the 'great port of embarkation,' than they are likely to be in Irish vessels.

"The withdrawal of this ruinous competition will now, no doubt, in this manner of an ignation, materially serve the Cork Steam-ship Company, as double [illegible] numbers of those who therefore made for Queenstown will be compelled to turn their thoughts towards Cork, owing to the superiority of the vessels leaving the port. From early dawn on the day of the steamers sailing up to the hour of starting, whether it be ten in the morning or three in the afternoon, the curious in those matters will be sure to find the quays leading to the packet-office one continued stream of cars, carts, trucks, and porters, and all heavily-laden with boxes, bags, bundles, and [illegible] bladder bazaars and sacks of potatoes, and all tending to the one centre, namely, the desk of the *Master* and where the well-fed, well-dressed as also well-disposed are sure to congregate, to view the scene around. The following sketch will show one of those weekly scenes, and from which I trust your readers will [illegible] on of the hustle and excitement that takes place upon the [illegible] truly heart-touching.

[illegible] ace of the low [illegible] wretched and miserable-looking beings. At present it is the bone and sinew of the land that appear to go out, and even those [illegible] than a remunerative employment at home, the number of the sums of money sent into this country from relatives in America, our [illegible] alone paid out on [illegible] ittances received during the [illegible]

PRIZES FOR SUPERIOR CLOTH.—On Wednesday evening, [illegible] entertainment by Mr. J. Smith, the woollen merchant, [illegible] at his villa at Turnham-green, on the occasion of his distributing the medals to the successful competitors for producing cloths of the finest possible quality. Next week we shall engrave the medal, a fine work of art, by [illegible]

GREAT EXHIBITION CAKE.—Messrs. E. Hoitt, the confectioners, of Islington and Lombard-street, have made a cake in imitation of the great Exhibition Building, which has attracted many thousands to their establishments where it has been readily disposed of. This cake contains no fewer than [illegible]

NEWCASTLE AND CARLISLE RAILWAY.—On Wednesday a special meeting of the company was held at Newcastle; M. Plummer Esq., in the chair, at which it was resolved to raise an additional capital of £150,000, in new shares, bearing a preference dividend of four per cent., with a bonus. At the meeting it was stated that the arbitrator [illegible] and his counsel (Mr. Cross) had awarded as the final [illegible] having only had £2,000 from that gentleman [illegible] ssed by some gentlemen at the meeting, [illegible] and one or two hon[illegible] expressed as the [illegible] day was rapidly approaching when [illegible] railway would wound [illegible]

METROPOLITAN NEWS.

THE MAY MEETINGS.

The May Meetings have commenced this week with some of the most important of those assemblages. We subjoin a brief notice of each:—

BRITISH AND FOREIGN BIBLE SOCIETY.—On Wednesday the annual meeting of this society took place at Exeter Hall, Lord Ashley in the chair, supported by the Marquis of Cholmondeley, the Earl of Harrowby, the Bishop of Calcutta, Sir R. H. Inglis, Sir T. D. Acland, Mr. Plumptre, M.P. &c. The report, which was read by the Secretary, showed that the operations of the Society extended over the western, northern, central, and southern portions of Europe [illegible] the Canadas, and adjacent countries, Persia, India, China, Polynesia, Africa, and America, and the Scriptures had been translated into the vernaculars of those parts of the world. The issues from the Society during the year had amounted to 1,117,647, making a total of 24,747,667 since the commencement of the society in 1804. The entire receipts for the year ending March 31st, 1851, amounted to £105,330 2s 8d, being an increase over the preceding year of £11,695 1s. 1d. The receipts applicable to the general purposes of the society had amounted to £53,795 7s. 10d., including £25,968 8s. 10d. free contributions from auxiliary societies. The amount received for bibles and testaments was £51,514 15s. 10d. The expenditure during the past year amounted to £105,143 10s 10d., being £187 2s. 10d. over that of the preceding year, and the society was under engagements to the extent of £61,562 7s.

CHURCH OF SCOTLAND MISSIONS.—The anniversary meeting of this society was held at Exeter Hall on Monday evening; the Duke of Argyle in the chair. Amongst those on the platform we observed Sir Charles Malcolm, the [illegible] Mr. Stuart (of Moffat), the Rev. Dr. Cumming, and several other ministers of the Church of Scotland. After the meeting had been opened by prayer, his Grace the Duke of Argyle said, that it afforded him peculiar satisfaction to preside on that occasion, because the prosperity of the society appeared to him not only healthy of the highest and most good which it had been the means of effecting, but also the gratifying fact that the public fund appreciated and warmly supported an institution which had been the means of evangelising all parts of [illegible] the blessings of religion and education. They had heard from the report [illegible] during the year they had received £12,671 for home missions, and for their foreign missions £27,410. The number of teachers the institution had [illegible] was 4,000. Besides [illegible] benefits the society had conferred on [illegible] at home, it had promoted education in Jamaica, the Mauritius, [illegible] Trinidad, Demerara, and throughout the West Indian Islands. The noble Duke concluded by moving the adoption of the report. The motion, having been seconded, was unanimously agreed to. Resolutions in support and furtherance of the report were passed.

CHURCH MISSIONARY SOCIETY.—On Tuesday, the annual meeting of this society took place in Exeter Hall. The Earl of Chichester presided; and, in opening the proceedings, observed, that when all other missions failed, [illegible] encouraging assertion—when they had recently returned to their [illegible] of China, and also, in a very remarkable manner, to the entire continent of Africa, as well as to the whole of India—it was extremely gratifying to know that they had received the most satisfactory reports from the missionaries. They had recently sent out one "truly missionary" bishop to North America, and they would soon be enabled to dispatch another to the west coast of Africa. They were therefore [illegible] these good work[illegible] as a period when the Church was in a position of [illegible] and danger—a position which made every Protestant stand to his arms and look around him with alarm. He alluded with regret to the fact, that both within and without the Church the principles of Popery had been making rapid and incessant encroachments on the Protestantism of the country. A very lengthy report was read, detailing the proceedings of the missionaries during the past year, and stating that the society had large increase in property. The income, including a sum of £10,000 in donations and legacies, amounted to [illegible] showing an increase of £7,075 over the receipts of the last year. The expenditure amounted to £104,634. A bequest of £5,000 had been received from the late Miss Godfrey, of Blackheath, "as a special purpose of providing for the orphans and widows [illegible] A bishop would be sent out to Sierra Leone as soon as [illegible] arrangements were completed for the purpose. The accounts from the different stations showed that the society's missions were progressing most favourably. It was a fact deserving of notice, that by an limp-ral means, entirely unsectarian, was attended to those who embraced Protestantism in Turkey. Heretofore, converts to Christianity in that country were unable to maintain it. The Earl of Harrowby moved, and the Bishop of London seconded, the adoption of the report, which was carried unanimously. Resolutions were then passed, and the meeting dispersed.

LONDON CITY MISSION.—The annual meeting of this society took place on Friday, at Freemasons' Hall, H.R. Prince Albert in the chair. The report stated, in general terms, that the efforts of the society had been most successful during the past year than at any former period of its existence. The receipts during the year had amounted to £[illegible] which was a special need had been a[illegible]000, which showed an increase of £4,700 as compared with the income of last year. In addition to the ordinary contributions, they had received £257 towards the erection of a new hall, and £[illegible] towards the erection of their labours. The report was adopted, and several resolutions passed for carrying out the objects of the society, after which the meeting separated.

THE NATIONAL SOCIETY.—The annual meeting of this influential society was held in Exeter Hall, on Monday, Thomas Farmer, Esq., in the chair. After the meeting had been constituted by prayer, and the chairman had delivered an appropriate address to the assembly, the secretary, Mr. Pumptre, in proposing the adoption of the report, said the society, notwithstanding the misunderstanding which had arisen among some of [illegible] bers, had done all in its power to promote the objects for which it was established, and to promote its efficiency. From the report they had learned that the receipts of the institution during the year had amounted to £[illegible], and the expenditure to £[illegible], leaving a balance in favour of the society of £[illegible]. The expenditure over receipts of £9105 8s. 11d. That deficiency was proposed to be disbursed by the sale of the donations and annuities funded. The report was then read, and on the motion of Mr. John Young, on its funds; and it is stated that the committee of the society, in the confidence that whatever sums they received would be made good by the liberality of the members, had always been guided by the objects of the society in anticipation of the views of the members. It was a gratifying fact that the confidence of the working committee had always been more than less than the powers of the association, and that the reliance of the committee upon the liberality of the members had always been reap rated to in a manner which, while it reflected credit on the donors, gave the securities of forwarding the interests of the institution. The total receipts were 80,070. In the course of his speech the honourable gentleman stated that it appeared from the total ordinary receipts at the Mansion-house, and at the districts in London, Scotland, and Wales, that there was £68 [illegible] 6d. from the Hibernian Missionary meeting, £42 [illegible] 6d.; and from the Juvenile Christmas offerings, £3000 9s. 3d., making a total from the above sources of £76,318 8s. 9d. This was to be added, contributions of foreign auxiliaries [illegible] £12,429 0s. 3d.; colonial grants, £4930 1s. 3d.; [illegible] 5s.; annuities [illegible] 10, leaving an amount £3091 5s. 3d., and dividends, [illegible] 2d.; making a gross sum of £104,661 14s 6d. The motion was seconded by [illegible], and was also several resolutions in furtherance of the objects of the society.

SUNDAY SCHOOL UNION.—The annual meeting of this society was held on Tuesday evening, at Exeter Hall; E. Harris, Esq., M.P., in the chair. The report stated that favourable accounts had been received from all parts of the world in which the society was a fowing aid being rendered towards the Sunday-schools. From [illegible] Van Diemen's Land, the West Indies, and the United States the accounts [illegible] encouraging. The receipts during the past year amounted to [illegible] amount of contributions was £1333, being less than that of the preceding year, and leaving a balance against the society of £320. The report was adopted, and several resolutions were passed in favour of resolutions passed for the furtherance of the objects of the society, the meeting separated.

CHRISTIAN INSTRUCTION SOCIETY.—The twenty-sixth annual meeting of the friends of this society was held in the church of the Independents, Falcon-square, Aldersgate, on Tuesday evening, for the purpose of receiving a report from the committee of their proceedings during the past year. The meeting was fully attended, the body of the church, the galleries, and the platform being crowded to the chair, referred, in brief terms, to the great advantages arising from the association, and its working. He was happy to say that the income had exceeded their expenditure, as the meeting would be convinced by the report, which would be read to them by their secretary. The secretary then read the report, from which it appeared that 100 students had been assisted, 3000 visitors, who entered the domiciles of 30,000 families. The report was unanimously adopted, and resolutions in support of the society were carried with acclamation.

HOME AND COLONIAL SCHOOL SOCIETY.—On Monday, the fifteenth annual meeting of the donors and friends of this institution was held in the School-room of the Institute, Gray's-inn road. The Archbishop of Canterbury took the chair, supported by the Earl Waldegrave, J. P. Plumptre, Esq., the [illegible] H. Sewell, Archdeacon Waterford, Major Woodroffe, General Magenis, the Rev. E. Garbett, Rector of Birmingham, and a number of influential gentlemen, friends of the institution. Previous to the general meeting, the [illegible] was conducted in the Institute underwent an examination. The Archbishop of Canterbury having briefly opened the meeting by prefacing the [illegible] the institution, founded as it was upon true Protestant educational principles, and calculated to produce the best results both at home and abroad, the secretary read the report, a most voluminous document, which states that the system pursued [illegible] Committee of Council on Education, as [illegible] of Schools, at Christmas last. The committee proposed to erect cottages, upon 35 allotment rent-free, for twelve months, during the first class, during the year. The number of teachers trained in the institution was stated at 145. The Model School contained 90 preparatory children, 150 infants, and 160 juveniles. The receipts during the past year amounted to £2750 16s. 3d., and the expenditure to £3705 7s. 5d., leaving a balance in favour of the Institution of £954 9s. 8d.

NATIONAL PROVINCIAL BANK OF ENGLAND.—On Thursday, the eighteenth annual meeting of this bank was held at the banking-house in Bishopsgate-street; J. T. Laurie, Esq., in the chair. The report shows the net profits of the past year to be £31,236 3s. 6d., which, added to the undivided profits from previous years, made the total profits £[illegible] 13s 6d., out of which it was proposed to pay a dividend at the rate of 6 per cent. per annum, amounting to £24,549 16s, leaving a reserve in hand of £[illegible] 17s 6d. The report was adopted, and the dividend declared.

TRIBUNALS OF COMMERCE.—On Thursday a public meeting was held at the London Tavern, Lord Wharncliffe presiding, to consider what measures should be adopted for obtaining an alteration in the commercial laws of this country, and the appointment of Tribunals of Commerce, by which complicated questions equitable, and cheap decisions may be obtained on disputes affecting trade and commerce, between the merchants and traders of the country. Ultimately, it was resolved to petition Parliament, praying for an act for the purpose, after having been addressed by several friends of the society, in furtherance of resolutions, the meeting separated.

SOCIETY OF ARTS CONVERSAZIONE.—On Wednesday evening, the first of a series of four conversazioni, projected by the council of the Society of Arts, for the purpose of giving the foreigners whom the Exhibition has attracted to the metropolis a peep at the interior of English society, and the influential [illegible] took place at the Society-house, John-street, Adelphi. The rooms were very full, but the foreigners were not as numerous as might have been expected, those of the Continental nations being represented [illegible] among others, the Austrian and the French. M. C. Dupin was also present.

KING'S COLLEGE HOSPITAL.—On Monday the quarterly court of governors was held at the college, in Portugal-street; the Rev. A. W. Jelf, D.D., in the chair. From the report, it appeared that on the 1st of January last 114 patients were in the house, and 300 had since been admitted, making a total of 414. Of these 300 were cured, 23 had died, 23 had left, and 116 remained under treatment at the close of the quarter. The number of outpatients received had been 6894. The report was adopted.

LONDON HOSPITAL MEDICAL SCHOOL.—The distribution of prizes for the present session took place on Monday, after which a lecture was delivered by Dr. Sutherland, and the pupils and their friends. C. B. Stuffield, Esq., the chairman of the house committee, presided. Gold medals presented by the governors of the hospital, for proficiency in attending to the patients in the wards, were given to several gentlemen. The proceedings were terminated by an address by Mr. Stuffield congratulating the pupils on their successful exertions.

LOCK ASYLUM.—On Sunday morning a sermon in behalf of the funds of the above asylum was preached at the Lock Chapel, by the Rev. Hugh Rowel, M.A., honorary canon of Chester; at the conclusion of which a collection was made amounting to £[illegible]. In the evening, the Rev. Capel Moyneaux preached an old of the same benevolent cause, when a further subscription was entered into, making an aggregate of £[illegible]. The anniversary festival of the Lock Hospital and Asylum is to be held on Wednesday next, [illegible] manship of the beneficent friend of the charity, the Hon. Arthur Kinn[illegible]

ST. PANCRAS ALMSHOUSES INSTITUTION.—A meeting of the friends of this charity was held on Thursday, at the institution, Southampton-street, Euston-square; the Rev. T. Dale in the chair. The secretary stated that a committee of influential residents and others had been formed for the purpose of establishing a[illegible]houses for the reception of about one hundred pensioners, who, from unavoidable misfortune, found themselves in their declining years reduced from comfort and independence to penury and want. The subscriptions already announced amounted to £[illegible] and as soon as they had reached £[illegible] the almshouses would be built. The only requisites to render candidates eligible for this charity would be [illegible] should have paid poor-rates in the parish for not less than seven years, and should not receive parochial assistance, and have never received parochial relief. Resolutions were passed for carrying out the objects of the institution, and the meeting separated.

ROYAL HUMANE SOCIETY.—On Wednesday evening, the 77th anniversary of this society was commemorated at the Freemasons' Tavern. The chair was occupied by Benjamin Bond Cabbell, Esq., M.P., who, in proposing the toast of the evening, the health of the society, to the Honourable and Reverend the members and supporters of the institution on the undoubted success that had attended their exertions bore for it the cause of humanity. Since the last anniversary dinner, no fewer than 281 cases of persons rescued from drowning had been investigated by the committee, and in 271 of them the parties had been restored to life. The cases of persons rescued from drowning during the past year

REUNION DES ARTS.—Under this title, a number of professors and amateurs of musical and pictorial art propose to hold weekly meetings, the first of which took place on Tuesday night, at the Beethoven-rooms, Queen Anne Street. In one of the apartments, chamber music, of a classical character, will be performed, both by professors and others; in another, a small collection of paintings, original and selected, will be weekly exhibited; and it is proposed to give to the meeting a literary character, by the introduction of orations, lectures, recitations, and so forth. The musical programme on Monday evening included Miss E. Day, Mdlle Rummel, Mr. I. Day, Herr C. Goffrie, and Herr Schmidt; and the collection of works of art included some clever water-colour and oil sketches. The association starts under good patronage, and publishes a long list of artistic members.

ROYAL ASYLUM OF ST. ANN'S SOCIETY.—On Wednesday evening the anniversary of this society took place at the London Tavern, Bishopsgate-street; Mr. Stanley, M.P. for Lynn, in the chair. About 200 gentlemen sat down to dinner. The chairman, in proposing "Prosperity to this institution," referred at some length to the history of the society. It was established 140 years ago, but up to the year 1809 it had only a day school. A new era then commenced. Children were then taken under the entire care of the managers, and the number had now increased to 225. As regarded the finances of the institution he was happy to find that whereas a few years ago there were debts to the amount of £2300; those obligations had now been discharged, a fund had been spent within building and repairs. The society had acquired a corporate character, and had invested in the funds £12,000; but, as the managers considered it their duty not to accumulate wealth but to administer it, they had therefore extended the benefits of the society as they were enabled to do so, it was still needful to appeal to the generosity of the public. The subscriptions announced amounted to upwards of £1100

ARRIVAL OF RAJAH BROOKE.—The Peninsular and Oriental Company's steamer *Ravine*, Capt. Evans, arrived at Southampton on Thursday, from Constantinople, Smyrna, Malta, and Gibraltar. On board the steamer is Sir James Brooke, K.C.B., Rajah of Sarawak and Governor of Borneo. Sir James appeared in excellent health and spirits, and was accompanied by his nephew, Mr. Grant. Sir James has arrived at Sarawak, in Pulo Bell-Malli.

LANGBOURNE WARD.—It was understood on Wednesday in the City, that Mr. Ou itt, M.P., would be a candidate for the aldermanic gown of this ward, on the room of Sir John Key, who has been promoted to the Bridge Without, as Alderman Thompson had refused that honour. Mr. Cubitt is stated to have received the support of Mr. Masterman, M.P., and Mr. Samuel Gurney.

ROMAN CATHOLIC HIERARCHY.—An address, to which 255,726 signatures were attached, and which was presented to her Majesty from her Majesty's Roman Catholic subjects in England, disclaiming any intention of treachery upon the Royal prerogative in the recent appointment of a Roman Catholic hierarchy, has been printed by order of the House of Commons

GRAND ASSAULT OF ARMS.—The merit attaching to an intention of reviving the "old English science of fencing, sparring, &c., will commend itself to the English mind. We are prepared to give the largest amount of praise to the performances under the above title, which we witnessed at Saville House, on Wednesday the 30th ult. We take an interest in such "a rough play," the dexterity, vigour, and perfect self-command of the friendly combatants will afford a rare treat; and the stalwart Highlanders, Campbell and Macdonald, in their masterly use of claymores and targets, form a striking and pleasant contrast with the small, light, lithe, and active figures of the wrestlers, Dixon and Douglas. There was fencing between Messrs Winterbottom and Chapman, a light stick, in which most strange and amusing effects were introduced, by Messrs. Percy and Wharton; and various feats by others. Almost equally deserving of praise, with the French *canne* and *bâton*, and the menacing and unparalleled bayonet of British. The spectacle is, perhaps, unique at present in London, and will probably collect many visitor

ST ALBANS ELECTION.—A Royal proclamation, offering a reward of £50 each, payable by the Treasury, was issued on Tuesday, and posted in various public places in the metropolis, for the discovery, apprehension, and delivery over to the custody of the Sergeant-at-Arms of the abducted witness. Waggett, Hayward, Birchmore, and Skeggs. The proclamation attracted large crowds of readers at the Mansion House. The witness Edwards, who was committed on the ground of having been concerned in the abduction of Waggett, has now been in Newgate nearly a month, and has been visited by various parties. It is proposed to bring in a bill for the appointment of a commission to inquire into the whole affair at St. Albans

LIBEL.—In the Bail Court, on Monday, Mr. Serjeant Shee, on the part of the nuns of the Roman Catholic Convent of Notre Dame, at Clapham, obtained a conditional rule for a criminal information against the printer and publisher of the *Morning Herald*, for having published in that paper, on the 12th of March last, a libel reflecting on the moral character of those ladies, from which it would be inferred that one of the inmates of the convent had been delivered recently of an illegitimate child. The learned Serjeant based his application on affidavits showing the utter falsehood and groundlessness of the slander. The learned gentleman also obtained a similar rule against the printer and publisher of the *Morning Herald*, on the same ground.

CHAMPIONSHIP OF THE THAMES.—On Wednesday, the competitors for the championship and the heavy stakes were Robert Coombes, the champion of the Thames, and Thomas Mackinney, of Richmond, who aspired to that honorary distinction. As the weather was propitious, the banks of the river and other steam-boats were literally besieged, and Putney, Hammersmith, and every part of the shores of river in the course, presented thousands of spectators. The course was from Putney Bridge to the Ship at Mortlake. The start took place at a few minutes after six o'clock, and after a hard struggle Coombes went through Hammersmith Bridge two clear lengths a head, increased it gradually, and won by a dozen or more lengths—two rotatching his hat on the waters of the Thames and Tyne besides the valuable consideration of £400 stakes. The time occupied by the winner was 1 hour 1 min. 30 secs.

ROBBERY OF NEWSPAPERS.—At the Mansion-house, on Wednesday, a lad, named Henry Agar, was committed to prison for 14 days, for selling newspapers, which had been, on the previous Friday, forced off the shoulder of a publisher's messenger, at the General Post-Office, during the time the mail was generally taken away there at the closing of the box. The parcel stolen contained numbers of the ILLUSTRATED LONDON NEWS and other journals, and it appeared that papers were often thus lost and the blame thrown upon the Post-Office authorities, whereas the papers had never been put into the post at all. Mr. Peacock, the solicitor to the Post Office, who attended to watch the case on behalf of that establishment, stated that the authorities of the Post-Office were anxious to show to the public that the numerous complaints as to the miscarriages of newspapers arose from the negligence or misconduct of the servants in all probability they were caused by the want of proper care upon the part of the newsvenders, who unwinded boys with vast quantities of journals, who became thus, in consequence of the carelessness of some and the dishonesty of others, subjected to considerable diminution in the neighbourhood of the Post-Office, in which they ought all to have been deposited In the present case, about 50 newspapers had been sent by a newsvender to the Post-Office in the care of a boy, who by some means lost them near the establishment, and the parties to whom they had been directed, supposing that the fault of the non-delivery lay with the Post-Office authorities, came to town to complain of the injury. It was at the moment discovered that the papers, instead of having been posted, had been carried and in the newspaper market opposite the building, by the prisoner, who was no doubt in confederacy with persons of more experience in practices by which false imputations were cast upon the systems observed in that important department. It was thought necessary to look to all cases of the kind with great attention, and the newsvenders were bound to exercise more caution than was at all usual with the mass of them, in depositing or causing to be deposited the newspapers they wished to post in the box.

BIRTHS AND DEATH— In the metropolitan districts, the births [illegible] [illegible] females. [illegible] Deaths during the same period.—Males, 484; females, 510: total, 994. The average of births in six corresponding weeks in 1846 was 1424. The rate of mortality [illegible] the week ending last Saturday, as shown by this return, is still higher than from the experience of late years might be expected at the beginning of May. The deaths, which in the previous week had been 940, have declined in the week ending last Saturday to 994: but [illegible] average of ten corresponding weeks is only 883 [illegible] Unsupposed rate of increase of population, does not exceed [illegible] and there is still an excess in the mortality of the present week above the average, equal to 31. From a comparison of corresponding weeks of [illegible] only in one instance, when, occurred in 1846, when small-pox, scarlatina, and typhus abounded, were the deaths more numerous than those registered last [illegible] previous week the number of young persons who died under the age [illegible] was 644. In the last it was 443. Hence it appears, that, though this latter number is greater than usual, the health of the juvenile part of the population has improved. But the unseasonable coldness of the weather is not [illegible] its effects on the old; for in the above week the mortality of this class has increased, the deaths of persons of 60 years and upwards having been in the previous week 226, in the latter 222. The zymotic or epidemic class [illegible] little difference between last week's results and the average. [illegible] were children except one, died of [illegible] death which occurred at the Small-pox Hospital is recorded [illegible] d of May.—a policeman, [illegible] small-pox, [illegible] small-pox, continued, unprotected (20 days)." Mr. Watts, the registrar, adds, that "the deceased had been sent up from Hampstead to be in attendance at the Exhibition, and with other members of the police was attacked with the disease, and was removed to the Hospital at Upper Holloway." Hooping-cough is on [illegible] numbered [illegible] were also 8 deaths from [illegible] from scrofula, 6 from tabes mesenterica, 5 from disease of the liver, 4 from water on the brain, 4 from disease of the brain, which same [illegible] aged 82 years. [illegible] of the nervous system, was also fatal in 16 cases, which is the usual number. The 69 deaths from the two last-mentioned [illegible] cephalitis and hydrocephalus, occurred with only three exceptions, in children, and exceeded the corresponding [illegible] 1846, in all 1867 children, were registered [illegible] of the [illegible] corresponding weeks in ten years [illegible] 82 to 85; we [illegible] 84 to 87; [illegible] 86 to 89; [illegible] 88 to 91; [illegible] 90 to 93; [illegible] 92 to 95; [illegible] 94 to 97; [illegible] 96 to 99; [illegible] 98 to 1001; [illegible] 1000 to 1003; [illegible] 1002 to 1005; [illegible] 1004 to 1007; [illegible] 1006 to 1009; [illegible] 1008 to 1011; [illegible] 1010 to 1013; [illegible] 1012 to 1015; [illegible] 1014 to 1017; [illegible] 1016 to 1019; [illegible] 1018 to

M. SOYER'S "SYMPOSIUM" OF ALL NATIONS, GORE HOUSE, KENSINGTON.—THE GARDENS.

fortune-teller; and the impenetrable Grotto of Ondine, shown in the centre of the Illustration. This is a little pavilion of many-hued stalactites, the ceiling of dazzling crystal, through which are seen myriads of gold and silver fish. The grotto is surmounted with a statuette of Hebe, who, from her enchanted cup, dispenses to mortals through the shafts of the temple artfully concocted liquors. In the centre of the lawn is a marble fountain group, of classic design; and to the right is the Baronial Banqueting Hall, in which the Sanatory Commission and her friends are feasted right royally this very day. The exterior is castellated; the roof is entirely of stained glass; the walls are hung with crimson drapery, and oil paintings by Madame Soyer; there are elegant statuettes, and vases of fragrant flowers; a music gallery, a dais for the chairman, &c.

Adjoining the garden is the *Pré d'Orsay*, with six grassy pyramids, surmounted by vases filled with flowers; at the extremity is "*Le Pavillon monstre d'Amphitryon*; or, the Encampment of all Nations"—a regular dining saloon, to accommodate 1800 persons.

Here we take leave of the Symposium for the present, wishing M. Soyer all success in his new world of ingenuity; and the sooner the reader becomes initiated into their mysteries, the better for his mundane felicity. They are, unquestionably, worthy of Heidegger, or the master of the revels of any age.

BATTY'S GRAND NATIONAL HIPPODROME, KENSINGTON.—THE CIRCLE—(SEE PRECEDING PAGE.)

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, May 10, 1851.

EXHIBITION SUPPLEMENT
TO
THE ILLUSTRATED
LONDON NEWS

No. 484.—Vol. xviii.] SATURDAY, MAY 10, 1851. [Two Numbers, 1s.

THE GREAT INTERNATIONAL EXHIBITION.

The subject of the Great International Exhibition, and its present and future consequences upon the mind and character of the age, not alone in Great Britain, but throughout the world, is one too vast to be speedily exhausted. Public opinion can as yet scarcely grasp it in all its magnitude.

Considered as a spectacle alone, the Inauguration was one which, for grandeur and magnificence, and for its effect upon the imagination, might bear comparison with, if it did not excel, any which the annals of the world can offer. The Building itself—the fitting shrine for the objects of mingled beauty and utility which it encloses—is as original and novel as the occasion; and if the ancient peoples had advanced far enough in civilization, and had possessed wisdom enough to conceive such a project as this friendly rivalry of the industrious workers of all climes and races, this Building would have been commemorated by the history and tradition of three thousand years, in the songs of bards and in the proverbs of the people, as a wonder of the world, worthy to rank with the Pyramids, or with the gates and walls of Thebes or Palmyra for its greatness, and with the Colossus that bestrode Rhodes harbour for its beauty. But the Crystal Palace has the merit of surpassing all these in the true nobility of the purposes for which it was erected. It is no vast monument of a still vaster pride and vanity, like the Pyramids; it is not, like the gates and walls of the ancient cities of the east, a bulwark against the encroachments of vindictive and rapacious enemies; nor, like the Rhodian Colossus a useless, although splendid, ornament of a great capital. Different from and more excellent than these, it is sanctified by a high purpose, the highest, indeed, known to that practical religion, which, including all objects of human interest, preaches not simply love to God, but good-will to men.

Though its iron pillars and its crystal walls are not constructed

THE "PRINCE OF WALES" MODEL FRIGATE.

OPENING OF THE GREAT EXHIBITION.—THE CHINESE MANDARIN, ETC.

for a durability that shall rival these great works of the olden time—its idea will remain to all coming ages, a living fact, endowed with a tenacity that shall produce the mere outward form of similar or still more splendid monuments of human progress in every quarter of the globe, whenever they may be required for a purpose so exalted.

The ceremonial of opening was as auspicious and imposing as the object was novel; and even in a time when people are but little inclined to let their imagination run away with their judgment, or to accept the grand and the indefinite for the small and comprehensible, the fancy of the coldest and most calculating of the spectators was warmed into enthusiasm by the scene. It was not alone the sight of a youthful and beloved Queen, surrounded by her family, lending the aid of an universal and well-won popularity to that solemn consecration of industry; nor the presence at her side of the illustrious Prince, to whose clear and comprehensive intellect and philanthropic heart the Exhibition owes its existence; nor that of the aged warrior—the most notable man in all Christendom, and to whom we are indebted for the repose that has enabled the nations to show that they can work as well as combat; nor that of the chief officers of a state compared with whose power and dominion the empires of old were but as provinces, that made the scene so imposing: it was not alone the presence of myriads of people shouting with "heart and voice" the anthem which speaks both the humble piety and the exulting loyalty of Englishmen; nor the concourse of strangers from every quarter of the globe, and especially from that great nation with whom our rivalry has always, until now, been on the bloody battle-field; nor the magnificent display of every conceivable article of usefulness or luxury invented by the ingenuity of men; nor the gay and brilliant appearance of the exterior of that Crystal Palace, glittering in the rays of a lovely May morning; nor the still more brilliant interior, realizing to the hard matter-of-fact men of Saxon England in the nineteenth century the gorgeous descriptions of fairy palaces born in the luxuriant imaginations of the Oriental story-tellers; nor the reflection that forced itself upon all minds, how truly great and how full of good augury for all humanity such exhibitions might become hereafter; nor the pardonable exultation felt by Englishmen in the fact, that in England alone at the present day such an exhibition was possible: it was not any one of these facts, but a combination of them all, and of a thousand other circumstances equally significant and pleasing, that made the scene within and without the Crystal Palace, on that memorable day, the most affecting and cheering, as well as the most remarkable event in the modern history of mankind.

It has been well said of this Great Exhibition, that by its means the nations of the world have, for the first time, co-operated together in one peaceful act. This of itself gives it a grandeur and a solemnity which might atone for a thousand errors, if any such existed. To have brought about such a result is to have lived to a noble end, and to have conferred a benefit upon humanity; and to a share in this great achievement are entitled not alone the heads which planned, but the hands which executed it. To us it seems, while endeavouring to disentangle from amid the mass of reflections that force themselves upon our minds as we write upon this theme, that the co-operation of the industrious many of all climes and races in this work is a fact full of good promise for a future time. The co-operation of the world will not end with the year 1851, nor be confined to an emulative display of what each nation or section of a nation has done, or can do, in art and manufacture.

In the history of nations, as in that of individuals, physical facts always take precedence of, and are the forerunners of moral and spiritual facts. The workers of the world having shown each other how they can work, what cotton, linen, silk, and woollens they can spin, what metals they can fashion into shapes of beauty and usefulness, what ingenious and mighty machinery to defy space and time they can construct, what secrets of nature they can discover and turn to account for the service of humanity, what wealth they can create to please and flatter the senses and the intellect of all, will learn, that, if co-operation be good in this respect, it may be good also in another. They have exhibited in concert; the next step will be to work in concert, not alone in physical, but in moral and religious work.

When they take *that* step a new era will begin, and Utopia will no longer be an idle dream, but will take the form and substance of a possible fact. Once again, there is a handwriting upon the wall—not in the warning characters of "*Mene mene tekel upharsin*," but in hopeful words which seem to come spontaneously from all lips, and to shape themselves into the divine accents, "peace on earth, and good-will to men."

A GUIDE TO THE GREAT INDUSTRIAL EXHIBITION.

THE FOREIGN DEPARTMENT.

After having afforded our foreign partners, in the great Temple of Peace and Commerce, another week for completing their arrangements for unpacking, for marshalling in due order the many beautiful objects which, for want of time duly to display they had thrust out of sight during the ceremonies of the opening day, we resume our march of investigation by the same kind of rapid view of the eastern or foreign wing that we have already bestowed upon the British department.

For the imperfect preparation of our foreign friends there are many reasonable excuses to be found. They had far to travel; they were subject to all the delays incident to sea, to land journeying, to custom-houses, and to dependance on agents. In a new country, having to deal with officials and servants whose language was unknown or imperfectly known to them, every movement was necessarily slow and expensive. Besides, they were distracted by repeated rumours of adjournment, and restricted for obvious reasons in the number of men they could employ.

Our own countrymen, with all their advantages, would, many of them, have been terribly behindhand, if they had not been within a few minutes, or, at most, a few hours, of their workshops. As it is, many a Manchester, Glasgow, and London House was turned out of the Building before its work was complete, and had to pray for leave to prepare a second edition of their display for Saturday.

The great silk trophy contained within its ample tent fifteen men and ten women, all hard at work from Monday morning until half-past ten on Tuesday night, and then was barely completed.

There can, however, be no doubt, that the Royal Commissioners were quite right in adhering with rigid punctuality to the day originally fixed. If they had not, the day of opening might have been indefinitely postponed from a week to three weeks is even now claimed by several foreign contractors, as the narrowest time within which they can appear in full splendour. Russia has scarcely anything unpacked, beyond a few vases. The greatest treasures of the Tuscan contribution are still fast in their cases; and on the day after the 1st of May, in the French and in part of the German department, hammers were going on busily, and shavings, sawdust, and musty hay were nearly as plentiful as they were a week previously.

INDIA

Before passing into the Foreign Department, we must make a little tour through a department which represents a country where seventy millions of subjects acknowledge the sovereignty of England, which is even now one of our best markets, either to buy raw produce or sell British manufactures, and yet which, in spite of books, and pictures, and panoramas, is scarcely known to a very large part of our educated public, except as a land of elephants, tigers, cobra-di-capellos, shawls, and diamonds. Young ladies versed in French, Italian, music, and even the use of the globes, talk as if Bombay and Calcutta stood in the same relation as London and Brighton. Young gentlemen of unexceptionable manners and coats, if they think about the subject at all, class the ingenious Hindoo, practising arts his forefathers practised with the same skill centuries before civilization had commenced in France or Britain, with the Bosjesmans or Ojibbeways

Yet India is a country it is time we should all know, for it is perhaps the land in which there is more "*future*" for our commerce and manufactures than any other. Railroads have commenced there, and before long a double railway route through Europe, with the electric telegraph, will make Calcutta nearer to us one time than Berlin not a century ago. In the meantime, nothing could have been more opportune than a collection which is an exhibition in itself.

Although in the British department, we have a right to treat it as foreign, because nine-tenths of the contents will be new to nine-tenths of the visitors

India occupies both sides of the eastern end of the Western Avenue entering on the transept.

On the northern side are a series of models of the ordinary country craft used in fishing, trading, and for piracy, some arms and saddlery.

On one side of the bay are a large collection of the iron, and on the other of the brass vessels commonly used by the native Hindoos and Mahommedans, some of them very elegant, and, as well as the pottery, forcibly reminding one of the form found in ancient Egyptian and Etruscan remains.

A little further on is a tent, composed of the most costly shawls embroidered in gold, covered with a variety of the richest praying carpets; cushions carved in ebony, with an elaboration of ornament which it is impossible to describe, are arranged about it.

Next, we find a set of Indian toys—probably exactly the same kind of toys that Indian children played with when British children were sold in the slave market of Rome, or even when Alexander the Great defeated Porus and crossed the Hindus, late the boundary of British power.

Ranged round a large table are more than 150 figures of every Indian trade and occupation; representations of many servants needed in an Indian household—the valet, the cook "frying a fowl," the pipe preparer, and all the infinite division of domestic labour. Then the trades: the barber shaving a dark man's head; two sawyers at work with a most primitive saw; a washer-man beating out clothes on a fluted board; a water-carrier, after the manner described in the "Arabian Nights," with his leather bottle. In the Tunisan division, a full-sized leather bottle, for carrying across a camel's back in the desert, may be examined. Peasants are shown, with the native machinery, putting a handful of sugar-canes between a couple of rollers turned by an ox; while, beside, are others boiling the sugar. What a world of intellect lies between this sugar-boiling and the elaborate machinery referred to in our last Number, in which the highest scientific powers have been brought to bear on the same subject.

A little farther on is a complete representation of an Indian fair, with the principal buildings, modelled with the exactness of imitation for which the Hindoos are so justly celebrated. Merchants expose their wares, camels unloaded repose, soldiers pile their arms, the juggler performs, the story-teller tells his tale, the horseman grooms his Arab steed; the elephant, with grass in his trunk, pricks up his ears as his master beckons to him; some smoke, some eat, a great lord rides through in state, a fakeer or saint begs—it is like a bit in an Indian romance.

Near at hand is a rice field, with a man on a stage frightening away the birds. Among the buildings are a bazaar, a mosque, a temple, and a native house, as well as tents pitched, with their occupants.

Among the manufactures are ivory carvings, horn work, an alabaster chair, of great size, and imitations of all kinds of native fruits.

Costumes of great magnificence hang upon the walls. But perhaps the most interesting and useful part of the collection, with the exception of the figures of Indian trades and models of an Indian fair, is to be found in the southern

Without dwelling, at present, on the beautiful jewellery, of which fine specimens may be seen in our shops, or the scimitars, talwars, daggers, spears, matchlocks, camel guns, wall guns, and other deadly weapons, we push on where, first, lies an admirable set of models of the Indian implements of agriculture, in many of which we can trace the originals of our greatest improvements. These models have been manufactured by Native convicts. Carts and waggons, with open timber bottoms and sides, and solid wooden wheels (the axles turning round, as well as the wheels), are on the same plan as those still used in Spain and Portugal, the superiority of execution being on the Indian side. One plough has a seed dibbler attached, and, although lightly made, and only intended for soft soil, is superior in construction to ploughs we have seen in the south of France drawn by a donkey. The original of the clod-crusher, the scarifier, are all to be found; and two thousand years before two-horse ploughs came into use, the Hindoo drove his two buffaloes ploughing for rice with reins, without a separate driver.

Cotton-cleansing machines, and machines for grinding wheat, equally rude and ingenious, are there, and yet the style of execution of the models shows that, to bring about whatever improvement is possible, good copies to imitate only are needed. A Malay axe, with iron of the rudest workmanship, has a flexible handle, such as an American backwoodsman approves.

After the machinery, to which no brief description can do justice, come the rawmaterials, which—besides specimens of cotton indigenous and grown from New Orleans or Sea Island seed, hemp, flax, silk, and other known fibres—include a large well-arranged collection of the fibres of the aloe, the pinneapple, and a number of plants unknown, or little known, in this country. Our intercourse with the Indian peninsula and archipelago is increasing so rapidly, that, in the course of the next ten years, steam-boats will be more common than sailing ships were twenty years ago; while we need not despair of seeing a locomotive running all the way from the island of Bombay to the heart of the Bay of Bengal. It would not cost so much as the expedition to and retreat from Cabul. In the meantime our botanists and manufacturers cannot do better than look out for new raw produce for these unlimited carrying powers to convey.

The cotton cloths are curious, but we dwelt longer on the model of one of those ancient looms, as ancient in principle as Joseph's coat of many colours, which the Hindoo weaver suspends from a tree, makes a hole in the ground, and squatting on the edge, drives the shuttle with his feet.

Precious stones and minerals, and various kinds of timber, rough and unpolished, are exhibited in quantity, and will, with other Indian products demand future notice and illustration.

EGYPT AND TUNIS.

Egypt, on the north side, just in face of the Koh-i-noor in its golden cage, pushes forward prominently long matchlocks, sabres, and large, flat, to us European, most uncomfortable saddles, magnificently embroidered in gold—just the sort of thing to set off a cavalcade under a glowing eastern sun. The broad flat seat seems much more calculated for the feats of Mr. Batty's equestrian hornpipers, than for the use of soldiers or huntsmen. Nevertheless, use is everything, and we know that the Arabs can ride

On entering the Egyptian department, we find one wall covered with drapery of violet, crimson, green, and blue silk garments, and crimson and green shawls, all richly embroidered in gold. The shawls will, we ear, create frightfully covetous feelings among our fair friends Then there are embroidered slippers of various sizes, some small enough for feet never made to walk, but to be displayed, peeping out of the folds of Turkish trowsers—for these slippers have no heels, and the owner of such small feet would be sure to display them if a chance occurred.

It is quite certain that many of the articles of woollen and cotton exhibited could be made, and are made, of the same pattern, much more cheaply in England than in Egypt. On a table lies a large slab of beautiful yellow alabaster. A mosque has been built lately in Cairo of this material. On the alabaster slab stands a coffee-pot, which looks like rather dull block tin, surrounded by a swarm of little egg-cups reversed: on turning them up it is found that the metal is not tin but silver, and that each apparent egg-cup holds a little china cup. These are the famous coffee cups, in silver stands, which formed such a staple ornament in the Oriental novels, which followed the Byronic mania, before "Pelham" and "Pickwick" put murder in a turban to the rout.

One of the walls is adorned with fans of peacocks' feathers, very like English fire-screens; but these fans in Egypt are not mere ornaments, but genuine necessaries, and so are the fly-flappers of grass. Among the raw materials are cotton, cassia, and a variety of drugs and timber. A lump of alum awakens strange ideas. It is marked in French, "Alum from the Great Oasis, refined at Cairo." What would have expected, twenty years ago, to have a bit of the Great Oasis exhibited in Hyde Park, with other articles, to be explained by an intelligent Egyptian speaking capital English?

There are some sickles and hoes, exceedingly rude, and wasteful of labour. We should like to know the value of them: if not home-made by a "Fellah" without money, they must be dear at any price. One cannot help wondering whether the railroad between Alexandria and Cairo, planned by Robert Stephenson, is to be made by Coptic or Arab navigators with such tools as these.

Among the articles for use, are saddles for an ass, a horse, and a camel. The sight of the camel saddle gives one the back-ache. The common horse saddle, quite soft, without any tree, made of leather, with a lining of several rows of felt, is worth the attention of our southern colonists, where horses have no shoulder to keep the saddle in place, and are liable to sore backs.

The raw produce—vegetable and mineral—of Egypt is more important, no doubt, than the manufactures, but, of course, it makes little show

Tunis contributes largely. Amongst other things, there are some extremely fine floor-matting, and a magnificent collection of gold-embroidered dresses.

In the centre of the court is a real Arab's tent, of black camel's hair, a stout, useful material, which does not, however, realise the words of the song—

> Come to the desert—come with me;
> Our Arab tents are fair to see

Skins of lions, leopards, antelopes, and wild goats appropriately adorn this tent. Within it are arranged rude husbandry tools, hay-forks, such as school-boys make of a forked stick. There are also the Arab musical instruments—a fiddle with two strings, and a guitar, or African banjo. Candles of brown wax, of a taper, crooked, slip shape, hang among other household treasures We particularly noticed some straw hats, literally as large round the brim as a coach-wheel, and so wide in the head, that we presume a turban or cap goes inside.

The general impression produced by the survey of the productions of such countries as Egypt, Turkey, Tunis, and native India, is the same; that is to say, that the more civilised nations excel most in common comforts—comforts which all classes may enjoy. In splendour of costume, jewellery, and arms, in pageants and processions, we find it hard to approach people who do not carry pocket-handkerchiefs, and have not much to do with the washerwoman.

PORTUGAL.

Portugal, in arrangement as in geography, stands next to Spain, with a kind of sign in front, as a set-off to the huge Spanish windlass, in the shape of a great dripstone from the island of Terceira, which is said to possess powerful filtering qualities. Truly it could not have been sent to a place where it was more needed than the banks of the Thames. Opposite the Portuguese, close to Tunis and China, stands a vase of feather flowers from Portugal's former colony of Brazil. Those flowers are made from the natural feathers of the birds of the country, undyed, intermixed with the scales of diamond beetles. Besides being excellent imitations, they are very lasting. Among the contributions of Portugal are specimens of indigenous marbles, preserved fruit, grain, barrels of snuff (from which a pinch may be taken), cotton and woollen cloths, and other fabrics, of which the less said the better, and an exquisite carving in ivory of "Prometheus devoured by a Vulture." The anatomical development of Prometheus is admirable. The feathers of the bird are better than the form.

SWITZERLAND.

From Spain and Portugal, to cross to Switzerland, is, perhaps, in every respect, as great a change as possibly can be imagined. We have before us the products of a country without colonies, without a sea-coast, unfavoured in sun or soil like the Iberian peninsula; but industrious, educated, intelligent, self-dependant, and enterprising. Switzerland produces little raw produce, but great excellence in manufacture. A considerable space is occupied by cottons and similar goods, which will be more properly noticed in a general comparison of foreign textiles. Beautiful straw plait, wood carvings of great delicacy, both ornamental and useful, shapes fit for fancy dairies, bows and arrows, and a crowd of ingenious trifles, show how part of the rural population are occupied during the long winter months. In the gallery over the Swiss cottons, &c., the celebrated Geneva watches are exhibited in great force—watches for the deaf and blind, a watch which runs with one winding 374 days; a watch, smaller than a fourpenny-piece, to hang in a serpent brooch; one still smaller, in the top of a gold pencil-case, tells the hour, day of week, and month. With the watches are exhibited many curious and valuable philosophical instruments; and, descending again, we find some examples of the musical boxes, which, thirty years ago, were the pocket companions of every Continental traveller on his return to England. Among the watches are exhibited the separate parts of a watch. The cheapness of Geneva watches is produced by a great division of labour, and the low price at which work is done by the families of the small freeholders in the winter evenings: the works are afterwards put together and finished in the towns. The Swiss watches have great advantages in delicacy, minuteness, beauty, and cheapness; nevertheless, the strong English watches were never in more brisk demand for foreign export than at present. At Coventry, the great seat of the trade, every man is in full employment.

We must not pass over without mention the Swiss embroidered curtains, ribands, and velvets. Indeed, there is scarcely a single branch of manufacture in textiles, in metals, in pottery, of which they have not sent creditable specimens.

Next to the watchmakers' and jewellery work, models and carvings in maple and white wood will amuse those who take no interest in the progress of more serious manufactures.

ITALY.

Italy stands between Spain and France, but, unlike Switzerland, is as yet not half prepared for receiving company.

TUSCANY, with many cases to unpack, represents Italy for the present, with a more striking display than any other state of the Peninsula. The centre of the room is occupied by several very beautiful tables of mosaic, of hard pebbles on marble or lapis lazuli, the finest from the Royal manufactory. Several clever imitations of the mosaics in wood stand round. A remarkably ugly carriage occupies a conspicuous position. A set of those anatomical preparations for which Florence is so celebrated, presented by the author to Professor Owen are arranged in glass cases. In this instance the whole internal economy of the torpedo, magnified on a large scale, has been modelled with extraordinary fidelity. The minute blood-vessels are faithfully re-produced, in a manner which must be in the highest degree useful to the naturalist and to the anatomical student, without being at all disgusting.

On one side of the room stands a cabinet carved in black walnut in 1848, of very great merit for the elegance of the design and delicacy of execution, which may probably form on a future occasion the subject of

an illustration; and there are several chairs and other pieces of furniture in the same style.

The mineral specimens include ornamental stone, lithographic and colored stones in great variety found in Tuscany, and used for mosaic-work: specimens of alum, sulphur, copper, antimony, and quicksilver.

The vegetable produce includes wheat, from which the well-known Leghorn pastes are made; of that from which the straw for the bonnets, known as Tuscan and Leghorn is manufactured. In examining the manufactured articles, we find that Messrs. Vyse, who employ so many hands in straw plaiting in Hertfordshire and adjoining districts, have also establishment in Tuscany.

It will be remembered, that when Sir Robert Peel explained the plan of his famous Budget, he made efficient use of a bundle of Tuscan straw plaits. He showed that such an article, varying in quality according to fineness and lightness, so easily packed in a narrow compass and concealed would never pay or be excluded by a high duty.

There are specimens of Tuscan plait exhibited almost worth their weight in gold.

Then again, the Tuscan oil, which in the straw-covered Florence flask, now going out of fashion, has given a name to all the table oil we consume—and we consume more and more every year, coming from various countries—is ranged in bottles, which, as they are neither to be smelt nor tasted, do not say much for themselves. But still, the unravelled have the satisfaction of thinking that for once they have seen the genuine article.

The animal produce division gives us more specimens of merino fleeces and work from more than a dozen silk manufactories.

Merino fleeces form part of the Tuscan exhibition. If the resources of Italy were properly developed, it ought to export a very large quantity of wool, as the pastures are plentiful and the climate suitable.

ROME sends nothing very remarkable, beyond some of those exquisite cameos which have never been excelled elsewhere; and, whether from indifference to the Exhibition, or from exhaustion, gives a very poor idea of the resources of the Papal dominions, even as compared with the Mohammedan state of Tunis.

SARDINIA.—We turn with interest to the 94 contributions of this kingdom, which includes in its territories Piedmont, Savoy, Genoa, and the great island of Sardinia, because we not only sympathise with the people in more points than one (it is the only constitutional kingdom left in Italy), but because we have recently concluded an advantageous treaty of commerce and navigation with the King of Sardinia, which is likely to largely develop the resources of his kingdom and to increase our intercourse with it.

The principal exports of the continental states of Sardinia are silk, hemp, oil, and cork. Rice and wine are grown, but not exported to any extent, although, whenever we reduce our duties on wine, we may expect to receive some.

The island of Sardinia is rich in timber trees and minerals, besides having a soil and sun suitable for the vine, olive, tobacco, flax, hemp, and a variety of produce; but oppressive laws, great ignorance on the part of the people, an ignorance which is carefully cherished by the priesthood, a malaria existing in certain of the most valuable districts, and the want of roads, have left Sardinia more than a century behind the north-western states of Europe.

The present sovereign of Sardinia is anxious to unloose every restriction on internal and external commerce; and it is to be hoped that the specimens sent are but the heralds of a more complete collection for our second Exhibition in 1856.

The only objects that are very prominent are a huge elk, from the museum at Turin, stuffed with great skill, and carved furniture, the property of the King.

Of course, there are specimens of raw and thrown and organzine silk, of that mythic article, Genoa velvet (almost all the velvet we consume is made either in Lyons or Spitalfields, or one of our manufacturing towns of theno rth); also wax and olive oil.

A pair of pantaloon's boots cannot be passed over, they are so extremely comical; and Turin contributes, with other silver filligree work, a column ornamented with emblems of the "Great Exhibition."

A very jolly bacchante, in marble, of Sardinian authorship, dances in front of the Italian Court.

SPAIN.

Spain stands next to Egypt, with a magnificent supply of deadly weapons—swords of true Toledo manufacture; a pair of rapiers—one of them, as to handle and sheath, fashioned into the shape of a silver serpent. When sheathed it forms a complete circle, and when drawn, such is the perfection of the tempered steel, it straightens at once. Then there are all manner of deadly daggers, with handles of wonderful magnificence. But the gems of the case of arms are two pairs of pistols, in wrought iron, damascened over a gold ground, worked into fantastic figures and forms, as delicate as filigree, from the butt to the muzzle: not a single hair's breadth is unornamental—they are perfectly wonderful, we have never seen anything in this country, or in France like them; it reminds one of Benevento Cellini's work. There is also a metal book-cover, intended to hold a title of nobility, in the same style of incrustation of gold and silver on wrought iron.

A case, very nicely arranged, contains samples of raisins, figs, silk, oil, Indian corn, wheat, tobacco, and other agricultural productions of Malaga.

We cannot much admire the execution of the shrine in gilt metal and precious stones; but a table ornamented in wooden mosaic, with wreaths of flowers and the arms of the Queen in the centre, with "A. S. M. Victoria de la Gran Bretana," is exquisite in design and execution. It must, if the time of its execution be considered, be beyond all price. It is said to contain three million pieces of wood.

A model of a bull-fight in an amphitheatre filled with spectators, occupies a conspicuous situation, and tells the story well; but we are not quite sure that it is of Spanish manufacture, and for the following reason—both France and Germany carry on a trade with Spain in toys. Some short time since, a grave report from a German Minister of Commerce went the round of the German papers, setting forth that the German toys had been beaten out of the Spanish market and returned on the hands of the manufacturers unsold, in consequence of the superior correctness with which the French had represented the ceremonies of the bull fight, for the benefit of the Peninsular market. Under these circumstances, German artists had been instructed to prepare in Spain a correct series of drawings of every incident in tauromachia, which were to be lithographed and distributed among the toy manufacturers.

In glass cases hang black lace mantillas of the most aggravating perfection, and embroidery quite unapproachable in any country where reading and writing are much practised. After looking at the Spanish embroidery, our Berlin wool and crochet damsels may fling away their needles and hooks in despair.

We must not pass over a set of little figures, representing Spanish characters, with a genuine Spanish expression of countenance. The sort of figure is common enough, but the execution of these is extraordinarily clever.

There is a "contrabandista," or smuggler, sitting on the croup of his loaded mule, lounging forward with a cigar in his mouth; at his side a carbine, ready for use; and a devil-may-care expression on his countenance, which, although only a chimney ornament, is quite a work of art as regards reality: it must be a portrait.

RAW MATERIAL.

The strength of Spain, if that unfortunate country could but know it, lies in her natural productions, agricultural and mineral, and their simple products. The manufactures of Spain are mere shams or curiosities. It is well known that England, France, and Germany manufacture all sorts of woollens, cottons, and hardware goods after Spanish models, which are afterwards smuggled into that country by brothers of the smoking, lounging, gentlemen just described.

An excellent series of illustrations of the natural wealth of Spain have been sent. The inspectors of mines of each district, whose names seem legion, for Don Juan is always helping Don Carlos to do nothing, have sent each a collection. These include iron of the finest quality. We were large importers of iron from Spain, until we perfected the method of smelting with coal; and, at the present time, iron ore, fit for making the finest steel, exists in large quantities, if there were roads to convey it cheaply to the coast. Also, lead and silver, quicksilver, copper, antimony, cinnabar, nickel, and numerous minerals of chemical value, as well as a fine collection of marbles of great beauty.

AGRICULTURAL PRODUCE.

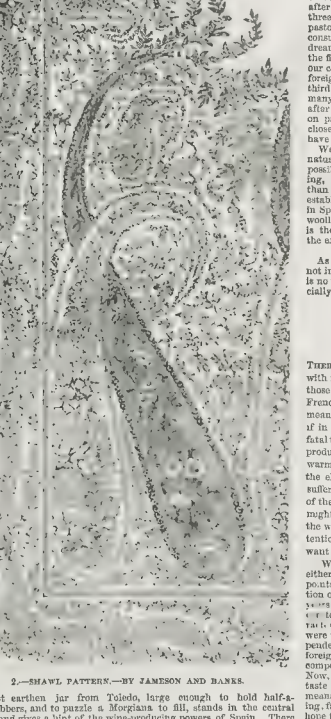
The agricultural collection is equally varied and valuable, affording an excellent idea of the rich variety of the Spanish soil and climate.

1.—IRISH TABARET—BY ATKINSON, OF DUBLIN.

There are specimens of wheat and barley from every district; of maize, of buck wheat, of rice, of every kind of grain, of tobacco, of cotton. In fruits, olives on branches of several kinds, besides chesnuts, extraordinarily fine walnuts, dried fruits, such as peaches, oranges, citrons.

Among dye stuffs, in great variety, a large specimen of the barilla plant.

From the Spanish colonies we have a complete series of specimens, scientifically arranged, of the timber woods of Cuba and the Philippine Islands.



2.—SHAWL PATTERN.—BY JAMESON AND BANKS.

A vast earthen jar from Toledo, large enough to hold half-a-dozen robbers, and to puzzle a Morgiana to fill, stands in the central avenue, and gives a hint of the wine-producing powers of Spain. There are excellent wines, which, for want of cheap carriage, never leave the country.

ANIMAL PRODUCE.

Among the animal productions are cochineal, many specimens of raw silk, and wool from the choicest merino flocks, washed and unwashed. The wool is enclosed in cases. We hope an opportunity will be given of handling and comparing it with samples from choice German and Australian flocks. Half Yorkshire depends for mixed fabrics, and nearly all the West of England for fine cloths, on the Spanish breed of sheep, but not on Spain.

Up to the year 1800 all our fine wool came from that country. The trade has almost entirely disappeared. We now obtain our finest wools from Germany, where the Spanish sheep are housed all the winter, and tended with a care which compensates for the defects of climate. The best part of a first-rate Saxon fleece will sometimes be worth six shillings a pound.

Our great and annually increasing supply of fine wool is from the Australian colonies, where the Spanish breed, introduced by Macarthur, and crossed continually with the best German and Spanish rams, with little care and expense, produces a wool which, although not equal to the finest Saxony or Spanish merino, enables our manufacturers to produce a variety of new and beautiful fabrics.

The Spanish proprietors of thorough-bred sheep form a sort of corporation, ruled by ancient exceptional laws, and endowed with privileges which are fatal to the progress of agriculture in a great part of the kingdom. At certain periods they have a right to drive their flocks, feeding without compensation, for hundreds of miles, and to return the same way. This privilege was given, no doubt, in order to afford a change of climate and pasture, very advantageous to the fleece, but adverse to any improvements in agriculture.

The strictly exclusive and meddling system of Spanish legislation has ruined all existing, and prevented the establishment of any new, occupations. We can illustrate this by the experience of a friend of our own.—

AN EMIGRANT IN SPAIN.

A colonist, who had returned from Australia, took a journey into Spain, soon after Sir Robert Peel's tariff permitted the importation of foreign cattle.

He liked the country, liked the people, found plenty of pasture to be had at a nominal rate; thought he saw his way to an exportation, and made up his plans accordingly. He said, "I will import an English thorough-bred stallion, a short-horned bull or two, and some south-down rams. I will breed lambs from across of the Spanish American (not pure merino sheep); I will lend my rams free to the farmers, buy the lambs from them, and, having cut their tails, send them to England. They will pack well on a steamer, and arrive to sell at a good profit, just at the time of the year when house lamb costs half-a-crown a pound. I will cross the Spanish mares and breed horses of a good sort for Spain and for French cavalry. I will herd them as we do in Australia, in 'mobs,' with a stockman to look after every 200; and they will cost me next to nothing for keep up to three years old." His cattle plans were equally pretty; but our pastoral Alnaschar had forgotten what country he was in. He consulted a friend—a Spanish merchant: he smiled and said, "You dream, my friend: you are not in England, or in an English colony. In the first place, you will not be permitted to cut the lambs' tails; it is not our custom. In the next place, you will not be permitted to import foreign rams: it is contrary to law to cross the breed of sheep. In the third place, if you breed horses, the Government has a right to take as many as it pleases for cavalry, at a fixed price, which will not suit you, after importing your fine English horses. And, finally, you cannot count on pasture for your flocks or herds, for the part that you have chosen is just in the way where half a million noble blooded mermos have the privilege of marching."

We relate this anecdote, because, after studying the magnificent natural resources of Spain, as displayed in our Exhibition, it is impossible to help wondering why such a country is not populous, flourishing, and wealthy. But customs and prejudices are more powerful than laws, and it would be easier to change the dynasty than to establish a common-sense system of internal and external commerce in Spain. As it is, we send copper vessels disguised as iron, and make woollen and cotton goods in Spanish fashion and marks; for the smuggler is the great protectionist of Spain, and insists on his vested rights, to the exclusion of good roads or remunerative customs duties.

As the produce of foreign contributors is arranged geographically, and not in classes, and the name of each country is written up plainly, there is no need to give a diagram, which would merely copy plain signposts, especially as the galleries of the east side are nearly unfurnished.

THE BRITISH DEPARTMENT.

SILK MANUFACTURE.

THERE are few departments of the Exhibition which will be examined with more interest than that of the silk manufacture, since it is one of those in which the well-known reputation and long tried skill of our French neighbours will subject us to the severest test. Many well-meaning and intelligent people believe that, as regards our silk trade, if in no other department of manufacture, this Exhibition would have a fatal tendency; since it would inevitably show us the poverty of our own productions, especially in an artistic point of view. Spitalfields is absolutely warm, if not positively hostile. Macclesfield could not see the use; until the eleventh hour; and it was only the fear of being absent, and thus suffering judgment to go by default, that led to any movement in either of these localities. Manchester and Coventry had some hopes that there might be points in which they might excel, and consequently set about the work with more spirit and determination, and the fullest possible intention of winning if they could, but, if beaten, that it should not be for want of a trial.

Without claiming for our silk manufacturers any super-excellence either of taste or judgment, it is not too much to say that there are points in which they certainly stand pre-eminent; and when the question of quality is discussed, no one need fear for the results. Of late years there has been a constant tendency to avoid the production of good silks, and pay more and more attention to those of a plain character. This has arisen since the period at which the restrictive duties were taken off French silks; and the manufacturer, who formerly depended upon his clandestine means for obtaining patterns of these foreign productions, and using them as designs for his own fabric, was compelled to forego his piracies, and depend upon some original source. Now, unfortunately, he had altogether neglected the cultivation of the taste and talent around him; and in his hour of need the slender artistic means which he had been compelled to provide for the purpose of copying, failed him as a source of that originality by which alone he could hope to stand.

The disquietude, therefore, of the silk manufacturers of this country, and more particularly of Spitalfields, is to be accounted for in the fact that they were totally unprepared for such a competition as that in which they were called upon to take part; and having been so long used to depend upon others rather than upon themselves, they were certainly not in the best possible condition to exert themselves with any effect.

The display before us, however, only serves to prove how much more might have been done had this habit of self-reliance been cultivated a little earlier, and the innovations of taste been regarded rather as a means whereby an extension could be given to trade, than as ruinous to certain exclusive interests which were never, after all, really benefited by the so-called protection afforded by antique restrictions.

Ascending the first staircase on the south side of the western nave, the examples of British silk manufacture will be found to occupy the gallery immediately at the head of the stairs, north and south. The Spitalfields or metropolitan silks, and the Coventry ribbons, being displayed in glass cases next the nave, and the Macclesfield and Manchester productions in a parallel line on the other side of the staircase. Nearly every class of silk goods is represented, and manufacturers, wholesale and retail dealers, are strangely enough found in competition, or at least in comparison, with each other. Messrs. Campbell, Harrison, and Lloyd, of Friday-street, City, exhibit several excellent specimens of figured moiré antique damask, rich brocades, and velvets. Stone and Kemp, Spital-square, a rich assortment of plain and fancy silks. Isaac Boyd, some admirable specimens of silk furniture damasks; and other houses keep up the reputation of Spitalfields for parasol silks, gros-de-Naples, satins, and velvets. Two specimens exhibited by the Spitalfields School of Design, as the production of pupils of that institution, are practical illustrations of its utility when properly directed. The crowning representation, however, of Spitalfields is the trophy in the central avenue, alluded to in our last, of which an illustration is now given. This richly-clothed and decorated object forms a decided feature of the Exhibition, and consists of a parallelogram of mirrors with a wing at each of the angles on which are draped the richest furniture damasks, well selected and

3.—DESIGN FOR PANEL.—BY W. A. PAPWORTH.

5.—CARVED BOOKCASE. SOCIETE DES EBENISTES.

4. DESIGN FOR PANEL.—BY J. W. PAPWORTH.

effective colourings. The structure is divided into three tiers, and rises to the height of forty feet, above which are placed the flags and banner. The lower tier displays the broad silks of the largest patterns; and at certain angles these are reflected in the mirrors; whilst selections of silks are arranged upon a plinth which supports the whole, an ornamental *fascia* completing the first compartment From this rises the second tier, in which, however, too many silks have been crowded, and the effect is lost in consequence; but, as the defect is easily remedied, we trust it will be done at once The arrangement, too, should be more loose and pendent in its character, thus giving ease to the folds of the drapery. This remark applies especially to the upper tier, in which the less costly, but, in some respects, the more showy goods, such as striped labarets, are placed The pieces are drawn too tight, and give a stiff and formal effect to that which, with a little consideration, or less hurry in arrangement, might be made tolerably graceful. Great credit is due to Messrs. Keith and Co. for the spirit and energy they have displayed in taking up this costly illustration of our trade single-handed, and the examples of silk of which it is formed are, with a few exceptions, equally creditable to their skill and taste as manufacturers (See Illustration on next page)

Messrs. James Houldsworth and Co. are the principal exhibitors of silk from Manchester. Their specimens are all of a very high character. The large silk banner which occupies the centre of their compartment has been executed specially for the Exhibition, and is composed of silk grown and manufactured in England It is intended as a memorial of the late Mrs. Whitby, of Newlands, Southampton, who devoted so large a portion of her time and fortune to the promotion of the growth of silk in England, and has been manufactured by Messrs. Houldsworth for her friend, Mrs. Wish. In our more detailed notices we shall return to this interesting example.

The embroideries by machinery, for which Messrs. James Houldsworth and Co. have been so long noted, are here displayed in all their accuracy of "repeat" and brilliancy of effect; and this house sustains its reputation in a most satisfactory manner, the arrangements of the display being at once tasteful and effective.

Messrs Whitworth and Proctor's specimens, of a totally different class from those last quoted, are very admirable, and will bear, as they deserve, a close inspection Messrs. Harris, Taylor, and Pearson's goods, which fill a glass case of similar design to that of Messrs Whitworth and Proctor, thus balancing the arrangement on each side of Messrs. Houldsworth, are of a class for which Manchester is noted—plain silk goods of excellent quality at a comparatively low price; and it is as specimens of this class only that they are exhibited.

At the back of the Manchester specimens, a miscellaneous collection of examples in silk and silk manufactures is placed In the centre, and occupying the large portion, are some very excellent examples of furniture damasks, manufactured and exhibited by Mr. William Grosvenor, of Kidderminster. One example, a broadcloth, will require special attention at some future time, when we hope to give an illustration of it The other exhibitors comprise those from Leek and Derby, [illegible] interesting case of illustrations of the growth and process of silk manufacture, from the eggs of the silkworm to the finished goods, by Messrs. Hadwen and Sons, Bryan, Mackintosh, and Brown, with specimens of cyclo silk by Holdforth and Sons, of Leeds.

The Macclesfield exhibitors are grouped together in a large glass case at the head of the stairs; and the special productions of that town are worthily represented by Messrs. Brocklehurst and Sons, H. and T. Wardle and Co., and Critchley, Brinsley, and Co. Ladies' silk handkerchiefs and small silk shawls being the leading features, there is nothing especially suited for illustration. Of the colouring of many of the specimens, however, we can speak in the highest terms of commendation.

RIBBONS.

The staple productions of the ancient city of Coventry, as already stated, occupy a prominent situation in the Central South Gallery, next to the nave, and are displayed in a long glass case, of more pretension to architectural beauty than has been received in its construction Of the display here made it is only right to premise, that Coventry has hitherto resisted manufacturing cheap ribbons, in which great effects are obtained at the smallest possible amount of labour and the minimum quantity of material; and the examples here shown are, with very few exceptions, intended to illustrate the regular manufacture of the various houses who have united to make this exposition of the ribbon trade Each of the leading firms is represented, and each has endeavoured to display the leading features of its own special trade Thus, Messrs. Sturdy and Butterworth exhibit silks of ribbons remarkable for beauty of design and the application of steam power to their manufacture; and Messrs Sharpe, Odell, and Jar exhibit illustrations of a medium quality of goods manufactured at Coventry. In order, however, to show how far the ribbon weavers of Coventry are capable of going beyond the ordinary character of goods upon which they are usually employed, and by the manufacture of which the commercial status of that city is kept up, it was wisely resolved, by a few spirited individuals, that a ribbon should be manufactured and the cost of its production be defrayed by subscription In order to ensure the production of such a specimen as would prove the capability of the Coventry workmen to produce better things than they usually have credit for, and to show that the element of price was always to be considered in the production of excellence the ribbon thus manufactured, under the especial superintendence of a committee of manufacturers appointed for that purpose, is exhibited in the central [illegible] of the glass case which has been set apart for its display in a variety of [illegible] Unfortunately, woven engraving [illegible] does not produce [illegible] the natural beauties of the [illegible] in that [illegible] would, therefore, be useless, as its [illegible] and the arrangement of the [illegible] for the purposes, seem to constitute the primary elements of its excellence and, without believing that it is the very perfection of design and workmanship in ribbon manufacture. We earnestly commend it to the attention of the visitor, as showing how far the energies and talent of our countrymen may be

eveloped by judiciously-exercised encouragement, and
e stimulus of an extraordinary circumstance, such
this Exhibition has proved to many of our manu-
actures. Let the Coventry men take a lesson from
hie, and, indeed, the Spitalfields men might do the

7.—TIEN DE CORSAGE.—BY MM. BOUILLETTE, HYOCLINE, AND CO.

same; and let them take care to produce at least one first-rate specimen of their skill every year for the future, as a point of perfection at which their artisans should aim as far as possible, even in their ordinary productions.

SHAWLS

The valuable and interesting display of British shawls has been most judiciously arranged in the gallery on the south-western side of the transept, the

8.—BRACELET.—BY MM. BOUILLETTE, HYOCLINE, AND CO.

London and Norwich contributions being placed in a series of elegantly-designed glass cases; and those of Paisley in suitable compartments, either covered with glass or open, according to the character of the goods. When the great variety of production in this department of textile fabrics alone is taken into consideration, and it is remembered that the design may range from the most intricate India prize patterns to the most primitive of plaids, and yet present decided features of excellence *per se*, the importance of its complete illustration will be at once acknowledged. Nor is this application of the arts of design to be confined exclusively to the production of the patterns by the loom alone, since, of late years most important improvements in the decoration of shawls have been effected by the application of printing by blocks, and the success which has attended this method is fully exemplified by the very beautiful and unique specimens exhibited by Mr. Charles Swainland, of Crayford, Kent, one of the last of those London printers whose reputation has been eclipsed by the mechanical contrivances and rapid methods of production of their Lancashire rivals. The broche shawls of this unrivalled printer have long held the command of the market; and the selection now exhibited will only serve to enhance the reputation acquired by the experience of nearly half a century.

Messrs. Kerr and Scott, of St. Paul's Churchyard, exhibit largely and in great variety, alike in printed and woven fabrics. Messrs. Webber and Hare, of Milk-street, City, and Messrs. Keith and Sloobridge, of Wood-street, also display an admirable selection, to be noticed and illustrated at a future period. The Norwich exhibitors, too, make a most interesting display in both shawls and figured poplins, brocades, and damasks. Messrs. Francis Norris and Sons are very extensive, as may well be supposed, since the great mass of British plaids are manufactured at that place. The Indian long shawls of Mr. R. Kerr have been held in high esteem for many years past, and the specimens he now exhibits sustain his reputation.

The gay colours of many of the tartan shawls and plaids group well with the more sober hues of the fancy plaids,

10.—LAMP. BY M. SUSSE.

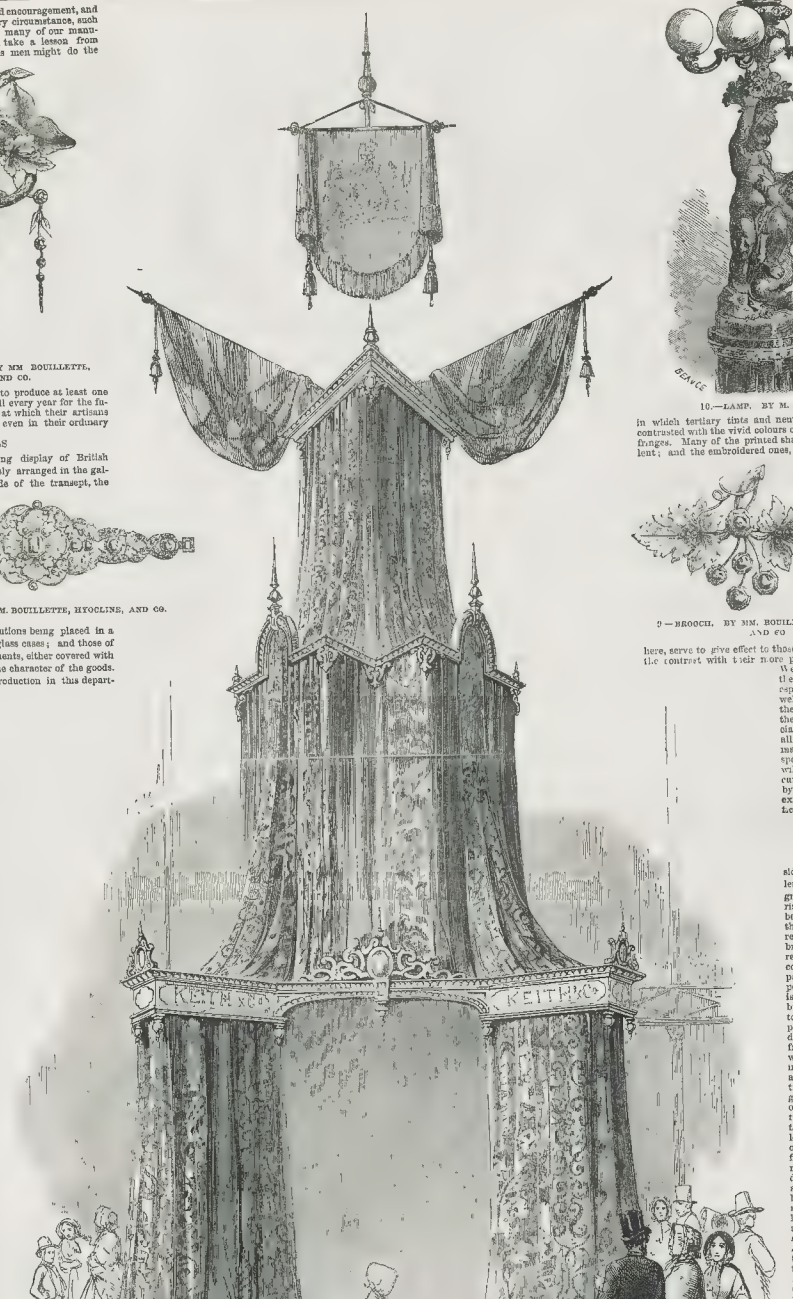
in which tertiary tints and neutrals are admirably contrasted with the vivid colours of broad borders and fringes. Many of the printed shawls are very excellent; and the embroidered ones, though out of place

9.—BROOCH. BY MM. BOUILLETTE, HYOCLINE, AND CO.

here, serve to give effect to those around, and gain by the contrast with their more prismatic companions. We commend this group, then, to our fair readers especially, and it will be well if it does not render them too fastidious in their choice of these special articles of dress to all future time, since, in making purchases, the specimens here displayed will invariably be referred to as standards by which to judge of the excellence of similar articles.

CLOTHING, HOSIERY, &c.

On the corresponding side of the Transept Gallery, passing under the great elm tree, which rises in all its summer beauty over the head of the visitor, affording a refreshing shade by its branches, and a grateful relief to the eye by its colour, the clothing department of the British portion of the Exhibition is placed, and the contributions here assembled together come from all parts of the United Kingdom. Passing along the front of the gallery, which, as quoted in our introduction, affords so admirable a view of the transept, we pass two organs, one being placed on each side of the great tree. The first, nearest the shawls, is an elegant-looking instrument, the outer case being of tasteful design in the decorated Gothic style, with dispersed pipes and other accessories; the other being, in its upper part at least, an abominable-looking box, with moveable "luffer" boards, and the whole of the internal mechanism of the instrument displayed to view. Certainly, John Knox's definition of an organ, as a "kist of whistles," was never more completely illustrated than in this instrument, which, alike for itself and everything around it, is sadly misplaced. The prominent position, seen as it is from the whole transept, ought to have suggested something of a more decorative character; and, as the instrument is intended to illustrate certain improvements of construction, it ought to have been placed more immediately in connexion with the other musical instruments: a double advantage would thus have been gained,



11.—SILK TROPHY.—BY MESSRS. KEITH AND CO.—(SEE PRECEDING PAGE.)

12.—SILK PATTERN BY HOULDSWORTH AND CO.

since the merits of the instrument would have been better displayed, and a valuable space for some decorative object been made available for something more sightly than a huge box. These remarks have been made *en passant*, as affecting the question of the decoration of the Building, a point which, in this instance, has been most unaccountably overlooked.

The clothing department, as the legitimate subject of our present remarks displays great variety, and has evidently cost much labour in the arrangement. Opposite to the visitor, passing from the shawl department in front of the offending organ, a very interesting display of the manufactures of the Scottish Highlands is placed, forming a very picturesque group, of which we purpose giving an Illustration. The exhibitor, Mr. Macdougal, of Inverness, has brought together, at much trouble and great cost, various specimens of the clan tartans, plaids, and tweeds manufactured at St. Kilda, Highland brooches of bog oak, deer's teeth, and cairngorms; various Highland ornaments of dress, and specimens of rock crystal from Cairngorm Mountain, Inverness-shire. At the back of this Highland display, Messrs. Wigham, of Edinburgh, show an elegant selection of fine wool shawls in fancy and Indian patterns; and the group is completed by the very *recherché* display of Mr. Brookmaster on the one side, and Mr. Holmes on the other—the former exhibiting several elegant articles of male costume, and the latter a magnificently embroidered mantle; the glass cases in which these articles are displayed being very tasteful in design and elegant in appearance. The hosiery of Leicester and Nottingham, the hats of Manchester, the gloves of Worcester, Limerick, and Yeovil, the straw plaits, &c. of Luton, will all require special attention at some future time. The metropolitan display of varieties, too, cannot be done justice to in this rapid glance; but we would particularly urge upon the notice of the visitor the very interesting exhibition of straw bonnets, and the illustrations of the process of preparing the straw. Messrs. Cristie's illustration of the processes of the hat manufacture, too, is worthy special attention, as showing the gradual progress of the raw material through its different stages until it arrives at that perfected state when it becomes useful to man for his personal comfort or subservient to his taste as a decorative adjunct.

And here, whilst alluding to processes, and before finishing this glance at our textile display by a review of the lace contributions, it is proper that we should correct an inadvertent omission in our remarks on cotton manufactures in the hurried sketch of last week, and now call attention to the very tasteful display made by Mr. Bazley, of Manchester, one of the Royal Commissioners. Owing to the delay in placing Mr. Bazley's contributions, in consequence of his desire to have a living cotton-plant, per the last packet from America, as the first example of his series of illustrations, the fact that he had succeeded in producing a small quantity of cotton yarn of even greater fineness than that to which we called attention as exhibited by Messrs. Thomas Houldsworth and Co., did not come to our knowledge in sufficient time for our last publication, and, therefore, it is essential that justice should be done to this remarkable contribution now. The remarks on fine spinning are quite applicable to this example; but when it is known that, instead of No. 900, Mr. Bazley exhibits No. 1000, or a specimen of cotton yarn spun to the length of 1000 hanks of 840 yards each to the pound, our anxiety to call attention to this fact will be understood: for it will be thus seen, that, whereas Messrs. Houldsworth's contribution counts 430 miles to the pound weight of cotton, Mr. Bazley's counts upwards of 487 miles! The contribution of the latter gentleman illustrates, as a whole, the operations of both the coarse and fine manufacture of cotton arranged parallel to each other, commencing, as already stated, with the growing cotton-plant as the primary stage; and, with the manufactured pieces exhibited by Messrs. Glover and Dunn, places the whole process of cotton manufacture before the visitor, from the finest lace as its highest manifestation, down to the "low quilt," made from mill sweepings and waste.

LACE AND EMBROIDERY.

The many very elegant, and, at the same time, miscellaneous contributions under the above head, render it almost an impossibility to group the leading features in such a manner as to render a glance intelligible.

Nottingham, of course, stands forward as the exponent of machine-made lace, whilst Honiton exhibits the pillow-made lace, for which, with Buckinghamshire, it has been so long famous. The sewed muslins of the north of Ireland again make their appearance here, exhibited by the Glasgow manufacturers, in connexion with Scottish examples of the same class. Limerick displays its laces through the well-known firms of Messrs. James Forrest and Sons, of Dublin, and Abbey Court, Limerick; and Messrs. Lambert and Bury, of London and Limerick. Messrs. Forrest's display is a very elegant one, and is admirably arranged in a glass case, of similar construction to that already noticed as so well adapted to the display of the shawls. The Irish Work Society also exhibits the result of its exertions in the promotion of Irish industry; and the Ladies' Industrial Society of Dublin shows to what an extent the hand labour of the Irish poor has of late been made subservient to commercial purposes and the promotion of social progress. Of course, the machine-made laces of Nottingham display themselves in the largest groups; and the trophy, or tent, formed of party-coloured examples, is a marked feature of this exposition when seen from the opposite gallery, for it is in too confined a locality to be properly seen where it is erected.

As might have been anticipated, the "ladies' work" displayed, or attempted to be displayed, in the department of embroidery and tapestry, is almost fearful in its amount—such as crochet and Berlin wool work, artificial flowers, and flounces. A wilderness of ten-arm mats, antimacassars, needle-work for ottomans, &c., might have been found there, had everything been accepted for which space was claimed. Even as it is, there is more than enough of the examples of industrious idleness with which our ladies manage to cheat Old Time. Still, there is much also to admire; and many a lesson will be learnt by the lady visitors as to methods of production in this kind of work, which, but for this Exhibition, they never might have known.

CARPETS.

Among the glories of the Exhibition must be reckoned its carpets; and the amazing progress made in design as applicable to these articles during the last six or eight years, cannot fail to strike every observant person. The domestic habits of the English are peculiarly favourable to the due development of this manufacture, and it only required the stimulus of an event like this Exhibition to bring out the latent energies and talent of our carpet manufacturers, and place their trade in its true position. The display now made is highly satisfactory, for there is, certainly, much less of the usual style of carpet decoration. In this respect we had, and still have, much to learn; and the absurd notion of ornamenting our floors with effects in high relief, when the chief requirement of such ornamentation is flatness, appears passing away. A floor, whether covered with a carpet or not, is intended to walk upon; and with a series of artistic pit-falls on the one hand, or stumbling blocks on the other, the *rationale* of decorative art as applied to these articles was completely hidden defiance to. Then came the imitation of the French school, in which ornaments represented in high relief—scrolls panels, and even the skies and landscapes of Louis XV.—formed the stock subjects for ornamenting our floors. Happily we are beginning to see our way back to first principles, and, with the great improvements made of late years in the various methods of producing carpets, there has also been an improved practice in their decoration.

The numerous examples of the various classes of carpets now exhibited are to be found suspended either from the girders above the gallery, or hanging down the side of the gallery from the roof girders above. Messrs. Crossley's display of patent tapestry is made upon the wall of the South Gallery, and is one which, in spite of certain defects in the principles of decoration as applied to such examples of manufacture, does infinite credit to the producers. The specimens shown by Messrs. Henderson and Co., of Durham, the respective Kidderminster manufacturers, Messrs. Templeton, of Glasgow, and the results of Messrs. Bright and Co.'s new patent process by which Brussels carpets are printed with the required pattern after having been woven by power, all go to produce a satisfactory display of our national and industrial skill in this direction. The series of carpets manufactured for her Majesty, and hanging from the roof against the gallery above the West Riding department, are very excellent examples of their class; and we trust in due course to be enabled to do full justice to them, as well as to other individual specimens which cannot be so readily quoted at the present time. The effect produced by hanging the carpets from the girders above the gallery, as already quoted, is very excellent. Each example is seen at a glance, and the amount of colour thus distributed throughout the Building materially aids the effect of the general arrangement.

In addition to the carpets exhibited as specimens of manufacture, there are numerous examples of carpets worked by the co-operation of a number of ladies. The most remarkable of this class is one worked for her Majesty by the Lady Mayoress (1850) and 150 ladies of Great Britain, from a design by Mr. J. W. Papworth, under the superintendence of Mr. W. B. Simpson, West Strand. A portion of this carpet is shown as an example, the original having been used at the inauguration of the Exhibition, and was an object of great interest to the visitors on that occasion.

Of floor-cloths there are some very magnificent examples hung in the neighbourhood of the Carriage Court, where they are displayed to great advantage.

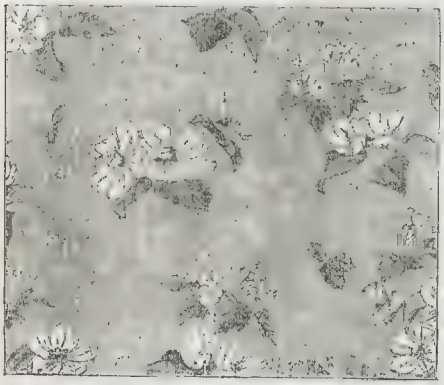
Having thus concluded a rapid sketch of the textile fabrics of the British portion of the Exhibition, and called attention to some of the leading features which characterise the various departments into which they are of necessity divided, we proceed to the

MEDIÆVAL COURT.

One of the great features of modern art in England has been the revival, during the past ten or twelve years, of those ecclesiastical and domestic decorations which characterised the middle ages, and the earnest enthusiasm and profound knowledge of one man has done more to effect this than all the antiquarian lore of learned societies. In contemplating the remarkable exposition now made in the court or apartment devoted to this mediæval display, every one must acknowledge the influence exercised by Mr. Pugin in producing this result; and though our sympathies are certainly not with him in his ecclesiastical predilections, yet for his energy and his talents every one must have respect; and we may trust that in due time time the love of art, engendered by his exertions, may re-act in another direction, and produce more legitimate results than those arising from either merely copying or exclusively studying the art productions of one age.

13.—BLUE AND GOLD POPLIN.—BY ATKINSON, OF DUBLIN.

In the collection before us we have the results of an union of those manufacturers, or art-workmen, whose attention has been more exclusively devoted to the revivals here illustrated, with the designs and superintendence of Pugin. We have the furniture of Crace, the stained glass and metal work of Messrs. Hardman, the stone and wood carving of Myers, and the encaustic tiles of Minton. It is to be regretted, however, that the apartment or court had not been at least twice the size, as, in that case, everything would have been seen to much greater perfec-



14.—PRINT PATTERN.—BY DALGLEISH, FALCONER, AND CO.

15.—TAPESTRY PATTERN.—BY BRIGHT AND CO.

tion. As it is, there is a sensation of huddling together, which the size and height of many of the examples renders more apparent than real, from the fact that distance cannot be obtained to view them perfectly.

We may divide the contents into two distinct departments—that of ecclesiastical, and domestic furniture and decoration. Entering from the north through a passage leading from the central avenue, the stained glass is seen to some advantage under the shadow of the gallery, and passing through a doorway of a suitable form and proportion, the whole apartment presents a very striking appearance. In the centre stands a font of stone-work, very admirably executed by Mr. George Myers, the panels on the sides being decorated with bas-reliefs, and the whole surmounted with a richly carved canopy of oak; and when the font is in use, the centre, which forms the cover, rises into the upper part. On the left, on the eastern side, the great group of ecclesiastical furniture is placed. In the centre is a stone altar, beautifully carved with bas-reliefs of the Agony, Bearing the Cross, and the Crucifixion; the whole surmounted with hangings of rich and varied texture, and with suitable devices, such as the *fleur de lis*, roses, and the sacred monogram. The sconces, candelabra, and chandeliers, all of wrought metal, are remarkable examples of the truthful adaptation of a given material to a special purpose. The lecterns are particularly noticeable, being bold and effective alike in design as in execution. The smaller one, with the sacred monogram for the tablet, and a small figure of St. John the Evangelist as the surmounting ornament, is at once elegant and novel. A highly decorated rood cross occupies the corner, the carving of which is of a very high character. The monumental brasses, the balustrade of a staircase, the gold and silver vessels for the service of the altar, the vestments for the priests, and the tomb of Dr. Walsh, with its admirable encaustic tile escutcheons, are all so many points of excellence to which we would direct attention, amongst the ecclesiastical examples.

In the domestic specimens there is, if possible, a wider field for the selection of excellence; and where there are so many points challenging attention, it is difficult to select. We would, therefore, urge upon every lover of excellence in art to see these examples, and study them closely, and we trust to be enabled, in due course, to assist in such an examination, by pointing out and illustrating those individual specimens which contain the greatest amount of merit.

CHURCH EMBROIDERY.

In connexion with the Mediæval Court, so far as purpose is concerned, but placed on the opposite side of the central avenue, are Mr. Gilbert J. French's examples of church embroidery, foot-cloths, and carpets. Mr French's exertions in this direction are now well known and appreciated; and the excellent character of his productions entitles his display to our attention, in connexion with the larger, though not more complete, manifestation above described. A vested altar of rich crimson velvet, embroidered with gold, and a flowing communion-cloth of ruby velvet, also elaborately embroidered, form striking and beautiful objects in the group before us. These are surmounted with embroidered velvet book covers, of appropriate designs; and the whole of these are surrounded by wall hangings of various patterns, and are placed upon carpets with suitable decorations. The richest example is, in all probability, the least likely to be observed. This is a "fair linen cloth" for the altar, which, from the nature of the material, does not display a damask pattern of stars and sacred emblems to that advantage which could be wished. We hope to be enabled to return to these examples, and examine and illustrate them in detail.

HARDWARE.

It would be a hopeless task to attempt to give even a fair glance at the productions exhibited under this head, embracing, as it does, such a variety of examples. It is requisite, however, for the due performance of the work before us, that we should at least indicate certain leading features of the display. The productions of the great and important towns of Birmingham, Sheffield, and Wolverhampton, not to mention the extensive contributions of the Colebrook Dale Company, whose dome, gates, and fountain form an exhibition in themselves, are most conspicuous. The group of miscellaneous examples of iron casting contributed by this house is arranged at the entrance to the Mediæval Court, and consists of ornamental grates, ranges, stoves, and fenders for domestic use; and, in addition to a collection of works of foreign design, groups and statuettes by English artists, Mr. John Bell and Mr. B. W. Hawkins, in bronze, of which, in due course, we hope to give Illustrations and a detailed notices.

The Sheffield contributions are of a very high class, and Messrs Hoole, Robson and Hoole exhibit grates and mantel-pieces, exquisite alike in design and execution. Messrs Blunt and Smith's collection is also of a very first-rate character; and Messrs. Carr and Steel's examples of grates in bright steel and or molu are especially worthy of notice and examination as beautiful examples of casting and chasing. The court containing the works of the Sheffield contributions presents an extraordinary exposition of the various branches of the hardware trade pursued in that town —that of all kinds, saws, cutlery, in short, speaking in commercial phrase, a complete "pattern card" of the industry of the metal-workers of the north.

Birmingham displays, if possible, a greater variety still, but of a different class of articles. Nearest to the central avenue, and along the passage leading to the Sculpture-room, Messrs. Winfield's display of metallic bedsteads, chandeliers, brackets, and ornamental gas-fittings are placed. Most of these are alike elegant and appropriate in design, the execution being of a very high character. The arrangement of these articles, too, is judicious and effective, but we think the prevalence of red on the walls and floor is somewhat objectionable in contrast with so much brilliant metal. The compound character and the design of some of these examples must be noticed hereafter, and more in detail. Mr. W. Potts exhibits a choice collection of bronzed gas-lamps, girandoles, and chandeliers, the decorative parts of which are worthy of high commendation. Messenger and Sons also keep up the reputation of their house, and, with some exceptional points, present many admirable examples of ornamental casting and metal chasing. Buttons, the multifarious examples of brass-founding in all its various forms as applied to decorative and domestic use, gilt toys, and specimens of jewellery, lock furniture, and ornamental lamps, needles, fish-hooks, candlesticks, and carriage-lamps, with a perfect wilderness of miscellanies, make up the representation of the industry of the toyshop of Europe. Of *papier mache* it would be useless to speak now, as this will require more detailed attention than can be afforded at present; but it is only just to say that the examples displayed, both from Birmingham and Wolverhampton, are of a high class, and such as do full credit to the artistic and executive skill of the producers.

GOLD AND SILVER PLATE.

The rich and varied examples of this class of manufacture are placed in the South Central Gallery, in continuation of tapestry, lace, &c., and immediately over the great group of textile fabrics; and it is only after repeated visits that the spectator can fix his attention upon any example or even group of examples, so manifold are the attractions around. The great group, however, of Messrs. Hunt and Roskell forms an excellent starting point; and in this magnificent display are to be found examples of designs by some of our best artists, wrought out with great skill and effect. Messrs. Garrard, too, keep up the reputation of their firm for taste and excellence in this department; and the elegant displays of G. Angell, Compton-street, Clerkenwell; and J. Angell, Strand; will attract the attention of all admirers of pure taste. The Etruscan adaptations of the former are especially noticeable for their elegance, and the perfect manner in which, whilst the antique forms are preserved, the vessels are adapted to modern purposes. C. F. Hancock, Widdowson and Veale, and J. V Morel and Co., all exhibit articles of the best kind. The equestrian statue of Queen Elizabeth, by the latter house, is a massive and skilful production, and, as a specimen of embossing, is probably unrivalled in this Exhibition.

The Sheffield houses make a much better display than was anticipated, and, without going into the detail of names at present, it is sufficient to say of them, each displays points of excellence to be quoted in due course.

The weight of supporting the reputation of Birmingham has fallen upon Messrs. Elkington, for Messrs. Collis certainly do not appear in their usual force, although there are many points to admire in their productions. Messrs. Elkington's contributions, however, are very varied in their character, and the wonderful examples of electro-deposit as applied to the production of high art specimens render their display of great interest. The statue of Geoffrey, Earl of Gloucester, modelled by Jan. Westmacott, for the House of Lords, and here produced in metal by the electro-deposit process, is a very interesting work. The bust of the late Sir Robert Peel is not to our taste as a work of art. The vase, representing the triumph of science and the industrial arts, is *apropos* to the Exhibition, and though preponderous in design, is clever in execution. The statues of Watt and Shakspeare are very elegant. On the whole Messrs Elkington's display is one of which they have a right to be proud.

In jewellery there is a large and costly exhibition, and one of the interesting features is the revival of antique types for brooches, pins, &c. Messrs. Waterhouse, of Dublin, as also Messrs. West, of the same city, have most successfully adapted the ancient Irish ornaments to the requirements of modern times; and the examples exhibited are worthy of examination, and will claim future attention.

PORCELAIN.

In an admirably-selected position in the north-west gallery of the transept the Porcelain has been arranged, and, as a whole, with good effect; but in many individual instances there is a want of elevation about the stands, which deteriorates somewhat from the effective display of the articles exhibited. Any one who can call to mind the state of our porcelain manufacture some twelve or fifteen years ago, and compare it with the elaborate exposition here made, cannot fail but to be struck with astonishment at the progress made, and that, too, not merely in the high class specimens, but in the commoner articles of earthenware and stoneware adapted to decoration. That great hive of industry, the Staffordshire Potteries, has certainly sent forth on this occasion a full and fair manifestation of its strength; and whether we look at the elegant Parian statuettes of Copeland and Minton, or the substantial but tasteful utilities of Ridgway, we find improvements on past methods characterising the leading features of every department. Could Wedgewood but have seen the results of his talent, his genius, his industry, and his enterprise thus richly rewarded by the manifestation of to-day, and the proof that the trade of which he reared the first healthy plant has grown and flourished until such a large number of his countrymen were sheltered under its branches, his genuine spirit would have been filled with joy and gratitude for the success of his exertions. And here, in the midst, stands the honoured name, "Josiah Wedgewood and Sons, Etruria;" the manufactures exhibited by whom, though excellent in many points, being but a respectable shadow of what such a house ought to have been able to have produced, considering its bygone advantages. The jaspar ware is one of the leading features, and the cameos for which the original house was famous are also shown. The Parian statuettes and groups are tasteful in subject, and in many points excellent in execution, and, on the whole, the examples do not disgrace the name they bear.

The extensive contributions of Copeland, as also of Minton, cannot by any possibility, be done justice to in this glance, and to select from a great a variety in each instance would only create disappointment if we would, therefore, urge upon the visitor the necessity for carefully examining both contributions, and studying the leading features of each; and due time we hope to accompany him, and point out those features of excellence which appear to be worthy of a permanent record.

John Ridgway and Co. exhibit largely, and their tea services are of an exceedingly elegant character. Messrs. Rose, of Coalport, also make an extensive display; and with a great lack of taste and judgment in many points, and a sad want of elementary knowledge in the art, there are many points of excellence which will require special attention. Mason's ironstone china is noticeable for its colour. Messrs. Chamberlain of Worcester, seek to keep up the ancient reputation of "the faithful city" and their own house; and certainly, for richness of effect, we have only seen a more satisfactory group. The tone of the whole display, so to speak, is full and harmonious, and many of the individual specimens are of high excellence. Armitage's semi-porcelain, a comparatively new invention, has not that brilliancy of effect which the examination of former specimens had led us to expect. There are, however, many advantages to be derived from its use; and the examples now shown are artistic in decoration, without aiming at too much—a rare quality in manufacturing art.

The examples of porcelain displayed by other exhibitors will be treated of in due time; but we earnestly call the attention of our readers to this display of native talent and industry, as one which will amply repay examination.

GLASS.

Had this Exhibition taken place seven years ago, the examples of glass manufacture on the British side would have been so ridiculous as to have provoked contempt. Happily, the removal of that fiscal restriction which paralysed our glass trade for so many generations, preventing, as it did, all improvement, and creating a monopoly where freedom alone could be expected to be successful, has enabled us to make such strides in this important manufacture as to place us in a position to become, at least, equal to our Continental neighbours in the production of ornamental glass, whilst it is confessed that we are already superior to them in the manufacture of the more useful kinds. The Crystal Palace itself is an example of this; and when we examine the display made by Messrs. Pellatt, whose magnificent chandeliers, with their prismatic colourings, form a new era in art, we see no reason to doubt our progress towards perfection in the ornamental branches also.

Messrs. Rice Harris and Son, of Birmingham, exhibit a series of most elegant specimens of cut and pressed glass in a variety of colours, gilt, enamelled, and engraved, as also examples of threaded or Venetian glass. Messrs. Bacchus and Sons, and Messrs Lloyd and Summerfield, also of Birmingham, present an exposition of their productions, in which are many admirable examples to be noticed hereafter. Messrs Richardson, of Stourbridge, also make an extensive display of their painted, enamelled, and cut glass, the ornamental being combined with the useful.

The examples of glass for useful purposes are very numerous—rough plate, bent glass, coloured glass for use in stained glass windows, glass shades of unusual dimensions, and whole roofs formed of segments, as illustrative of the increased and increasing use of this material for building purposes. In short, the glass trade of Britain is well and thoroughly represented, and we anticipate that this display will lead to even greater improvements than any yet made in this manufacture.

Quitting the gallery, and proceeding to the transept on our way to the Foreign side of the Building, the trophy of the glass manufacture demands attention.

OSLER'S GLASS FOUNTAIN.

This crowning specimen of the improvements in the glass trade, already quoted, is fitly placed in the centre at the intersection of the nave with the transept. The basin of concrete in which the fountain itself is placed is some 24 feet in diameter, and affords a goodly surface for the falling spray. The structure of glass stands 27 feet high, and is formed of columns of glass raised in tiers, the main tier supporting a basin from which jets of water can be made to project, in addition to the main jet at the top. As the structure rises it tapers upward in good proportion, the whole being firm and compact in appearance, and presenting almost a solidity of aspect unusual with glass structures. A central shaft with a slightly "tipped" orifice finishes the whole, and from this the water issues in a broad well-sized jet, forming in its descent a lily-like flower before separating into a spray, which in the sun-light [illegible] and sparkles in harmony with the fountain itself. Altogether, the work of no mean pretension, and many difficulties [illegible] be a serious bar to the structure put forth by Messrs. [illegible], and, with the experience derived from the execution of this, there can be little doubt of a greater success in some future effort of the same enterprising manufacturers.

ON THE APPLICATIONS OF ELECTRICITY.

It has been observed, that the first successful application of Electricity to the wants of man will ever distinguish the present reign as an important era in scientific history. Those of us living will have to say before our readers, at an early period, an account of the Electrical contrivances and applications of Electricity which are shewn at the World's Fair. First and foremost we must call to mind the very curious and excellent clock, which faces the visitor as he enters Hyde Park, and looks up to the south end of the transept. This clock we described in a former Number, and mentioned that it was the invention of Mr. Shepherd, of Leadenhall-street. Since that period, this same gentleman has added two other clocks, one in the transept, the other at the extreme west end of the Building. Both of these communicate with the main clock by a wire, and thus the time is accurately telegraphed from dial to dial, and all shew the same time. The power is given by an electro-magnet, devised by Shepherd and worked by a form of Smee's battery, which that gentleman has specially devised for the purpose. Mr. Smee recommended the use of mercury into which either pure zinc is placed, or zinc deposited from its solution by galvanic agency. The amalgam is placed in a porous pot, which is suspended at the upper part of a jar. The latter is filled with a mixture of pure sulphuric acid and water; and Mr. Smee considers that this form of battery will prove the most enduring which has yet been devised; and he speaks confidently, that it will probably continue in action for a twelvemonth without any alteration. Mr. Shepherd appears to have brought electric clocks to high perfection; and when the visitor views this interesting inventor, he may not only observe the time of day which they indicate, but may also read an indication of the genius of the age in which he lives.

There are other electric clocks besides Shepherd's. Bain has also examples of electrical clocks; and the French have exhibited an electric clock which requires no less than twenty cells of Daniell's battery to work, and hence is vastly inferior to the English clocks.

With regard to the sources of electricity exhibited, we have large plate electrical machines, by Messrs. Watkins and Hill, a gutta percha electric machine, also Grove's, Smee's, Daniell's, Sand, percolating, and carbon iron batteries, exhibited by numerous manufacturers. There is also a curious battery invented by T. C. Pulvemacher, in the form of a chain, to be worn round the body, and contact to be broken by the motions whilst walking. There are many curious devices for isolating the voltaic force. Mr. Whishaw has exhibited a plan by which the wires are separated in pair, and are fixed in their situation by gutta percha plugs; he has also earthen pipes for a similar purpose. There are other plans, where the wires covered by gutta percha are enclosed by leaden pipes; but perhaps the most interesting of all these devices consists in the heavy iron cases which have been contrived for the purposes of the international communication between France and England, by Messrs Brett and Little. We have, as measurers of the power, galvanometers; and amongst the Foreign department, a Weber's dynamometer, for ascertaining the amount of electrical force when it has been generated. A syphon trough, by Mr. Wellvay, may be occasionally useful; and a battery protector by Mr. Whishaw, to prevent the action of fumes, may be at times usefully employed.

Within the last few years, the discovery of Daniell's battery has led to the carrying out of an idea which has bestowed upon the arts and manufactures a new power of operation in the manufacture of metals, by enabling the artizan to deposit them atom by atom from their chemical solution. The entire range of processes are classed together under the term Electro-metallurgy, and many examples may be seen at the Great Exhibition. One of the most striking specimens of electro deposition is observable in that truly wonderful model of the Britannia Bridge, in which Mr. James has certainly most amply done justice to the merits of the original structure, which will remain as a lasting monument to the genius of Stephenson. This beautiful model adorns the western part of the nave, and it has been made most accurately to scale. Each tube has every rivet represented on its surface, and the tubes have been entirely deposited by galvanic agency. We had the opportunity of seeing this valuable model in process of manufacture. The tubes were made in parts, by depositing the metal upon a type-metal mould. The moulds were placed in a decomposition trough with a positive pole, and the reduction was effected with a Smee's battery, in the ordinary way. The pieces were then accurately joined together, and the whole electro-plated. The piers are of cast brass, and electro silver plated to resemble stone, which they do so accurately, that a practised electro-metallurgist was deceived in our presence. We recommend our readers carefully to examine this model, which shows, firstly, a perfect tube from one end to the other, resting in its proper situation; secondly, one tube in the process of being raised; and, lastly, one floating on the pontoons, swinging round into its proper situation. This model is not only a beautiful electro-metallurgic specimen, but also gives an accurate idea of the grand national structure which it represents.

It is an interesting fact, that the first article in the catalogue is a jewel case, gilt and silvered by the electrotype process, with small electro medallions, modelled from life by Leonard Wyon. We had an opportunity of examining these works of art in the studio of the artist; and no one could fail to recognise the advantage of transferring to metal those free and delicate touches which the artist alone could give to wax. This work was ordered to be executed for the Exhibition by her Majesty, which sufficiently shows the estimate the Queen has formed of the advantages of electricity to the wants of man, by honouring the Exhibition by an example of one of these adaptations which so peculiarly distinguish the present time. For thousands of years medals and coins have been struck from a die; and, until the accession of her present Majesty, it would never have been possible to have made an electro medallion, simply because the process had not been discovered. This specimen has not yet arrived at the Exhibition. In electro bas reliefs Elkington stands pre-eminent; and he has adapted the most beautiful specimens to enrich sideboards and other furniture. Again, in electro statues he excels; and a very noble example is exhibited in the statue of the Duke of Gloucester, executed for the House of Lords. In electro-plating, Elkington also excels; and he has shown a noble vase, which has been designed expressly for the Exhibition. Connected with electro silver plating, the visitor must not fail to notice the bright plating invented by Mr. Lyons. He accidentally observed that when a few drops of bisulphuret of carbon were dropped into the silver solution, the silver was deposited as though it were polished. We nearly passed these specimens, from their having been placed in the room devoted to machinery.

Several other countries have exhibited electro-silver plated and electro-gilt works; and, as far as the mere gilding or plating is concerned, they must be considered as fully equal to those of the English, though, as far as the design and splendour of the objects are concerned, the British have unquestionably the pre eminence.

As far as regards electro-gilding and plating, specimens may be found in all parts of the Building. Amongst surgical instruments and

OPENING OF THE GREAT EXHIBITION.—ENTRANCE OF HER MAJESTY AND HIS ROYAL HIGHNESS PRINCE ALBERT

OPENING OF THE GREAT EXHIBITION—THE ROYAL PROCESSION.

philosophical apparatus, amongst ornaments of every description, articles gilt and silvered in this manner may be found [illegible] and buttons, hinges and dish covers—in fact, every kind of [illegible] article has received the advantage of the electro plating and gilding processes; so that the application of electricity for these purposes is on the most extensive scale in most European countries.

The ILLUSTRATED LONDON NEWS has occasionally taken advantage of the perfect mode which electro-metallurgy affords of multiplying printing surfaces, and there are not found wanting exhibitors who have profited by this important discovery. The Government are of this class, as in the western extremity of the Building specimens of the Ordnance maps are shown. The plates from which these maps are printed are made of copper; and at Southampton the copper plates are multiplied, altered, or joined together, as occasion may require, by processes carried out by Mr. Geddes, under the superintendence of Captain Yalland. The apparatus at that station is very complete, the troughs being kept in motion by mechanical contrivances, and the power obtained by enormous examples of Smee's batteries. It is much to be regretted, that the copper plates have not themselves been exhibited; but, perhaps, it is not yet too late to remedy the defect.

Messrs. Delarue and Co. have also enriched the Great Exhibition by taking advantage of the power of electricity to multiply printing surfaces. At their interesting stall a novel display of playing cards are exhibited. The backs of these cards are embellished by designs of great excellence; but having produced one surface block, it is multiplied by the ordinary precipitating trough and Smee's battery to an undimited extent, and thus Messrs. Delarue are enabled to issue cards of a more beautiful description than would be possible by previous methods. It is much to be regretted that these gentlemen, like the superintendents of the Ordnance, have not thought it a matter of sufficient interest to exhibit a few of their electrotypes; but these eminent manufactures have fallen into the common error of supposing that that which is known and daily adopted at their wonderful manufactory is not novel and curious to the rest of the world.

In the exhibition of the articles of gutta percha we have also elaborate designs, which have been formed by electro moulds; but here we observed no moulds, but only the works which have been obtained from them. In the same category fall the embossed copies of coins by Mr. Barclay. He has exhibited many excellent specimens of Greek coins from Col. Leake's collection, which we know to have been embossed from electro moulds; but the moulds have not been exhibited, which we can but view as an important omission, but which, as in the case of the Ordnance specimens, may be remedied.

Electro-metallurgic depositions on retorts and evaporating basins have been exhibited by Mr. Edwards; and this process, which for some time has been much employed, forms a very useful protection to brittle articles.

The catalogue contains a notice of a galvanic arrangement, by Mr Crosse, for purifying water and preserving animal substances; but we could not find it in the Exhibition, from the numbers not being properly placed. We missed, also, what is described in the French division under the name of the "galvanic pontiae." The present defective state of the numbers and catalogues renders the task of reviewing extremely laborious.

In the western part of the nave Mr. Gould has exhibited a monumental brass, with copper deposited upon brass in certain positions, to heighten the effect.

Before the Exhibition opened, we had an opportunity of examining a very curious mode of etching hard steel by the disruptive voltaic discharge invented by Mr. Pring. It is a process very little known, but is well worthy the attention of manufacturers, and it is a process adapted for females, as it requires no exertion of physical strength. The process requires an electro-magnet, with six cells of a Smee's battery.

The scientific public are looking forward with great anxiety to ascertain how far magneto-electricity is applicable for manufacturing purposes; and with regard to instruments of this character, Mr. Henley certainly has effected the greatest result. This well-known mechanician has exhibited a very large and powerful magneto electric machine, the armature of which he has formed somewhat in the shape which the magnetic curves would naturally take. He states that as much as 10 CI of mixed gases are given off per minute—a result which gives great importance to this engine. This mechanician has also exhibited a magneto-electric telegraph, which we have seen exhibited at the Friday evening meetings at the Royal Institution, and which has given great satisfaction to scientific men. It appears to have great facility in its manipulation; but experience must determine whether the magneto-electric machine is preferable to the battery and needle telegraph, though, as appearances go there is every appearance of its being a successful invention.

Specimens of magactic plate are expected by Prince and Son, of Birmingham.

Mr. Henley has exhibited also an electro magnet of great power. It is stated that with fifteen of Grove's batteries it possesses such attractive force, that considerable care is required not to approach a bar of iron within two or three inches; and in one instance a man's hand was bruised from being drawn rapidly to the magnet, from his holding in his hand a bar of iron. Whilst we were inspecting the electrical apparatus, we were startled by some terrible shrieks; and on turning round to ascertain the cause, we found that one of the workmen had been decoyed to try the power of one of the machines, and, to the no small delight of the beholders, screamed with terror when he felt the effect, declaring that no money would have induced him to have tried the experiment if he had known that he would have been racked in that manner. We warn the gentle sex not to venture to try this machine; but if they can coax any sleepy gentlemen companion to take a shock, they will be much amused at his lively movements; in fact, he will be served as *Prospero* promised *Caliban*.

> I will rack thee with old cramps;
> Fill all thy bones with aches; make
> Th at beasts shall tremble at thy din

The application of electricity for the conveyance of [illegible] has been very amply represented at the Great Exhibition. In the first place, the telegraph has been carried round the Building, to give information from place to place, and also to Scotland-yard. The apparatus used by the Telegraph Company with the needle instrument, is shown. Many varieties of printing telegraphs are exhibited, including Bakewell's, which is competent to transmit the identical handwriting of the operator. Electric telegraphs, for domestic and hotel purposes, are shewn; and one which is denominated the comic telegraph, is worth a passing glance. The electric indicator, by Mr. Ritter, is a very useful contrivance to give warning of fire or thieves. The battery employed is an ingenious modification of Smee's battery and is charged with Rochelle salts instead of dilute acid, the whole arrangement being so designed as not readily to get out of order. There are other contrivances, to give notice from carriage to carriage by means of galvanic agency; but it would be impossible in a general article to give more than a cursory account of electricity as a medium of telegraphic communication.

Electro magnetic machines have for a long time past been great favourites with medical men, as experience has shown that this form of electricity is particularly applicable for the cure of disease. In this department, Messrs. Horne and Thornthwaite have most excelled, and these have certainly produced a very noble specimen of an electro-magnetic machine. It gives an intermittent current of electricity, but always in the same direction. It is so contrived that the power of the shock may be regulated with the utmost precision, so as to excite at one time the most terrible shocks, at another the most gentle contractions of the muscles. It would contribute much amusement, if the exhibitor would keep it in action, and agitate each of the sturdy muscles of our country friends as would like to try the experiment. The different contrivances which medical men adopt to apply the electricity to various purposes are also manufactured in first-rate excellence, and leave but little to desire upon this score—the only drawback being that the contrivance is already in the hands of the majority of the medical practitioners of this country, and therefore possessed of but little interest to those who seek novelties. There are other forms of medical machines by various exhibitors: some so small as to be called portable machines; others so large as to be really quite pieces of machinery; but, with the exception of Pulvermacher's battery before mentioned, they are all electro-magnetic machines, and we believe that all give a to and fro current, except that exhibited by Messrs Horne and Thornthwaite.

There is a model of a chair with a Grove's battery behind, intended, it is presumed, to show its application for medical purposes. All physiologists and electricians are aware that a number of cells are preferable for medical purposes; and, if such be its intended application, it must be regarded as a retrograde movement in medical electricity.

Professor Norton has exhibited his galvanic arsenical apparatus for the detection of the mineral.

Connected with the subject of electricity, we cannot refrain from noticing the beautiful models illustrating the anatomy of the torpedo, which have been modelled by order of the Grand Duke of Tuscany, and which are shewn in the Foreign department of the Building. These exquisite representations should be carefully examined by all who are interested in the structure of the electrical fishes.

As a motive power, electricity has not been considered by scientific men to be particularly applicable, on account of its apparently increased cost over steam. The Exhibition is not rich in illustrations of the application of electricity to machinery; but there are two or three models contributed by Mr. Knight and other exhibitors.

For the purposes of lighting, electricity is also considered unfavourable in an economical point of view; but still Mr. Allman, according to the Catalogue, has furnished an electro lamp. Messrs. De Lenil and Co. and Messrs. De Bebosq have also exhibited electro lamps. We searched in vain the building round for the electro magnetic apparatus which is said to have printed American papers; also for the decomposition apparatus, which is meant to give off hydrogen alone, the description of which had lately occupied so much space in the transatlantic newspapers. We apprehend that such contrivances are not adapted for buildings made of glass, which allow the object to be illuminated at every point, and it will turn out that they can only act in a darkened apartment, where the visitors cannot see all that is taking place.

When we review the applications of electricity at the Great Exhibition, we cannot but be sensible that the specimens exhibited are of a degree of excellence far before anything we have in public view. Within ten short years, the whole of these applications have been conceived by the scientific man, and adapted by the manufacturer and mechanic to the wants of man. Whilst, however, extolling this gaudeamus display, we can hardly be insensible that scarce any novelty has been added to the World's Fair: in fact, that everything which has been exhibited has been rather a super-excellent specimen of that which has been known, than an example of any new discovery. This statement must be highly suggestive of a moral to the political economist: for, whilst it clearly demonstrates that excellence of mechanical detail and execution can be purchased for money, it also shows that inventive and other results of the higher powers of mind can only be brought forward under favourable circumstances, in a naturally gifted individual, and are not to be purchased at any price. The first practical appliances of electricity will render the reign of Queen Victoria famous in scientific history; and, upon the whole, the Prince Consort must receive the congratulations of the English nation for the beautiful specimens which his Royal Highness' Exhibition has brought forward, and which, by itself, is able to give a stamp to the present age which will be interesting for all time.

As far as the applications of electricity are concerned, England unquestionably bears the palm both in the variety of purposes for which this force has been employed, and also for the excellence of the articles which have been produced; and not only does England in this matter show its pre-eminence over any single country, but it has far surpassed the combined competition of all the other countries of the globe.

CIVIL ENGINEERING AND BUILDING CONTRIVANCES.

THE SUTRESTIONS of the nave and transept at present collect together by far the largest bodies of visitors; and the more utilitarian sections of the Exhibition are, as it were, almost deserted. But the case will be otherwise when the doors are opened to the useful body of the people—that large and important class, who, by their united efforts, have made the Exhibition what it is. So little frequented, indeed, were the galleries on the north side of the *British* nave up to Saturday last, that articles were not only misplaced, but also injured, without the perpetrators being discovered. If anything can show the desirability, nay, absolute necessity, of the exhibitors being at once admitted to the Building to protect their own property, surely, the absence of proper supervision, such as we have mentioned, must convince the Royal Commissioners that a revisal of their unexpected decision as to excluding exhibitors from their own domains is imperatively called for. We have thought it necessary to mention these facts, as there is a large amount of valuable property distributed in the galleries of the British division of the Building.

The direct approach to the class now under consideration is from the staircase north of the British nave, and nearest to the western entrance. There are nearly one hundred and eighty exhibitors in this class, among whom we discover the names of some of the most eminent civil engineers in this country; and many others of equal standing are also here represented by models of their works, exhibited either by companies, or by those who have constructed or become proprietors of the models. But, before cursorily noticing the principal objects of interest in the gallery, our attention was specially called to two models of bridges, which are among the chief ornaments of the western or British nave.

The first is an accurate and highly wrought representation, by Mr James, of the largest suspension-bridge in the world, being a mile in length, designed by, and executing under the direction of Charles Vignoles, an English engineer of eminence, and now chiefly resident in Russia. This bridge, which crosses the Dnieper at Kieff, is half a mile in length, and consists of the massive suspension piers and two sets of chains on either side, from which depend the vertical iron bars, to which the strongly under-trussed roadway is attached.

The other model is of the great Britannia Bridge—a work sufficient of itself to immortalize Robert Stephenson, the distinguished engineer. This model was executed by Mr. James, of Broadwall, who, by perseverance and great ingenuity, has contrived to represent every plate, bolt, rivet, and angle iron throughout the gigantic structure. Mr. E. Clark, who superintended the works while in progress for Mr. Stephenson, is the exhibitor.

Near to the above models is one on a larger scale, exhibited by Messrs. Finch and Willy, of Liverpool, who constructed the original extraordinary-looking bridge, designed by Brunel, over the Wye, at Chepstow—which consists of four spaces or openings, three of which measure each 100 feet, while the fourth extends to 300 feet—the roadway of which is suspended, by vertical rods, from a wrought-iron elliptical hollow beam.

Before leaving the nave, we must direct the attention of our readers to the Dioptric Revolving Light apparatus, of Chance Brothers, of Birmingham, who supplied all the glass for the Crystal Palace; and also to Wilkins's Improved Catadioptric apparatus for a similar purpose.

In this cursory notice of some of the principal objects in this important and highly interesting portion of the Exhibition, it will be impossible to do more than merely allude to them; but all the more important inventions, models of works, either executed or proposed, will be fully described and illustrated on future occasions.

Returning to the north-western gallery by the staircase already mentioned, our attention is at once arrested by a large and well-executed model of Mr. Dunbill's design for a proposed suburban live and dead cattle market, of 80 acres, with *abattoires*, &c. It is to be hoped that this model will call the attention of the million of landowners who will visit the Exhibition, to the all-important subject of removing the many nuisances connected with a cattle market in the midst of the largest city in the universe; and that they will leave no stone unturned to effect the annihilation of the almost numberless slaughter-houses now polluting the atmosphere of the metropolis.

Models of bridges, either executed or proposed, form an important feature in the space allotted to civil engineering and building contrivances.

John and Benjamin Green, of Newcastle, Captain Samuel Brown, Messrs. Hunt and Gandell, Captain Moorsom, and George Rennie, in addition to Charles Vignolles, E. Clark, and Messrs. Finch and Willy, already mentioned, are the principal contributors.

The Messrs. Green, of Newcastle, exhibit a large model of one of the laminated wooden arches of the Wellington Viaduct, on the North Shields Railway. The advantages of this mode of bridge building are economy in the first cost, and the rapidity with which arches so constructed may be put up; but there the great difficulty of preserving the timber in such exposed situations, notwithstanding the various nostrums proposed, is a formidable barrier to the general introduction of this light and elegant description of bridge.

The veteran Captain Samuel Brown, the inventor of the Chain Bridge, exhibits, among other things, a model of the Brighton Suspension Pier, one of the first of the kind executed, and which has led to the adoption of this pleasing form of pier and bridge by many of the first engineers of Europe, in cases where the traffic is not of a ponderous character. The fairy-like structure of the great Telford over the Menai Straits aptly serves as an illustration; for so soon as the heavy traffic of the Holyhead Railway was anticipated, a new bridge of great strength was designed and carried into execution by Mr. R. Stephenson, while the lighter traffic of the Holyroad-road is still carried over the original structure.

Messrs. Hunt and Gandall contribute a well-executed model of their design for an architectural bridge to cross the Thames at Westminster. The whole, including the cloisters on either side, is in perfect harmony with the style of architecture of the Palace of Westminster.

Captain Moorsom was the first engineer in our country to introduce the railway lattice bridge from America: this he first effected on the railway between Birmingham and Gloucester, and he has since erected, over the Nore, in Ireland, a handsome bridge on the plan, a model of which appears in this division. The same gentleman also exhibits a model of his design for the proposed bridge over the Rhine, which gained for him the second prize.

Mr. George Rennie also exhibits a model of his design for the proposed bridge over the Rhine at Cologne, and also models of skew bridges.

There are many other models of the works of the civil engineer in this part of the Exhibition, which will no doubt attract considerable attention when the gay and glittering scenes below shall have satiated the crowd, who especially seek after novelty in its most attractive form. We shall at present merely mention some of the more important articles exhibited in Class 7, which we have not already noticed.

The Commissioners of northern Lighthouses exhibit a great variety of lighthouse apparatus, by Alan Stevenson, of Edinburgh. In the same division Mr. T. Stevenson, also of Edinburgh, contributes revolving lights and other apparatus connected with this important subject.

The Lords of the Admiralty having given directions that a model of the Plymouth Breakwater should be exhibited at the Crystal Palace, the same has been accordingly deposited. The lighthouse, designed by the eminent engineers, Walker and Burges, is executed in silver, the whole being further illustrated by sectional and other models.

The model of the shield of the Thames Tunnel, the great work of Sir I. K. Brunel, is exhibited by Messrs. T. Dorkin and Co., who constructed this ingenious and extraordinary piece of mechanical contrivance, and assisted the engineer in the invention.

HOROLOGICAL SECTION.

A great portion of the Central South Gallery, and also a part of the western, or "Great Organ Gallery," are appropriated to a grand display of clocks and watches, including chronometers of every description, and from most of the great manufacturers and British horologians of the present day. The most conspicuous objects in this division are—the *Alpha* clock of Mr. Roberts, of Manchester, which stands on the north side of the western gallery. The peculiarities of this clock are—first, the use of cast-iron for all the wheels except that called the "escape wheel," and the substitution of an endless chain for the ordinary rope, so that the drum, and one of the two weights ordinarily used, are dispensed with. Mr. Bennett's four-faced clock, which is placed on the south side of the western gallery, to match the "Alpha." Messrs. Smith and Sons' large turret clock, the works of which are enclosed in a glass case, and which, on a careful inspection, will be found to contain many valuable improvements.

The other most conspicuous objects in this department are Sheppard's electric clock, which has been already recently described in the ILLUSTRATED LONDON NEWS, and the simple and beautiful works of which are enclosed in a glass case in the South Transept Gallery; and, finally, Dent's turret clock, which is very visible in an elevated position in the British portion of the nave. A great novelty in connexion with this clock is the bell, constructed of union metal (cast iron and tin), far more sonorous than the ordinary bell-metal, and of about one-third the price of the former. The weight of this bell is about 18 cwt. The inventor is Mr. Stirling, a gentleman of fortune, living near Stirling, North Britain.

The regulators, chronometers, pendulums, and other improvements in horological apparatus, which are collected together in the Central South Gallery, would alone form a highly interesting exhibition.

Mr Frodsham exhibits a beautiful astronomical clock, various marine chronometers, day of the month watch, gauges for the admeasurement of watch-work to the thousandth part of an inch, and other important improvements.

Messrs. Sm th and Sons exhibit, in addition to the turret clock already mentioned, a 400-day skeleton time-piece and almanack, a new self-compensating pendulum regulator, with compass, perpetual almanack, barometer, and thermometer, and several other ingenious and useful horological contrivances.

Mr. Hutton exhibits, among other articles, his glass and metallic compensation pendulum.

Bashaw's centimetral chronometer, with movable ring, for taking velocities on railways with the greatest accuracy, and for other purposes; and the uniformity of time clock and telegraphic annular counting of the same gentleman (the former made by Johnstone, and the latter by Messrs Smith and Sons—all of Clerkenwell, deserve attention.

To enumerate all the other beautiful clocks, chronometers, movements, and other apparatus in the horological department, would occupy more space than can be allowed at present, but the most important of which will be described and illustrated in subsequent Numbers.

CARRIAGES AND LOCOMOTIVE ENGINES.

Man has been variously described as a cooking animal, as a laughing animal, a tra[illegible] animal, and by no end of other attributes, as the culinary, [illegible] rational, or other feelings of the describer predominated; but, [illegible] we walked through the compartment of the Crystal Palace devoted to carriages, cabs, locomotive engines, and other means of conveyance, we could not help thinking that he might be quite as appropriately described from the brute creation by the definition of a coach-building animal. Nor was this opinion weakened on our way home through Piccadilly, crowded with cabs, omnibuses, and every description of vehicle, conveying hundreds of passengers, here, there, and everywhere

From the days of the charioteer Jehu, who, we are told in Scripture, "drove furiously;" from the days of the old Assyrians, Ninevites, and Babylonians, of whom we have the sculptured representations as they appeared in their chariots of war; from the days of the Olympic chariot races; from the days of the ancient Britons, who, Cæsar tells us, garnished their coach-wheels with scythes, down to the present time, when fast men drive about in Hansom cabs; when hard-worked mechanics take a shilling trip by railway into the green fields; and when even the poorest occasionally indulge in a threepenny omnibus to Camden-Town, or other suburban retreats—we have continued evidence of other means of locomotion than the two legs with which nature has endowed us.

Yet, notwithstanding this antiquity of the practice of riding in carriages, coach-building, as we now understand it, is of but comparatively recent date in England, being no farther back than the reign of Elizabeth

Stow tells us, that, "In the yeere 1564, Guylliam Boonen, a Dutchman, became the Queene's coachmanne, and *was the first* that brought the use of coaches into England; and, after a while, divers great ladies, with as great a jealouse of the Queene's displeasure, made them coaches, and rid up and down the countries, to the great admiration of all beholders; and then, by little and little, they grew usual among the nobilitie and others of sort; and within twenty yeeres became a great trade of coach-making."

Anderson, in his "History of Commerce," makes the use of coaches in England even later than this, and says they were introduced by the Earl of Arundel about the year 1580. For a long time they were exclusively confined to the wealthy classes; and it was not till the year 1625 that coaches were let for hire, when they stood at the principal inns in London. In 1637 there were in London and Westminster only fifty hackney-coaches.

From coaches let for hire, the next step in England was the introduction of stage-coaches, which very soon after 1636 were established. These, the immediate precursors of the omnibus for short distances, and railway for longer ones, bring us down to our own day. Of mail-coaches, the first ran between London and Edinburgh about the year 1785; and the next, from London to Glasgow, in 1788; from which time, spite of the intricate reticulation of railways, which now like a cobweb covers the map of England, with its thousand branches, they have continued down to this day; and in many a country village may still be seen the round red face of the coachman, as he pulls up at the door of the little roadside inn—still may be seen the bustling ostler, as he releases the smoking team from their harness, to give place (as has the system of which they are a type) to fresher, stronger cattle—still may be heard the guard's official note as he winds his horn on starting—vestiges, though they be of an age which, though all but our own, has been miraculously hurried into the past by the omnipotent power of the steam-engine.

From the sedan-chair and the cumbrous barge of the days of Elizabeth—luxuries that none but the higher classes could indulge in to the excursion train and the penny boat of our own, how great a change! How great a change, too, from the heavy, lumbering vehicle which Guylliam Boonen constructed for his Royal mistress, to the light, the graceful, and commodious vehicles we see exhibited in the Crystal Palace! There are easy, comfortable Broughams, which speak of competence and easy-going thorough gentility. There are dog-carts, with wheels whose spokes of slender rods of iron look like greyhound's legs—all lightness, though all strength—that speak of reckless, daring speed. Stylish barouches, which suggest the fashionable lounging drive along the Park, rich and aristocratical. There are state carriages, which tell eloquently of Royal *levees* and drawing-rooms, and mingled with these—as in this world suffering is ever mingled with enjoyment—are invalid carriages, wherein the sufferer may enjoy the air of heaven, the while all carefully propped up with the softest pillows; and that no stage of mortal man's career may be omitted, Shillibeer exhibits an improved and patent hearse!

Amongst the collection of carriages we were pleased to notice two attempts at an improvement upon the old knee-crowding, dress-crushing, temper-destroying, headache-causing omnibuses we have so long been familiar with in the London streets. They are larger, and are made very high, so as to allow room for a very excellent ventilating apparatus. This is certainly a step in the right direction.

In this department there is one object which especially calls for notice. No 868 is a light open park wheel chair, with glass panels, painted with allegorical representations of the seasons. It is very beautiful and tasteful in design. And a barouche (No. 863), the body of which is in the form of a shell, is well worthy of attention.

In the Railway Department there are several inventions exhibited—inventions for safety, and inventions for comfort; for speed, and for strength. There are improved locomotive engines, and improved carriages. Of the former, two mammoth engines stand prominent, the "Lord of the Isles," contributed by the Great Western Company; and the "Liverpool," by the London and North-Western. The "Lord of the Isles" was built for the Great Western Company, at their works at Swindon, and is capable of taking a passenger train of 120 tons at the rate of sixty miles an hour. It is of 743-horse power, and the weight of the engine and tender when in full working order is 82 tons 13 cwt. The cylinder measures 18 inches in diameter, the length of stroke 24 inches, and the maximum pressure of steam 120 lb. The driving-wheel is 8 feet in diameter. This engine, large as it is, is catalogued as "one of a *standard class* of engines constructed for this company for passenger traffic." As in opposition to this is a beautiful little fairy like engine, called the "Little England," adapted for light traffic, a pretty little toy that we could fancy conveying a "ladye faire" to the arms of her lover. Then there are railway carriages made of *papier mache*! and others in which we have an illustration of "beauty unadorned," being unpainted, and leaving the wood—an exquisite specimen of East India Moulmein teak—uncovered except by a thin coat of varnish. There is a very elegant model of a Royal State railway carriage, with a promenade round the outside; there are new signal apparatus to prevent accidents; modes of communication between the passengers and the guard; improved breaks, buffers, and railway appointments generally, that would well nigh promise that the day of railway accidents had passed away for ever.

Before we quit the subject of carriages, we must we may be allowed to mention one fact in connexion, not with the Exhibition itself, but with one of the results of the expected passenger traffic in the streets of London. From the 1st of May, the day of the opening of the Crystal Palace, the omnibus proprietors, expecting, no doubt, that notoriety would prevent their making their fortunes this year, raised their fares from 3d. to 4d. What has been the result? Spite of the thousands of people we have continually seen at the Exhibition—*the omnibuses are empty!* This is significant, cheapness is the order of the day. To [illegible] dear stand, return to monopoly; and we would suggest to the proprietors of the vehicles in question, that they should consult the pages of Cocker, who will inform them that twelve passengers at 3d. will pay considerably better than six at 4d.

ON THE ORIGIN OF THE FORCES WHICH HAVE BEEN EMPLOYED IN THE MANUFACTURE OF THE ARTICLES EXHIBITED

As a prelude to our description of the various mechanical and chemical applications which the Great Exhibition so abundantly contains, it appears desirable that a short notice should be given of the principles which regulate the production of the forces which are employed by mankind in the numerous manufactures. It is the exclusive privilege of the human race to generate these forces; and, although other animals may exercise enormous muscular force, or generate electricity or light within their own frame, man alone can make the candles, the battery, the steam-engine, and employ them to obtain the desired results. In the production of all these forces, one uniform law is observed, which the philosopher and the mechanic must explicitly obey, for every effect must have its antecedent equivalent cause; or, in other words, the most trifling operation is always preceded by some other change which produced it. In this country the steam-engine lends its mighty aid to the arts and manufactures above all other instruments of power; and when the visitor views the mighty hammer of Nasmyth, he should carry his mind back to the boiler from which issues the steam, and from the boiler to the fire, which is the immediate source of the effects which the gigantic hammer produces. All the effects which he will witness through the multifarious machines, however intricate they may be, are referable to that primary change in the fire-place where the coals combine with the oxygen of the air, and the products of that combustion are carried away and diffused through the atmosphere. The results produced by the machine have a proportionate antecedent change in the fire-place; and howsoever intricate and complicated the intervening mechanism may be, the result can never be increased beyond the force which has arisen from the combustion of the coal, or, chemically speaking, by the union of the carbon and oxygen.

Nor can the less known, and apparently more mystic power of electricity, be brought to bear to perform any heavy operation without a corresponding change of matter. When the silversmith plates or gilds his ornaments, we have a result which has arisen from a change of matter in the battery cell. As the silver or gold is deposited atom by atom in the electro-metallurgic trough, the zinc is also wasting in the battery. We thus perceive that the operator has substituted zinc for coals, when he employs voltaic action instead of the engine and boiler. When we examine the clock which moves by electrical force, the telegraph which silently carries the message to distant places, the statues which have been made by electrical agency, or the superb ornamental designs which have been gilt or silvered in a similar manner, the mind is immediately carried back to the change in the battery which is the primary cause of the result which is observed.

In the Exhibition noble castings in bronze and zinc appear. The metal in the hands of the cunning artificer has yielded the cohesion of its particles; and, under the power of the workman's fire, has become so fluid as readily to take a cast of the most minute workmanship which the artist could impress upon the yielding wax or the moulding clay. Here, again, the casting of the objects must be considered with the heat of the furnace, the heat with the change of coke or charcoal into carbonic acid, by means of its attraction, not less than the fire-place requires its accession of fuel, or the lamp its replenishing of oil

In perambulating the multifarious passages of the Crystal Palace, and even in viewing the noble edifice itself, the student cannot properly isolate from his mind that not one column could have been formed, not one of the most delicate fabrics constructed, without those who have manufactured them having been supplied with adequate nutriment, and without the machines employed having been moved by the effect of a change of matter.

All the triumphs of human skill displayed in the vast Building, together with the very structure itself, have been produced by some change of matter which constituted the source of power. It is within the power of man to generate power in this manner to assist him in carrying on his operations; but he is necessitated to employ a power proportionate to the result which he desires to obtain; for no method can be in any way increase the amount of power when once obtained, or cause it to produce disproportionate results

Having thus taken a brief review of the sources of power by which these articles have been produced, we shall be in a condition to examine the particular advantages of all of those which shall have sufficient merit to demand a special examination.

Still the curious investigator will descry the lively Daguerreotype and the charming calotype, and may be tempted to exclaim, "Here is a production made by immaterial agency; here is a result or effect produced without a previous change of matter to constitute its cause." In this case, however, no less than in the preceding, the light is artificial, the camphine lamp or naphthalised gas is the agent by which a change takes place which is the primary source of the effect by which the picture has been delineated. Doubtless the Exhibition contains specimens of pictures formed by light and engraved by electricity; yet even these noble triumphs of science have only been achieved by acting upon the law, that to produce any change, some other change is required.

The steam-engine and furnace may require their coals, the lamp its oil or naphtha, the battery its zinc, to combine with oxygen to give its power to man, but yet objects will appear where great effects have been produced by the hands of man himself. Cannot the marble group be cut by the sturdy arm of man, and cannot the beautiful lace be prepared by the delicate hands of females? In viewing these beautiful works the mind may for an instant forget the source of power from whence these results have arisen. Nevertheless, modern science has amply indicated, that the delicate finger cannot make one slight movement, or the sturdy arm give one blow without a change of the materials in the human body, which requires food for its renovation.

PICTURE-PRINTING IN COLOURS.

THE present state of this art, which has attained to considerable importance within the last few years, is admirably shown in the various examples contributed to the Fine Arts court.

As long ago as the middle of the fifteenth century we find ornamental initial letters, printed in two or three colours, by the Germans; and several specimens of picture-printing in chiaroscuro are now extant that were executed early in the sixteenth century. These attempts were continued at intervals, and were improved on by an Englishman, John Baptist Jackson, about the year 1740; and afterwards, about 1780, by another Englishman, named Skippe: but these, it must be understood, were mostly imitations of sepia or Indian-ink drawings, and not, properly speaking, colour printings. In the year 1818, William Savage published a quarto volume, entitled "Practical Hints on Decorative Printing," which contained some bold and clever illustrations of the art of colour-printing; but, as far as regards its adaptation to the representation of pictures, we know of nothing further being done with it, until Mr. Baxter took out a patent for printing in oil colours from wood blocks and steel plates conjointly, and produced the illustrations to the "Cabinet of Painting," published by Chapman and Hall in 1836. Since then, various books-plates, some good, and some bad, have been produced by the same process; and, in 1844, Messrs. Collins and Reynolds, pupils of Mr. Baxter, executed some very creditable colour-pictures for the "Old Story books of England." These were done with wood blocks only. Mr. Baxter's patent expired about a twelvemonth since, when he applied for, and (thanks to Lord Brougham) obtained, a renewal of the privilege, and since then has produced a series of small colour-pictures, which, we understand, have met with a very extensive sale. Many of these pictures are exhibited by Mr. Baxter in one large frame. They are meritorious in their execution, pretty and pleasing, but most of them are inartistic, and some of them are from very bad drawing. The best are a copy of Raffaelle's "Madonna," which has a very finished look, and a new picture of the Great Exhibition Building.

Messrs. Leighton, of Lamb's Conduit-street, are the next exhibitors of wood block colour-printing, and we must say that the imitations of water-colour drawings which they have produced rank much higher as works of art. There are certain outlines and shortcomings which we would fain see corrected; but, with all their blemishes, their copies of drawings by Wehnert, Lee, Absolon, Weir, and Noble, must rank as the best contributions in this branch of the art. Messrs. Leighton do not use an engraved steel plate, as Mr. Baxter does, but gain many gradations of tone by means of mezzotint metal plates, worked in the same way as the wood blocks. In each of the four pictures in the Exhibition we find traces of about sixteen to eighteen different printings.

Passing to the other side of the court, we find a number of examples of colour-printing by the lithographic press. First, we come to Mr. Owen Jones's exquisitely printed flowers and fruits. These are as near perfection as we ever expect to see in works of the class; both the delicacy of tone and the deep richness of colour of nature are most admirably presented, and far surpass in effect the efforts of ordinary water-colour painting. We should like to see Mr. Owen Jones try an imitation of one of Lance's fruit-pieces, or Mrs. Margett's flowers—not that we doubt his power of rendering them beautifully, but that we wish to see how far the art can be carried.

We next find a frame containing Messrs. Hanhart's productions, and these make us linger long. The copy of Mr. Creswick's "Forest Farm" is excellent—in some parts as good as can be hoped for, especially the sky, the far distance, and the trees; the farm-house is not quite so successful; but we hear that Mr. Coventry, to whose hand-craft this work is attributable, promises a more perfect copy at a second proving of the stones. But Mr. Frederick Taylor's "English Squire," lithographed in colours by John Brandard, is Messrs. Hanhart's pride; and well it may be. We do not hesitate to claim for it the highest praise; and we doubt if there is a work of imitative art in the whole Exhibition showing more artistic skill, and more untiring patience, than is evinced (to those, at least, who know the necessary process) in this remarkable work. The subject is very pretty: an old English Squire and his daughter, with their attendants, all on horseback, accompanied by a falconer bearing the hooded hawks, are passing by some peasant children at a gate. The riders and their dresses, the horses and dogs, and esp[illegible]ally the little children, are all exceedingly drawn, and full of beautiful colour. We are sure that nineteen out of every twenty visitors would believe they were looking at an original water-colour drawing, were it not for the announcement beneath it, and the unfinished copies, showing some of its various stages, that are displayed in the same frame. If the reproduction of a good drawing be a good service, Messrs. Hanhart and Mr. Brandard deserve the thanks of every lover of art.

Messrs. Hullmandel and Walton next show excellent specimens of their lithotint drawings; and then we come to Mr. Day's splendid contribution, "The Destruction of Jerusalem," by David Roberts, lithographed by Louis Haghe. This is a very extraordinary production—the largest picture, we believe, ever drawn on stone, and certainly a most successful one. It is hardly an example of colour-printing, for there are but two or three tint-stones used; and it is more for its grandeur as a work of art than for any application of a new art that we admire it. The published drawings of Roberts's "Holy Land," lithographed by the same artist, are too well known to need more than a passing word of commendation.

Of Mr. Kronheim's elaborate copy of "The Descent from the Cross," on which it is said some large sums of money have been expended, we cannot speak with praise. It may be mechanically—it certainly is not artistically—good. With most of the minor specimens of this interesting art that are exhibited, we are all sufficiently conversant.

SCULPTURE.

(SECOND NOTICE.)

IN proceeding to resume our observations upon the productions in Sculpture, brought into honourable competition in the Great Exposition of the Arts and Industry of all Nations, a sense of the importance of the subject induces us to consider the subject upon a broader basis, and with more reference to fundamental principles than is thought convenient or agreeable in ordinary newspaper criticism. We cannot but recollect that this is no common exhibition-room, where producers expose their wares in the way of trade, to ensnare customers and procure bread, but a field of generous rivalry, to which artists from all quarters of the world have been invited, with a view, by a comparison of their various productions, to increase the common stock of knowledge as regards the legitimate resources of the art, and to award premiums to the most meritorious performances. All who have answered to this invitation have, by so doing, challenged criticism, not only as to individual merit, but as to comparative excellence, and have a right to demand it. The public, also, who have so cheerfully and substantially supported this great cosmopolitan *reunion*, and who look to derive instruction from the field which it opens, would equally have good ground to complain of a dereliction of duty in those who pretend to write for their guidance and information, if, from motives of false delicacy, or upon other grounds less excusable, the journalist were to shirk the task of criticism, or weakly and injudiciously perform it.

It may be gathered from the few general observations which closed our last week's brief notices in this department, that the result of the very casual survey we had been able to make of the works in sculpture sent for exhibition in the Crystal Palace had by no means elevated our previously entertained notions of the *status* of the plastic art in this country, much less prompted a favourable comparison with other nations in the same school. Subsequent and careful inspection has only confirmed us in this unsatisfactory conclusion; and has, moreover, led to the conviction that the cause of our failure is more deeply seated than is generally imagined by artists and their admirers.

Want of patronage is the common cry with artists, as with actors and men of all professions who happen to fail of success commensurate with their own estimate of their merits. Like Danaë, the coy genius of sculpture is only to be won by a shower of gold; forgetful that the shower of gold did not make Danaë what she was when she attracted the discriminating gaze of the Thunderer. Let our patronage-hunters in the plastic art bear that in mind of the frail Danaë, and let them also consider whether the allegory might not with truth be carried a little further, and the inducement of gold lead to the ruin of art, as it did of Danaë. But, indeed, as to the complaint of want of money-patronage, we consider it peculiarly uncalled for as regards sculpture, which, having reference to the number of hands employed in it, is more lavishly rewarded than any other branch of art, to say nothing of the miserable crumbs which fall to the share of many more intellectual pursuits. St. Paul's and Westminster Abbey, in both of which whole mines of wealth have been distributed amongst the hewers of stone and the moulders of clay, are witnesses to what we assert. The squares, too, each with its costly bronze or marble occupant. The Nelson Monument was no mean job after its kind—whilst the Triumphal Arch comes like the rod of Aaron to swallow up all the jobs of the preceding half century. In short, is there a site of ground throughout the country where a testimony to departed worth can possibly be put up, which will not one of those days be so occupied? Is there a single issue of the *Times* without a testimonial subscription list? The ancient Greeks, it is true, had their Pantheonic mania likewise; but their tributes were to gods, and heroes almost deified; and the men employed in producing these still unequalled works, brought to bear all the resources of their art in depicting, rather than embodying the principal subject in the most perfect and appropriate forms a deep study of the human figure could suggest, with only such an amount of accessorial decoration as might be absolutely necessary to indicate the character and state of the personage represented. We, having no plurality of gods to worship, no old historic heroes to engross our wonder and exhaust the resources of our art, too generally content ourselves with mere imitations of

16.—CENTRE-PIECE.—BY SMITH AND NICHOLSON

17.—CANDELABRUM.—BY M. ANDRE.

18.—CENTRE-PIECE.—BY SHARP

gross humanity, individualising nature in her thousand imperfect manifestations, and completing each new portraiture with the addition of details which high art would disdain to notice. Upon this point we find some appropriate observations, so judiciously and so ably stated by Sir C. L. Eastlake, P.R.A., in a paper inserted in the appendix to the third Report of the Commissioners on the Fine Arts (1844), that we readily quote them, in preference to enlarging upon the subject in weaker language of our own:

"The colour of white marble, which, it appears, may sometimes increase the illusion of drapery, is not the only quality by means of which some substances may resemble nature more literally than the marble flesh can. The qualities of smoothness, of hardness, of polish, of sharpness, of rigidity, may be perfectly rendered by marble. It is not easy to conceive a greater accumulation of difficulties for a sculptor aiming at the specific style of his art to contend with, than the representation of a personage in the modern military dress. The smoothness and whiteness of leather belts, and other portions of the dress, may be imitated to illusion in white and smooth marble. The polish, the hardness, and sharpness of metal, and the rigidity even of some softer materials, are all qualities easily to be attained in stone; yet the white marble flesh is required to be nearest to nature, though surrounded by rival substances that, in many cases, may become absolute fac-similes of their originals. The consequence of the direct and unrestrained imitation of the details in question is, that the flesh, however finished, looks petrified and colourless, for objects of very inferior importance, even to the buttons, are much nearer to nature. The objection to these details, from their unpleasant or unmeaning forms, is here left out of the account.

"The boldness with which the ancient sculptors overcame similar difficulties is remarkable. Thus, to take an extreme case, rocks, which, in marble can be easily made identical with nature (thereby betraying the incompleteness of the art in other respects), are generally conventional in fine sculpture, witness the basso-relievo of Perseus and Andromeda, and various examples in statues where rocks are introduced for the support of the figure. In order to reduce literal reality to the conditions of art, the substance, in this instance, is, so to speak, uncharacterised: the same liberty is observable in sculptured armour as treated by the painters, sharpness is avoided, and the polish does not surpass, sometimes does not equal, that of the flesh. In like manner, steps, or any portions of architecture, are irregular, and not geometrically true in their lines and angles: on a similar principle, probably, the inscriptions on the finest antique medals are rudely formed; for it cannot be supposed that the artists who could treat the figures and heads so exquisitely, could have been at a loss to execute mechanical details with precision."

Now mark the contrast between the past and the present. Whilst the ancient sculptors were so engrossed with the diviner part of their work, the living figure, that they studiously avoided the too accurate delineation of subordinate objects, whether of decoration or attire, lest by comparison these should detract from the *ressemblance* of the former, modern sculptors, beginning too often with the most humble attempts at portraiture, and other branches of imitative art, are content to atone for the lamentable shortfalings of the living part of their subject by slavish copying of a button hole, or a leather strap, or worsted hose. And have they not their admirers? Undoubtedly they have, and the name of them is legion—a public who will stare and wonder at the workmanlike finish of a helmet or a jack-boot, but have no appreciation of the sublime inspiration or a jack-boot, but have no appreciation of the sublime inspiration evinced in the various speaking and all but breathing relics of the antique.

It would appear, therefore, that, as between artists and the public, there are faults on both sides, which, when they both begin to understand what is worthy of them, may gradually be removed. With these general observations, which we may follow up from time to time in the course of these notices, we now proceed to remark upon some of the works in the Sculpture Gallery of the Hyde Park Exposition.

19.—GROUP OF BRONZES.—BY VITTORY.

The Sculpture Room is a small, ill-lighted, and overcrowded apartment, which, being entered through the gaudy Mediæval Court, points significantly to the retrograde path of art. The first object that strikes us in the centre, at the extreme end, is a statue in marble of her Majesty, by Francis, which unhappily illustrates many of the errors of prejudices and of taste we have suggested in the preceding paragraphs. The head is as singularly devoid of dignity as the figure is of grace, being indeed completely buried in the cumbersome trappings of Royalty; the artist having made no effort to contend with the natural heaviness of his material, by indicating through it the bearing of the limbs. On either side of this figure are two other productions by different artists, which afford examples, though not in equal degrees of turpitude, of the diversion of the sculptor's art to subjects altogether unworthy of and inappropriate to it. One of these, which is by Mr. T. E. Jones, presents a very rough, but not very truthful, portrait of a Shetland pony, upon whose back two children are seated, whilst a third, scrambling on the ground, offers to feed it; a full grown Scotch deerhound completes the already redundant group, which is obviously borrowed from Landseer, and is named The other subject referred to is Mr. Bell's "Innocence." The female figure, who has left a comfortable character is seated upon a sheepskin, which has evidently been the chief object of the artist's solicitude. In order to distract attention still further from what ought to be the principal subject, Mr. Bell has decorated the king of the forest with a wreath of flowers, elaborately twisted, and has set sparkly high relief, the colours picked out with yellow, which not only covers the neck and mane, but extends behind the female figure round to the animal's starn, whilst a single rose disengaged from the rest occupies a prominent position in the foreground of the base. Could the force of ingenuity go further to destroy the "unity" of a composition? In another part of the room, Mr. Bell's "Babes in the Wood" exhibits a similar instance of mischievous ingenuity heaps of leaves, and a branch of a tree, upon which is perched a bird, being prominent above the principal

objects, and breaking the graceful outline which in works of sculpture is a condition essential to beauty.

Still more glaring instances of ignorance of the higher purposes and legitimate resources of the sculptor's art are to be found in Sharp's plaster group, "Christ's Charge to Peter," where the sheep and a bunch of keys are the actualities of the piece, the figures exhibiting a lamentable ignorance of the structure of the human body; and in "Christ bearing his Cross," where the sculptor has introduced an absolute wooden cross, some seven or eight feet long, which could not have been carried in the way he has placed it in the arms of his figure. We notice these productions, not for any pleasure of fault-finding, but for the purpose of emphatically pointing out to the thousands who will visit this room, and who may read these lines, what to avoid.

20.—TRITON FIGURE FOR A FOUNTAIN.—BY M. ANDRE.

Against the walls are two large bas-reliefs by Mr. Carew, which exhibit considerable merit of intention, though with much of ine quality and weakness, and, perhaps, we might add, carelessness in the execution. The first in importance is "The Descent from the Cross," of which it is remarked, that, although it covers a very large space, the interest of the scene is confined to a very limited portion of the base. The upper part is occupied by the cross, and an indication of rays of light, which, perhaps, the artist designed to turn to effective account on the execution of the work in bronze or marble, but which, it must be obvious, only colour or gilding could realise. Mr. Carew has

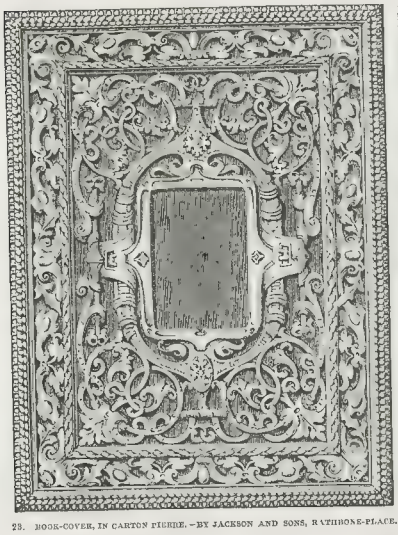
22.—FRAME FOR A LOOKING-GLASS.—BY HANSON.

shown less anxiety to find subject-matter to fill his ground than Rubens, in his great work on the same subject, though the latter had all the resources of his florid pencil to fly to, and could have occupied the whole of the upper part of his canvass with aerial effects, had he been so minded. In the principal group of Mr. Carew's work, the head of Christ stands out with remarkable effect, the light falling upon it so as to give it all the pator of death. The heads of the Apostles are of less merit, and disappoint us by the utter want of sympathy and veneration which they betray for the precious burden in their hands. They are all looking off the picture, in a downward direction, as if calculating the steps by which they are to descend with safety. The female figures, also, which are a good deal scattered, appear to be each so overwhelmed with her own particular grief, that they none of them show any solicitude about the divine object which has brought them together, and no sympathy for one another. The boy on the right is an intruder. The consequence is a want of *ensemble*, to say nothing of a want of truthfulness to nature, which must considerably militate against the success of the piece. Mr. Carew has very abundantly draped his figures, but he has done it in that broad massive style, which is sometimes very effective in painting, but which, is always heavy in sculpture, and suggests the suspicion that it has been resorted to to avoid the trouble of going into anatomical details. The "Baptism of Christ," Mr. Carew's other bas-relief, is less elaborate and ambitious than the preceding work, consisting, as it does, of two figures only. Still, in these two, we perceive a want of judgment—the build of the limbs being brawny, not to say heavy, a character, quite out of keeping with the personages represented, while there is little attempt at dignity to realise the sublime poetry of the scene. Mr. Carew is more at home in his smaller work, a plaster figure of "Whittington." The face is very expressive, as in the act of listening to the distant sound of Bow bells. In the costume, however, there is the same shirking of difficulties, the whole figure being buried in coat and trousers of the thickness and unyielding texture of leather.

Mr. Evan Thomas's bas-relief, "The Spirit of Science unveiling Ignorance and Prejudice," has many pleasing and creditable features; as, for instance, the dazzled and awe-struck expression of "Ignorance," at the moment of being unveiled before the light of truth, and the sitting figure of "Prejudice," wrapped in a thick and impenetrable cloak beneath. The rest is rather commonplace, particularly the figures of the two youths receiving instruction, on the other side of the picture, and who do not sufficiently balance the composition.

21.—VASE—BY M. ANDRE.

Conspicuously in the midst of the room is a table, covered with the models for statuettes sent in to compete for the prizes of £100 and £50 munificently offered by the Art Union of London for such objects. We would by no means disparage the kindly intentions of this body in affording encouragement to the development of our native genius, however small the modicum of reward, provided the field of competition selected be such as



23. BOOK-COVER, IN CARTON PIERRE.—BY JACKSON AND SONS, RATHBONE-PLACE.

24.—BLOTTING BOOK-COVER.—BY C. YE

25.—GROUP OF BRONZES, &C., BY MENE.

cally to afford opportunities for improvement, and to encourage industry in a legitimate way. But when the committee of the Art Union fancy that by the offer of £100 they will induce twenty or thirty competent men to set themselves to work devising and perfecting an original subject for a statuette which shall be of any merit as a work of art, or be worth even the expense of casting as a table ornament when completed, they labour under a very great delusion, a delusion which the present display made in answer to their call ought for ever to dispel. These gentlemen appear to have begun at the wrong end, and to expect to find, by the door, minds imbued with genius, and with practised hands, ready to answer to their call; whereas, the utmost they should have sought to promote by their limited munificence were the executive abilities of students in the art. This might perhaps best have been done by selecting some one or two of the well-known groups of the antique, in the Museum or elsewhere, as models to be imitated in statuette size; and with a view not to confine the candidates too slavishly to the task of merely copying, we would not altogether have prohibited a latitude in adaptation, modification, or additional attitude to the purpose. We merely throw out the suggestion, as affording, possibly, the means of release from the dilemma to which all schemes for competitions in works of art are necessarily more or less subject, and opening a legitimate school for study and improvement to our future Bacons and Flaxmans.

We cannot quit the Sculpture-room, without recording our meed of praise of the "Greek Hunter," by John Gibson, which is exhibited by its owner, Lord Yarborough. Here is no crude imitation of nature, which artists often copy without understanding what nature is, or should be; here is evinced a mature study, a ripe appreciation of the best classic models, after all, in the present state of art, the best and surest types of excellence. In *plastique*, the model is well chosen or the subject, nervous, wiry, and athletic. The muscular development is carefully studied, and without exaggeration: the intent and animated expression of the face is true to the occasion; and the general finish of the flesh texture—mark alone that above the instep of the right foot—approaches perfection. We need not despair of excellence in the higher walks of art, when such works as this come from British hands.

We shall return to many creditable productions in this room in the course of our critical survey, but we must close our remarks for the present.

THE HISTORY OF INDUSTRIAL EXHIBITIONS.

BY WILLIAM BLANCHARD JERROLD.

(Continued from page 373.)

CHAPTER II.—*(Continued.)*

THE second official exposition of French industry, like the first, was dedicated to the anniversary of the Republic.* France was still at war, but the Peace of Luneville had already been signed, and the preliminaries also which had been negotiated between France and England were to be signed in London only a few days after the proposed opening of the second exposition. Encouraged by the pacific aspect of affairs, the manufacturers made prodigious efforts, and the result surpassed the most sanguine hopes of the Government. The Louvre was the scene of this second national exhibition. Two hundred and twenty exhibitors were admitted to the competition—about double the number of those who had figured in the first exposition. The Government, recurring to the first exposition, had decided that the same number of prizes which had been distributed on the former occasion should suffice for the present; but the rapid advances which the manufacturers had made within the short space of three years, proved at once the insufficiency of the rewards; and it became necessary, in order to meet the progress which had been made, to set aside the seven manufacturers who had obtained gold medals at the first exposition, and eight of those who had already obtained silver medals. From this necessity arose the custom adopted in subsequent expositions, of voting only the confirmation of previous rewards in favour of those who maintained honourably their acquired position. At this exposition ten gold, twenty silver, and thirty bronze medals were awarded.

In the year VI. no manufacturer of woollen goods was classed among the prizeholders of the first order. In the year IX. Decretot re-appeared with goods as delicate and beautiful as those which he had brought to perfection at Louviers, before the revolution of the year VI. Terneaux Brothers had hardly gathered together the ruins of their fortune and manufactures; in the year IX. they had raised the products of Sedan. Rheims, and Verviers once more to their original perfection, and their workshops resounded with the clatter of five thousand looms.

Before the Revolution, French manufacturers depended upon foreign wool for their finer fabrics; but the exertions of Chaptal (who has been called the Colbert of the nineteenth century) changed the face of affairs in this respect, for we find that in this second official exposition there was set apart for the display of French woollen fabrics manufactured from the fleeces of the Spanish breed of sheep naturalised in France. Thus, within a few years, the rearing of the merino sheep and their coarse raw material challenging comparison with those of the Peninsula. The jury, in the name of France, acknowledged the debt of gratitude due to MM. Gilbert, Tessier, and Huzard, three members of the Institute, "for the zeal and perseverance with which they have watched over and improved native wool." (*Report, year IX.*)

In the year VI. the highest degree of fineness to which native manufactures spun cotton was No. 110, and this number obtained a prize in the exposition of that year; the exposition of the year IX. contained cotton spun to the degree No. 250.

The Baron Charles Dupin declares that in the year VI. the cotton fabrics of England without doubt surpassed those of France; and he refers to the products exhibited at the second national exposition, consisting of velvets, nankeens, stockings, &c., to show how rapidly his country had advanced towards that degree of excellence which he allows English goods to possess indubitably.

The manufacture of leather had also made extraordinary advances within the same short period. At the time of the first exposition, only the most common leathers were dressed in France: in the second exposition were found moroccos from Choisy le Roy, that might have challenged comparison with those of Turkey. The carpets of Sallandroye, the china of Sèvres, the earthenware of Sarreguemines, and the beautiful printing of Didot, Herhan, and Pranoen, were especially commended by the jury.

Names which will be known as long as an enlightened patriotism and commanding talents receive the homage of men, were included among those of the members of the central jury on this occasion. We should mention Berthollet, Berthoud, Guyton de Morveau, De Prony, Vincent the painter, and M. Costaz, the framer of the report. At this exposition the ground Jacquard obtained only the bronze medal for his important improvement in Vaucanson's loom. M. Burat, commenting upon the insufficiency of the prize awarded for so important an invention, warns us not to blame the jury for holding Jacquard's improvement in a comparatively trivial light, inasmuch as the manufacturers and weavers themselves hardly deigned to bestow a moment's notice upon it.

The history of the Jacquard loom has its moral. "Until its introduction," Mr. Bishof writes in his history, "the production of the superior figured silks depended solely on the skill of the weaver, and that to a degree which few attained. The necessity of extreme carefulness and skill is now considerably diminished; in other words, the production of the most costly fabrics is laid open to a large number of operatives. Jacquard was originally a manufacturer of straw hats; and it was not till after the peace of Amiens had been signed that his attention was attracted to machinery. Happening one day to take up an English newspaper, his attention was arrested by a paragraph, in which the Society of Arts (to their honour be it recorded) offered a premium to any person who should weave a net by machinery. Dr. Bowring, who had a personal interview with him many years afterwards, tells us that the perusal of this extract awakened his latent mechanical powers, and induced him to turn his thoughts to the discovery of the required contrivance. He succeeded, and produced a net woven by machinery of his own invention. It seems, however, that the pleasure of success was the only reward he coveted; for as soon as accomplished he became indifferent to the work of his ingenuity, threw it aside for some time, and subsequently gave it to a friend as a matter in which he no longer took any interest. The net was by some means at length exhibited to some persons in authority, and by them sent to Paris. After a period elapsed, in which M. Jacquard declares that he had entirely forgotten his production, he was sent for by the Prefect of Lyons, who asked him if he had not directed his attention to the making of nets by machinery. He did not immediately recollect the circumstance to which the Prefect alluded; the net was, however, produced, and this recalled the fact to his mind. The Prefect then rather peremptorily desired him to produce the machine by which the result had been effected. M. Jacquard retired three weeks for its completion; at the end of which time he brought his invention to the Prefect, and directing him to strike some part of the machine with his foot, a knot was added to the net. The ingenious contrivance was sent to Paris, and an order was thence dispatched for the arrest of the inventor."

Here, Dr. Bowring is in error. Napoleon's order was to the effect that M. Jacquard should be conveyed to Paris with all possible dispatch; and the spirit of those who interpreted the Imperial command led them to believe that nothing less strict than an arrest could be meant in the case of a man who threatened to injure the weavers of Lyons so seriously.

On his arrival in Paris, he was installed in the Conservatory of Arts, and set to work to make his machine on a large scale. He fashioned everything with his own hands; the wood-work and the iron-work were shaped by his dexterous and unerring arm. It is related of him that one morning he paused from his labours to consider the principle of a most complicated machine invented for the purpose of weaving a shawl for the wife of Napoleon. "His body bent, with his hands resting on his knees, which was indeed his ordinary attitude, his eyes were busy in every corner of the machine, and a droll smile half quirked his lips as he inquired of the *directeur* under whose orders the workmen were employed—

"'Rather an expensive job that, sir!'

"'Twenty thousand francs!'

"'Diable!' exclaimed Jacquard; 'why in yonder corner is a machine, by Vaucanson, which, with a little attention, would answer the same purpose, and would not cost more than five hundred! It is a pity that serious attention is not paid to Vaucanson's clumsy invention, for it contains the principles of all combinations in weaving: I must look to that.'

"And away posted Jacquard, and shutting himself up in the workshop allotted to him, set to work with the saw, the chisel, and the plane. At first he constructed from memory a model of Vaucanson's machine, for he thought it would be convenient to carry to Lyons as a curiosity for his wife. Then, with the model before him, he made alterations; brought the principle to better application simplified it. Nothing wearied his hand, nor fatigued his brain, while he thus laboured in the construction of a machine the most remarkable in its combinations, and the most wonderful in its results. Now and then, indeed, the perspiration would hang upon his forehead. His arms bare, his shirt sleeves tucked up to the elbows, and singing a Lyonnese air, as his busy plane kept time on the rough timber, the door of the chamber suddenly opened—it was Napoleon, the First Consul

"'Well! Master Jacquard, my spinning machine?'

"'Premier Consul, it is completed.'

"But I cannot recognise, in the machine before me, even the form of the original model.'

"'Why, truly, the machine on which I am now employed is not for spinning, but for weaving silk stuffs, with this you may weave shawls like that intended for your wife.'

"'Is that its only use?' inquired Napoleon.

"'The idea is not entirely my own: Vaucanson inspired me with it. This machine, sir, this little trifle which you see here, contains, as I said yesterday, the sole principle of all combinations in weaving. It will simplify the labour of the weavers of articles of luxury, and will allow the workmen of Lyons only to be like other men are, without making them bundy-legged and hump-backed. You little know, sir, to what contortions of body—to what fatigue—the poor creatures are subject! The head workman, seated on a high stool, is compelled to fling out his legs right and left, to give the proper direction to the threads which the pattern and fashion of the work require. One or more workmen are employed to put the cords in motion: for this task, which is torture itself, children and young girls are employed; we call them *tireuses de lacs*. The unfortunate little creatures cannot go through their occupation without forcing themselves into positions which engender disease, check their growth, and sow the very seeds of disease. With the blessing of God, I hope the machine I am now about will remedy all this."

"The First Consul took the mechanic by the hand, and said, 'Jacquard, you are a noble citizen!'

"He was sent back to his native town with a pension of a thousand francs, which was subsequently raised to six thousand francs. Notwithstanding the patronage and approval of Government, he had the greatest difficulty to overcome the jealousy and prejudice of the silk-weavers; and so great and blind was the animosity of these artisans against him, that he was more than once in danger of losing his life at their hands. On one occasion, a threatening crowd assembled before him in the public square of his town, to be sold as rubbish, and himself to be held up to public execration as an enemy of his species. The experience of a few years, however, sufficed to change the aspect of affairs totally; and he had the ultimate satisfaction of witnessing, not only the success of the increased facility of production effected by his invention, that the looms of Lyons were enabled to compete with foreign markets."

The three years that intervened between the first and second expositions were fruitful with astonishing results. The classes of manufacturers were stimulated by the promising aspect of the first exposition, to represent as completely as possible the industrial skill and taste of the country at the second. The manufactories, that in the year 1798, were almost deserted, had resumed their wonted air of activity—Sedan, Rheims, Louviers, Sèvres, and Sallandrouye were again prosperous Thus, the first great experiment, made in the midst of revolutionary clamour, and in the excitement of successful warfare, had undoubtedly the salutary effects of revivifying the dormant energies of the industrial population, and rescuing the manufactures of the country from the low state into which they had inevitably fallen during the rapid current of public events, when civil wars were waged to defend a sentiment, or to satiate a demagogue. The whirr of the looms burst once more upon the ear as the sword sank into the scabbard; and France, as she shook off the hideous nightmare of her revolution, turned gratefully to count again those serene triumphs which the industry and skill of Lyons, Sèvres, and Louviers had won for her in the face of the civilised world.

CHAPTER III.

NATIONAL EXHIBITIONS OF INDUSTRY UNDER NAPOLEON.

The three years which intervened between the first official exposition of France and the second were marked by rapid advances in all departments of agricultural and manufacturing skill. The impetus thus given by the first exposition was redoubled by the second; and the third, and, although only twelve months intervened between it and the third exposition, the progress that had been made within that year was found to be almost unprecedented. As the number of competitors at the second of those expositions had exceeded that of the first, so did that of the third exceed that of the second. The utility of such exhibitions had been fully proved by the two experiments; and on the third occasion the triumph of a generous competition were evinced in a remarkable degree. M. Van der Weyen, speaking of Industrial Exhibitions, very pertinently affirms, that, "had similar competitions taken place earlier, the world would earlier have benefitted by many of the discoveries of modern times; and even the most important of those inventions—the steam-engine—would not have been left for other hands, had due publicity been given to the Marquess of Worcester's early experiments."* The careers of Jacquard and Vaucanson fully bear out the learned Belgian's position; since we find that the attention of the former was originally called to mechanical inventions by an advertisement issued by the London Society of Arts, and that the result of his ingenuity was published to the world through the means of the official exposition of France; while Vaucanson obtained his first public reward and acknowledgment at the third official exposition of his countrymen's skill and industry.

Several instances are on record of inventions having remained unnoticed and unrewarded for years, and then suddenly come into use. The fly-shuttle, which was not introduced into the weaving of cotton till more than twenty years after its invention; and the apparatus for spinning by machinery, said to have been invented by a Mr. Wyatt of Lichfield, so early as the year 1735, but of which not even a model now remains

"William Lee, a clergyman, invented the first stocking-machine in 1589, and made a pair of stockings by his frame in the presence of James I. His invention was discountenanced, upon the plea that it would deprive the industrious poor of their subsistence. He went to France, where he met with no better success, and died at last of a broken heart."†

The most remarkable feature of the exposition of 1802 was the progress it showed in the application of machinery and chemistry to industrial improvement. Twenty-two gold medals were distributed on this occasion. Among the prize-holders were Aubert, who exhibited his stocking-frame; Montgolfier, who sent his hydraulic ram; and Vaucanson, who produced his silk-spinning machine. This machine has been alluded to in a previous chapter, as that which suggested to Jacquard the idea of the invention which has immortalised his name. These inventions, destined to change the face of the commercial world, to provide labour for the yearly increase of the populations of civilised states, and to lay the foundation of the brilliant era which is now dawning upon the world, though they were received as productions worthy of the most honourable prizes, did not create that enthusiasm which great improvements in machinery now call forth. Indeed, in those times the industrial world, so narrow was its view, regarded improvements in machinery as invasive of the mechanic's best interests. The words in which M Jacquard's machine was described in the report of his jury were suggestive. In proportion to the general enlightenment of a people is the popularity of an inventive genius. When, in the year 1669, M. de Gennes made his first attempt to weave by machinery (his loom is described in the "Philosophical Transactions" for 1700‡), his efforts created little attention, and probably, not the faintest applause; and when Hargreaves discovered his ingenuity in the cotton-jenny, his skill was rewarded with persecution. Even now, men exist beyond the walls of Bedlam, who look with a longing gaze to the weavers of Bandar Abassi, who, like the Hindoo weavers, perform their work in the fields. They would be glad to see the spinning jenny and the Jacquard loom cast aside or burnt, and behold the Spitalfields weaver lay his warp upon the ground, dig a hole for his feet, and work with a reed tied to a tree for his shuttle. "Yet," interposed Col. Fereroe to Thomas Thompson, who was called upon to argue the question of "machine breaking" so late as 1830, "if Noah and his family, when they came out of the ark, had held a council upon the best way of providing themselves with the comforts of dry land, it would have been a strange line of argument for one of the household to have pointed to the stock in trade which had escaped the deluge, and said, 'This is a plough,' and by harnessing the clean beasts to it, you would do six times as much work as with the spade; therefore, break the plough, and take the spade. Your wife, too, has a spindle, with which she can spin so many threads in an hour; but I could show her a way that would not spin half as much. Let us be machine breakers, and then we shall all be comfortable." The benefits of machinery, however, are easily proved; but it has been a hard fight to persuade the hungry workman, temporarily deprived of his employment by a few ingeniously-contrived cog-wheels and cranks, that he should hail the advent of his present enemies for their promises of future good. It was, therefore, a bold step, when manufactures were once more reviving in France, as the tides of revolutionary blood retired away, to award gold medals to such inventions as Aubert's stocking frame, and Montgolfier's hydraulic ram.

MM. Décroiselles, of Rouen, and Amfry and Darset, of Paris, were also the recipients of gold medals as rewards for the excellence of their mineral products. The attention which French chemists have for a long time given to the production and perfection of dyes, has won for the dyes of France a reputation which we are only now endeavouring to equal. From the remote antiquity when the purple wool (the sacred symbol of Royal and sacerdotal dignity), which formed the staple article of Tyre's commerce, was valued at a hundred crowns, experiments have been constantly going forward, to extract various colours from a thousand different substances, both animal and mineral. Hardly a plant, an animal, or a earth, like the *terra de Sienna*, but has been experimentised. Gage, Cole, Plumier, Reaumer, and Duhamel have endeavoured to extract a purple, like the famed Tyrian dye, from various shell-fish, but without success. The hundred fifty, and the Minister of the Interior of fifty. The premiums offered at first amounted only to small sums but the Parisian Society of Arts and Manufactures of the present day tempts native talent by the annual award of vast amounts. The youth of France is urged fully to enter into the quinquennial competitions which their government calls them to engage in. Sir David Brewster, in the course of his introductory address, delivered in July, 1850, to the British Association for the Advancement of Science, when referring to the encouragement which the various governments of France had unanimously accorded to the arts and sciences, said very pertinently:—"Owing to the prevalence of scientific knowledge among all classes of the French population, and to their admirable system of elementary instruction, the advancement of science, the diffusion of knowledge, and the extension of education are objects dear to every class of the people. The soldier as well as the citizen—the socialist, the republican, and the royalist—all look up to the National Institute as a mighty obelisk erected to science, to be respected and loved and defended by all. We have seen it standing unshaken and active amid all the revolutions and convulsions which have for so long agitated that noble but distracted country—a common centre of affection, to which antagonist opinions, and rival interests, and dissevered hearts have peacefully come to rest. It has become an institution of order, calculated to send back to its contending friends a message of union and peace, and to replace in stable equilibrium the tottering institutions of the state. In a great nation like ours, where the higher interests and objects of the state are necessarily organised, it is a singular anomaly that the intellectual interests of the country should, in a great measure, be left to voluntary support and individual zeal—an anomaly that could have arisen only from the supineness of ever-changing administrations, and from the intelligence and liberality of a commercial people—an anomaly, too, that could have been continued only by the excellence of the institutions they have established."

It is necessary to recapitulate the overwhelming advantages which the French mechanic has long had in artistic education over the English mechanic. The recent introduction of Schools of Design sufficiently demonstrates the difference that has existed between the chances of the competing workmen; and when even now, shall we find gratuitous schools in London for drawing and painting similar to those which exist in every one of the twelve arrondissements of Paris? These fine national institutions have yielded to France the reputation which she now holds of leading in matters of taste, the manufactures of the world. Under the sagacious rule of the Emperor the commercial value of art was fully recognised; and although four years elapsed between the third exposition and the fourth, no time was lost in the interval.

On the occasion the national exhibition of industry was held in a spacious building erected for the purpose on the Esplanade of the Hôpital des Invalides. It is only necessary to compare the textile goods manufactured in France in the year 1806, with those manufactured in the year 1806, to see at once the marvellous rapidity with which improvements had been introduced. At this exhibition the printed cottons of Mulhausen and Fogelbasch (manufactures which have been ever since highly prized in every quarter of the globe) were seen to their appearance.

The elegance of design and beauty of dye for which these manufactures are still celebrated, have saved the manufacturers of Alsace from irrevocable ruin. Mr. Bishof thus fairly shows, from the statistics of a Mulhausen manufacturer, M. Koechlin-Schlumb, that it has long been impossible for a Rouen or a Mulhausen manufacturer to compete with a Manchester cotton firm. The case stands therefore simply thus—that while France has been developing the artistic genius of her workmen, the people of England, less sensitive, from the want of national education, and perhaps constitutionally, to the beauties of form and colour, have advanced in the power of simple production. Manchester can produce a printed calico at a greater speed than Rouen, but Rouen can imprint the finer designs and dyes upon its fabric.

Cotton lace, blonde, silk thread, cloth, imitations of Cashmere shawls, and various mixed textile fabrics, also illustrated the manufacturing progress of France, in the industrial exhibition of 1806. In the manufacture of iron and porcelain progress was decidely shown These cheering results of Napoleon's vigorous efforts to restore the manufacturing prosperity and reputation of his country were manifested in the last exposition which took place under the Empire.

It is noticeable, as indicating the general tendency which the various

* A Republic, the destruction of which had already been determined upon by a genius to whom the national adulation afforded that absolute power which eventually ruined him.—*Baron Charles Dupin.*

* William of Malmesbury declares of Pope Sylvester II., that he erected an organ which was played by steam: and, though we cannot rely very implicitly on the authority of this most credulous historian, the anecdote deserves to be noticed, as a proof that the use of steam as a motive power was partially known, or at least suspected, as early as the 11th century.—*Taylor's Revolutions o Europe.*

† Charles Knight's "Capital and Labour."

‡ A machine which *suppresses* a workman in the weaving of figured goods.

§ Lingee, one of the most useful of all dyes, was denounced as a dangerous drug by Parliament, and it was forbidden in the reign of Elizabeth: this was only repealed in the time of Charles II.

ruling powers of France have shown to cultivate native manufactures and arts, that her national exhibitions have celebrated the dethronement of the Bourbon family, being fostered by the bitterest enemies of the Bourbons, and have inaugurated the restoration of the Bourbon Monarchy. It is impossible not to discover, in this constant solicitude for the advance of art and manufacture, the source of that artistic greatness which has made the French people the leaders of taste in every part of the world. The alacrity with which their example in holding periodical exhibitions of native industry has been followed by other countries, and the invariable good which has resulted from them, induced the Baron Charles Dupin to preface the report of the jury for the exposition of 1834 with this sentence:—"Thus, the constantly increasing assistance of the arts to our national industry has attracted the attention of foreign powers. Nearly all the governments of Europe have endeavoured to follow our brilliant example, even those which appear to be the least progressive in their principles Austria, Spain, Piedmont, Portugal, the two Sicilies, Holland, Prussia, Bavaria, Denmark, Sweden, and Russia, have established national expositions, with such success that they have made them periodical. Among all the powers in Europe, England alone thinks herself too rich and advanced to need recourse to such a stimulant." A fourth chapter will bring the history of the exhibitions of France to a close; and a fifth chapter will treat upon those of Belgium, in which country they have been held, it may be stated at once, with signal and unfailing success.

CHAPTER IV.

EXPOSITIONS OF FRANCE.—(CONTINUED.)

NAPOLEON'S commercial policy, extolled so often and so loudly for it penetration and completeness, was, however, marred by the force of his prejudice against England; since we find that while, on the one hand, he was endeavouring to encourage and elevate native industry by industrial exhibitions, and the establishment of gratuitous educational institutions, on the other hand, he could not forbear from the vindictive exclusion of [illegible] manufactures from the French territory. He prohibited the importation of British muslins, cotton cloth, both plain and coloured, and other cotton articles; while he subjected cotton thread to a heavy duty. After the close of the fourth official exhibition, in 1806, and the dispersion of the rival manufacturers who competed at it, a long interval succeeded, in the excitement of which little attention could be bestowed upon the peaceful battles of rival industries.

The European strife for freedom against the ambition of the Corsican sub lieutenant, the dethronement of the eagle, the struggle of legitimacy, the restoration, the hundred days, the heroic valour and the downfall of Apsley House, the imprisonment of the mighty emperor on a rock all these events, which are landmarks in the history of the last half-century, stunned the ears of nations, and made them deaf to the glories which yet shine, alas! fitfully, and with unsteady radiance, athwart the path of the man of science, the man of letters, and the man who realises Commerce paled before the bloody eagles of France, the scrried ranks bristling with steel, the hundred-fanged war-ship, the roar of battle, the thunders of death! An exhibition of industry while Parisians were intoxicated with the glories of Jena, the stirring story of Arcole, the blast of fame rising from Jemappes! No! the rolling drums must drown awhile the whirr of the shuttle, the weaver must e'en doff his head-gear to Mars. But now the idol is caged, the warrior's crest droops, the tramp of alien feet rings through France; and amid the rejoicings and intrigues which mark this restoration, the sails of merchantmen pant in the breeze, Kechlin pursues his honoured labours, Raymond and Widmer de Tony exult in their chemical successes; and Jacquard, unhappily the Adam Warner of his time, reappears on the scene.

After an interval of thirteen years, in consequence of the restored monarchy, as the last had been to the glory of the man now dethroned and disgraced, spacious galleries were raised in the Court of the Louvre to celebrate the *fête* of St. Louis, by assembling all that the skill and genius of the country could bring to swell the national show in the excellences of native manufactures and arts. The great feature of this exhibition was the marked improvement in the manufacture of metal—a department of industry in which France was excelled by few other countries, as, for instance, England, Prussia, and Belgium. In 1806 the only foundry in France was that at Creusot; but in 1819 the furnaces of the Loire and other places sent excellent specimens of metal manufacture to the national exhibition. On this occasion, however, the most favourable specimens of rolled iron from the forges of Grossenore were presented; and bronzes, stereotype plates, and other metal manufactures of delicate workmanship, attested by the excellence of the specimens presented, that the French artisans who had escaped the wars had not rested from their labours.

This exhibition showed the rapid progress the country had made in the manufacture of steel, since exhibitions began. In less than twenty-one departments showed excellent specimens of this metal; and in nearly every branch of manufacture where steel was used, most encouraging improvements were displayed.

In machinery John Collier exhibited a model of his machine; and Jacquard (who, in the exhibition of 1801, gained a bronze medal) exhibited a model, which was highly eulogised by the authorities, and for which he was decorated. It is an encouraging sign of the times, that the children of the Lyonese who burnt Jacquard in effigy, should have erected a statue to the memory of the inventor in one of their public squares!

The results of machinery about this time began to be properly appreciated; and manufacturers, taking advantage of the cheapened means of production, began to compete for cheapness, as well as elegance of design, and, by this means, to bring their manufactures within the reach of the great masses of their countrymen

The labours of Daniel Koechlin, of Mulhausen, which have tended so materially to bring the printed calicoes of France to their present high artistic excellence, bore some of their welcome fruits to the national exhibition of 1819. Dr. Ure, who visited M. Koechlin's establishment at Mulhausen, reports that so profoundly had this eminent man studied his manufacture, more particularly with regard to the nature and properties of dyes, that he had in the laboratory attached to his establishment upwards of 3000 labelled phials, filled with chemical reagents and specimens subservient to dying.* The history of calico-printing, both in England and France, presents a moral which the histories of too many inventions unhappily furnish; viz. that it is publish and share sighted on the part of a class to endeavour to impede the result of inventions for increased production. Not many years after, the merchants of Paris, together with those of Rouen and other districts, declared that "they came forward to bathe the throne with their tears on the suspicious occasion" of the establishment of cotton fabrics upon a footing of equality with other industries. The Inspector-General of Manufactures appealed to the bodies still discontented, in these terms:—"Is any of you now deny that the fabrication of printed cottons has occasioned a vast extension of the industry of France, by giving profitable employment to many hands in spinning, weaving, bleaching, and printing the colours. Look only at the dyeing department, and say whether it has not done more good to France in a few years, than many of your other manufactures have in a century?"

Other names of eminence occur in the report of the jury. Among the exhibitors who were decorated were Vitalis (the Kechlin of Rouen); Raymonde of Lyons, who had invented a process for fixing a Prussian blue dye upon silk; Widmer of Tony, who gave to the manufacturing world a green dye of immense value (for the invention of which a prize of 6000 guineas had been offered in England); Arpin, the muslin manufacturer of Saint Quentin; Bacot, cloth manufacturer of Sédan; Beauvais, Depouilly, and Muller, silk manufacturers of Lyons. M. Bauwens, of Lelsel in Flanders, and Bonnet, of Jujurieux, in the department [illegible], were decorated for their successful introduction of the silk of Bengal and Tonquin into the south of France. Mr. Ternaux, of Paris, received the decoration of the Legion of Honour for his successful introduction of the merino sheep into France. Mr. Darcet, of Paris, and Brongniart, of the Sèvres pottery, received the decoration of the Legion of Honour for their valuable researches in the chemistry of porcelain and pottery. Mr. Ternaux, of Paris, received the decoration of the Legion of Honour for his successful introduction of the merino sheep into France. Mr. Darcet, of Paris, and Brongniart, of the Sèvres pottery, received the decoration of the Legion of Honour for their valuable researches in the chemistry of porcelain and pottery.

It is remarkable evidence of the increasing popularity of these exhibitions, that the authorities found it necessary to extend the time at each successive exhibition. Thus, while the first exhibition remained open only three days, the sixth was accessible to the public for fifty days. On this occasion, notwithstanding a falling off in the number of exhibitors, the jury decided to distribute no less than 1091 rewards among the competitors.

The report of the jury of this exhibition includes notices of many improvements in native textile manufactures, in the processes of metal manufacture, in dyes, in optical instruments, and in papers.

Another interval of four years elapsed between the closing of the sixth and the opening of the seventh national exhibition. The exhibition of 1827 was in every respect a great advance on all preceding exhibitions. The building in the quadrangle of the Louvre was on a larger scale than before, and the number of exhibitors amounted to 1795. The progress of national manufactures, and the effect of the use of steam power upon production, were here remarkably shown. The manufacture of merino goods, which in the beginning of the century was unknown in France, now represented an annual value of 15,000,000 francs; and shawl manufactures gave proof of a progress equally sudden and extensive. The improvement and extension of merino manufactures may be traced back to the notable exertions of Chaptal and others to improve the native fleece by interbreeding with the Spanish flocks, which were noticed in the exhibition of the year IX. of the Republic. In the silk trade great advances had also been made. The cultivation of silk, which had been restricted to the southern departments, in the belief that the mulberry would not flourish in the northern departments, was now extended to those colder lands, and found to produce silk of a purer and finer quality than that hitherto raised in the south: floss silk was introduced into many new kinds of material; and mixtures of silk and wool first appeared at this exhibition. In printed cottons ginghams, tulle, and blonde, splendid specimens were displayed, the cheapness of which was as remarkable as their excellence. The results of the application of machinery to every department of manufacture were shown in every article exhibited. Paper-hangings, which French manufacturers could now, with the aid of machinery, produce in endless lengths, and which for artistic excellence surpassed those of England, now first enabled France to compete with us successfully in this respect Breguet exhibited cheap chronometers (priced as low as £40 each) Vicat came forward with some improved and new cements; and from Sèvres some some fine specimens of stained glass marked the restoration of this beautiful manufacture

The dawn of promise which the seventh national exhibition of France held up was soon clouded by the rapid development of political events which preceded the days of July, and the elevation of the Orleans branch of the Bourbon family to the throne. [illegible] seven years which intervened between the seventh and eighth exhibitions were marked by three commercial disasters which materially follow [illegible] and social [illegible] Paper-hangings, which in 1827 [illegible] to the manufacture [illegible] France contained [illegible] ners of their trade [illegible] more than 1000 hands [illegible] jury, to less than 244 [illegible] who were employed the [illegible] previous year.

Four great galleries were erected upon the Place de la Concorde, and the exhibition was opened with great solemnity. The result was worthy of the importance given to the exhibition. The manufacturers of France had profited by previous experience, had learned to hail the long proffered concurrence of science with art, and accordingly they were enabled to give evidence of a still further progress in the development of the laws and products of nature to the wants of man. The man appointed to preside over the juries was equal to the important occasion; and the elaborate, sound, and elegant treatise on the development of French industry, which he prefixed to the report on the exhibition, is now fairly rated as a work of commercial reference, and relied on as the labour of an experienced man and an enlightened statesman. This report will be found a luminous history and analysis of the progress of French manufactures from 1789 to 1834. He shows, as illustrative of the increased study of machinery, that whereas, in 1791, only six patents were taken out, in 1834 no less than 876 were issued. Giving juries the discretionary power to the promoters of national exhibitions, he shows how progress in native manufactures was co-extensive with the encouragement of machinery; and he might have added that the inventions of Jacquard, Collier, Vaucauson, Montgolfier, Aubert, were first brought into public notice at these gatherings of industry, French manufacturers and workmen to encourage the quinquennial lists they were called upon to enter. During the seventh exhibition, which preparated the seventh from the eighth exhibitions, the progress made in the construction and adaptation of machinery to manufacturing purposes had revolutionised French economy. The production of the periodical books to paperprinting earned a gold medal at this exhibition by MM. Zuber, of Mulhausen, and increased this manufacture beyond the hopes of the most sanguine. Shawls had fallen between 30 and 40 per cent in value since the close of the exhibition of 1827; but the demand had increased with rapid strides; flax-spinning was becoming a popular branch of industry; and cotton manufactures, after a protracted and calamitous depression, were reviving again. While Normandy produced printed cottons of a comparitively coarse and common description, from the use of a great industrial classes, Alsace sent forth specimens of printing, which for clear brilliant dyes, superiority of design, delicacy of shades, and beauty of manufacture, commanded admiration in the general market. Alsace alone at this time produced annually no less than 750,000 pieces of printed cottons, valued at 24,000,000 francs. The jury of 1824 commended highly the excellence of this brilliant manufacture.

A new manufacture was introduced to public notice at the Exhibition of 1834, which has since become of considerable importance, viz. elastic threads manufactured from India-rubber, by MM. Rattier and Guibal, who were rewarded with a gold medal. For the production of some exquisite specimens of marqueterie and ornamental cabinet and inlaid work, this exhibition was remarkable, as well as for some specimens which indicated the revival of the art of wood-engraving, and works which promised to rival the artistic productions of the middle ages, in enamel and "niello," sent in by MM. Wagner and Mansion. The arts were imbided to M. Guymet, of Lyons, for the fabrication of an artificial ultramarine (well known to all artists as French ultramarine), which was first publicly presented in the exhibition of 1824; and the potteries of France exhibited specimens of a new combination of clays, which was called opaque china, and which was recommended for its superiority to earthenware and for its comparative cheapness. These brilliant achievements of French industry were rewarded by the distribution of 697 medals and 28 decorations of the Legion of Honour.

On the 1st of May, 1839, the ninth official exhibition of industry was opened to the French people. The increased demand for space had necessitated the construction of an immense building upon the Carré de Marigny of the Champs Elysées. No less than 4881 exhibitors contributed to the great national bazaar. A superficial area of nearly 4 acres metres was covered in to receive specimens of the goods of French manufacturers exclusively; and, in addition to this vast space, it was found necessary to construct a separate building to receive the splendid products of Mulhausen. The exhibition showed the manufactures of France as far in advance of their condition of 1834, as in that year they had advanced from their state of 1827. The export trade of the country had increased in an extraordinary degree; and the general effect of the exhibition of 1839 was the cheapness at which all the manufacturers endeavoured to produce. The importance attached to the cheapness of production at this period is shown in the classification adopted by the jury. Thus, the first section comprised inventions and improvements, ranged with reference to the importance of their results in manufactures; the second comprehended the importance of the factories, and their situation; the third, the actual and commercial value of the products, the fourth, the cheapness realised by increased means of production. Here may be discovered a glimpse of the result for which the supporters of these institutions had all along laboured. The rewards and honours bestowed upon Jacquard, Aubert, Ternaux, and Oberkauf; the learned dissertations of Chaptal on history; the public drawing academies; the general knowledge attained by every Frenchman of the manufacturing capacities of every district of his country, were beginning to reform their promised measure of fruit The artisans of France were fast becoming artists; the manufacturers, scientific men; the manufacturers of sabres, builders of steam-engines. The framers of the report justly ranked the growing greatness of manufacturing France. They found that their manufacturers had completely established the spinning of wool by machinery, and were making great efforts for the cultivation and manufacture of flax. They saw that the extension and improvement of machinery were the foundation of their successes. The cylindrical block paper machines, exhibited as a novelty at the exhibition of 1834, were now exported from France to all the manufacturing states of Europe; Jacquard's machine had been multiplied and improved; M. Gedinge had invented an ingenious mechanism for wood carving; well-borng instruments had been materially improved; France, that in the beginning of the century possessed only about a dozen steam-engines, now employed fifty foundries in the construction of these machines; warranted chronometers were now valued at 800 the price they fetched in 1834. needles (in the manufacture of which England had hitherto enjoyed a complete monopoly) were at this time binding the royal those of Birmingham

Two new materials were also offered to the commercial world at this exhibition—stearine, and Prussian blue dye. In glass and porcelain manufacture, improvements had been no less rapid than in the manufacture of textile fabrics; and the art of preparing leather had advanced so far, with the aid of enlightened chemists, that France, which, in 1806, imported tanned leathers from England, had reversed this order of things, and now exported her prepared hides to the British markets. Fine lithographic stones, which had recently been discovered in one or two departments, figured at this remarkable exhibition; and the marble quarries of the Pyrenees contributed some splendid specimens of this beautiful material. Lenoir declares, in his work on native exhibitions, that the most hopeful character of the exhibition of 1839 was the cheapness of all the manufactures—the diminution in the cost of preparing raw materials for the use of man. "Spun and woven goods, tools, furniture, begin to find their way into the houses of the humble—thanks to the genius which directs industry."

(To be Continued.)

* The art of calico-printing is of ancient date in India; and, indeed, derives name from Calicut, a district famous for the Indian manufacture.

THE ENGRAVINGS.

OPENING OF THE EXHIBITION.

WE this week present our readers with four additional Pictures from the Industrial Festival of the First of May; with four illustrations of kindred interest in the Number published with the present Supplement First, upon the front pages.

THE SERPENTINE

Before the arrival of the Royal procession, the [illegible] passage, the Serpentine was a point of great attraction: the banks being lined with thousands of spectators, gazing upon a beautiful miniature fright to which floated upon its surface. Another attraction was a gentleman floating upon a mattress, in the form of a canoe, and who, with the aid of delicately shaped and tiny paddles, swept gracefully along the water, taking care, however, not to venture far from the bank.

The identical model of a 26-gun frigate is named the *Prince of Wales*, and was launched on the Serpentine on Monday morning; having been brought from Woolwich on the previous day.

THE CHINESE MANDARIN.

The second Illustration upon the front page is very characteristic. Among the circle surrounding the dais upon which her Majesty was seated, the Mandarin He-Sing, of the Chinese Junk *Keying*, was conspicuous. The Mandarin arrived at the Crystal Palace at about half-past ten, in a carriage, attended by his secretary, and, on his entrance, he was immediately introduced into the area reserved for the Great Officers of State, and the Royal and Foreign Commissioners. After the gracious reply of her Majesty to the address read by the Prince Consort, the Mandarin He-Sing was specially noticed by her Majesty; and the important functionaries between him and the Queen having separated on either side, the Mandarin approached the throne, and had the high honour of saluting her Majesty by a grand salaam, which the Queen most gracefully returned. The Mandarin was also much noticed by the young Prince of Wales and the Princess Royal.

On the formation of the Royal procession round the Building, Prince Albert, at the suggestion of the Queen, was pleased to convey to the Mandarin a special invitation that he would join in the procession; and he, accordingly, took his place between the Archbishop of Canterbury and the Comptroller of her Majesty's Household, and accompanied the Royal progress throughout the inauguration ceremony. It should be added, that the Mandarin is an early representative, at the Exhibition opening, of the vast empire of China.

ENTRANCE OF HER MAJESTY AND PRINCE ALBERT.

The large Illustration at page 388 shows the entrance of her Majesty and the Prince Consort, accompanied by the Prince of Wales and the Princess Royal, and their attendants, into that portion of the North Transept immediately adjoining the Royal dais.

After her Majesty had left the robing-room, a second flourish of trumpets announced her approach, when the bronzed gates leading into the transept were flung open, and the full power of the chorus, band, and organ burst into "God save the Queen," only to be drowned by the acclamations which simultaneously arose from floor and galleries, from nave and aisle, as the Royal procession advanced.

Following the Lord Chamberlain, and in front of the principal officers of the household, all of them walking backwards, and ushering in her Majesty, came the Queen, leaning upon the arm of Prince Albert, and holding the Prince of Wales by the hand; the Prince Consort conducting, in like manner, the Princess Royal. Following the Royal group was a glittering line of Lords and Ladies—the uniforms and Court dresses of the gentlemen contrasting with the toilettes of the maids of honour and ladies in waiting. Close to her Majesty walked the Prince of Prussia, with the Duchess of Kent on his arm; then followed a long line of officers of the Court, &c. Next, at page 389, is represented

THE PROCESSION.

After the "Hallelujah Chorus" had been sung, was formed the Royal procession to conduct her Majesty through the Building; the groups gathered round the dais filing off in slow and stately order, led by heralds in their superb surcoats; the various officials of the Exhibition in court dresses; the diplomatic corps in their various costumes; the Duke of Wellington and the Marquis of Anglesey; her Majesty's Ministers, the Archbishop of Canterbury, the Officers of the Royal Household, her Majesty and the Prince Consort, the Prince of Wales and Princess Royal, and their Royal relatives, foreign visitors, and the Court attendants. The passage of the procession (seen from an elevated position) was very striking.

Turning to the right, the procession moved to the west end of the nave on the north side, down a deep lane of human beings, full of loyal expectancy. Her Majesty and the Prince were preceded by the Lord Steward, Lord Chamberlain, and Vice-Chamberlain. The *coup d'œil* varied at every step, yet was always picturesque and beautiful. The Foreign Commissioners, whose labours had hitherto confined them to their own department of the Exhibition, gazed with wonder at the development of British industry by which they found themselves surrounded. The Indian and Colonial collections were left behind, the Fine Arts Court passed, and the procession, cheered unceasingly in its progress, moved into the area devoted to our many-featured manufacturing products. The pageant reached the western entrance, and was itself, and the unequalled grandeur of the scene whereof it formed the leading feature, reflected in the immense mirror exhibited at this point. When it was returning on the south side of the nave, the gigantic organ by Kyrfit, suddenly rolled forth its billows of sound. The effect was extremely fine. Displays of textile fabrics, of hardware, of cutlery, and of furniture, of busts of courts and avenues filled with the richest materials, crowded upon the wondering gaze of the spectator. Still, upon the mind, the grand impression left was the magnificence of the general spectacle, the loyalty of the great assemblage, the cordial understanding between the Sovereign and the flower of her people; above all, the hearty union of all classes in celebrating with becoming zeal this inauguration of a temple dedicated to industry and peace. At length, the procession reached the transept, and proceeding round the south end, entered the Foreign department of the Exhibition, and moved onward amid loud acclamations. The French organ, by Du Crequet, and that from Erfurt, by Schulze, each in turn poured forth its music; and as the nave and rounded the eastern end of the Building, the bands of the Coldstream and Scots Fusilier Guards varied the performance by their spirit-stirring strains. The return along the north side of the nave caused new enthusiasm of the foreigners and visitors assembled there. The enthusiastic cheering went on continuously around the Building; and at last, having completed the *détour* of peaceful triumph, the Queen returned once more to the position in the transept where her throne was placed.

1.—TAPARET BY R. ATKINSON AND CO., DUBLIN

A not very excellent arrangement of the imperial emblems, the rose, [illegible] and thistle. The texture of the original article is, however, its best feature, and one which will be better appreciated in the market than in the Exhibition.

2.—SHAWL PATTERN, BY JAMESON AND BANKS

This is an example of a series of valuable articles of this class, each

bited not only by this house, but others. In the specimen before us there are many excellent points, and, probably, the fine pattern could not easily be treated with a better result. It is singular for what a length of time this type has kept in vogue, and whatever may be the colour or detailed character of the design of a shawl, it is inevitable that it begins and ends with a pine.

3.—DESIGN FOR A DECORATIVE PANEL. BY W. A. PAPWORTH.

4.—ANOTHER. BY J. W. PAPWORTH.

Two very rich and elegant designs for panelling, the one in the pure Greek, the other in the more florid Roman style. These are in the Fine Art Court.

5.—CARVED BOOKCASE. BY THE SOCIETE DES EBENISTES.

A very beautiful design, very successfully carried out; speaking highly for the taste of our French neighbours in the decorative art.

6.—MR. MOXON'S WALL DECORATION.

The decoration represents the end of a drawingroom in the Elizabethan style. The fittings, glass frame, and exquisite chimney-piece containing a medallion of Chaucer, and groups from his most celebrated poems, are by Mr. Thomas, whose fertile genius has so much enriched the New Palace at Westminster.

The beautiful grate was manufactured by Mr. Jenkes.

The polychrome and gilded decorations are by Mr. C. Moxon, of High-street, Marylebone, whose works at Buckingham Palace and several mansions of the nobility are well known.

The panels consist of a diaper of flock and gold, on a very pale tint of amber, surrounded with a bold moulding of white and gold. The styles are a light tint of lavender colour. The frieze is white marble, with a flowing scroll ornament of giallo antico and sparkling gems of lapis lazuli, malachite, and rubies, and inlaid gold. The cornice is white marble, with inlaid mosaic gold ornaments. The capitals are white and gold on lapis lazuli ground. The upper portions of the columns are in flutes of breccatella and white marble. The lower is ornamented with an Elizabethan scroll-work of giallo antico on green ground, inlaid with gems of lapis lazuli, malachite, and jasper. The lower part of the columns is separated from the upper by an ornamental fret of giallo antico on a deep red grotto ground, with lozenges of malachite and lapis lazuli. The plinth is of solid gold, and the base mouldings of Scotch jasper Galloway green. The dado is in panels of green and Sienna styles, separated by ornamental lines of white, inlaid with grotto. Gold and white mouldings run at the top and bottom of the dado, in parallel lines, and the whole is finished by a light dove-coloured marble skirting, which harmonises with the lilac tints on the upper styles, and produces a chaste and perfect combination of colour. It is impossible by engravings to represent the beautiful colours, the richness and marvellous transparency of these imitations of marbles, in which Mr. Moxon has rivalled the varied tints of nature with great fidelity, and this novel application of painted mosaic for decorative purposes may be considered perfectly successful.

7.—TIEN DE CORSAGE. BY MESSRS. BOUILLETE, HYOCLIN, AND CO.

8.—BRACELET. BY THE SAME.

9.—BROOCH. BY THE SAME.

Three very tasteful articles of jewellery, displayed amongst various other costly productions by this celebrated house.

10. LAMP BY M. SUSSE

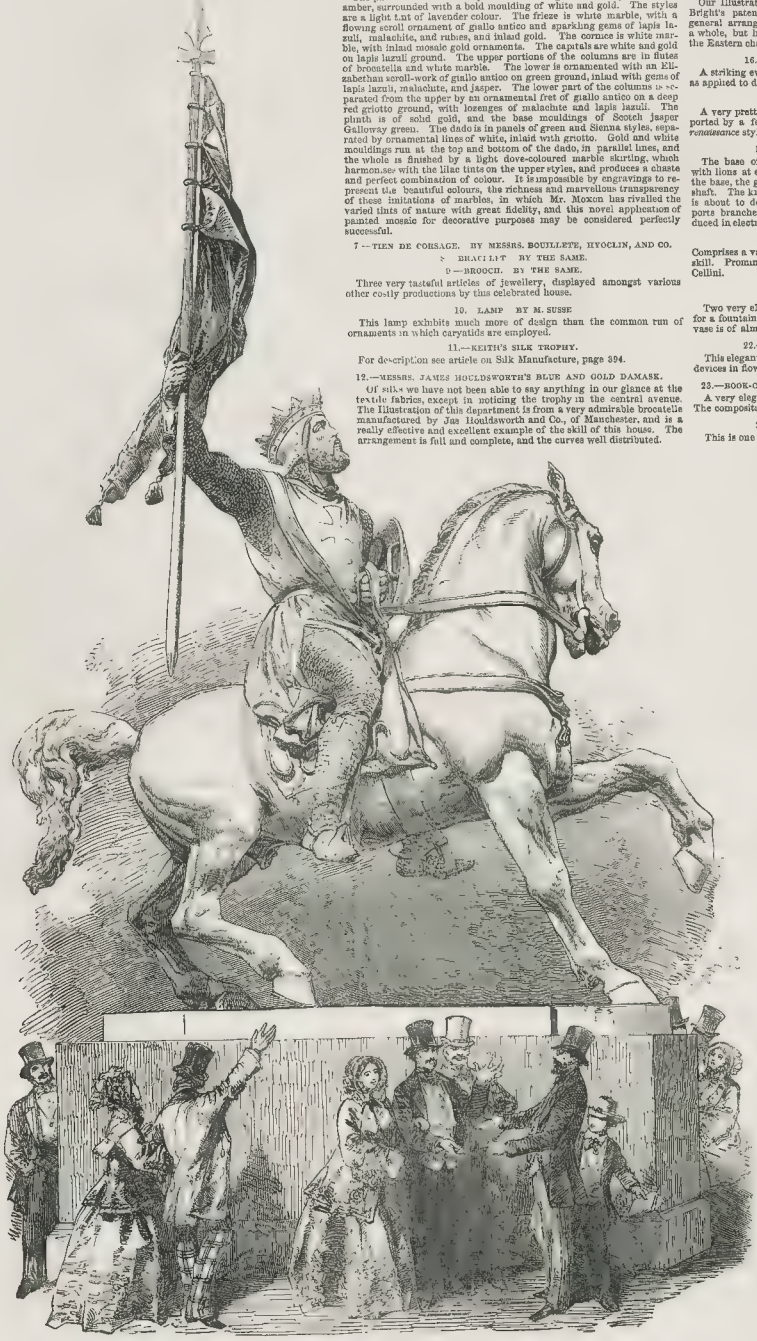
This lamp exhibits much more of design than the common run of ornaments in which caryatids are employed.

11.—KEITH'S SILK TROPHY.

For description see article on Silk Manufacture, page 394.

12.—MESSRS. JAMES HOULDSWORTH'S BLUE AND GOLD DAMASK.

Of silks we have not been able to say anything in our glance at the textile fabrics, except in noticing the trophy in the central avenue. The illustration of this department is from a very admirable brocatelle manufactured by Jas Houldsworth and Co., of Manchester, and is a really effective and excellent example of the skill of this house. The arrangement is full and complete, and the curves well distributed.



2.—GODFREY DE BOUILLON

13.—POPLIN IN BLUE AND GOLD. BY MESSRS. R. ATKINSON AND CO., DUBLIN.

This is an excellent example of conventional treatment, inasmuch as it affords the greatest possible facility for the introduction of "plate," as the gold thread is technically called. The arrangement of figure is very simple; and of the texture, we can only say that it is equal in quality to anything of the kind in the Exhibition.

14.—MESSRS. DALGLEISH, FALCONER, AND CO.'S PRINTS

Have been quoted as good examples of their class. The illustration is from a muslin, and the design is at once graceful and appropriate, the printing clear and distinct, whilst the drawing is well understood and perfectly adapted to the fabric.

15.—MESSRS. BRIGHT'S PATENT TAPESTRY.

Our Illustration shows the arrangement of one of the specimens of Bright's patent process of printing tapestries for curtains, &c. The general arrangement of the design is good, and the effect excellent as a whole, but heraldic emblazonments are not precisely appropriate to the Eastern character of the design.

16.—CENTRE-PIECE BY SMITH AND NICHOLSON.

A striking evidence of the progress which the purer principles of art, as applied to decorative purposes, have made in this country.

17.—CANDELABRUM. BY ANDRE

A very pretty design in iron, by M. André; the branch being supported by a female figure. The pedestal is richly decorated in the *renaissance* style.

18.—CENTRE-PIECE. DESIGNED BY SHARP.

The base of this magnificent candelabrum is of a triangular form, with lions at each corner, supporting shields for armorial bearings. On the base, the group of St. George and the Dragon are fighting round the shaft. The knight, having wounded his reptile opponent with his spear, is about to deal the deadly blow with his sword. The vine shaft supports branches for nine lights, and basket for flowers. It has been produced in electro plate, upon German silver, by Mr. Ansley.

19.—A GROUP OF BRONZES. BY VITTORY,

Comprises a variety of exquisite subjects, finished with the nicest artistic skill. Prominent in the centre of the group is a statuette of Benvenuto Cellini.

20.—TRITON. BY ANDRE.

21.—VASE. BY ANDRE.

Two very elegant specimens of decorative iron. The triton, intended for a fountain, is full of spirit, and the outline extremely graceful. The vase is of almost classic merit.

22.—FRAME FOR A LOOKING-GLASS. BY HANSON.

This elegant production is of oval form; richly carved in wood, with devices in flowers, fruits, birds, squirrels, &c.

23.—BOOK-COVER IN CARTON DE PIERRE. BY JACKSON AND SONS.

A very elegant production in *carton de pierre*, pierced, over velvet. The composition in the cinque-cento style.

24.—BLOTTING-BOOK COVER. BY C. ASPREY.

This is one of the richest specimens of pierced work, in or molu upon velvet, we have ever witnessed. The details are of endless and beautiful variety. It was executed as a commission from a gentleman, whose arms are accordingly displayed in the centre.

25.—A GROUP OF BRONZES. BY P. J. MENE.

This group comprises the following subjects:—Dead game, a hare and a pheasant; a stag hunt; a boar hunt. The second-named was exhibited at the Louvre in 1844; and the third was exhibited at the Louvre in 1848, where it obtained a gold medal; and at the exposition at Rouen, where it was rewarded with a silver medal.

26.—SIR GODFREY DE BOUILLON.

This is a work of extra-colossal dimensions, by M. Simonis, the original of which, in bronze, was inaugurated at Brussels in 1848. The knightly Crusader bestrides a war-horse of somewhat heavy proportions, which he has suddenly reined in, as he waves on high a flag as a rallying sign for his comrades in arms. There is considerable energy and spirit in the whole composition, which can but be appreciated when seen from the extreme east end of the galleries.

Godfrey de Bouillon, Duke of Lorraine, was one of the principal leaders of the Second Crusade; and the following brief account of a passage in his romantic career, from Mackay's "Memoirs of Extraordinary Popular Delusions," will be read with interest in connexion with the present subject:—

"Godfrey of Bouillon traversed Hungary in the most quiet and orderly manner. On his arrival at Mersburg he found the country strewed with the mangled corpses of the Jew-killers, and demanded of the King of Hungary for what reason his people had set upon them. The latter detailed the atrocities they had committed, and made it so evident to Godfrey that the Hungarians had only acted in self-defence, that the high-minded leader declared himself satisfied and passed on, without giving or receiving molestation. On his arrival at Philippopoli, he was informed for the first time of the imprisonment of the Count of Vermandois. He immediately sent messengers to the Emperor, demanding the Count's release, and threatened, in case of refusal, to lay waste the country with fire and sword. After waiting a day at Philippopoli he marched on to Adrianople, where he was met by his messengers returning with the Emperor's refusal. Godfrey, the bravest and most determined of the leaders of the Crusade, was not a man to swerve from his word, and the country was given up to pillage. Alexius here committed another blunder. No sooner did he learn from dire experience that the Crusader was not an utterer of idle threats, than he consented to the release of the prisoner. As he had been unjust in the first instance, he became cowardly in the second, and taught his enemies (for so the Crusaders were forced to consider themselves) a lesson which they took care to remember to his cost, that they could hope nothing from his sense of justice, but everything from his fears. Godfrey remained encamped for several weeks in the neighbourhood of Constantinople, to the great annoyance of Alexius, who sought by every means to extort from him the homage he had extorted from Vermandois. Sometimes he acted as if at open and declared war with the Crusaders, and sent his troops against them. Sometimes he refused to supply them with food, and ordered the markets to be shut against them, while at other times he was all for peace and goodwill, and sent costly presents to Godfrey. The honest, straightforward Crusader was at last so wearied by his false kindness, and so pestered by his attacks, that, allowing his indignation to get the better of his judgment, he gave up the country around Constantinople to be plundered by his soldiers. For six days the flames of the farm-houses around struck terror into the heart of Alexius; but, as Godfrey anticipated, they convinced him of his error. Fearing that Constantinople itself would be the next object of attack, he sent messengers to demand an interview with Godfrey, offering at the same time to leave his son as hostage for his good faith. Godfrey agreed to meet him, and whether to put an end to these useless dissensions, or for some other unexplained reason, he rendered homage to Alexius as his liege lord."

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, May 10, 1851.—Supplement.

THE ILLUSTRATED LONDON NEWS.

No. 485.—VOL. XVIII.] SATURDAY, MAY 17, 1851. [TWO NUMBERS, 1s.

THE GUILD OF LITERATURE AND ART.

We notice with pleasure that an attempt is to be made to unite the literary confraternity in support of a scheme for the mutual advantage of all who make literature their profession. It is not the first attempt of the kind with the history of which we are familiar, but we sincerely hope that the movement will be more successful than those which have preceded it, and that the attention of literary men and of the friends of literature will be kept to the subject, until something worthy of this great cause be accomplished. It is because we honour and esteem the professors of literature, and because we have the highest possible appreciation of their social importance in a ltimes, and more especially at the present time, when the powers of literature for good and for evil have been so vastly increased, that we hope literary men will consider the subject in all its bearings, upon themselves in the first place, and upon society in the second; and that they will take on this, as on other matters of public concern, the high and dignified position which the world is willing to accede to them.

The scheme at present on foot is the establishment of a guild of literature and art. We think the name ill chosen; for "guild" suggests the close monopolies of the middle ages, and the word has no connexion with literature. But on that point we need not dwell. Sir Edward Bulwer Lytton has generously given a piece of ground to build a house or home for authors in the decline of their life or their powers, and has even more generously written a play, the pecuniary proceeds of which are destined to form a nucleus for the permanent endowment of the institution. A number of literary men and artists have engaged to perform this play in the principal towns of the kingdom, and it is likely that a very handsome sum will thus be raised. But the institution is not to be eleemosynary:—

It is proposed (says the prospectus) to open, at a Life Office of acknowledged respectability and capital, a Branch Insurance and Provident Society, solely for the professors of literature and of art.

Within the former term are understood to be comprehended all writers, of either sex, of original works or dramas, or of not less than twent original papers in periodicals. This limitation is intended to exclude accidental contributors to periodicals, who may not be attached to literature as a profession. Within the latter term all painters and sculptors who make the Fin Arts their profession

MAYING.—DESIGNED BY FOSTER.—(SEE NEXT PAGE.)

and all students of the Royal Academy of England, Scotland, or Ireland, are to be included.

This society will embrace the several objects which the members of a profession may be most disposed to secure—such as life insurances, at rates of premium calculated as payable either for the whole term of life, or as altogether ceasing to be payable at a certain age; annuities, to commence at a certain age; pensions to widows; payments destined to the education or provision of children, &c.

In connexion with this society, by which it is intended to commend and enforce the duties of prudence and foresight, especially because these whose income is wholly, or mainly, derived from the precarious profit of a profession, it is proposed to establish and endow an Institute, having at its disposal certain salaries, to which certain duties will be attached; together with a limited number of free residences, which, though sufficiently small to be adapted to a very moderate income, will be considered with due regard to the ordinary habits and necessary comforts of gentlemen. The offices of endowment will consist:—

1st. Of a Warden, with a house and salary of £300 a year

2nd.—Of Members, with a house and £170, or, without a house, £200 a year.

3rd.—Of Associates, with a salary of £100 a year.

For these offices, all who are insurers in the society above mentioned are qualified to offer themselves as candidates. Such insurance is to be considered an indispensable one situation, saving in exceptional cases (should any such arise) where an individual can prove that he has made every effort to insure his life, but cannot find acceptance at any of the offices, by reason of impaired health or of advanced age, at the date of this prospectus.

Each member will be required to give, either personally or by a proxy elected from the associates, with the approval of the warden, three lectures in each year—one in London, the others at the Mechanics' Institutes, or some public building suited for the purpose, in the principal provincial towns. Consistently with the many duties exacting time and attention that will devolve on the warden, he will not be required to give more than one lecture annually; which, delivered by a proxy, he will, health permitting, be expected to compose himself, and that in his metropolis.

These lectures will be subject to the direction and control of the managing body of the Endowment. They will usually relate to letters and the arts, and invariably avoid all debateable ground of politics or theology. It will be the endeavour of the committee to address them to points on which the public may be presumed to be interested, and to require dispassionate and reliable information to make them, in short, an educational and improving feature of the time.

These are the main features of the plan; and, though we might take objection to some details of the method proposed, and point out, at the same time, some omissions, we sympathize so cordially in the objects in view, and anticipate so much good to result from the mere discussion of the subject, that we are well content, in the meantime, to waive some differences of opinion.

One great merit of the project in our eyes is the proof it affords that literary men are beginning to appreciate and to help each other. That is a great point. There has hitherto been too much mistrust of literary men by literary men, and too much cant in the world upon the supposed infirmities and exaggerated calamities of authors. The woes of genius are an old story. Every brainless parrot of society, when he has heard that a man of great talents was imprudent, assumed, as a matter of course, that the imprudence was the necessary concomitant of the genius This stupid but widely spread delusion is going out of date, but it still requires to be combatted. Until it be rooted out of the minds of the multitude of well-meaning people, will the decencies of literature cease to pander to it either by their lazy indifference or by allowing the imprudence of men of small genius to be cited as a proof of the imprudence of great, and, indeed, of all genius, so long will it be difficult, if not impossible, for literature to take its true place in the estimation of the world. If men embrace literature as a profession, without the proper moral as well as literary qualifications for success, we must no longer blame literature for their failure. If imprudent men enter the law, or the church, or the medical profession, fail in the pursuit of fame or riches, no one ever thinks of blaming the law, or the church, or the practice of medicine for that result, or asserts that law, medicine, or the church are necessarily connected with imprudence. The same reasoning should apply to literature. In our day there is still growing distrust for literary work of all kinds, and the writer is almost as much in request as the lawyer or the physician. Whatever the case may have been in former days, the workmen of literature are as well paid as any other kind of workmen; and the higher prizes of the profession—necessarily confined to a small number—are more accessible than ever to the best of that which humbler people call genius.

The first thing to be done for the elevation of the literary character and position is, that literary men, by their lives, as well as by their writings, should show that "common sense" goes along with uncommon sense; that true genius is prudent, mathematical, and logical; that they should affirm to the world, through good and through evil repute, in life and in death, that those who say and who deny the fact—that the good writer should be the good man, and that the highest genius is that which includes moral as well as intellectual gifts. The greatest poet of the English nation was a careful and painstaking gentleman, who knew the value of money, and paid his way. Shakespeare never whined or groaned, or was ashamed of his business, or blamed poetry for any occasional failure which he made. He took the world as it came, and while he adorned it, he enjoyed it, and all the while clung to his manly independence as the brightest jewel of his life. Milton and Johnson are also great examples; Southey and Scott were men of business; and, in fact, if we run through the list of all the most illustrious names of English literature, we shall find the most brilliant to have been the most honest and prudent, and that the greatest souls were those who triumphed over adversity, and achieved for themselves a high social position among their contemporaries. It is only the smaller men, who would not have succeeded in any profession requiring energy, self-control, perseverance, or honesty of purpose, who have countenanced, for their own purposes, the mistake and delusion, that failure in life was one proof of a capacity for authorship, and that to be in debt and difficulty, to skulk and sneak, and play dishonest tricks was the necessary apprenticeship to be served by genius. That old error has had its brains knocked out, and it is quite time that if should die and be buried. It is because we see that the promoters of the New Guild of Literature and Art have given much thrift, foresight, and well-reasoned, as qualifications for the advantages of their institution, that we wish them to be successful in their effort. Tailors, shoemakers, cabinet-makers, and all other prudent handicraftsmen insist that their sick and aged should have contributed to their benefit or trades' societies before they can be entitled to relief; and it is essential that literary men, who, even of the lowest ranks, are paid as a higher rate for their labour than the best paid compositor who sets up the types for them, should imitate the virtues of their humbler brethren, and help themselves before they appeal, like beggars, to the charity of the world.

There will, of course, be exceptional cases; but the man of true and high genius, even if unprosperous, will find more dignity and happiness in his work, with a dry crust for his dinner, than the man of less genius, who whimpers, and weeps, and accepts the ostentatious charity of the world, as if he had a right to be fed at the expense of his neighbours. Milton had more dignity in his little school-room, and showed more admirable heroism in his daily drudgery, than can be found in the history of a thousand men like the Irish author, who, in their false dignity, would have scorned to keep school, but did not scorn to become swindlers. Literary men like these sometimes wanted bread, because they wanted honour and principle, and not because they possessed a talent for writing prose or verse. Such literary men are happily rare in our time; and literature having become a pursuit for its professors to be proud of, and not to blush for, they will become more and more rare still, until they are finally extinct. In a profession numbering so many persons as literature now does, there must and will, necessarily be a certain proportion who will be unprosperous, and another proportion whose health and strength will fail them prematurely. Such support, if the Guild of Literature and Art be firmly established with, if they have duly qualified themselves by preliminary probation, will upon their more successful brethren. This is as it should be. Such an institution will be worth a thousand Pension Lists.

FANCIES FOR MAY.

'Tis merry in the mead,
When tree, and flower, and weed
Unfold their tender leaflets to wanton in the Spring;
When the linnet in the croft,
And the lark in the loft,
And the blackbird in the thicket, attune their throats to sing.
Oh! 'tis merry out of doors,
On the daisy-spangled floors
Of the balmy fields and pastures in the sweet, sweet month of May;
When the heart of youth is light,
And the face of Care grows bright,
And the children leap for gladness in the morning of the day.

Oh! 'tis beautiful to see,
How the blushing apple-tree,
And the odour-laden hawthorn, and the cherry and the aloe,
Have put on their bridal gear,
And the nuptials of the year—
The bridesmaids of the Earth, with their garments white as snow.
And how the happy Earth,
Growing young again in mirth,
Has prank'd herself in jewels to do honour to the day—
Of gold and purple bright,
Of azure and of white;
Her diadem and bracelets, the meadow flowers of May.

Come forth, come forth, ye sad!
Look at Nature, and be glad,
Come forth, ye toiling millions, God's universe is fair.
Come forth from crowded street,
And cool your lavrish feet
With a trample on the turf in the pleasant open air!
The children in the meads
String the buttercups like beads,
Be not too wise to join them, but sport as well as they;
Come and hear the cuckoo sing,
Come and breathe the breath of Spring,
And gild your life's October with the memories of May.—C. F. H.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Paris journals still harp on the "vexed questions" of the revision of the Constitution, the presidential election, and the fusion of the two branches of the ex-Royal family.

It is quite marvellous how, in the absence of more exciting subjects, they ever recur with renewed energy to those used-up topics, without their discussions presenting any one feature of novelty. During the past week, although their columns were filled with editorial views and comments on these matters, the several arguments advanced on each side were but a dull repetition of those which had previously been brought forward. M. de Girardin, the editor of the *Presse*, a short time since wrote in favour of the revision; but he has now altered his tone, and advocates the opposite opinion. His journal also states that General Cavaignac bids fair to be elected President of the Republic in 1852, for his candidature is making rapid progress, and is well received by all bodies of electors.

With respect to the "fusion," all that can be gleaned is that nothing is settled or determined on by the parties most interested.

The strange vow of their duties as constitutional Ministers which is sometimes taken by statesmen in France, is exemplified by the following despatch, which M. Léon Faucher issued to the local authorities in one of the provinces on the 9th instant, for the purpose of influencing an election, so as to secure the return of the candidate who was opposed to the repeal of the recent law restricting universal suffrage. The despatch is as follows:—

THE MINISTER OF THE INTERIOR TO THE PREFECT OF THE LANDES

In presence of the manœuvres which the advanced Opposition direct against the law of May 31, 1850, upon its discussion, and so soon to be carried out by the sub-prefects, that, in the opinion of the undersigned, the Government is called upon to exercise the influence of the administration, and to enlighten the electors. I call upon you to use your utmost zeal to see that the law is very decided to maintain the electoral law of the 31st May.

N. H. [signature] per d'ordre: supports unanimously General Darrieu the only candidate who has declared in favour of maintaining the law of May

M. Emile Girardin has given notice of an interrogation on the subject in the Assembly, with a view of censure passed on M. Faucher's conduct, similar to that which drove him from office some two years back, for having issued at the time a dispatch of the same character, and for a similar purpose at the present.

On Wednesday, in the Assembly, M. St. Romme questioned Ministers regarding the state of siege in the department of Var. M. Faucher defended the act of the Government. M. Favconet proposed the order of the day *motivé*, casting censure on the Ministry. M. Sylvet moved the order of the day pure and simple, which was carried by a majority.

M. Jules Lerroux has presented to the National Assembly a propos tion, containing nine charges and 114 articles, having for object the abolition of distress among the poor, by the creation of a new social institution.

The last accounts from Algeria represent that colony to be gradually submitting to French authority, and that, in all probability, no violent commotion will take place for years to come.

M. Mazzini has forwarded a long communication to the Central Committee of London, giving an account of the progress of democratic principles throughout continental Europe, which he deems highly satisfactory to the revolutionary cause.

PORTUGAL.

We have advices from Lisbon to the 10th instant, at which period no movement had taken place in the capital, but great commotion was anticipated when Saldanha, whom the Queen had nominated President of the Council, should arrive. He was expected to enter Lisbon on the 13th, at the head of a large military force, and was likely to be received with open arms by the people.

The King-Consort had resigned the command-in-chief of the army, and his resignation had been accepted. Saldanha, although nominated President by the Queen, had declared that he would not accept it until he was in Lisbon. He issued all documents in the name of the Queen. Among political circles, great apprehensions were entertained that the Queen would be obliged to abdicate, and that a Republic would be proclaimed, or a Regency established under Saldanha until the young Prince Royal, now aged 4, should attain his majority, which was fixed at his 18th year.

The Count Thomar has arrived in England.

UNITED STATES.

The advices from New York this week are to the 29th ult.

Intelligence from Havannah, and New York, has been received to the 19th ult., from which we learn that the most intense excitement prevailed with regard to the projected American invasion; and so confidently was it expected, that the troops for the previous week had been ordered to sleep on their arms, and be ready for marching at a moment's warning. The vessels of war in port had been ordered to be ready for action. It was currently reported in Havannah, and generally believed, that the cause of the detention of the *Ohio* on her last trip from New Orleans to Havannah, was to bring out an invasion, and so great was the excitement on her arrival, that hundreds of people were waiting on the mole to catch a sight of the expected invaders; but, apparently to their great disappointment, she passed along as usual to her moorings without any demonstration of hostility.

FOREIGN ICE.—Importations of entire cargoes of ice continue to take place from the north of Europe to an extraordinary extent. Some idea may be formed of their amount when we state that the importations from Norway, during the past month, have exceeded 16,000 tons weight of the ice, whereas the supplies of the last and previous year each amounted in all to about 10,000 tons only for a corresponding period.

The following are the imports of grain, flour, &c., into Liverpool, for the fortnight ending the 7th instant:—169,472 bushels wheat; 1233 sacks flour; 12,930 barrels ditto; 80,487 bushels Indian corn; 39,— sacks ditto; 2400 bushels rye; 10,352 bushels beans; 8244 bushels peas, 10 bags ditto; 4928 bushels barley; 882 barrels meal; 2020 boxes cheese; 111 casks ditto; 50 cases ditto.

On Saturday last, Mr. W. Cubitt, M.P., was elected Alderman for the ward of Langbourn, in the City of London.

NAVAL AND MILITARY INTELLIGENCE.

THE COMMAND IN CHIEF AT MADRAS.—The ill-health of Lieut.-General Sir George Berkeley having compelled him to resign his command, the office has been bestowed on Lieutenant-General Sir R chard Arm-trong.

Lieutenant-Colonel Thomas Gore Browne, of the 21st Regiment is appointed Governor of St. Helena. Colonel Brown was greatly distinguished during the Affghan campaign.

LAVA FOR TRAMWAYS.—A foreign firm, Messrs. Oral and Armani, have proposed to the Government a metallic lava as a substitute for granite on tramways; and the Admiralty have ordered its properties to be tested at Woolwich, and to be reported upon by the dockyard officers.

COALING AT ST. HELENA.—Arrangements have been made for coaling steam-vessels at St. Helena, at the rate of 160 tons a day

A Court of Directors was held on Wednesday, at the East India House, when Lieutenant-General Sir Richard Armstrong, K.C.B., was appointed Commander-in-Chief of the Company's forces on the Fort St. George establishment.

REINFORCEMENTS FOR THE CAPE.—The *Megæra*, 10, iron screw steam frigate of 350-horse power, is to be commissioned immediately at Sheerness, to carry troops to the Cape of Good Hope, and notices have been put at the dockyard gate at Woolwich for riggers to serve in that vessel. Several appointments from the *Fisgard* have been made to the *Megæra*, although they have not as yet been officially announced. The troops expected to proceed in her to the Cape are the 2nd or Queen's Royal Regiment of Foot, and Captain Sadly's company 5th battalion of the Royal Artillery. Captain Eaddy, with a number of officers of the Royal Art llery, attended at the pond in the Repository Ground, on Wednesday, to test an India-rubber boat made by Mr. Gutridge, for enabling the officers or men to cross the rivers in South Africa. The boat weighed only 36 lb., and was found not only capable of carrying persons, but, on weights being put in the boat, its buoyancy was sufficient to sustain 56 lb.

THE CAPE MOUNTED RIFLES.—In justice to Lieutenant-Colonel Napier and the officers of that portion of the Cape Mounted Rifles which recently be ame disorganized and disarmed by command of his Excellency Sir Harry Smith, Commander-in- Chief at the Cape of Good Hope, in consequence of the bad spirit evinced by the privates of that corps, we give publicity to the following general order, dated Head-quarters, King William's Town, 15th March, 1851:—

It is with the deepest regret it at the Commander-in-Chief has been compelled to de rive a considerable number of the detachment of Cape Mounted Rifles and Lieutenant Colonel Napier of the same and horses—a corps with whom he has served so long—as he has no reason to doubt, even a remaining few individuals of the officers and men of the corps may be equally free from the imputation which has cast a stigma on the whole; but the circumstances which have led to this melancholy defection in a corps which once evinced the military spirit and discipline which Lieutenant-Colonel Napier and the officers of the Cape Mounted Rifles have exerted themselves to the utmost to avert it; their conduct upon all occasions of service under their orders, has always been in the field before the enemy; and it is with true pleasure the Commander-in-Chief can record in every British officer and soldier of that command a repetition of bravery and devotion to the service.

Lieutenant-Colonel Napier and the officers of that establishment may rest assured this expression of approbation of their services will be submitted to his Excellency Her Majesty's Secretary of State for War, the Duke of Wellington and Commander-in-Chief.

A. J. CLOETE, Lieut.-Col. D.Q.M.G. &c.

Lady Franklin's vessel, the *Prince Albert*, was to have sailed for the Arctic Regions on or about the 30th inst.

ROYAL DONATION TO THE PORTSMOUTH SAILORS' HOME.—Her Majesty the Queen has most graciously presented £100 in aid of the Sailors' Home at Portsmouth, which, we are happy to say, is progressing most satisfactorily. Since the opening, 103 beds have been occupied, and on our going into the home on Monday, we saw eight seamen comfortably dining off a sumptuous supply of roast beef and other good things.

MEETING OF THE EXHIBITORS IN THE CRYSTAL PALACE.—A public meeting of the Exhibitors was held on Thursday at Crosby Hall, Bishopsgate-street, for the purpose of considering their position with reference to the Great Exhibition; Mr. H. Wilson of Bethnal-green took the chair, and said, that, although there were not so many present as he could have wished, as the last meeting was a very full one, he was glad to see so many present, and on our going into the home on Monday, we saw eight seamen comfortably dining off a sumptuous supply of roast beef and other good things.

MEETING OF THE EXHIBITORS IN THE CRYSTAL PALACE.—A public meeting of the Exhibitors was held on Thursday at Crosby Hall, Bishopsgate-street, for the purpose of considering their position with reference to the Great Exhibition; Mr. H. Wilson of Bethnal-green took the chair, and said, that, although there were not so many present as he could have wished, as the last meeting was a very full one, he was glad to see so many present, and on our going into the home on Monday, we saw eight seamen comfortably dining off a sumptuous supply of roast beef and other good things.

May 15, 1851

SIR,—I had a long conversation with Mr. Owen Jones last evening, and he has all of that if you and your friends will make a proper application, your wishes will be complied with.

Yours &c., W. T. CARPENTER

The Chairman said, after this letter, he hoped the proceedings would be carried on without displaying that harshness of spirit which no doubt they must all in a degree feel. The meeting was addressed by Mr. John Tebay, C.E.; Mr. Harris, Mr. Whishaw, Mr. Rettie, and several other exhibitors, and resolutions to the following effect were carried unanimously:—

That this meeting of the exhibitors viewed with regret the stringent course of policy which the Executive Committee of the Exhibition had pursued towards the exhibitors, and that this meeting considered that many circumstances might arise during the season of the Exhibition which might render it necessary that a committee of exhibitors should be therein established; and that the following gentlemen be appointed a committee to the purpose of carrying out these resolutions—Messrs. Hindley, Harrison, and Rettie; and that a deputation be appointed by the said committee to wait upon the Royal Commissioners of the Exhibition.

The meeting then adjourned till next Thursday.

PROVINCIAL BANK OF IRELAND.—The twenty-sixth annual meeting was held at the offices, 64, Old Broad-street, on Thursday; Oliver Farrer, Esq., in the chair; when a report was read, which showed that, in addition to the balance from the last account of £66,982 7s. 6d., there was in hand, as profit for the past year, £44,500 of £5 per cent, or £3 per share, Rs. Ibs., out of which it was proposed to pay the usual dividend of £3 per cent per annum, amounting to £43,200, and leaving the undivided balance of £69,477 11s. 10d. The report was adopted.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST.—His Royal Highness Prince Albert has signified his intention of performing the ceremony of laying the foundation-stone of the new hospital on the 25th of June next. The Earl of Carlisle, the President of the institution, and a number of noblemen and gentlemen who take an interest in the success of the charity, are expected to be present to support his Royal Highness on the occasion. The site of the intended hospital comprises a spacious area of ground adjacent to the principal entrance to Victoria-park; and the building, when completed, cannot fail to prove ornamental to the neighbourhood, and beneficial to the poorer inhabitants.

SAILORS' ORPHAN GIRLS' EPISCOPAL SCHOOL AND ASYLUM.—The annual meeting of this society was held on Thursday, at Hanover-square Rooms; the Duke of Manchester in the chair. The report stated that the committee had to so felt an increase of annual subscriptions to cover a large proportion of the regular annual expenses, and enable them forthwith to erect a building which might be more worthy the name of an asylum for the orphan daughters of their countrymen's brave seamen. The number of orphans admitted during the past year had been twelve; the receipts for that year amounting to £441 2s. 3d., and the expenditure to £327 10s. The report was adopted, and the meeting being addressed by several gentlemen, the proceedings terminated.

BRITISH REFORMATION SOCIETY.—The annual meeting of this society was held on Thursday, at the Hanover-square Rooms; Sir George Pitch in the chair. The report stated, that since the last anniversary meeting remarkable events had taken place; but, while twelve months ago peace and quietness comparatively reigned, now that apparent quietude had been broken by a rude hand, few expecting at that period any danger from the Church of Rome; hands of the society had increased in the ratio of their desires. The receipts for the past year amounted to £2810 6s. 8d., and the expenditure to £2626 5s. 3d., leaving a balance in hand of £184 1s. 5d. The report was adopted at the meeting, and the report was adopted; after which the proceedings terminated with a vote of thanks to the chairman.

LORD'S DAY SOCIETY.—The annual meeting of this society was held on Thursday, at Exeter Hall; Mr. M. Plumptre, M.P., in the chair. The report commenced by alluding to the fact of the endeavours the society had made to put down the delivery of letters on the Sabbath. It next alluded to the extra trains and excursion trains on the Lord's day, as a subject of deep regret, and mentioned the various associations and kindred societies that had assisted them in their efforts to abolish the crying evil. The receipts had amounted to £2930 7s. 9d., and the expenditure to £1135 14s., leaving a balance due to the treasurer of £2669 13s. 3d. The report was adopted, and the meeting having been addressed by several gentlemen, the proceedings terminated.

ORPHAN WORKING SCHOOL, HAVERSTOCK-HILL.—The committee of the above institution have determined to add ten to the number of children in the school at the earliest possible period. As every vacancy has been filled during the last nine years, and this addition will be at the rate of fifteen per annum for the ten years. We trust the public will liberally support the charity, so that its members may be encouraged to pursue their onward career, and thus add to the happiness of the widow and confer lasting blessings upon the orphan poor.

ST. ALBANS BRIBERY COMMISSION.—The bill for appointing commissioners to inquire into the existence of bribery in the borough of St. Albans, prepared and brought in by Mr. Ellice and Mr. H. Stuart, recites that its expedient to appoint such commissioners, as bribery in no way can be examined, and was made a faithful discovery, are to be indemnified from criminal prosecutions. It is proposed that each commissioner shall receive five guineas a day over and above travelling and other expenses. The latest account concerning the whereabouts of the "abducted" witnesses, Hayward, Waggel, Birchmore, and Skeggs, is to the effect that they are at Boulogne

The final abandonment of those once lucrative mines, Howden and Percy Main Collieries, near Newcastle, has led to great privation amongst the large number of persons who were employed in those extensive coalworks. The miners are gradually drafting themselves from the locality to other collieries.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

PROTECTION

The Earl of GLENGALL presented petitions from Tipperary, praying for the re-imposition of a protective duty in favour of home-made flour. The noble Earl supported the prayer of the petitioners by many statements of the extreme distress that existed in Ireland, and which had been enhanced, if not created, by the operation of Free Trade.

Lord GRANVILLE admitted the existence of distress, but denied the inference that it arose from the abolition of protective duties.

After some further conversation on the state and prospects of Ireland, in which Lord MALMESBURY, Lord HARDWICKE, and other noble Lords took part, the petition was ordered to lie on the table.

CHURCH EXTENSION.

Earl GRANVILLE moved that the Church Buildings Act Amendment Bill be referred to a select committee.

Lord PORTMAN urged that the bill would make a large reduction in the number of free seats, and effect other changes disadvantageous to the poorer classes.

The Bishop of LONDON explained that the bill was to give every facility to persons desirous of erecting new churches, and defended the reduction in the number of free seats.

Lord STANLEY objected to the *ex post facto* character of the bill, which proposed to make alterations applying not only to new churches, but also to those already in existence. He thought one of the clauses was calculated to excite dissension in the Church, by allowing one parish to build a new church in the immediate neighbourhood of, and merely in opposition to, another

After observations from the Bishop of OXFORD and the Earl of CARLISLE, the motion was agreed to.—Adjourned.

HOUSE OF COMMONS.—MONDAY.

CEREMONIAL OBSERVANCE IN THE CHURCH.

Sir B. HALL said that early in the year an address had been presented to her Majesty from the laity of the English Church, in which the histrionic arrangements of some of the clergy of the Church were spoken of in terms of condemnation; and her Majesty was prayed to interpose and put an end to them. In consequence of this address, her Majesty had desired her Secretary of State to communicate on the subject with the Archbishop of Canterbury, and Sir George Grey had accordingly written to that prelate to express his desire that these practices in the Church should be discouraged and suppressed. He (Sir B. Hall) now wished to ask the Prime Minister what steps the archbishops and bishops of the Established Church had taken in pursuance of the letter addressed by the Secretary of State to the Archbishop of Canterbury, by command of her Majesty, for the purpose of suppressing certain practices in places of worship belonging to the Established Church; and whether the Bishop of London had taken, or was about to take, any legal proceedings against any of the clergy who sanctioned what Sir Hardinge called "histrionic performances" in the churches within his diocese?

Lord J. RUSSELL said, that, in consequence of the letter addressed by his right hon. friend to the Archbishop of Canterbury, a communication had been received from that prelate stating that attention would be called by him to the subject. There was at the same time an address to the clergy on these practices. The Government had not had any further communication on the subject, and he could not, therefore, state what steps were proposed to be taken by the prelates in question. As the House, however, was now in possession of the general views of the Government on the subject, he (Lord J. Russell) did not think it was at all convenient for him to be called on to reply to questions connected with it on every occasion.

ECCLESIASTICAL TITLES ASSUMPTION.

Lord J. RUSSELL having moved that the House go into committee on the Ecclesiastical Titles Assumption Bill,

Mr. MOORE rose to move as an amendment, "That the standing order which commands that no bill concerning religion should be first considered in a committee of the whole House be read, and that the order for the committee on the Ecclesiastical Titles Assumption Bill be discharged." The hon. gentleman repeated the words of the standing order in question, declaring that no bill relating to religion or the alteration of the law concerning religion, shall be introduced except in committee of the whole House. He referred to Mr. Hallam's work on the practice of the House, to show that the standing order was construed to apply to bills dealing with the subject-matter of religion, and not its temporalities. The administration of the sacraments, confirmation, ordination, dispensations, were regarded by the Roman Catholics as vital and essential parts of religion, and with the free action of the bishops in exercising these important functions of their office the bill would interfere. In support of this view, he read the opinion of the eminent canonist, Dr. Murphy, Dr. Kelly, and Mr. Baddeley, on a case submitted to them, and contended that the bill fell clearly within the standing orders of the House.

Sir C. GREY differed with the hon. member in this conclusion, and appealed to the Speaker, who had given his opinion previously to the introduction of the bill, that it was not included in the terms of the standing order. He cautioned the House against making the opinion of counsel on a subject as the construction of its own standing orders; if that opinion were consulted at all, it should be by direction of the House.

Mr. HORSMAN supported the objection of the hon. member for Mayo, and referred to the precedent of the Irish Church Temporalities Bill, on which the same objection had been taken after the second reading, and carefully considered, and having been withdrawn, re-introduced in committee of the whole House.

The SPEAKER stated his opinion on this question, which he regarded as one of some difficulty. There was no precedent exactly applicable for the House of the sense of the standing order, and the precedents were various; but he was inclined to think it was not necessary that any bill should be introduced in a committee of the whole House, unless it regarded the temporalities of religion, not to land or instruments, or other such matters. The Irish Church Temporalities Bill was in the nature of a taxing bill, and no reference was made on that occasion to the standing order as to bills affecting religion. That bill was introduced on this subject by the Home Secretary before the introduction of the bill, and before he was fully acquainted with its provisions. Having carefully considered all the provisions, especially the second clause, he still adhered to the opinion he had formerly expressed, that this was not a bill of such a nature as required it to be have been introduced in committee of the whole House.

Mr. SHAFTAN felt that he should be speaking against the evidence of his senses, if he were to say that this was a bill which did not affect religion.

Mr. REYNOLDS moved the adjournment of the debate.

Mr. HUME thought it would be the better course to adjourn the question, and afterwards appoint a committee.

Mr. KEOGH contended that the bill came within the standing order, and read an opinion given by Sir F. Kelly, Mr. Brodie, and Mr. Baddeley, to the effect that the bill, in its original (and still existing) state, containing the second and third clauses, would render it illegal for any Roman Catholic Bishop to exercise his official functions in any see of the United Kingdom, though such functions were merely episcopal and spiritual, and had no reference to any temporal authority. These duties could only be exercised within a see properly defined, and therefore the bill would render them illegal. Would the House determine, in the face of an opinion thus signed, that the bill did not affect the temporalities of the Roman Catholic religion? The Speaker's opinion was not to determine on all occasions the legal construction of bills introduced, and this bill, as prepared by the law officers of the Crown, had been found to have a directly contrary opposite effect to that originally intended by Ministers. An important precedent was the Roman Catholic Emancipation Bill, which had been introduced in committee of the whole House.

The SOLICITOR-GENERAL contended, that, on the very face of the standing order, it related to matters of faith and doctrine, not to questions of ecclesiastical management or discipline, and that the bill did not affect spiritual, but merely temporal, description?

Mr. GLADSTONE must vote against the adjournment of the debate, though, if the proposition of the hon. member for Manchester to appoint a committee, the proposition of the hon. member for Stroud, would be much valuable result to could not be reduced to a single principle; it would be a most valuable result to have some rule laid down for their guidance in future. He considered the Solicitor General to be right in his view that the standing order referred not to matters legislation in general, but to the established religion of the country, and that all bills affecting the securities of the established religion ought to pass through a preliminary committee, as had been the case with the Irish Church Temporalities Bill, the Test and Corporation Acts Repeal Bill, and the Jewish Civil Disabilities Bill. The conclusion to which he came was, that the question was involved in such considerable difficulty with respect to the precedents before them, that a committee should be appointed which might lay down a clear and definite construction of the standing order, so that that their hitherto confused practice might become intelligible and uniform.

Mr. SADLEIR thought the bill must be considered as partially at least affecting the established religion of the country.

Lord J. RUSSELL shortly contended that the precedents referred to did not bear on the present case, and the ultimate decision must in any case rest with the discretion of the House

Mr. BRIGHT considered the noble Lord, that, after the introduction of the bill, he had stated to the House that he had found it affected the spiritualities of the Roman Catholic religion. He thought the present bill had also a distinct bearing, at least, on the Church of England. It would only be fair in addition, Indeed, to allow the bill to be referred to a select committee, in order to show the Roman Catholics that the House would proceed in such a matter with all due deliberation.

The House then divided on the motion for adjourning the debate, which was negatived by 179 to 53.

Mr. LAWLESS moved the adjournment of the House.

After some conversation, the House divided, and rejected the motion by 145 to 36.

On the question that the Speaker do leave the chair,

Mr. M. J. O'CONNELL spoke to the principle of the bill, maintaining that the act of the Pope called for no legislative action, as the Irish Roman Catholic prelates had for a long series of years been appointed under the Papal sanction.

Mr. URQUHART contended at considerable length that there had been no violation of the law of nations, and that the Pope's rescript had its source in political feeling.

Mr. KNOX felt, that, if the House went into committee, all the effects of great orators and statesmen in favour of full enjoyment of civil rights by Roman Catholics would have been rendered vain. He regarded the premise of the bill as unfounded in fact, and referred the opinion of the hon. and learned member for Aylesbury (Mr. Bethell), given when out of the House, that the second and third clauses were comprehended in the first. The bill would interfere both with the purely spiritual and ecclesiastical functions of the rulers of the Roman Catholic Church.

Lord JOHN RUSSELL contended, in opposition to the honourable and learned gentleman, that the bill, as regarded Ireland, repealed the enactment of 1829, which had been enforced, and obeyed by the Roman Catholic prelates of Ireland. What was intended by the bill was, by the present bill, to prevent the insidious and open assumption of ecclesiastical titles. It was not the business of a Government to pry after and seek out matter of offence for punishment; but, when a person came, pretending authority from the Pope for establishing bishoprics, assuming rule and governance, and the like, this was no quiet exercise of religious functions or non-compliance with the letter of some law, but an open and daring defiance of the sovereignty of the country. If, after the passing of the bill, persons were found assuming titles openly, and setting up their pretensions in opposition to the authority of the Crown and Parliament, it would become the duty of the Executive Government to enforce the law. He denied that there was any persecution in this bill, and again averred that it was a political measure, directed against a political influence, and that he would not suffer the name of religious liberty to be prostituted for the purpose of covering foreign aggression

Mr. BRIGHT retraced the history of the agitation from the Mansion-house dinner downwards. After all the speeches made, however, whether in the House or out of it, there had been no clear definition of the wound said to have been inflicted on this country or of the remedy which should be applied. The bull against the papal rescript was such as had been used by the See of Rome since the days of Hildebrand, and was rather of form than substance. The Pope had always ignored the existence of the Church of England, and necessarily so, taking the same view as the Church of England did of Dissenting sects. He contended that the creation of bishops would really do much to relieve the Roman Catholics from that Ultramontane influence of which so much had been said. He looked on the danger as purely imaginary, and the whole matter as one of sentiment. He proceeded to point out the evil effects of this bill, which he anticipated would be felt for years to come.

Mr. SCULLY moved the adjournment of the debate.

The House divided—

For the adjournment	.. ..	54
Against it ..	.. ..	363
Majority against ..	.. .. ..	—311

Mr. O'FLAHERTY again moved the adjournment of the debate

Lord JOHN RUSSELL thought the House might have been allowed to get into committee on the bill, after debates which had taken up so many nights; but, rather than keep the House constantly dividing, he would assent to the adjournment.

The debate was then adjourned to Thursday.

PROPERTY TAX BILL.

This bill was read a third time and passed.

THE WOODS AND FORESTS.

Lord SEYMOUR obtained leave to bring in a bill, to make better provision for the management of the woods, forests, and land revenues of the Crown, and for the direction of public works and buildings. The noble Lord said the bill was the same as that of last session, with a few alterations of detail.

Adjourned at a quarter before two o'clock.

HOUSE OF LORDS.—TUESDAY.

MARRIAGE (INDIA) BILL.

Lord BROUGHTON moved the second reading of this bill. Legislation on this subject had been recommended by Sir C. Robinson, Sir Samuel Romilly, and, more recently, by Lord Campbell and the present Lord Chancellor. A commission had been appointed to inquire into the subject, consisting of the late Recorder of London, the late Lord Advocate of Scotland, Dr. Lushington, and others; and they proposed that the marriage law of India should be made conformable to the marriage law of England. There were 1054 clergymen in India who were capable of solemnizing marriages, of whom 789 were Roman Catholics. There were also laymen who were in the habit of performing the ceremony, but the validity of such marriages had been questioned. Even so late as 1849, an attempt was made at the Supreme Court of Bombay to quash an action for criminal conversation, on the ground that the marriage was illegal; but the court held the marriage to be bad. In a similar case, however, the Supreme Court of Madras had held the marriage to be bad. There were only six ministers of the Scotch Free Church in India, but every marriage performed by them was liable to be questioned. To obviate all the evils, and assimilate the law of India to that of England, the present bill was introduced.

The Earl of ELLENBOROUGH did not object to the principle of the bill, but he thought some of its details were not adapted to the state of society in India.

The bill was then read a second time.

STEAM COAL FOR THE NAVY.

The Earl of ELLENBOROUGH called the attention of the Government to certain experiments which had been made by Sir H. De la Beche and Dr. Lyon Playfair, with a view to test the quality and comparative descriptions of coal, to be used on board steam-vessels. He recommended similar experiments being tried on Indian coal, and that those gentlemen should specially report as to the liability of the different kinds of coal to spontaneous combustion. Experiments should also be made at sea, and under the boilers, because the atmosphere at sea might have some effect on the generation of heat.

The Earl of ARDEN (who was very indistinctly heard) was understood to say that the subject had engaged the anxious attention of the Admiralty, and that the suggestions of the noble Earl were worthy of consideration. Various experiments had been tried, chiefly with a view to test the relative power of various kinds of coal for the purpose of steam navigation.

Their Lordships adjourned at a quarter before six o'clock.

HOUSE OF COMMONS.—TUESDAY.

There being only 21 members present a four o'clock, the House adjourned.

HOUSE OF COMMONS.—WEDNESDAY.

The House sat from noon to six o'clock

A short conversation took place on the subject of there having been "no House" on the preceding day, when the important subject of Parliamentary reform was fixed for discussion.

Mr. HUME and Mr. COBDEN explained their absence at the critical moment of the "count out" by the fact that they were sitting on committees when the House met, and before they could reach the House, owing to the distance of the committee rooms, it was counted out

The Charitable Institution Notices Bill and the Landlord and Tenant Bill were each read a second time.

RELIGIOUS HOUSES BILL.

Mr. LACY moved the second reading of the bill, and explained that its provisions included, 1st, The registration of the names of all inmates of the monasteries and other religious domiciles; and, 2ndly, The power assigned to local magistrates to visit every such establishment without notice, and remove at once any one of the lady occupants who should desire to leave it.

Mr. HUME considered that the bill was likely to irritate a large section of the religious community of the country, and hoped that it would not be passed.

Sir GEORGE GREY also believed that the bill was open to serious objections, and would, besides, fail to accomplish the object in view. He should support an amendment for postponing the second reading to that day six months.

Mr. NEWDEGATE and Mr. DISRAELI supported the bill.

Mr. PALMER, seeing that the Ministers had pronounced against the measure, hoped it would be withdrawn.

Mr. GUSTARD warmly defended the Catholic conventual establishments, without which, he declared, Ireland would long since have sunk, and urged the withdrawn of the bill.

The discussion was continued by Lord Ashley, Lord Arundel and Surrey, Sir J. Pakington, Mr. Keogh, Mr. Spooner, the solicitor-General, Mr. Freshfield, Mr. Serjeant Murphy, and Mr. Sidney Herbert.

The House then divided :—

For the second reading	.. .. ..	91
Against it ..	.. .. ..	123
Majority ..	.. .. ..	—32

The bill was accordingly lost.—Adjourned.

HOUSE OF LORDS.—THURSDAY.

Their Lordships sat a short time, and some petitions were presented.

CHANCERY REFORM BILL

Lord LYNDHURST called the attention of his learned friend on the Woolsack to the promise which he had made at the beginning of the session, that a Bill for the regulation of proceedings in the Court of Chancery should in a short time be presented to their Lordships.

The Lord CHANCELLOR said that noble and learned Lord had himself presided over the Court of Chancery for many years, during which he must have been aware of the existence of these evils, and yet he had left the remedy to be applied by his successors. His noble friend at the head of the Government had asked for leave to bring in a bill in the other House to remedy the evils of which his noble and learned friend had complained; his noble and learned friend had commented upon a former occasion on that bill, and had offered several valuable suggestions; he had himself also received several valuable suggestions from different members of the profession, and had requested the noble Lord at the head of the Government to postpone the measure until he should have had time to consider those suggestions. He (the Lord Chancellor) had considered them, and had drawn up a Bill, which would be laid on the table very shortly.

Lord LYNDHURST wished to know whether the bill would be introduced into their Lordships' House.

The Lord CHANCELLOR was understood to say that it would.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

INTERCHANGE OF LEGISLATIVE RECORDS WITH FOREIGN COUNTRIES

Mr. STANFORD asked Lord John Russell whether any application had been made on the part of foreign Governments, especially those of France and the United States, for an interchange of the records of the proceedings of the respective Legislatures, and other documents, such as returns, reports, and political statistics, and whether it was the intention of Government to bring the subject under the notice of Parliament.

Lord J. RUSSELL said applications had been made through the ambassadors of several foreign countries to the foreign office for an inter change of legislative records, and that they had been referred to the Speaker to exercise his discretion as to the propriety of according to such demands

THE ECCLESIASTICAL TITLES BILL.

Mr. KEOGH asked the hon. member for Midhurst (Mr. Walpole), whether the rumour which had prevailed that some understanding or arrangement existed between him and the Government with reference to the amendment of which he had given notice respecting the Ecclesiastical Titles Bill, was true, and, if so, whether his views were, in consequence, likely to be adopted? (Cries of "Hear," and "No, no.")

Mr. WALPOLE rose for the purpose of giving a reply, but, in deference to a general cry of "No, no," he resumed his seat without saying a word.

Mr. REYNOLDS then put a similar question to Lord John Russell.

Lord J. RUSSELL said the proper time to ask such a question would be when the House went into committee on the bill. (Cheers.)

On the motion for going into committee,

Mr. REYNOLDS, Mr. O'FLAHERTY, Mr. KEOGH, and several other members presented a great mass of petitions against the bill, the statement of the respective prayers of which occupied nearly two hours.

Mr. SCULLY then rose to speak against the further progress of the measure, the injurious effects of which upon the peace and well-being of Ireland he dwelt upon at great length.

The debate was continued by Mr. Wegg Prosser, Mr. Trelawney, Mr. Philip Howard, Mr. Reynolds, and other hon. members against the bill.

Mr. HOWARD contended that with the abolition of the feudal system, the union of the spiritual and the temporal power of the Pope in foreign countries had ceased, and in support of his view quoted the encyclical letter of Pope Leo XII. to the President of the Mexican Republic, in which his Holiness stated it was imperative on the Pope not to interfere in any but spiritual matters in foreign countries.

The Lord ADVOCATE supported the bill, on the 'ground that the spiritus supremacy claimed under the Pope's Rescript was not merely over the Roman Catholics, but all denominations of Christians residing within the limits of the new Sees.

Mr. WHITESIDE (in a maiden speech) strongly supported the bill.

Mr. LAWLESS having moved the adjournment of the debate,

The House divided—

For the adjournment	.. ..	46
Against it ..	.. ..	359

Mr. R. M. FOX then moved the adjournment a second time of the debate.

Lord J. RUSSELL assented, on the understanding that the debate be brought to a close on the next (Friday) evening.

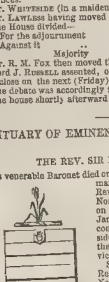
The debate was accordingly fixed for Friday.

The house shortly afterward rose, at ten minutes to two o'clock.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

THE REV. SIR ROBERT AFFLECK, BART., M.A.

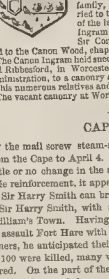
THIS venerable Baronet died on the 7th inst., at his seat, Dalham Hall, near Newmarket, aged 86. He was third son of the late Rev. James Affleck, M.A., Vicar of Pirnden, county Northampton, and succeeded to the title and estate on the decease of his brother, Lieutenant-General Sir James Affleck, Bart., in 1833. The baronetcy was conferred on Sir Edmund Affleck, in 1789, in consideration of that gallant naval officer's conduct in the command of the centre division in the memorable victory of Admiral Rodney.



Sir Robert Affleck, whose death we record, was Rector of Thurlaston, Notts, Vicar of Si kstone, county York, and Prebendary of York. He married, 16th May, 1800, Maria, second daughter of Sir Ralph Lopey, Knt., of Newick Park, Sussex, Chief Justice at Bengal, and by that lady (who died 12th March, 1825) had five sons and four daughters. Of the former, the eldest, now Sir Gilbert Affleck, fifth Baronet, was born 9th June, 1804, and is married to Evelina-Frances, eldest daughter of Francis Ellis, Esq., of the Royal Crescent Bath.

THE REV. EDWARD WINNINGTON INGRAM.

THE death of this gentleman, Canon of Worcester Cathedral, occurred on the 7th inst., at Cheltenham. Mr. Winnington Ingram was second son of Sir Edward Winnington, the second Bart., of Stamford Court, by Anna his wife, daughter of Thomas, first Lord Foley, and grandson of Sir Edward Winnington, Bart., by Mary his wife, daughter of John Ingram, Esq., of Bewdley. His additional surname of Ingram he assumed in compliance with a testamentary injunction of Mr. Francis Ingram, of Ribbesford, county of Worcester, which manor he inherited. He married, in 1804, Jane, daughter of the Very Rev. Arthur Onslow, Dean of Worcester, by whom (who died five months before himself) he had five sons and three daughters. Of this family, the eldest son is rector of Stamford, and is married to the daughter of the Bishop of Worcester, and niece of the late Earl of Coventry. One daughter of the Canon Ingram is the widow of Henry Barry Domville, nephew of Sir Compton Domvile, Bart. Another daughter was married to the Canon Wood, chaplain to the Queen, and died in 1844.



The Canon Ingram held successively the livings of Stamford, Clifton-upon-Teme, and Ribbesford, in Worcestershire, and was promoted in 1833, by Lord Grey's administration, to a canonry at Worcester. The Rev. Canon was much beloved by his numerous relatives and friends; he was aged 66 when he died.

The vacant canonry at Worcester lapses to the Ecclesiastical Commission.

CAPE OF GOOD HOPE.

By the mail screw steam-ship *Hellespont*, we have accounts this week from the Cape to April 4. But the intelligence thus conveyed presents little or no change in the aspect of affairs. Indeed, without a considerable reinforcement, it appears impossible that the troops at the command of Sir Harry Smith can bring the Kaffir war to a conclusion.

Sir Harry Smith, with about 2200 troops of all sorts, was at King William's Town. Having been apprised of the intentions of the Kaffirs to assault Fort Hare with the intention of rescuing the Hottentot prisoners, he anticipated their attack by moving against them. Upwards of 100 were killed, many wounded, and a large number of cattle captured. On the part of the British forces only a few rank and file were killed and wounded.

Colonel Mac Kinnon's patrol from King William's Town made a raid on the Kaffirs, destroyed several of their kraals, and, by the aid of the Fingoes, took a quantity of stock.

Sir Harry Smith having, since the desertion of the Cape Mounted Rifles, threatened to act only on the defensive unless assisted by the colonists, has at length induced a number of the frontier farmers to join him. They, however, contend, that unless the Kaffirs all along the frontier districts are exterminated, no security for life or property can be expected.

In consequence of forty-six armed Cape Mounted Rifles having connected themselves with the disaffected Hottentots at Bünkwater, about one-half of that body have been disarmed, and 200 of their horses are now appropriated to the use of the levies from the western district. Three or four of the deserters from the rifle corps have been shot.

The Fingoes continue faithful, but the band of Hermanus, now led by his son, refuse to surrender to General Somerset. They hang about Blinkwater, and assist the Kaffirs in their abortive attempts to rescue the Hottentot prisoners

Sandili, with the prophet Umlungeni, was safe in the fastnesses of the Keiskamma.

Leyola, the T'Slambie chief, who took up a strong position on the Debe Neck, interrupting communications between King William's Town and Graham's Town, decamped on the appearance of a strong patrol sent against him.

There has been no open demonstration at Cape Town, either favourable or otherwise to the Governor-General, but the feeling of the inhabitants is for the adoption of some determined course to prevent the protraction of the war.

The *Monthly Despatch* of the 3rd ult., speaking of the hitherto vain efforts of the small handful of soldiers in the Cape to make an effectual impression on the shifting hordes of the Kaffirs, justly observes :—

> These repeated marches and countermarches have led to no practical result bearing upon the fate of the campaign; they have, however, tended to make soldiers of the raw western levies, who were on their arrival undisciplined and unaccustomed to act in concert; but, on the other hand, they have excited surprise and distrust among that portion of the coloured population whose continued fidelity is of the greatest importance at the present critical period. It would be far cheaper to bring troops from the Mauritius or St. Helena, and to have con-

ECCA HEIGHTS PASS, NEAR GRAHAM'S TOWN.

ornaments from England at once, than to prolong the war for an indefinite period by endeavouring to crush the rebellion with the troops on the spot, who are too few to effect anything of consequence, entailing an ultimate ruinous expense, as many more will have to be brought before there can be a semblance of security on the frontier. Moreover, it should be remembered that the Hottentots cannot be kept in the field for ever, and that the time for which they were first enlisted has already half expired.

The defection of the Cape Mounted Riflemen greatly encouraged the Kaffirs, who assumed an insolent tone, and even attacked some men with a waggon within two miles of King William's Town; two of the Englishmen accompanying it were severely wounded, and the party had some difficulty in reaching that place.

With respect to events within the colony, it was confidently hoped that the capture and dispersion of the Fort Armstrong traitors would have had a most salutary effect upon the tribes in arms against the colonists; but the temporary re-occupation of the Kat River districts by rebel bands, in consequence of the numerous calls upon the services of troops, and other untoward events, speedily dispelled any such expectations. The further proceedings of General Somerset in this district on the 25th and 26th of February, and the capture of a quantity of booty and a number of waggons at Phillipton, Eland's Post, and other places on the Kat River, will be found in his despatch.

During the operations against Fort Armstrong, and upon other occasions, the eagerness of our Fingoe allies to capture cattle, whether belonging to friends or foes, has caused their commanders much trouble, while the chaotic confusion of races, and the diversity of interests among the frontier inhabitants, render the conducting of the war in a satisfactory manner one of the most arduous undertakings possible.

On the north-east the Tambookies are kept in check by the Burghers, but a small party under Commissioner Cole, of about 140 men, composed of Boers, English, Bastards, and Hottentots, who advanced from Sterkspruit against the chief Moroise, unsupported, met with a severe reverse, and the English lost nine of their number, who were killed. The troops under Major Warden happily came up and saved the remainder of the party

Small parties of Kaffirs are in the colonies doing much mischief; but the occupation of Kaffraria by the troops under Sir H. G. Smith has, no doubt, prevented their swarming in the Addo Bush and their other favourite lurking-places in former wars.

THE ILLUSTRATIONS.

The Ecca Heights Pass, leading from Graham's Town to Forts Brown and Beaufort, forms the subject of our Illustration this week. An excellent road has been constructed, connecting those distant posts with headquarters, by the late Lieutenant-Colonel Selwyn, of the Royal Engineers. The amount of labour necessary to effect this was enormous, the entire being what is technically termed side formation in the red sandstone rock, which had to be effected by the labour of a few Sappers, and details of men from the other corps. The point from whence our Sketch is taken is known by the name of Selwyn's Nose, from the fact of Colonel Selwyn's horse having fallen with him at this point, by which accident he sustained a severe fracture of that organ; and with that proneness to the ludicrous which characterises military life, the Sappers, very much to the annoyance of their commander, gave it its present appellation. This point is distant about eight miles from Graham's Town

The second Illustration show a waggon of the colonists attacked by a party of Kaffirs.

MEDAL

PRESENTED BY THE DANISH PEOPLE TO THE VOLUNTEERS FROM SWEDEN AND NORWAY WHO FOUGHT IN THE DANISH RANKS IN THE LATE WAR

This interesting Medal has been struck in memorial of the volunteer services of Swedes and Norwegians, who shared the dangers of the Danish people in their late war for the maintenance of the union of Schleswig with the Danish monarchy. The design is intended allegorically to represent the spirit which animated the Scandinavians in that great struggle. The principal figure on the obverse is "Heimdal," the Guardsman of Heaven, who stands as sentinel at the bridge of "Bifrost" (the rainbow), to give notice of the approach of strangers or of danger, by blowing his horn "Giallar." About him it is told in the "Edda" (see Frye's "Gods of the North," XLVII.), that he is constantly on the alert to prevent surprise on the part of the giants, that he was born of nine mothers, that he had a tooth of gold, could do without sleep, see at a distance of a hundred miles as well by night as by day, hear wool grow on the backs of sheep, and grasses shoot. He is represented on the Medals with his robe flying and his sword drawn, blowing his horn; before him is his symbol, the cock, shaking its wings and crowing; under the arch is the constellation of Ursa Major The Danish motto is taken from an old song of the giants, in the poetic Edda, and may be thus rendered into English: "Now stands the battle near Jutland." On the reverse is seen an old northern war-ship (the drawing taken from the Gobelins of Bayeux) under full sail. Two men are standing in the bow one of them stretching out his right arm as if saluting, whilst with the left hand he holds the hilt of his sword; the other is shading his eyes with one hand, as if better to see the shores they are approaching, whilst supporting the other arm on a scimitar. Two shields are seen on the mast, and on the one the arms of Norway, the lion, on the other the three Crowns of Sweden. Odin's two favourite ravens are seen flying round the ship. The motto, which is likewise from a favourite song of one of the old Scalds, says, "And the tide brings them on towards Denmark." Underneath: "To the volunteers from the brother countries."

This Medal (of which three only exist in gold; 360 in silver, for the volunteers; and 400 in bronze) has been beautifully executed by a young artist, P. Petersen, of Copenhagen; and the requisite funds were entirely raised by small voluntary subscriptions.

ATTACK ON COLONISTS WAGGON, BY KAFFIRS.

HYDE-PARK ON THE FIRST OF MAY.

CALENDAR FOR THE WEEK.

SUNDAY, May 18.—Fourth Sunday after Easter.
MONDAY, 19.—St. Dunstan.
TUESDAY, 20.—Lafayette died, 1834.
WEDNESDAY, 21.—First railway act passed, 1801.
THURSDAY, 22.—Alexander Pope born, 1688.
FRIDAY, 23.—Dr. Paley died, 1805.
SATURDAY, 24.—Queen Victoria born, 1819.

ROYAL PRINCESS' THEATRE, OXFORD-STREET.—MONDAY, MAY 19, and the following Evenings, the MYSTERIES AND THE ALHAMBRA. Monday, 19, the Fourth Night of the Grand Ballet of WAR; Fashion and Love in a Maze; Apartments, Wife's Secret, Apartments, and the All-at-one Theatrical. Tuesday, Apartments, and the Alhambra. Friday 23, Two Old Apartments, and the Alhambra Saturday, 24, the strangest Apartments, and the All-at-one.

FRENCH PLAYS.—ST. JAMES'S THEATRE.—Mr. MITCHELL has the honour to announce that the Theatre will be Open for the Season, on Monday, May 19, when will be performed, for the First Time in England, a New Comedy, in 3 Acts, entitled LA JEUNESSE DE HENRI CINQ, by Alexandre Dumas, the Author of "Monte Cristo," "Les Trois Mousquetaires," "Le Comte de Morcerf," "Le Chevalier de Maison Rouge," "Le Chasseur de Sauvage," "Le Capitaine Paul," "Le Bal Masque," "Le Chevalier d'Harmental," "Le Comte de Lorraine

METROPOLITAN NEWS.

ROYAL BOTANIC SOCIETY.—FIRST SHOW.—The May show of the Royal Botanic Society took place on Wednesday, at the gardens in the Regent's Park. It was generally determined, that, notwithstanding the backwardness of the season, it was the finest May show which had ever been held in Europe, as undoubtedly it was the largest, to provide for which an extra tent was obliged to be provided. The collection included three tents to the north of the winter garden, in which were the orchideæ, pelargoniums, azaleas, and seedlings. A tent to the west in the American garden was devoted to the collections of greenhouse plants, and one to the east, near the Chester-gate, to the rose collection. Besides these, seven wooden compartments were appropriated exclusively for the day, the general scientific collections, *Victoria regia* house, a small tent for rhododendrons by Messrs. Standish and Noble, and in the new ornamental ground fine specimens of wax flowers and ornamental plants were acknowledged to be in finer condition than on any previous occasion. There was a general conviction of the great progress made in the practice of growing flowers; but what was more remarked was, the increased liberality displayed by the exhibitors in their treatment of colours—a point in which our gardeners have been backward in common with our manufacturers and the public generally. The large collections of wax greenhouse plants afforded ample scope for arrangements displaying the harmony or contrast of the plants, and the peculiar form of the exhibition ground, first adopted last year, presented good opportunities for producing effect—turfed seats being placed instead of wax-cloth coverings. The exhibition, being the first of the season, was inaugurated by a state visit from her Majesty. The Royal party likewise included Prince Albert, the Prince of Wales, the Prince and Princess of Prussia, &c. The *corps* assisted at four carriages, with attendants. Her Majesty arrived at ten o'clock, alighted at the principal entrance, and was received by the Duke of Norfolk, president; the Marquis of Aylesbury, the Bishops of Winchester and Durham, &c. The Queen had not been visible two o'clock. The musical arrangements included one hundred musicians of the Guards, under the direction of Messrs. Waddell, Gratian, Cook, and [illegible].

THE ROYAL LITERARY FUND.—On Wednesday, the 61st annual dinner of this fund took place at Willis's Rooms, Prince's Hall; the Right Hon. Sir Van der Weyer, the Belgian Minister, in the chair. His Excellency was supported by Senor Isturiz, the Spanish Minister, Lord Ashburton, Lord Londesborough, the Hon. E. Phipps, Baron de Tuyll, Baron Martens, Baron de Meyendorff, M. Grenier, and M. Delaperrie, the Earl of Belfast, Lord Crewe, Mr. Vice-Chancellor Knight Bruce, &c. The chairman, in proposing the toast of the evening, "Prosperity to the Royal Literary Fund," commented upon the great objects which this society had been founded, and upon which it was carried on, embodied the prayer, good and true feeling which society owed to those who, regardless of such common-place worldly riches, had devoted themselves to the field of literature; and who, amidst privations of every kind, had ministered to our intellectual wants and pleasures. (Cheers.) The toast having been duly honoured, Mr. Peter H. Hall before the public the state of the society's funds. Unlike some other societies, which, if they saved a man from drowning, requested him to come before the annual meeting and show himself to the world, in this institution he to public view the results of his labours in the funds. Nevertheless, in (the Rev. Dr.) remembered an occasion upon which the French Ambassador himself was proud to avow himself as one of those whom they had assisted; for the society extended its aid to literary men of all nations. (Loud cheers.) During the past year they had to put 38 persons, who were thus classed:—History and biography, 4; Biblical literature, 3; science and art, 3; typography and travels, 4; education, 5; poetry, 4; essays and tales, 7; drama, 1; law, 1; medicine, 1; and miscellaneous, 3. Their accounts during the past year had been as follow:—In which they accounted for this—38 grants for relief, £1,035, expenses (including as area, £110 11s 3d), £35 14s. 6d.; purchase of £300 stock, £269 10s.; balance, £108 17s. 3d.: total, £1779 14s. 9d. The persons relieved comprised 29 males, 9 females, 6 being authoresses and 3 widows. Amongst the subscribers was the Queen, who had given them 100 guineas since 1835—(loud cheers)—Prince Albert, and many other distinguished personages. Mr. Alison, Mr. Thackeray, and others whose names stand high in the master-roll of literature, addressed the assembly in the course of the evening.

PROTESTANT ASSOCIATION.—The Earl of Winchelsea presided at the annual meeting of this society, in Exeter Hall, on Wednesday. The report, which was very lengthy, dwelt on the necessity of all true Protestants exerting themselves to counteract the efforts of Romanists and Tractarians, and Propagandism, and stated that their committee, acting under the impression conveyed to them from many quarters, that it would be highly desirable that efforts should be made to form some new organization which would meet the crisis in the affairs of Protestantism, caused letters on the subject to be addressed to some of the leading Churchmen and Dissenters, who have taken a leading part in the anti-Maynooth movement of 1845. The answers received to such letters did not seem to justify the committee in originating such movement. The receipts of the association during the year ending up to the end of March were £1053 18s. 4d.; the expenditure, £999 0s. 8d.; leaving a balance in hand of £54 14s. 8d. With respect to finances, the committee observed that the position of the London auxiliaries afforded a favourable criterion of the amount of the feeling of the country generally, as much had been done by local associations with local funds. The report having been adopted, Mr. Plumptre, M.P., the Rev. Hugh Stowell, and other gentlemen addressed the meeting at much length, and resolutions were passed in support of the objects of the society.

BRITISH MISSIONS.—On Tuesday evening the united annual meeting of the committees of those missionary societies connected with the Church of the Irish Evangelical, and the Colonial Societies, took place at Exeter Hall; Mr. Pilkington, M.P., in the chair. The report of the society's proceedings stated that the Home Missionary Committee had made up for the deficit of the March were £1053 18s. 4d.; the expenditure, £999 0s. 8d.; leaving a balance in hand of £54 14s. 8d. With respect to finances, the committee observed that the position of the London auxiliaries afforded a favourable criterion of the amount of the feeling of the country generally, as much had been done by local associations with local funds. The report having been adopted, Mr. Plumptre, M.P., the Rev. Hugh Stowell, and other gentlemen addressed the meeting at much length, and resolutions were passed in support of the objects of the society.

BRITISH MISSIONS.—On Tuesday evening the united annual meeting of the committees of those missionary societies connected with the Church of the Irish Evangelical, and the Colonial Societies, took place at Exeter Hall; Mr. Pilkington, M.P., in the chair. The report of the society's proceedings stated that the Home Missionary Committee had made up for the deficit of the destitute towns and districts of England with the Scriptural ministrations of the Gospel, had expended £176,000 in furtherance of this praiseworthy object. Unfortunately, however, the annual sum required for the various operations of the institution greatly exceeded the present income, and an appeal was therefore made to the public for increased pecuniary support. The Irish Evangelical Society was established in 1814 to promote the preaching of the Gospel amongst "Popish multitudes," and to counteract the superstition of Romanism, and to evangelise the country. The expenditure last year was £2351 7s., leaving the insufficiency of funds of £1316 10s. 2d., leaving a very small balance in hand to sustain the operations of the society for a year. The Colonial Missionary Society was formed in the year 1836, and was now conducting its operations among more than nine millions of our British subjects. It had sent forth from the parent land, for labour, 87 ministers; it had ordained, for labour in the colonies, 39 young men; it had assisted to maintain more than 30 ministers, who had entered the colonies on their own resources, or who were in the field before the formation of the society, but could not have maintained their ground without such aid. It had now on its list of brethren, receiving aid, 34 ministers diligently labouring, and nine young men receiving education for the ministry. The number of members in the colonial churches exceeded 4000, and it appeared that 3500 persons were brought into the truths of the Gospel from these missionaries. The report was received and adopted, and, various resolutions having been passed in furtherance of the objects of the institution, the meeting separated.

TEMPERANCE DEMONSTRATION.—The sixth of a series of temperance demonstrations was held on Monday night in Exeter Hall. There were upwards of two thousand persons present on the platform were the Hon. H. Greeley, member of the United States Congress; Rev. H. Garnett (a clergyman of colour), Geneva, state of New York; and many well-known advocates of temperance. John Cassell occupied the chair. During the course of the evening the meeting was addressed alternately by Europeans and Americans.

SOCIETY OF ARTS.—The second *conversazione* of the season, given by the members to the foreign visitors of the exhibition, was held on the society's rooms, John-street, Adelphi, on Wednesday evening, when it was attended by a very numerous and fashionable company. The walls of the great room were decorated by the collection of pictures by Mr. Turner, R.A., and upon the tables were a number of the early studies and drawings of Mr. Mulready, R.A., which he kindly placed at the disposal of the council. In the course of the evening Herr Lidarow, of Vienna, performed on the violoncello, in company with performances on the pianoforte and violoncello. In addition to various solos, these gentlemen gave, with extreme good taste, Beethoven's sonata in F. Op.

CHURCH PASTORAL AID SOCIETY.—The annual meeting of this society was held on Tuesday, at Exeter Hall, Lord Ashley, M.P., took the chair, and opened the proceedings by stating that the accounts and resolutions were to be celebrated in that hall, he could not but consider this as the most important. As it mainly affected the interests of the Established Church, which came home both to their hearts and their homes. The receipts during the previous year amounted to £31,955, which exceeded the certain expenses of the previous year by £735. The expenditure for the year had been £30,060, which exceeded that of the previous year by £1095, there were now 37 grants more than at this time last year, making the total number 407, being the largest number ever on the list of the society. The aid of the society was now extended to 332 incumbents, in charge of an aggregate population of 1,284,000 souls, and 75 of them were without any church accommodation whatever. The Thames Angling Preservation Society.—On Wednesday the thirteenth annual meeting of this society was held in the Freemasons' Tavern; Mr. H. Whitbread, M.P., in the chair. Mr. S. C. Whitbread read the report, which stated that the fishing in the Thames was in a most satisfactory state, having an increase of trout, and poaching being on the decrease. The receipts, including a balance of £26 3s. 3d., amounted to £367; the expenditure, £317, left a balance of £49 9s. The report having been adopted, and thanks voted to the chairman, treasurer, and secretary, the meeting separated.

LICENSED VICTUALLERS' ASYLUM.—The Wednesday the twenty-third anniversary festival in aid of the funds of the Licensed Victuallers' Society was held at the Highbury Barn Tavern, Highbury. The company numbered about 400 of the members and friends of the society. Mr. B. C. Wilkinson occupied the chair. The report which was submitted on behalf of the board of management stated, that, during the last year, ten additional houses had been added to the ladies' wing of the asylum, that a chapel had been erected for the use of the inmates and subscribers, that a new board-room had been provided, and that a chaplain's house was in course of erection. A large increase had taken place during the past year in the number of life members. The total amount of subscriptions received had been £7760 10s., being a larger sum than had been obtained for any single year during the existence of the institution. During the course of the evening a large number of handsome donations and subscriptions to the funds were announced.

SAILORS' HOME ASYLUM.—The annual meeting of this society was held at the Hanover-square Rooms, on Saturday; Admiral Bowles in the chair. The report stated that the House contained accommodation for 300 sailors, and had a reading room provided with daily and weekly newspapers for the use of the inmates. It bore testimony to the beneficial effects of the new Mercantile Marine Act on the condition of sailors. The inmates were well behaved and very attentive to their religious duties. The establishment formed a boarding and lodging house for seamen and apprentices, during the time they must unavoidably remain on shore between their voyages. The building was capable of accommodating 300 boarders, giving each man a sleeping cabin to himself. The funds of the society were in a very prosperous condition, and showed a balance in their favour.

SERVANTS' ROYAL PROVIDENT AND BENEVOLENT SOCIETY.—The fourth annual meeting of the subscribers and annuitants of the society took place on Wednesday, at St. Martin's-hall, Long-acre; the Bishop of Salisbury in the chair. The report stated that her Majesty had consented to become patroness to the society, and that the directors had rescinded the rule by which the benevolent fund was applied to the reduction of the payments of annuitants. A home for servants out of place had been established in Great Marlborough-street, where they could reside, having a sitting-room and separate dormitories. The total number of servants who had obtained places through the [illegible] during the past year was [illegible], and the number of servants [illegible] was 245, and the amount received £3058 19s. 2d.; and the total amount received for annuities since the commencement of the society in 1847, was £26 223 15s 7d.

GOVERNESSES' BENEVOLENT INSTITUTION.—On Wednesday evening the anniversary festivity of this excellent institution took place at the London Tavern, and was numerously attended. The chair was filled by the Marquis of Westminster. The reserved seats were filled by the ladies patronesses, as well as recipients of the bounty of the institution. The chairman, in proposing the "Prosperity to the Governesses' Benevolent Institution," observed that the establishment had gone on for a series of years affording a refuge and a maintenance to many most excellent and highly educated ladies, who, without the shelter and protection afforded by such an institution would have a difficulty in procuring that occupation suited to their refined tastes and accomplished acquirements. In the course of the last year the amount disbursed in temporary assistance was upwards of £1000, and the number of pensioners elected was not fewer than 1400. Subscriptions to the amount of £2317, including the annual donation of her Majesty of £200, were announced during the evening.

GENERAL DISPENSARY.—Benevolent Institutions.—The quarterly general meeting of this society established in 1846, for affording relief, in old age and infirmities, to domestic servants, being subscribers to the society—was held at the Hanover-square Rooms on Tuesday. Lord Robert Grosvenor, M.P., in the chair. The chairman having congratulated the meeting upon the success which had attended the operations of the society, the secretary read the report, which stated that the committee had the satisfaction to announce that during the past year between 1200 and 1300 new members had joined the institution, which now had a permanent fund of £3938 17s. 2d. The committee had also felt great pleasure in announcing, during the past year, another election of pensioners, the result of which was published on the 5th of February, when 4 members were declared duly elected, making 5 pensioners already receiving permanent relief. The committee had much pleasure in further announcing that another election of 4 pensioners will take place in July. The objects of this institution had also been further carried out, in affording temporary assistance to several of its members who were in very distressed circumstances. The registry department, established solely for the benefit of the members, is so continued to exist highly satisfactory and encouraging results, several hundred families, of distinction having once at service in the society's institution, and having expressed themselves highly satisfied with servants so selected.

LONDON PHILANTHROPIC SOCIETY.—On Tuesday evening the anniversary festival in aid of the funds of this institution took place at the London Tavern, Bishopsgate-street; Mr. Alderman Cubitt, M.P., in the chair. This society was established for the purpose of providing the poor with bread and coals in all parts of the metropolis and its environs. The registry department, established solely for the benefit of the members, is so continued to exist highly satisfactory and encouraging results, several hundred families, of distinction having once at service in the society's institution, and having expressed themselves highly satisfied with servants so selected.

CORPORATION OF THE SONS OF THE CLERGY.—The annual festival of this society, instituted nearly two centuries since to relieve distressed clergymen and their widows, was celebrated on Thursday last. At three o'clock Divine service was performed in St. Paul's Cathedral, and the Rev. C. J. Vaughan, D.D., Head-master of Harrow School, preached an excellent sermon in behalf of the charity, from the 8th chapter of Numbers, verses 14. In the evening the friends of the charity dined together at Merchant Taylors' Hall, the Right Hon. the Lord Mayor presiding, supported by the Archbishop of Canterbury, the Bishops of London, Salisbury, St. Asaph, Bangor, Winchester, and Chester, Lord Ashburton, M.P., Lord Overstone, Sir R. H. Frankland, M.P., Mr. Pigott, Sir J. M. P., Mr. O'Gwyn, M.P., &c. The income for the year was given as follows:—Collected at the Cathedral, £241; at the dinner, £939; annual subscriptions, £958; dividends on stock, £2695; total, £4833, exclusive of the stewards' fees of £31 10s each, out of which the expenses of the festival are paid. The number of stewards are nineteen, and many of them have given handsome donations in addition to their usual subscriptions.

CONSECRATION OF A NEW CATHOLIC CHURCH.—On Wednesday morning the consecration of the new Catholic church just erected in Park-road, Clapham Park place, in the presence of Cardinal Wiseman and a large assemblage of the Catholic clergy. The edifice, which is the last of very large dimensions, is yet unfinished, but the decorations of the interior are chaste and beautiful, and around the altar are of an elaborate description. There was a very crowded congregation at the ceremony, by whom the building was completely filled long before the ceremony commenced. By half-past eleven the Cardinal Archbishop arrived, and was greeted by warm demonstrations of respect from the Catholic portion of the assembly. After the arrival of Cardinal Wiseman high mass was performed with unusual solemnity and splendour; and at its conclusion Cardinal Wiseman took his station at the altar with an attendant priest on each side holding up his robes, and thence delivered his discourse, in which he made marked reference not only to "the Church of our Immaculate Lady of Victories," the name of the new edifice, but also to the "blasphemies" uttered by the "enemies of the Catholic faith." He concluded by an earnest prayer to the Blessed Virgin, in which the great majority of the congregation reverently joined. The musical portion of the service was performed by Mr. Leffler, Miss Betts, and an efficient choir. In the evening a second service took place, the sermon being preached by Father Cobb. Collections were made on each occasion.

EDUCATION OF THE POOR.—The Venerable Dr. Robinson, Master of the Temple, preached on Monday in the church of St. Dunstan's-in-the-East, Great Tower-street, on behalf of the Central Church of England Sunday and Infant school for sixty children has lately been established as an addition to the foundation, so that 180 poor children now receive the benefit both of instruction and clothing. The Lord Mayor and Sheriffs, Mr. Alderman Finnis (the treasurer), the Common Councilmen of the ward, and Under-Sheriffs Ellis and Law, attended. The church was very fully attended, and the collection amounted to £140 0s. 5d.

REAR-ADMIRAL THE DUKE OF NORTHUMBERLAND AND LIFE-BOATS.—The Duke of Northumberland, on accepting the office of president to the Royal National Institution for the Preservation of Life from Shipwreck, has not only generously contributed 100 guineas to its funds, but has also, with his usual benevolence, kindly consented, during his temporary to supply the coast of Northumberland from Berwick-upon-Tweed to Tynemouth with life boats, rocket apparatus, and every means necessary for the preservation of life from shipwreck, at his own expense, and exclusive of the funds of the above institution.

WIDENING OF PARK LANE.—The Commissioners of Woods and Forests have purchased the new houses that are about to be erected at the corner of Grosvenor gate, to the extent of eight feet. This desirable step has been taken on the petition of the inhabitants, who have been required by the commissioners to pay half the expense of the same.

FOREIGN FRESH MEAT.—The steamer *Cesaria*, from Hamburgh, has brought several packages of fresh killed butcher's meat as a portion of her cargo consigned to order. It is description of foreign provision is an importation free of duty.

On Wednesday the Marquis of Anglesea was thrown from his horse by the turnpike at the corner of Park-lane and Grosvenor street. The noble Marquis was much shaken, but not seriously injured.

KEW GARDENS.—The increased accommodation of the public in these gardens, which was announced last week as being in contemplation, will now be carried into effect, in accordance with the following official notice:—"By the gracious permission of her Majesty, the Royal pleasure-grounds at Kew will be opened to the public on every day in the week, between the hours of one and six, from Monday, the 12th of May, to Friday, the 12th of September, during the present year. The access to these grounds will be in the Kew and Richmond gates, by the Lion and Unicorn Lodges, and on the river side of the grounds, by the gate adjoining to the Brentford-ferry; the entrance gates to the Botanic-gardens on Kew-green being open as heretofore. Common sense will at the same time be generally expected to prevail in these Royal pleasure-grounds, by gates in the wire fence which separates the two. It is requested that visitors will abstain from carrying baskets or refreshment into the grounds; and smoking in the Botanic gardens is not permitted. By order of the Commissioners of her Majesty's Woods, &c. Office of Woods, &c."

BARREL ORGANS AND ADVERTISING VANS.—The following is a return to an order of the Hon. the House of Commons, dated the 6th of May, a copy "of the instructions given by the Commissioners of Police to the police officers relative to the preventing obstructions and other nuisances, caused by the large barrel-organ grinders and advertising vans in and about the metropolis":—

March 31, 1851.

The police would be justified in [illegible] playing in the streets, and, if necessary, removing the parties, in cases where [illegible] under circumstances, or in such places as to be inconvenient to the streets, more frightened, or the thoroughfares obstructed [illegible] Instructions to [illegible] Guidance of the police.

Whitehall-place, April 19, 1851. RICHARD MAYNE.

To the Inspectors and Sergeants.

No instructions have been given to the police respecting the advertising vans, there not being any that have come under notice to require them to act. In case of any such vans obstructing the streets they would come here, as in other cases of obstruction, and enforce the law—Sd and of Police, Richard Mayne.

Whitehall-place, April 19, 1851

THE LORD MAYOR'S NEW GLOBE HOUSE.—On Tuesday morning, at an early hour, a fire broke out in a wooden shed adjoining the new building in Leicester-square destined to contain Mr. Wyld's large globe. The flames took considerable height, but, by the active exertions of the police, no considerable damage was done. The building destroyed was used to contain a cross, and as a temporary office. The over-heating of the stove seems to have been the cause of the catastrophe.

DARING HIGHWAY ROBBERY.—On Saturday, information was received at the chief police-stations in London of a most daring Highway robbery attended with brutal violence, having been committed on the Hounslow turnpike road, about four miles from Bedford, on the previous Wednesday, on the person of Mr. Peacock, of Wilshamstead. The robbery was perpetrated, soon after nine o'clock at night, by four ruffians, who, at a secluded part of the road, rushed out and laid hold of the horse's head. Mr. Peacock attempted to urge the animal on; but they succeeded in turning the gig into a ditch alongside the road, where it turned over, and Mr. Peacock was thrown on his head on the ground, when they sprang upon him, and while one of them placed his knees upon Mr. Peacock's neck, the others rifled his pockets. The property stolen consisted of £70 in bank notes, a gold watch, some trowsers and a Bible, and a gold Geneva watch, and many valuable articles.

ROBBERY AT THE GREAT EXHIBITION.—Information has been forwarded to the police-station in Scotland-yard, since the Great Exhibition had been opened, a robbery had been committed in the American department, under very mysterious circumstances. It appears that Mr. D. W. Wilson, of Hertford, Connecticut, exhibited some articles connected with the rifle, and a detached breech-rifle-pistol, with a stock to form a gun. The article in question was found in the proper place on the day her Majesty opened the Exhibition, but it was on Tuesday discovered to have been stolen. A full description of the property was the same night sent to every police-station in the kingdom, also to the various pawnbrokers and dealers in such articles. Mr. Wilson, in a letter, "A slight mahogany case, containing a detached breech rifle-pistol, with stock to form a gun, with trap at butts composed of German silver, and an ornament of the same metal on the opposite side; maker's name, 'Colt's Patent, Hartford, Connecticut." The above robbery has been the means of the Commissioners of Police issuing orders for the officers to use greater vigilance than ever, to make to prevent any other robbery from being committed.

BIRTHS AND DEATHS.—The births registered in the week ending Saturday, May 10:—Males, 791; females, 781: total, 1572. Deaths during the same period:—Males, 580; females, 601: total, 1181. The average number of births for the six corresponding weeks in the years 1845-50 was 1341. A great increase is observable in the deaths registered last week of young persons [illegible] number of children who died under the age of 15 years was from 469 in the previous week to 511 in the last, while the corrected average is 425. A smaller increase is observed generally among persons in various stages of life.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean reading of the barometer was 29 508 in. The mean daily temperature was below the average in Saturday; but it rose gradually from 40 deg. 2 min. on Sunday to 56 deg. 8 min. on saturday, and the mean of the week was 47 deg. 4 min. The extent to which the daily mean temperature was lower than the average (derived from 16 years) of the several days is shown by the following decreasing numbers:—11 deg. 2 min., 10 deg. 4 min., 7 deg. 8 min., 4 deg. 5 min., 2 deg. 8 min., 0 deg. 6 min. On Saturday it exceeded its average by 3 deg. 6 min. The wind was in the north and north-west on the first three days, then changed to south west, and on the last two days was generally in the south-east.

Mr. Michael Desmonde, of Kilkenny, who died on Tuesday last, of consumption, has bequeathed a large sum—£50000, it is said—to the Roman Catholic Church, for various pious purposes, such as masses, the comp etion of the new cathedral in that city, &c. Bequests are said to have been also made to some of our local charities. The executors are H. Potter, J.P., and T. Hart, J.P., Esqrs.

Just previous to the departure of the *Hellespont* mail screw-steamer from Sierra Leone, on the 20th ult., the commissioners sent by the Governor to treat with the chiefs of the Nunez and Pongo rivers, had succeeded in their negotiations with the chiefs of Nunez, but those of Pongo had not yet accepted the propositions of the commissioners. The successful result of this commun cation is likely to be attended with great advantage to those British merchants who trade on that part of the coast.

TOLTOSUM.

BLINK BONNIE, WINNER.

YORK SPRING MEETING.—GREAT NATIONAL MATCH FOR 4

EXHIBITION OF THE ROYAL ACADEMY.—"THE MOTHER" (SCULPTURE).—BY J. H. FOLEY, A.

ROYAL ACADEMY EXHIBITION.

(SECOND NOTICE.)

We have paid another visit (a fourth) to the Royal Academy Exhibition; have listened to the arguments made use of by Royal Academicians and Associates in favour of their belief that this year's Exhibition is one of unusual excellence; and with patient attention have read the leading criticisms of the daily and weekly press upon the merits of the collection. We have done all this, and can see nothing to alter in what we ourselves have written on the subject.

The Exhibition is hardly above the level. New points of beauty, in certain pictures, have, we admit, been brought to view by some of the subtler critics of the press; and a few pictures, not of obvious excellence, placed more immediately under our attention: but the *impression* remains the same; and, had our criticisms been printed in the same week in which the Exhibition opened, it would have agreed in all the main points of admiration and objection with our contemporaries.

The Academicians lay great stress on the beauty and propriety of the mottoes appended to the catalogue; and some, in their wholesale admiration of the Forty, have gone so far as to recommend their collection into a little volume, with comments by Sir Charles Eastlake.

The early mottos were given by Dr. Johnson. The first is:—

Major rerum mihi nascitur ordo.—VIRGIL.

The second, from the same poet:—

Et vires acquirit eundo.

While the motto for the present year is:—

The pencil speaks the tongue of every land.—DRYDEN.

"Art speaks all languages." It will be seen that the Academicians have come at last to our English poets for quotations. The Forty are now without a Fuseli; for, though a schoolboy might supply an apt quotation from Horace or Virgil, there are some in the Academy like Nollekens and Northcote, who could not translate the simplest motto expressed in the simplest Latin. They have been busier with Titian's palette than the Latin dictionary.

The most glaring picture in the Middle Room is the large full-length portrait of Cardinal Wiseman, by T. Brigstocke, placed, wickedly enough, immediately opposite Mr. Cope's touching story of "The Martyrdom of Laurence Saunders, the second of the Protestant Martyrs in the third year of Queen Mary." Oddly enough, the Cardinal seems to be superintending the martyrdom of poor Saunders. We cannot say anything in praise of Mr. Brigstocke's portrait. He has not done justice to Cardinal Wiseman. Mr. Cope, on the other hand, has told his story of the martyrdom in a manner almost too painful; but he has told it well though a certain greyness of tone throughout seriously interferes with the beauty of the picture.

For comprehensive grasp of mind, the leading picture of the Middle Room is, on this occasion—what it seldom is when it is the best also—the largest in the room. We refer to the spirit-stirring picture by Mr. F. Madox Brown, entitled "Geoffrey Chaucer Reading the Legend of Custance to Edward III. and his Court, at the Palace of Sheen, on the anniversary of the Black Prince's Birthday."

Edward III. is seated in the dais-chair in front of Chaucer. On his left are Edward Prince of Wales (represented in his last illness), and Johana, "The Fair Maid of Kent," his Princess; at their feet is their child, afterwards Richard II.; behind these are seated the Princess Margaret (memorable for her learning, and her regard for Chaucer), and her sister, the Princess Royal. Seated

EXHIBITION OF THE ROYAL ACADEMY.—"THE SQUIRE'S FEW."—PAINTED BY T. F. MARSHALL.

to the right of the King is Alicia Perrers (formerly damsel of the chamber to Queen Philippa), and next to her is John of Gaunt (the patron of Chaucer), immediately behind Chaucer is the son of John of Gaunt (afterwards Henry IV.), with his father's sword and shield; and next to him, lower down, are Robert de Vere (grand chamberlain), and the Earl of Pembroke. On the foreground, seated on rushes, are Froissart, the historian, with his tablets, and the poet Gower. In the opposite corner, Thomas of Woodstock, patron of Gower (fifth son of Edward III., and afterwards Duke of Gloucester), is seen conversing with the Lady de Bohun, who becomes his Duchess. Behind Lady de Bohun is represented Chaucer's wife Philippa, the Picard, with a red head-dress, speaking to her sister Catherine Roet, who subsequently became third Duchess to John of Gaunt. The central figure, seated on the stone, is a Provençal troubadour, and on either side of him are his minstrels. The Cardinal, supposed to be the Nuncio of Gregory XI. to the Archbishop of Canterbury, is desiring the attention of the Countess of Warwick in the Court fool, who is so absorbed in Chaucer's tale as to have forgotten his calling.

Mr. Brown has revived the old poet and the Court of King Edward with a spirit worthy of Sir Walter Scott. He has caught a chivalric and poetic feeling (they are always allied in the highest poetry), and has really represented a scene of great interest much as it probably occurred, and in the style of an artist thoroughly alive to the importance of his subject. Mr. Brown is understood to be one of the Pre-Raphaelite flock, who have strayed from their proper pasture; but in this Chaucer picture there is no Pre-Raphaelite nonsense, while the advantages of having studied in a severer school, of having worked and thought and felt with the Pre-Raphaelites, are obvious at every turn. But Mr. Brown has known when to quit a peculiar school: he sees its beauties and its defects, and he knows what to copy and what to reject.

Mr. Egg's single contribution to the Exhibition is hung in one of the best places in the Middle Room, and well deserves its position. It is called "Peppy' Introduction to Nell Gwyn," and the passage which Mr. Egg has sought to embody is the following. We need not apologise for a quotation from Pepys:—

"Thence to the King's house, and there saw "The Humorous Lieutenant," a shy silly play, I think. Here, in a box above, we spied Mrs. Pierce; and going out, they called us, and so we stayed for them; and Knipp took us to the next box; to us Nell; a most pretty woman, and a rare actress, I believe, by her part to-day, fine, and did it pretty well; I kissed her, and so did my wife, and a haughty pretty soul she is. We also saw Mrs. Bell, which is my little Roman-nose black girl, that is mighty pretty; she is mainly called Betty. Knipp took us to see her in a box, and see the dancing, preparatory to to-morrow, for "The Gobi's," a play of Suckling's, not acted this twenty five years, which was pretty. And so away thence, pleased with this exceeding much, and special kissing of Nell, &c."

The incident is laid behind the scenes in the King's, or Drury-Lane Theatre, and Mr. Pepys is in the act of saluting Nell, with a loud and palpable kiss. Nelly turns her face to the spectator, so that the hearty smack of the entertainer does not touch the rich cheek of the charming actress. In the face and figure of Nell, Mr. Egg has been most successful. It is seldom that she has been represented so well. The action, too, of Pepys, is worthy of all praise; though we are of opinion that the head is a little too large and the face a little too old. Mr. Egg has worked from the Kneller portrait, and not from the portrait by Hales, painted when Pepys was young, and recently engraved in the *Gentleman's Magazine*. Mr. Egg, however, was possibly right in taking a known type of face for the Clerk of the Acts. The portrait by Kneller is well known—not so as yet the Hales. Let us add that the figure of Mrs. Pepys is capital, and that of Mrs. Knipp so tempting that we should like to turn her round and have a look at her. Mr. Egg deservedly a favourite with the public, has seldom painted a better picture

One of Mr. E. M. Ward's characteristic contributions, and one more in his old style, is (640) "John Gilpin delayed by his Customers." We need not quote the verses as they are familiar to almost all the reader. The expression on Gilpin's face is honest—Cheapside of the old school. The lady examining the dress is in Mulready's best manner; while the unhappy gentleman-escort to the two ladies is a tried-out jaded dandy, used to shopping, and heartily weary of his present employment. We could have wished that the figures had been full-length; not as they are, half-length. The canvass is also a little too small for the size of the faces—Gilpin's especially.

There are other pictures of merit in the Middle Room to detain the admirers of the beautiful in art. "Winter Sunset—a Slide" (385), by the elder Danby, is full of poetry of the true Danby stamp. "The Goths in Italy" (644), by Hall, has much to recommend it and it that will be discovered at the first glance, though the picture shows no advance on former efforts, and hardly justifies the expectations of friends "The Rescue of the Brides of Venice" (361), by the late elected Associate, Mr. J. D. Harding, is "Morning in the Meadows" (372), the first composition of Lee and Sydney Cooper. By the way, these Beaumont and Fletcher, or Sternhold and Hopkins-like pictures, are rifer than ever. They began with Edwin Landseer and Callcott, then extended to Lee and Cooper; and now Hall has taken to the manner of Addison. It is a dreadful and treacherous style, and fatal to the manner of Addison. It is only due to Mr. Marshall to give his picture a better place; and what reputation our columns can give to amend his unfortunate position and make his picture better known, we are willing to supply. Mr. Marshall's picture will be found on the preceding page; with the poem it suggested and well designed group of a mother and her two children, by Mr. Foley, A.R.A.; and a domestic companion to his "Ino and Bacchus," known to many of our readers as one of the most successful groups of the classic character recently produced by the English school.

THE GREAT EXHIBITION.—A grand entertainment will be given by the Metropolitan to the Foreign Commissioners, on Tuesday next, at the Castle at Richmond. The noble Cabinet and Commissioners will receive the guests on the lawn, where the band of the 2nd Life Guards will perform some favourite selections. The scene will be further enlivened by a regatta immediately under the terrace given by the Conservators: some of the best men on the river will contend for the noble President's purse for oar-riggers. The dinner will be served in the magnificent hall-room, which will be appropriately decorated Besides the efforts of ourselves and our correspondents to satisfy the popular curiosity and interest respecting the Great Exhibition, the artists in various quarters are busy over its beauties and wonders. Mr. David Roberts, R.A., is retained by the proprietors to paint the interior scenes; Mr. Selous is engaged over a panoramic representation of the opening; Mr. J. Nash is continuing his sketches both outside and inside; and Messrs. Delamotte and Pidgeon are preparing certain specimens of the views contributed to the Crystal Palace, which the Messrs. Thompson are to engrave. The Post-office authorities have recently adopted some excellent measures to facilitate the delivery of letters addressed "Poste restante," or "to be left till called for," in accordance with Continental usage. Notwithstanding their good intentions, we think, however, that they have not yet succeeded, as far, at least, as Exhibitors at the Crystal Palace are concerned, in making their arrangements perfect. The Crystal Palace is almost as large as some towns, and what would be more easy than to have a town delivery of letters within it? If necessary, on account of any extra trouble or extra pay-man, none of the Exhibitors would, we think, object to an extra penny, if their letters were regularly delivered to them within the Building. In the meantime, one and all would be grateful for the means of having to send for them to the little *bureau* set apart for the purpose, or, what is still worse, of being obliged to wait for them. As regards the letters which it might not be possible to distribute, a list of names similar to that exhibited at the General Post office in St. Martin's-le-Grand, would, if affixed in the main avenue, or at other specified places within the Building, relieve the authorities of a great trouble, and notify to those more immediately concerned, that letters awaited them. We threw out these hints *en passant*, and shall be glad if the attention of the Post-office be directed to the subject.

LIFE CASTING FROM LIVING SUBJECTS.—Mr. Baxter, with whose success in oil-colour printing the public are familiar, has just produced an effective view of the Great Palace of Industry, showing the south side and east end. By this process he has cleverly rendered the *glass*; and the picture is altogether a pleasing memorial of the World's Wonder

According to a return obtained by Mr. Moffat, the quantity of spirits exported to the British colonies in 1849 was 125,288 gallons; and in 1850, it was 123,774. The quantity exported to foreign countries and colonies in 1849 was 182 599 gallons; and in 1850, it was 185,140. The aggregate export for the two years respectively was 323,887 and 309,914.

THE THEATRES, &c.

HER MAJESTY'S.

Signor Alary's three-act comic opera, "Le Tre Nozze," was performed for the second time last Saturday night. The theatre was filled with Royalty, rank, and fashion Her Majesty and Prince Albert, accompanied by the Prince and Princess of Prussia, and Prince Frederick of Prussia, honoured the performance with their presence. With the Duchess of Kent were the Princess Mary of Cambridge and Prince Edward of Saxe-Weimar. Public opinion as to the new work, what it is inasmuch as to the lack of creative genius on the part of the composer, seems undecided, in respect to its pretensions. The work has been criticised with the solemnity and severity exercised in passing judgment on an oratorio. Now "Le Tre Nozze" is a comic opera—a musical farce, in fact. And the composer's invention was not taxed to depict the devotional feelings of sacred music, or the intense emotions of the lyric drama; it was only called upon to supply lively and fluent themes to develope the comical situations in the libretto. Although Alary produced an opera a few years since in Florence, he must be regarded as only a beginner, and every amateur knows what the early works are of composers for the stage. With all its defects and shortcomings, "Le Tre Nozze" contains some spirited writing, and the orchestration in many points indicates that the composer has studied in a good school. The overture, "Schiava di un negro," sung by Mdme. Sontag, Mdme. Guilliani, and Mdlle. Ida Bertrand; the duette, between Sontag and Lablache, "Ecco qui" the barcarola, "Quel dolce melodia," sung by Sontag and Guilliani; the romance, "Un segreto," "Qual mai notte," sung by Sontag, Guilliani, Bertrand, Gardoni, Ferranti, and Lablache; and the polka *finale*, with Sontag's vivacious, were the favourite pieces last Saturday, as on the first representation. Every body will, of course, visit Her Majesty's Theatre to see Sontag and Lablache dance the polka in the second act, and to hear Lablache's dee ardon in the *finale*. "My pretty one, I die for you." Every admirer of the inimitable basso in other of his characters will, after exquisite taste and finish in execution of the part of *Lesage*; her comedian in the *finale* as no [illegible] passage, as Lablache can, and as he has finished. It requires long training to attain the humorous genius of Lablache in acquiring his new character to effect comic humour impersonal one of similar parts; but the resources of Lablache as a humorist and caricaturist are inexhaustible, and as *Barond d'Arcetone* will be hereafter added to one of his most droll delineations. Saturday's auditory did not appear to be at all troubled about the question of Alary's profundity in connection with the Muses in invention. The listeners gave themselves up to the indiscrim pleas in the opera was [illegible], leaving the learned pundits in the lobby to groan about the absence of its deep, fadeless writing in "Le Tre Nozze." In this means Alary's success established when two or three very presentable things: first, that the taste for the modern Italian school is still strong on the part of a large frequenters; secondly, that [illegible] desire to keep it so is not feebly, even from a composer's standpoint; and, third ly, that there is a management had enough (and Lablache is most importantly to go on untried composers a chance of distinction.

On Tuesday night, Auber's beautiful opera, "Gustave" was given for the fifth time, with Mdme Bosenthal, Mdlle Caroline Dupree, and Signor Castelli, followed by the "Waltzes" ballet, "L'Ile des Amours," Mdlle Amalia Ferraris is coming great ground with the public; her sibling-scale on the *pointes* is one of the most finished choreographic achievements ever witnessed, and is followed by thunders of applause.

On Thursday, for the extra night, Mozart's immortal "Don Giovanni" was represented for the first time this season, with the following powerful cast:—*Donna Anna*, Mdme. Grisi; *Donna Elvira*, Mdme. Gazaniga; *Zerlina*, Mdme. Castellan; *Don Giovanni*, Signor Calzolari; *Il Commendatore*, Signor Scaglini; and *Leporello*, Signor Lablache. The "Notte e giorno faticar" and "Don Juan" duets, Mdlle Amalia Ferraris and the entire body of amateurs, intensely anxious to listen to the divine strains [illegible] Mozart. On such occasions [illegible] artist, who [illegible] is a host in himself. [illegible] It is truly a labour of love. The improvements [illegible] proved in the due development of the lovely parts allotted to the stringed instruments. All is more vigorous than usual. Grisi is grand in the [illegible] and the first and second violins were excellent. Tolbecque, Nadaud, Deloffre, Dury, Piatti, Platt, Rowland, Lavigne, Réconsat, Zeiss, &c., deserve honourable mention, in connection with the [illegible] Lablache is the [illegible] Leporello in Europe—[illegible] Batti, but [illegible] Lablache's Leporello is the perfection of Scarpa, assisted for the [illegible] express scena. The Zerlina of the gifted songstress, by its delightful naïveté and charming coquetry, drew down the repeated plaudits of the audience. Her sharsha the duo, "La ci darem," provoked the demand for its repetition. Lablache's [illegible] in the [illegible] carried inside in this opera is a substratum in the gorgeous harmonies of inestimable value. *Leporello* will do with him. Madame Guinand's rendering of the frightful ditty known in "Il Barbiere" reflects the highest credit on her position as a musician. Carlotta Grisi and Amalia Ferraris danced the minuet and a fandango with grace and dignity. After the opera, the *divertissement* was performed. It was an act, introducing the scenes of the Crystal Palace as on the night of the opening of the Exhibition. Carlotta Grisi and Paul Taglioni dancing a mazurka—Ferraris and M. Charles, a pas seul.

Next Tuesday will be produced Beethoven's "Fidelio," for the first time in this country on the Italian stage. Mdlle Cruvelli, who has created such a sensation in Paris, will make her first appearance this season in "Fidelio," as *Leonora*.

ROYAL ITALIAN OPERA

The revival of Donizetti's "Lucrezia Borgia," followed by the second and third acts of Auber's "Mesmerist," with Ronconi and Formès, attracted an immense auditory last Saturday night. Grisi and Mario achieved a great triumph, vocally and histrionically. It was the general opinion that their acting displayed unprecedented power and excellence in their delineations. The denunciation of *Lucrezia* in the prologue was the first excitement for Grisi; the second exhibition of *Lucrezia* with her son Gennaro, in the scene of the final outbreak of criminal exposure was for her finale. *Gennaro's* great scene was in the death struggle, after *Lucrezia's* vengeance for the insult of nobles at Venice, and Mario played and sang the new reading he gave to the character. The effect was thrilling in the extreme. Rarely have such plaudits been heard, as signalised the ovation to Grisi and Mario at the close of the opera. Mdlle. Angri's *Orsina* is an admirable impersonation, given in the true spirit of the first act which the part never before received; and the quarrel with the Standard *Gubetta*, excellently portrayed, by the way, by Ladislas, is full of dramatic zest and energy. Salvatore's *Jeppo* gives an insight into the versatility which he is so eminent, that the omission of the air of revenge would be a loss for the audience if he should repeat the part.

Rossini's "Donna del Lago," on the second time, and the second act of Meyerbeer's "Roberto il Diavolo," with Grisi, Signor Tamberlik, Signor Stigelli, and Herr Formès, were given on Tuesday night. Her Majesty and Prince Albert, with the Princess and Princess, and Prince Frederick of Prussia, were again present in the Queen's box, the suite occupying the adjacent double box. Mdlle. Castellan made her first appearance in the character of *Elena*, Grisi having resigned her old part of the Lady of the Lake, having to sing *Anice*, and having been long desirous of resuming *Elena* to a more youthful artiste of the florid school of musicians. Castellan was of course nervous, but was very clever and ill at ease, although she looked charmingly in the Scotch costume. Mario was out of voice, and this, no doubt, added to the embarrassment of Castellan's situation; but the music is so uncongenial to the tenor's style, that he never can be entertained of her ultimate success. The omission of the air in which Mario usually creates such a sensation, was quite unnoticed by the audience. Tamberlik's *aria Cantiamo* was encored, and Stigelli's was very nervous

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The leaders and many distinguished members of the Whig party have presented the Right Hon. Henry Labouch. M.P. for Devonport, and formerly Secretary of the Treasury, with a splendid candelabrum, as a testimonial of their high personal respect and appreciation of his valuable and laborious services in the office of Vice-President, during the four years he filled that situation.

The office of Paymaster-General, during the four years he filled that situation. The office of Paymaster-General, during the four years he filled that situation. The office of Paymaster-General, during the four years he filled that situation.

At a meeting of the Corporation of London, held at the Guildhall, on Saturday, it was resolved that an entertainment or entertainments should be given to the distinguished foreigners who have visited the metropolis upon the occasion of the Great Exhibition of all Nations and a committee was appointed to consider and report upon the most eligible means of accomplishing that object in the Guildhall. The plan will be upon the most magnificent scale, and in every respect worthy of the Corporation and the munificent occasion.

The Clothworkers' Company, of which the Right Hon. the Lord Mayor is a member, and his Lordship was a master when the grand entertainment was given to the late Sir Robert Peel, Bart., at Clothworkers' Hall, are about to give a number of the most distinguished foreigners who are now in this country to a banquet at their hospitable board on an early day. It is said that the other companies are preparing to show the spirit with which they can tax the character of the citizens of London for hospitality. There will be, it is supposed, a most strenuous rivalry.

The total expenditure on account of the constabulary force in Ireland, in the year 1850, was £562,183 14s. 6d. The total number of men in the service on the 1st of January, 1851, was 12,385: viz. 35 county inspectors; 249 sub-inspectors; 334 head constables; 1716 constables; 383 acting constables; 9,648 sub-constables. The number of horses in the service was 382.

A storm burst over Boulogne on Sunday, producing some lamentable effects. The lightning struck the dome of the new cathedral, and broke down some of the ornamental work. It then broke into a house adjoining, and killed an infant in its cradle.

From a return, printed by order of the House of Commons, it appears that the total expenditure for the relief of the poor in the unions of Ireland, for the year ended 29th of September, 1850, was £1,443,108, of which £216,240 was spent in maintenance, £105,189 in out-door relief, £123,661 in salaries was spent in maintenance, £105,189 in out-door relief, £123,661 in salaries and rations of officers, and £247,3?7 for other expenses. The number of persons relieved was 805,702 in, and 368,955 out of the workhouses.

A letter from Montreal says that the ice in the river Yamaska is about twenty-two acres of land, with three houses and out-bui dings, with a number of cattle and horses. One woman and two children are also said to have been drowned. The Yamaska is about twenty miles below Montreal.

It is rumoured that Lord Charles Clinton will come forward at the next general election for the northern division of Nottinghamshire.

The *Berks Chronicle* states, that the electors of North Hants are resolved to reject the Speaker and Mr. Forster, the present members, at the next election, and supply their seats with two Protectionists.

The gunmakers at Liege, who have recently suffered much from want of employment, are about to be actively engaged, in consequence of orders from foreign powers. The house alone has received an order to make 50,000 muskets for the Russian Government.

An Imperial ukase has been published at St. Petersburg, declaring Poland to be an integral portal district of Russia.

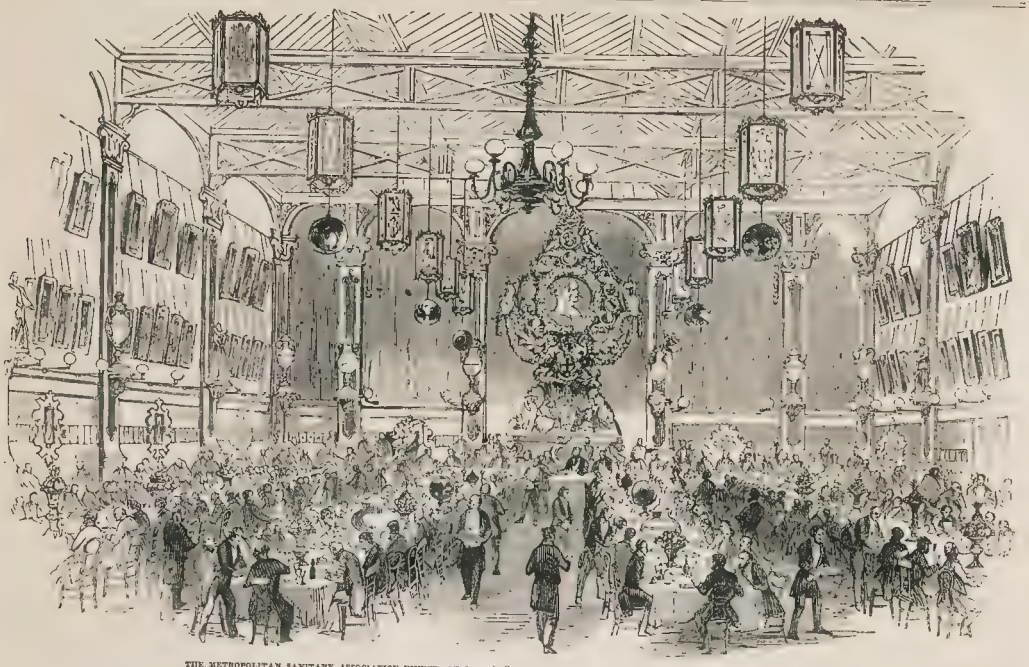
The English Commissioner (says the *Journal de Constantinople*), charged with regulating the boundaries between Turkey and Persia, having proceeded to Amadieh, Reschid Bey, the confidential friend of the Kings of Persia, ordered excavations to be made there, and came on some columns to that town, of great antiquity, and which are supposed to be Greek, and of the Lower Empire, in length, and 6 feet in diameter. He also discovered a tomb, and an agate necklace of a woman, with a bracelet on the arm, and a cornelian and agate necklace round the neck.

M. Petit, the director of the Observatory of Toulouse, has published a note, stating that the earth in at present passing through a space where innumerable planetary corpuscula are interposed between it and the sun, and that to this phenomenon must be attributed the lowness of the temperature for some time back. It is probable, he adds, that no material change will take place before the 15th of May, namely, Thursday last.

On Monday, while the Sardinian frigate the *Governale* was firing a salute on entering the roadstead of Cherbourg, one of her guns went off while being cleaned in consequence of the vent not being properly served, and killed two of her men.

The French agricultural show, consisting of breeding stock, agricultural implements and machines, and different articles or agricultural produce (rural implements and machines, and different articles or agricultural produce was opened at Versailles, on Tuesday. The number of animals exhibited was about the same as last year, but the rams have increased from 85 to 100. The about the same as last year, but the rams have increased from 85 to 100. The number of boars was also considerably augmented. The instruments and machines are not so numerous as last year, and the produce is also much less. The distribution of prizes was to take place on the 13th inst., and the sale of the animals on the following day.

On Saturday the usual half-yearly document relative to railway accidents was printed by order of the House of Commons. In the half-year accidents was printed by order of the House of Commons. In the half-year ending the 31st of December last there were 123 persons killed, and 168 injured. Nine passengers were killed, and 136 injured from causes beyond their own control. Nine passengers killed, and 9 injured owing to their own misconduct or want of control, 11 passengers killed, and 9 injured owing to their own misconduct or want of caution; 40 servants of companies or of contractors killed and 11 injured, of caution; 40 servants of companies or of contractors killed and 11 injured, of caution; 40 servants of companies or of contractors killed and 11 injured,



THE METROPOLITAN SANITARY ASSOCIATION DINNER, AT SOYER'S "SYMPOSIUM," GORE HOUSE, KENSINGTON.—(SEE PRECEDING PAGE.

LYCEUM THEATRE.

The restoration to this stage of Madame Vestris is an event which will be greeted by the public. On Thursday week she re-appeared in "The Day of Reckoning," as the *Countess D'Arentat*. Mr. Planché's Easter extravaganza, 'The Queen of Frogs," still continues attractive. The course of the original story is pretty closely followed. *Grenouillette*, the Royal croaker, but benevolent air , in discharge of a debt of gratitude Q *Dulcibell* and her daughter, the *Princess Carissima*, sets about their deliverance from the malevolent *Leona*, by first of all conveying intelligence of their imprisonment to *Fulminoso*, who forthwith descends by a private staircase to the centre of the earth, provided with a magic ring, which enables him to destroy all the monsters tha oppose his progress, but which he is compelled to part with to the dragon *Ki-to-fum*, as the condition of the release of the captives. They are instantly restored to their own gardens. Hither comes the elegant *Prince Nonpareil*, as suitor t *Princess Carissima*, but the giant *Hi-zhi-hi*, on behalf of the dragon, and by the prayers of *Fulminoso*, demands the surrender of the *Princess* t him, that he may marry or eat her at his pleasure But *Grenouillette* interferes, and sends *Nonpareil*, properly accoutred, to despatch the dragon, which he does in single combat But the dragon revives in the shape of the *Emperor of all the Insects*, in love with *Grenouillette*. The nuptial bower of the *Queen of Frogs* and the *Emperor* forms the concluding scene, which, for magnificence, has never been surpassed.

SCENE FROM THE "QUEEN OF FROGS," AT THE LYCEUM THEATRE.

PRIZES FOR SUPERFINE CLOTHS.

IN our Journal of last week we briefly recorded the distribution, on Wednesday week, of prizes awarded to the successful competitors who, at the request of Mr. J. Bull, the well-known woollen merchant, of St. Martin's-lane, had entered the lists for producing certain cloths of the best possible quality.

It will be recollected that when the proposition for the Great Exhibition was first mooted, Messrs. Bull and Wilson were amongst the first in their trade to offer a stimulus to the ingenuity and skill of our British weavers. They offered two valuable gold medals to any person who should produce the finest black cloth, and the finest black doeskin of British manufacture with this limitation only, that

PRIZE MEDAL FOR SUPERFINE CLOTHS. DESIGNED AND EXECUTED BY G. G. ADAMS.

they should be wool-dyed, possess strength of fabric and excellence of finish, and be confined to no particular price. Considering that our foreign trade in woollen cloths has greatly declined within the last few years in consequence of the French and Germans having taken the lead of the English manufacturers in the American and Russian markets, the result of the above competition was looked forward to with considerable interest. The contest, it was generally admitted, would rest with the manufacturers of the West of England and Yorkshire. An able and impartial body of judges was appointed, and from among the many candidates who presented themselves they selected the following:—Messrs. J. and P. Appleby, of Stroud, Gloucestershire, for the best specimen of black cloth; and Mr. Helme also of Stroud, for the best specimen of black doeskin.

The prizes were two medals, designed and executed by G. G. Adams, a young sculptor and medallist of great promise and merit, who has already received a premium of £100 as a successful competitor for the design of the prize medals for the Great Exhibition. The two medals represented Industry stimulated by British commerce: the fleece, distaff, and loom characterising the raw material and manufacture of cloth; and the palette, colour, and lion, British commerce. Casts of the medals and specimens of the cloth, which is of the most beautiful texture, have been deposited in the Crystal Palace.

We may mention, that a silver medal was presented to Mr. Edmonds, of Bradford, Wilts, for the next best piece of black cloth.

We have engraved the obverse of the medal: the reverse bears, within a bold wreath of laurel, "Presented by Messrs. Bull and Wilson, London."

FESTIVITIES AT CROWCOMBE COURT, SOMERSET.

GOLD CHAIN AND BADGE PRESENTED TO THE MAYOR OF CANTERBURY.

THESE superb and massive insignia have just been presented to the Mayor and Corporation of Canterbury, by William Henry Furley, Esq., the brother of the present worthy chief magistrate of that ancient city The Chain is of Elizabethan design, and consists of a broad band of massive links of burnished gold. To this is suspended the Badge, in the centre of which is the shield bearing the city arms in coloured enamel

COLLAR AND BADGE OF THE MAYOR OF CANTERBURY

surmounted by an exquisitely wrought mural crown, embellished with an elaborately wreathed border, the whole being in strict accordance with the Corporation old mace. On the reverse of the shield, on a tablet, is engraved the following inscription:—

The Gift of
WILLIAM HENRY FURLEY
To the Mayor and Corporation of Canterbury.
1851.

This splendid gift is from the establishment of Messrs. Hunt and Roskell, of 156, Bond-street, successors to the great firm of Storr, Mortimer, and Co., and cost, we believe, 200 guineas. It was worn by the Mayor on Easter Sunday, on his attendance in form with the members of the Corporation, and the sergeants bearing the mace and sword, at Divine service at the cathedral.

"THE FLYING DUTCHMAN," WINNER OF THE GREAT MATCH AT THE YORK SPRING MEETING, 1851.—(SEE NEXT PAGE.)

The formal presentation of the gift took place at a special meeting of the Town Council, held on the 15th ult., when a letter was read from the liberal donor, requesting the Mayor and Corporation to accept the Chain and Badge to be worn by the Chief Magistrate of the city. Upon the motion of Alderman Neave, seconded by Alderman Cooper, the costly present was accepted. The thanks of the Mayor and Corporation were voted by acclamation to Mr. Furley; and the Mayor was forthwith invested with the insignia.

FESTIVITIES AT CROWCOMBE COURT

THE delightful estate of Crowcombe Court, near Taunton, Somerset, the residence of Mrs Carew, was, on the 28th ult, the scene of great festivity, to celebrate the coming of age of her grandson, G. H. W. Carew, Esq., of the First Dragoon Guards, and who is the future heir of Crowcombe, as well as of Carew Castle, in Pembrokeshire, and Pentrechant, in Shropshire. The celebration of Monday, the 28th, was confined to the family residences; but next day the fine old mansion at Crowcombe was thrown open; the dining-hall tastefully decorated, was the scene of the merry dance, and in the long gallery was served a banquet, at which the guests drank health and happiness to the future heir. Next day the poor of the neighbourhood were liberally regaled; arches of evergreens and flowers were erected, the old eyes was prettily decorated, and the Royal standard floated from the church tower, whose bells sent forth a lively peal. Towards noon a procession was formed, and Captain Carew and his sister were drawn in triumph to the Hall; after which the poor sat down to a substantial dinner, followed by rustic amusements in the park and grounds.

It has never fallen to our lot to be present on an occasion where more genuine English feeling was exhibited than last week, at Crowcombe; and we cannot but rejoice that there are yet remaining many old families, whose joys and sorrows impress their neighbours also with kindred feelings.

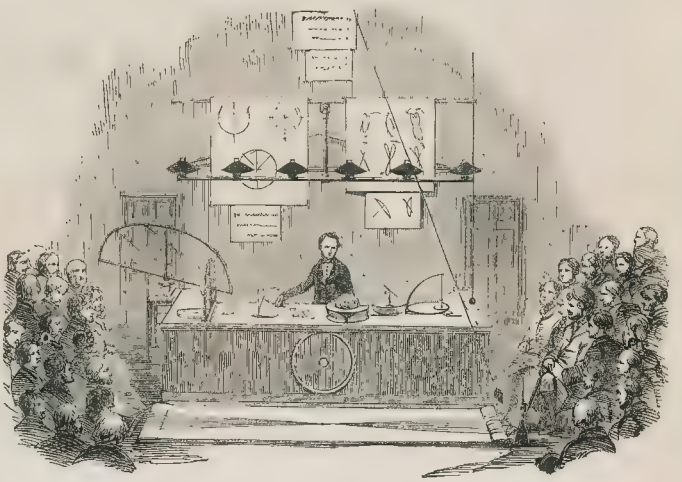
THE ROTATION OF THE EARTH.

"On the recent experiment shewing the Rotation of the Earth by means of the pendulum," by the Rev. Baden Powell, M.A., F.R.S., F.R.A.S., F.G.S., at the Royal Institution of Great Britain.

A CROWDED meeting of the Royal Institution took place on Friday, the 9th inst., to listen to the observations of the Rev. Baden Powell, Savilian Professor

VOLTIGEUR

of Geometry in the University of Oxford, "On the recent Experiment shewing the Rotation of the Earth by means of the Pendulum." Shortly after the hour appointed for admission, the theatre of the Institution was crowded in every part. At nine o'clock his Grace the Duke of Northumberland took the chair and Mr. Baden Powell began his address, by observing that the experiment alluded to had been the subject of so much popular notice, that it would be need less to go into a particular description of its nature or object; that, if fully verified, the result would, however, hardly amount to any more palpable proof to the senses than other astronomical phenomena afford; and that in this case, as well as in



ROYAL INSTITUTION. LECTURE ON THE ROTATION OF THE EARTH. BY THE REV. BADEN POWELL, M.A., &c.

these, the conclusion is equally derived from reasoning on the actual appearances. We have prepared an abstract of the details of Mr. Powell's discourse and illustrations; but, from the length to which they unavoidably extend, we are compelled to defer their insertion until our next publication.

YORK SPRING MEETING.

THE GREAT NATIONAL MATCH FOR £1000.

This memorable meeting has been attended with brilliant success.

Although the special train from London was announced to arrive at York an hour and a half before the race, the majority of the metropolitan sportsmen left on Monday; hence there was a numerous attendance at the Subscription-room at York in the evening, and enough said and done on the match to show that although the betting nominally was even, Volitear had the call; it was the prevailing opinion that the ground was strongly in his favour.

On Tuesday the weather, occasionally threatening, was fine, and the course was thronged to an extent that had not been witnessed at York in our time; in point of numbers, we know of nothing in the north that will bear a comparison with it but the St. Leger day of last year. Amongst the company in the grand stand was a much better display of rank, beauty, and fashion than we have accustomed to see of late years at race meetings. The excitement on the match was kept up to the last moment. The crack horses of their respective years met on equal terms as to weight and condition. Both parties were sanguine, and the gallant Dutchman has nobly redeemed the laurels he lost at Doncaster. That the best horse has won, does not admit of a doubt. The cheering from the enormous masses of people congregated in and around the stand might have been heard for miles. We may safely assert that such a day of excitement has never been, perhaps never will again be, seen at York. We subjoin the particulars:—

TUESDAY.

The Champion Handicap of 10 sovs each, with 50 added — Lord Glasgow's Argyll (if the Garter (Curtis, 5) 1. Mr. Stephen Price's Bumby 2

The Revival Stakes of 10 sovs each, with 20 added.—Mr. Harrison's Fem Hobby (Charlton), 1. Mr Padley's Paquetta (Hart), 2.

MATCH: £1000.

Lord Eglinton's The Flying Dutchman .. .. (Marlow) 1
Lord Zetland's Voltigeur .. .. (Flatman) 2

Even betting. Voltigeur, taking a load of three clear lengths, made the running at a good pace for such heavy ground, the Dutchman never attempting to go up until round the last turn; he then drew up, was within a length at the gravel road, had his head in front by the distance, and finally won, amidst the most enthusiastic cheers, by a length. Run in 5 min. 8 sec.

The Zetland Stakes of 10 sovs each.—Mr. Shepherd's King of Trumps (1 mile), 1. Mr Watt's [illegible] 2. Mr. Sorrell's Sam (Rogers) 3

The Brain of Pen[illegible] each, and 50 added.—Mr. Wentworth's Azeth (J. Mann), 1. Mr Padley's Paquetta (Hart), 2

The Selling Stakes. of 5 sovs each, and 25 added Mr. White's Clara (Flatman), 1 Mr. Dawson's Cripple Kate (Aldcroft), 2

The performance of the Flying Dutchman did not surpass the extraordinary quickness and punctuality of the express trains of the Great Northern Railway. The train which left York at six o'clock on Tuesday evening arrived in London at twenty-five minutes past twelve, conveying at least 400 passengers, drawn by a single locomotive engine.

WEDNESDAY.

The Eglinton Stakes, of 10 sovs each, with 50 added —Lord Eglinton's Pelopidas (Marlow), 1 Mr. Nichol's Miss Sarah (Holmes), 2.

The York and Ainsty Hunt Cup, of 100 sovs.—Mr. Martinson's Nancy (Osborne, jun.), 1. Lord Zetland's Voltigeur (J. Marson), 2

First Year of the Flying Dutchman's (late Ishor) Handicap, of 100 sovs.—Mr. J. Shepperd's Kate (Osborne, jun.), 1. Mr. E. Read and Country (J. Sharp), 2.

The Scramble Handicap, of 5 sovs. each, with 25 added.—Post-tempore, 1. Tordesillas, 2.

The weather was fine, and a tolerably full and fashionable company was attracted to the course. The racing turned out remarkably good, and was rendered peculiarly interesting by the defeat of Voltigeur. Its issue had the effect of giving the Black Doctor a strong lift in the Derby betting. It will be recollected, that, during the spring meeting, it was announced that the Flying Dutchman's appearance at Ascot would be contingent on the match proving a fair trial of merit. Such having been the case, the Earl of Eglinton declared, on Wednesday afternoon, that the Flying Dutchman would not start again.

NATIONAL SPORTS.

The racing fraternity will have their annual "Exhibition" (on this occasion, it is to be expected, of "all nations") on Tuesday next and three following days, the Derby and Oaks being the grand features of Wednesday and Friday; the general list, however, being so vastly improved, that, in respect to interest, it looks on paper quite as good as another. We fully anticipate a brilliant meeting. To please his foreign patrons, Mr. Dorling intends to print his cards, &c., in French and German—quite a new feature, and one worthy of being followed at Ascot. Cricket matches at Lord's and Newcastle, on Monday, embrace the other sporting fixtures for the week.

TATTERSALLS.

Monday.—A very considerable detachment of the "working classes" having taken flight for the "great exhibition" at York, the betting this afternoon was limited, showing, nevertheless, a considerable amount of spirit. Mr. Heartbreaker, and a momentous decline in the prime Minister. We were enabled to make out the following list of market prices:—

The Great Match. Even betting, Flying Dutchman for choice.	SUMMERSETSHIRE STAKES	
7 to 4 agst The Ban	6 sovs each (Oneeto) 100 sovs added 30 to 1 agst Chevelo	10 to 1 agst Terpsichore
	30 to 1 agst May Day.	
	LIST.	
5 to 1 agst Hernandez	20 to 1 agst Constellation	50 to 1 agst Hippotyus
11 to 2 —Tredegrass	22 to 1 — Heartbreaker	1000 to 15 — Artesia (i)
12 to 1 — Marlborough Back	25 to 1 — Mentala (own brer	1000 to 10 — Lord Raglan
14 to 1 — The Ban	33 to 1 — Black Doctor	(i)
16 to 1 — Theseus	40 to 1 — Newcastle (i)	1000 to 10 — Enterprise colt
	1000 to 30 agst Hampsford (i)	
7 to 2 agst F. yment	5 to 1 agst Aphrodite (i)	7 to 1 agst Hasn Homlsurg

ROYAL LONDON YACHT CLUB.

The first match this season of the Royal London Yacht Club came off on Saturday last, the course being, as usual, from Blackwall Reach, round a flag-boat moored off Gravesend, and back to the starting-point The contest was for the Challenge Cup, presented to the Club by Mr. J. T. Ilewes, which was won last year by the *Frolic*, belonging to Mr. A. Cox. It was a time match: yachts exceeding ten tons allowing a minute to all not exceeding that tonnage, and half a minute to those exceeding it; yachts under ten tons allowing half a minute to those of lesser tonnage. The morning was beautifully fine, and the attendance of members of the club and amateurs was very great.

Seven yachts had been entered for the match, but only six came to "the starting point," a point in Gravesend Reach a few hundred yards above the railway pier. They took their places in the following order, beginning from the Blackwall side of the river:—

Traveller	16 tons.	Mr G H Jackson, owner.	
Whisper	19	Mr Thos Evelegh	"
Mist	13	Mr Chas Hennegy	"
Phantom	21	Mr Samuel Lang	"
Frolic	12	Mr A Cox	"
Mermaid	15	Mr G E Brown	"

The start, which took place about twenty minutes past eleven o'clock, was a very good one, the *Mermaid* getting away first. She did not, however, long retain the first position, as the *Frolic* led round the point, pretty closely followed by the *Phantom* and *Whisper*.

The result of the "winning-post" in the following order and at the times stated, viz

				H	M	S
Whisper	.. .. ..	.. .. ..	.. .. ..	1	57	0
Phantom	.. .. ..	.. .. ..	.. .. ..	2	1	30
Frolic	.. .. ..	.. .. ..	.. .. ..	2	2	30
Mermaid	.. .. ..	.. .. ..	.. .. ..	2	14	30

Although the *Frolic* came in third, she was placed second, because, by the terms of the match, she was entitled to a greater allowance from the *Phantom*, on account of size, than the difference in their times of coming in.

Immediately after the termination of the race, Mr. A. Cox, the Commodore of the club, in a complimentary speech, presented the cup to Mr. Thomas Evelegh, the owner of the *Whisper*, in whose possession it will of course remain during the ensuing year; at the termination of which another contest will decide whether it shall become his property, or pass for the next year into the hands of some more fortunate rival.

London Model Yacht Club.—The postponed match of this club will take place on Monday, the 19th of May, at twelve o'clock, on the Serpentine, Hyde Park, for a silver cup, value £5, in four boats.

Novel Pedestrian Feat.—On Saturday morning last Mr. George Ledstone, better known amongst the fancy by his cognomen of "Gollah Goosbody," landlord of the Roper's Arms inn, Knottingley, near Ferrybridge, Yorkshire, started from his inn door, in Knottingley, between six and seven o'clock A.M., under heavy bets, to trundle a wheelbarrow in nine days to the Ji l Lion Inn, Horsleydown, in the metropolis, being a distance of near 185 miles. Ledstone anticipated completing his task on Saturday (this day) or Sunday: but intended, at all events, being in time to deposit his wheelbarrow in the Crystal Palace on the morning of Monday, the 19th instant. A guard was dispatched along with him on Saturday, to see that he faithfully executes the conditions on which the bets were laid.

IRELAND.

The Roman Catholic Movement.—The following letters from Lord Aberdeen and Sir James Graham have been received by the Roman Catholic Committee in Dublin:—

Sir, I have had the honour of receiving [illegible] an aggregate meeting of the Catholics of Ireland, which I assure you I shall carefully consider of the claims therein presented, and I beg to assure you of my determination to preserve in the course of conduct which has procured for me the good opinion and confidence of the country. I have the honour to be, sir, your most obedient and humble servant, Aberdeen.

Sir Colman O'Loghlen, Bart.

Gravesend-place, 7th May, 1851.

Sir, I have been absent from London until yesterday evening, and did not receive your letter as to the copy of the resolution which accompanied it until my arrival in town. I beg to express my grateful sense of the high honour conferred on me by a vote of thanks from an aggregate meeting of the Catholics of Ireland. I am glad that my discharge of a public duty should have been so far their approbation, and it is my earnest desire that they should continue to feel it without molestation the utmost freedom in the exercise of their religious rights. I have the honour to be, sir, your faithful and obedient servant, James Graham.

Sir Colman M'Loughlen, Bart., Catholic [illegible] rooms, 45, Lower Sackville-street, Dublin.

The Right Hon. Sidney Herbert was the guest at a public dinner given by the Roman Catholic Church of Irishtown, on a plot of ground granted by the Right Hon. Sidney Herbert, took place on Wednesday (last week), the Rev. Dr. Murray, now in his 84th year, being the premier celebrant. In the evening the members of the building committee, and the parishioners generally, entertained the Very Rev. Dr. O'Connell and Right Hon. Fairfield, agent of Mr. Herbert, at dinner, when the following tributes was paid to their excellent landlord by the Rev. Dr. O'Connell, who presided:—

The Rev Chairman said he was about to propose a toast which, he was quite sure, would be received with the enthusiasm it deserved—it was "The health of the Right Hon. Sidney Herbert." (Great applause.) Would every one join with him, when they had drunk that toast with their hearts and generous landlord." (Renewed applause.) The parishioners of Irishtown, assembled to-day to lay the foundation stone of a church. The ground which had been for many days cleared and dedicated to God by their venerated Archbishop was Mr. Herbert's gift, and a noble gift it was. (Applause.) He was giving them a lease for 99 years but the longest he could well make, at a rate of nominal rent, which non must was imposed so as to give those persons to whom the land was granted a full right to build on it. It was a most gratifying circumstance of a very large portion of a very valuable part of the honourable gentleman's estate (Hear hear.) He (the rev. chairman) could not refuse to them the site of their new church. It was a beautiful situation. It was approached at the western side by three convenient roads. In fact, everything that a church could require as subjects of convenience was to be found on the site granted to them. (Hear, hear.) They had not only the gift of that sacred wall but in

BRITISH AND FOREIGN SCHOOL SOCIETY.

The forty-sixth annual meeting of the supporters of this institution was held on Monday morning ... the society's premises, Borough-road; Lord J. Russell in the chair. Among the gentlemen on the platform were Earl Nevwilliam, Earl Waldegrave, Viscount Ebrington, M.P., Sir J. Bolleau, the Right Hon. Fox Maule, M.P., Mr. Evans, M.P., Mr. Hindley, M.P., Dr. Lushington, the Rev. George Clayton, the Rev. Dr. Duff, the Rev. Dr. Ryan, ... Dunn, the Rev. Mr. S. Gurney, &c.

Previous to the public meeting, the pupils were examined in the various branches of education ... and at the close ... and acquitted themselves in a highly creditable manner. The room was densely crowded.

The secretary read the annual report of the society ... very voluminous document, of which we append an abstract. It ... the society to be in circumstances highly favourable to its prosperity and permanence. The annual subscriptions had generally increased during the year, and the model schools were "full and other ... [illegible] children in daily attendance, and 30 pupil teachers had been apprenticed. The normal schools had been in vigorous operation: 116 were in training, 214 young women had attended the classes, the entire number (250) no less than 153 had been appointed to schools. Difficulty was still felt in obtaining candidates who were sufficiently educated. 54 new schools had been, or were, in preparation for 6,000 children. 81 ... had been made to schools, either at home or in the colonies. 22 ragged schools had been assisted. 24 schools had been supplied by temporary masters during the illness of their ... 3 schools had ceased to be teacher. The inspection of schools had been diligently carried out throughout the country, and public meetings had been held for the diffusion of education—335 visits of inspection had been made in London and the immediate neighbourhood—437 towns and villages had been visited by the agents of the society, and 58 public meetings had been convened and held, attended. In the district of Lancashire a ... more than 80 lectures were delivered, which had been ... by the society. In this district 20 schools had accepted Government pupils. The depository and publication department had prospered, the amount of sales being very considerable. The schools generally were reported as flourishing, provident funds and savings-banks appending among them. A strong opinion in favour of the working of Government ... which had accepted it, and had the deepest ... best interests of mankind. The ... [illegible] the British and Foreign School Society. The foreign operations of the society had been extensive: ... had been added in Canada, the West Indies, and in ... In Malta, the East Indies, Australia, and the South Seas. It ... capture of the society had exceeded its income, on which ground an earnest appeal for new subscriptions was founded. The advantage of the ... [illegible] as an educating and not depressing voluntary efforts, was forcibly ... and the very liberal character of the instruction afforded by the society was prominently ... [illegible] forward. The society's income during the year has been £6,487 3s. 8d., and the expenditure £6,487 3s. 8d. Of this income ... [illegible] than £1,000 ... [illegible] had been derived from the receipt of legacies, the money for increasing subscriptions and donations was obvious.

Resolutions in support of the adoption of the report, together with a vote of thanks to Lord J. Russell, and to the Duke of Bedford for their patronage and support ...

Lord J. Russell, in acknowledging the compliment, said:—I have always been a friend to the system pursued by this society, because it appeared to me, as you have been told in the course of these proceedings, to be eminently national (Hear, hear.) We all know that there are other societies in this country (indeed in the world of education, and most usefully engaged, and that a great number of pupils are instructed by them. With regard to one of those societies, called the National Society, I confess it seemed to me, that, however great the good they effected, they are deficient in this one point—that the greater portion of the children of the population of this country are excluded from these schools by the terms they imposed. With regard to another society, which is not yet established, but which is now endeavouring to make way, and rests upon secular education on ... I should say again that this society has a great degree of superiority over that ground of education, because it takes the religious element of man, by which I mean the element of the heart, and on which we in the South ... [illegible] (Hear, hear.) We all know that there are other societies in this country ... [illegible] in the work of education, and most usefully engaged, and that a great number of pupils are instructed by them. With regard to one of those societies, called the National Society, I confess it seemed to me, that, however great the good they effected, they are deficient in this one point—that the greater portion of the children of the population of this country are excluded from these schools by the terms they imposed. With regard to another society, which is not yet established, but which is now endeavouring to make way, and rests upon secular education on ... I should say again that this society has a great degree of superiority over that ground of education, because it takes the religious element of man, by which I mean the element of the heart, and on which we in the South ... [illegible] (Hear, hear.) We all know that there are other societies in this country ... [illegible] in the work of education, and most usefully engaged, and that a great number of pupils are instructed by them. With regard to one of those societies, called the National Society, I confess it seemed to me, that, however great the good they effected, they are deficient in this one point—that the greater portion of the children of the population of this country are excluded from these schools by the terms they imposed. With regard to another society, which is not yet established, but which is now endeavouring to make way, and rests upon secular education on ... I should say again that this society has a great degree of superiority over that ground of education, because it takes the religious element of man, by which I mean the element of the heart, and on which we in the South ... [illegible] (Hear, hear.)

CHURCH, UNIVERSITIES, &c.

OXFORD.

LORD JOHN RUSSELL'S COMMISSION.—It has been agreed upon by a large majority of the heads of houses and proctors, that an opportunity shall be given to the members of the University to express their opinions on Lord John Russell's commission. Adopting the suggestion of their legal advisers, it is proposed to present a humble petition to her Majesty in Council, praying that the commission may be withdrawn, and that the matter in dispute may be heard by counsel against it, and the sentiments of the majority will be ascertained by their determination to affix, or not to affix, the University seal to the proposed petition on Wednesday next.

The Bishop of Exeter has consecrated seven churches in his diocese for one ...

SEPTUNUS CHURCH, NEAR NOTTINGHAM.—Within the last month two additional stained glass windows have been placed at the east end of the church of this district, and the whole is now undergoing the process of cleaning, the manufactory of Messrs. M and A O'Connor, of Berners-street, Oxford street, London. They are very beautiful specimens of this elegant art, and reflect the greatest credit on the talent of those eminent glass painters.

ARCHIDIACONAL VISTATION.—Archdeacon Sinclair held a visitation on Monday, in the parish church of Cwmtgalon, which was numerously attended by the clergy of the neighbourhood of Nindlas. The archdeacon made a careful review of the events which have agitated the Church since his last visitation, and, while insisting upon the maintenance of the strict doctrines of the Church, warned the clergy against those tenets which, to Romanism which have led, in many cases, to results so much to be deplored.

The Rev. Thomas Wildman, Trinity College, Dublin, and incumbent of Matthew's Church, Worcester, in the diocese of Worcester, has been appointed domestic chaplain to the Right Hon. the Earl of Ellesmere and Wilton.

PREFERMENTS AND APPOINTMENTS. The following preferments and appointments have been announced:—The Archdeaconry of Lincoln, vice the Hon. and Rev. Langrowan, Anglesea, to Llandaff Cathedral. *Canonsthorpe*—The Rev. Augustus Morgan, Rector of Maulden, Bedfordshire, to the Hall Cathedral. *Aberdare*—The Rev. Thomas Price, Vicar of Llandilo-Fawr, Carmarthenshire, to Dyffryn Clwyd. *Rectories*—The Rev. J. Dawson, to St. Peter-at-Arches, Lincoln; the Rev. Dunckley Thomas, to Aston-le-Port, Brosely; the Rev. Richard Cooper Lefroy, to Cold Comfort, Wilts; the Rev. Henry Francis Lyte, to Berton-Overy, Leicestershire; the Rev. John Green, to Little Leighs, Essex; the Rev. David Jeffreys, to Llanvihangel, Pontsticill. *Vicarages*—The Rev. Henry Fox, to Isleham, Northamptonshire; the Rev. Henry Cavendish Dyson, to Barrow, in Essex; the Rev. Frederick J. Jeremie, to Hollesley, near Orford Bridge, Lincolnshire; the Rev. G. R. L. Warner, to St. Mary Bredin, Canterbury; the Rev. T. Bay, to Poles the Virgin, Canterbury; and of North Marden; the Rev. Richard Yarbrugh, to New Sleaford, Lincolnshire

TESTIMONIALS.—The following clergymen have recently received testimonials of their services in the parishes of which they are the incumbents:—The Rev. London, from the parishioners; the Rev. Samuel Hey, vicar of Bees, Derbyshire, from his congregation; the Rev James Thomas Round, on his resigning the rectory of St. Runwald, Colchester, from the parishioners; the Rev. Edward Thomas, curate of Caddeston-juxta-Heath, Cardigansh, re, from the parishioners; the Rev. J. W. Grane, on the occasion of his retirement from the incumbency of Woodhouse, near Huddersfield.

EAST INDIA COMPANY'S MUSEUM.—Several valuable specimens of natural history have just been added to the Hon. East India Company's Museum, Leadenhall-street, among which are one *Ovis Nahoura* (male), from Thibet; *Ovis Nahoura* (male and female), from Thibet; *Ovis vignei* (male), from Thibet; *Ovis*, domestic sheep of Thibet; *Capra*, goat of Thibet; *Capra Ibex*, from Kunawar; *Equus Hemionus*, wild ass of Thibet; *Tetraceros quadricornis*, the four-horned antelope. The whole of the above have been presented by Capt. R. Strachey, and have been beautifully stuffed and arranged, by Mr. Joseph Baker, museum preparer to the Company and to the British Museum.

THE CHANNEL ISLANDS.—The Lords of the Admiralty have just sanctioned an arrangement with reference to the Channel Island mails, which will materially facilitate the communication between Guernsey and Jersey and the metropolis. Hitherto, the contrast mail-packets have been despatched from Jersey at 8 A. M. every Monday, Wednesday, and Friday morning, and reaching Southampton at 5 P. M. the same evening, and the letters were forwarded by train to London, and have been subjected to an expensive and troublesome detention. It has now been ordered by the Admiralty, that, on and after the 1st of June, the packets shall be despatched from Jersey at 5 A. M. every morning, and proceed to French Southampton Docks about 6 P. M., just in time to get their baggage through the Custom House, and proceed by the 7 P. M. train, arriving in London at 9 P. M. Passengers will thus reach London the same evening of their departure from Guernsey and Jersey. The days of departure, both from Southampton and from the Channel Islands, are unchanged, and there is no alteration in the time of departure of the packets from South-ampton, which is always at midnight, on arrival of the night mails from London.

THE ROMAN CATHOLIC CHURCH OF ISLINGTON.—We understand that on Sunday last the chapel of the Most Holy Sacrament was opened in the Rev. Mr. Oakley's church, by Cardinal Wiseman, with great pomp and ceremony. The ornamentation is very simple, but rich and appropriate. The procession of the clergy amounted to about one hundred.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The English Funds opened with firmness on Monday, ... during the day Consols advanced to 97¾, closing, however, at 97½ to ¾. Tuesday was the monthly settlement in Consols, which was conducted without any ... ity of notice, except the advance in the value of money ... 97½ per cent. The closing price of Consols was 97 to ⅛ for money, ... 97⅛ to ⅜ for the June account. On Wednesday, however, the ... varied decreased in firmness, Consols receding to 97 to ⅛ for money, in consequence of some heavy sales, and a like heaviness prevailed ... On Thursday, with a remarkably limited business. Exchequer Bills have receded about 3s. during the week, and India Bonds also betray symptoms of retreat, leading naturally to the inference that ease in the value of money is anticipated. At the close of the week's transactions prices were, for Bank Stock, 211; Reduced, 98½; Consols, 97¾; New Three-and-a-Quarter per Cent Annuities, 97⅛; Long Annuities, to expire January, 1860, 7⅞; Ditto, 30 years October 10, 1859, 7 1-16; Ditto, 30 years, January 5, 1860, 7⅜; India Stock, 258; India Bonds, 2l dis. £1000, 50 pm; Ditto, under £1000, 51 pm; ... ditto, 5½; Consols ... for Account, 97⅜; Exchequer Bills, £1000, 49 pm; Ditto, £500, 49 pm; Ditto, Small, 49 pm.

In the Foreign Market the most important event has been a decline in Peruvian, arising from extensive sales. Monday's opening price was 83, and on Tuesd y sellers could only get 81½; but a favourable reaction of about ¾ per cent. has since occurred. Mexican has ranged between 20¾ and 21. Spanish Five per Cents have improved from 19¼ ⅜ to 20¾. In ... Four-and-a-Half per Cents are now at par. Portuguese four per Cents are steady at the nominal value of 33¾. The non-holders consider that the new Government cannot be easily more dishonest than the old. The various fractional fluctuations in the ... stocks will be best by the annexed list of closing prices:—Brazilian 5s, 96 ... 90; Buenos Ayres Bonds, 6s per Cent., Account, 55¾; Equador Bonds, 28¾; Mexican, Five per Cents., 1846, to January Coupons, 20¾; ditto, Account, 19¾; Peruvian Bonds, Five per Cent., 82½; Ditto, Deferred, 39½; Portuguese, converted, 34½; 3d ... Four per Cent., 33½; Ditto, Account, 33¾; Russian Bonds, Five-and-a-Half per Cent., 102; Spanish, Five per Cent., 1840, 20¾; Ditto, Passive, 3¾; Venezuela Bonds, Two-and-a-Quarter per Cent., Account, 33; Ditto, Deferred, 12¾; Dutch, Two-and-a-Half per Cent., 59¾.

In the railway ... considerable decline. The reasons for the rise cannot ... [illegible] ... the heavy "continuations" demanded, consequently sales are forced on the Market. In addition to this, the failure of a broker at Liverpool, ... [illegible] ... Mills, and Co., in London, have together tended to create considerable depression. London and North-Western, South-Eastern, South-Western, and Great Western, all mark a heavy decline. Closing prices are:—

ORDINARY SHARES AND STOCKS.—Aberd ... seen 12¾; Ambergate, Nottingham, Boston, and Eastern Junction, 4; Caledonian, 14¾; Chester and Holyhead, 9¾; Eastern Counties, 5¾; Edinburgh and Glasgow, 71¾; Eastern Union, 8 and C, 4¾; East Lancashire, 15¾; Great Northern, 1st, Ditto, Leases, A, 6¾; Ditto, Leases B, 12¾; Great Western, 86 ... Ditto, E, 7; Lancashire and Yorkshire, 59¾; Ditto, Fifths, 7; London and Thirsk, 16¾; London and Blackwall, 8¾; London and North-Western, 123¾; Ditto, Quarter Shares, 41¾; London and South-Western, 84; Manchester, Sheffield, and Lincolnshire, 31; Midland, 59¾ ... Ditto, 4th Class Shares, 10¾; Newmarket, 8; North British, 9¾; North Staffordshire, 9¾; Oxford, Worcester, and Wolverhampton, 16¾; Scottish Central, 10¾; Ditto, Perpetual, 10; Scottish Midland Junction, 4; Shrewsbury and Chester, 17; South-Eastern, 9⅞; South Wales, 2¾; York, Newcastle, and Berwick, 20¾; Ditto, Extension, 19¾; Ditto, G N E, Purchase, A, 6¾; Ditto, Halves B, 12¾; Great Western, 86;

THE NEW MUSEUM OF PRACTICAL GEOLOGY, JERMYN-STREET.—(SEE PRECEDING PAGE.)

SIR HENRY THOMAS DE LA BECHE, C.B., F.R.S., F.G.S., F.L.S.

Sir Henry Thos. De la Beche, Knt. Bachelor (eldest son of Colonel De la Beche), was born at London, in 1796, and received his first education at the school of Otery Saint Mary, in the county of Devon. In 1810 he entered the Royal Military College, then at Great Marlow, but afterwards removed to Sandhurst. The residence for a time of his father and mother, at Charmouth and Lyme Regis, both rich in organic remains, first attracted his attention to geology, which became his favourite study. On leaving Sandhurst he entered the army, but soon retired from the service.

In 1817 Sir Henry became a member of the Geological Society, then in the tenth year of its existence; in 1819 he visited Switzerland and Italy, studying everywhere their geological formations; and in the same year he was elected a Fellow of the Royal Society. In 1820 he published a paper in the *Edinburgh Philosophical Journal*, "On the temperature and depth of the lake of Geneva;" and in 1821 his first communication, the joint preparation of himself and the Rev. William Conybeare, was read to the Geological Society, announcing the discovery of a new fossil animal of the Ichthyosaurus family in the Bristol Bas, and which, as distinctive of its species, they named the Plesiosaurus. The paper at the time attracted the very general attention of the scientific world, and seems to have been Sir Henry's first introduction as a Geologist to the public. In 1823 he followed up his account of the geology of Switzerland by a paper in the *Transactions* of the Society on fossil plants, found at the Col de Balme, near Chamouny, in Savoy. In the same year he made a communication on the geology of the coast of France and of the inland country adjoining, from Fécamp, department of Lower Seine, to St. Vaarl, department of La Manche. There are also to be found in the *Transactions* of the Society, in the same year, papers by him on the geology of southern Pembrokeshire; on the bas of the coast in the vicinity of Lyme Regis, Dorset; on chalk and the sand beneath (usually called green sand) at the same place, and also in the vicinity of Beer, Devon.

Subsequently he visited his extensive family estate of Halse Hall, in the neighbourhood of Spanish Town, Jamaica; and in the latter part of 1825, communicated to the Geological Society his remarks on the geology of that island, of which, previously, there had not appeared any geological account.

In 1827-28, he published a tabular proportional view of the superior, supermedial, and medial rocks. Passing over numerous important papers, published in the *Transactions* of the Society, the *Philosophical Magazine*, *Annals of Philosophy*, and other scientific journals, as well foreign as British, we find that, in 1830, he published his first work, entitled "Geological Notes," and, in the same year "Sections and Views of Geological Phenomena," the whole of the drawings in which (and they have furnished data for almost all subsequent illustrators of the science) are from his own hand; and in 1831 was published the "Geological Manual," so well known to all students of geology, which was speedily translated into French and German, has gone through three editions and is at present out of print. In 1832, Sir Henry De la Beche proposed to the Government to supply the data for colouring geologically certain sheets of the Ordnance map of England, comprising parts of Cornwall, Somerset, Dorset, and the whole of Devon. The offer was accepted, and the greater part of the expense borne by Sir Henry himself.

In 1834 appeared Sir Henry's "Researches in Theoretical Geology," and in 1835, "How to Observe;" in the first edition of which, a closing paragraph pointed out the practical benefits to be derived by the establishment of a Museum for the purpose of showing the application of geology to the useful purposes of life, or, in other words, the mineral wealth of the country—which, in passing, we may mention exceeds now £20,000,000 per annum.

The geological department of the Ordnance Survey being fairly on foot, Sir Henry, in 1835, submitted to the Chan-

SIR HENRY THOMAS DE LA BECHE, C.B., F.R.S., F.G.S., F.L.S.

cellor of the Exchequer, "that the persons employed upon that department had constant opportunities afforded them of collecting specimens illustrative of the useful application of geology." The attention of the officers was accordingly directed to the object. Apartments were assigned for the collection in Craig's-court, Charing-cross; and in 1837, Lord Duncannon, then Chief Commissioner of Woods and Forests, requested Sir Henry to undertake the carrying out of his own proposal. He at once did so, and has since gratuitously devoted no small amount of his time and attention to perfecting the Museum. an account of the opening of which, in its new building, we have also where given at length.

In 1839, as explanatory of the geological maps of the above-named districts, Sir Henry De la Beche published a complete report, containing 646 closely printed octavo pages, with sections, views, and drawings, again from his own hand. The geological survey has since been more fully carried out, the Government taking a vote of £4000 for Great Britain, and £1500 for Ireland annually for the purpose; so that, in this instance, the original suggestion of Sir Henry De la Beche has proved no less successful than that for the establishment of the Museum.

In the present year, Sir Henry has published, at the Messrs. Longman', his most complete work, based upon "How to Observe,"—"The Geographical Observer;" which, in the minutenes of detail and excellence of its numerous illustrations, proves the value of the rare union, in his so complete, of scientific author and illustrative draughtsman.

In 1848, Sir Henry received the honour of Knighthood. In 1818 he married Letitia, daughter of Captain Charles White, of Lough Bricklan, county Down, Ireland: she died in 1844 leaving one child, a daughter.

The family is descended from the Barons de la Beche, who were seated at Aldworth, Berks, in the time of Edward II.

Our portrait is from a photograph by Claudet.

THE CANTERBURY ASSOCIATION SHIPS "BANGALORE," "DOMINION," "DUKE OF PORTLAND," "LADY NUGENT," "MIDLOTHIAN," AND "CANTERBURY," IN THE EAST INDIA DOCKS.—(SEE PRECEDING PAGE.)

EXHIBITION SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS

No. 486.—VOL. XVIII.] SATURDAY, MAY 17, 1851. [TWO NUMBERS, 1s.

LONDON DURING THE GREAT EXHIBITION.

THE Exhibition becomes more popular from day to day. The question asked some months ago was, Shall the Crystal Palace ever be pulled down? The reply was enthusiastically in the negative. The question now is, Shall the treasures of the Exhibition be dispersed? There is a general feeling growing in intensity, that the assemblage of articles now classified together in the long avenues, spacious courts, and elegant galleries of that marvellous edifice ought to remain a permanent source of instruction and delight to the people of all ranks and classes—a living museum of the arts and industry of the living world. It seems likely that funds will not be wanting for the purpose, and that, after all expenses are paid, sufficient will remain to keep up the Building, and to purchase the most important of the articles exhibited. Such a result, which no one was sanguine enough to imagine a few months ago, is now considered by sober people as highly desirable, and not at all impracticable. There remains but another step in the progress of opinion to be made, and then we shall have the realization of Mr. Paxton's idea, of a gratuitous admission of the people on certain specified days.

These are the great facts and feelings of the week with regard to the Exhibition. A few of the minor moralities connected with it deserve notice. For the nonce, and until further orders and new arrangement, London is not simply the capital of a great nation, but the metropolis of the world. The Exhibition has deprived it of its local character, and rendered it no longer English merely, but cosmopolitan. As the Confederation of the Swiss Republic chooses from time to time a new capital, or central seat of power, from among the towns and cities of its cantons, which is dignified with the name of the "Vorort," or "Fore-place," so London may be named, at present, the Vorort of the Great Industrial Confederation of Christendom.

The English are great travellers. Ever since the peace of Waterloo let loose the swarms of our sight-seeing countrymen to visit every nook and corner of Europe—to admire fine scenery—to pry into collections of pictures and curiosities, and to cultivate the national taste for the foreign, the nations of the Continent have been familiar with the long purses, the eccentricities, and the polyglot accomplishments of the restless English of the upper and middle classes. There needed no facilities of railways to set our busy heads of families, and their wives and daughters, a-gadding in the autumnal season in search of fresh air and new scenes. But our Continental friends have not returned our visits. They have seen us abroad, and not at home; and have, for the most part, been slow to understand what inducements we could have to travel. While it has been rare to find an educated Englishman who did not speak French, or perhaps German and Italian, more or less perfectly, and who did not know by personal inspection the main features of the most celebrated of the Continental cities; it has been still more rare, among the same classes in France or Germany, to find a man who personally knew anything about London or who could speak, or even read, the English language. Frenchmen of the highest standing in art, arms, literature, and the learned professions, found a world in France, and did not look beyond it. Germans were similarly ignorant of all but Germany, and wondered whether it were disease of the mind or of the body that forced Englishmen abroad. But *nous avons changé tout cela*. And, what with the Crystal Palace and the facilities afforded by the railway system, without which the Exhibition would not have been possible, the people of the Continent have, for the first time, been smitten with the love of seeing strange parts. Already this intercourse has produced a good effect: the columns of the French press bear pleasant testimony to the more kindly feeling consequent upon more intimate knowledge which the Exhibition has been the means of producing; and a whole host of errors, misconceptions, and prejudices bid fair to be driven for ever out of the heads of our nearest neighbours. John Bull is no longer an ogre, but a genial and courteous gentleman. The old joke about the gloom, smoke, and dirt of London, and the austerity, inhospitality, and semi-lunacy of the English character, has been dissipated, and our Parisian friends confess that the "sombre" city has produced the gayest, most fairy-like, most beautiful and original building in the world, and that these gloomy English people are positively well dressed, as pleasure-loving, as agreeable, and as polite as the French themselves. The joke as a little about our public statues and buildings as well they may; but they forgive much for the sake of the Crystal Palace. Mr. Paxton has, in fact, wiped off a national reproach, and blunted the edge of criticism, that, as regards other parts of London, might have found more than sufficient to whet itself upon to a most razor-like sharpness.

There was at one time a fear that London would suffer in the estimation of strangers, for all time to come, by the extortionate prices demanded for lodgings and food during the period of the Exhibition. But this fear has blown aside. The lodging-house keepers and the *exploiteurs* of furnished houses, though at one time inclined to be exorbitant in their demands, have come to their senses, and foreigners in London may be lodged almost, if not quite, as reasonably as usual. The price of food has remained the same, and the only extortion that has really taken root and flourished, and served to give us a bad character in the eyes of our visitors, is the vile attempt of the omnibus proprietors to raise their fares twenty-five per cent. But we rejoice to see that the omnibus people are likely to be losers by their impudent rapacity, and that the fourpenny fares will not pay.

The cosmopolitan aspect of London is striking. We have not only the ILLUSTRATED LONDON NEWS, in French and German, appealing to the sympathies of our guests in their own language, and telling them all about the Exhibition and other matters, but the daily papers are interlarded with French and German articles. With a kind regard for the stranger, our police and other authorities have become as polyglot as the press. An announcement in the Strand directs the German to the "Eisenbahn," and the Frenchman to the "Chemin de Fer." The Government aids the good work of fraternisation, and throws open the arsenal at Woolwich, and the great national dockyards, to the inspection of strangers; and our great nobles throw open their picture-galleries and parks to the visits of the people gene-

3. SALT-CELLARS. BY MOREL.

rive, whether native or foreign. The city of London is about to entertain the Foreign Commissioners. The artists of England have given a public dinner to Herr Kiss and the other foreign sculptors and artists, whose works have tended so greatly to the beauty and utility of the Exhibition; and other festivities of a similar kind are spoken of. All these circumstances are new and cheering, and are among the minor amenities for which we have to be grateful to the Great Exhibition.

Until the present time, the upper and middle classes, both of Great Britain and the Continent, are the only classes who have come to London. The multitudes have not yet made their appearance; but when the price of admission shall be reduced to a shilling, the excursionists will rush in by the cheap trains from every part of the United Kingdom, as well as from the Continent. Paris will land its thousands per day upon our shores; and the workers of Sheffield and Birmingham, of Manchester and the West Riding, of Glasgow and Belfast, and of countless other industrial towns and districts, will pour their teeming myriads into the great cosmopolitan metropolis, to carry away with them, there cannot be a doubt, a remembrance of pleasure and instruction to last them for the remainder of their lives. For six months or more, the intelligent mechanics of our distant towns have been clubbing their weekly shillings and pence for this rational purpose; and among the many interesting spectacles which London will shortly offer to foreigners, none will be more interesting than the visits of these hordes of working-men—the men who made the Exhibition what it is, and who, we fervently hope, will derive the greatest advantage from it.

But the Great Exhibition has its unpopular as well as its popular side. City merchants and their correspondents say that it has "killed business" for the season, and they grumble accordingly. The caterers for public amusement are still louder in their complaints. The theatres do not fill; panoramas—of which the name is legion, and which succeed each other more rapidly than memory can keep pace with them—are losing speculations; and people are so busy with the one Great Exhibition, that they cannot encourage any minor ones, or find time for them if they would. But all these things will right themselves. Business cannot be "killed" when so much money is spent and spending; and although it is possible it may have slept for awhile, it is certain that it will awake in due season. As for public amusements, we believe that there is a chance even for the panoramas.

A GUIDE TO THE GREAT INDUSTRIAL EXHIBITION.

SCULPTURE.

(THIRD NOTICE.)

We made some remarks in our last upon the debasing influence exercised upon art and artists by the temptation to adopt subjects of portraiture, as the ready means of attracting notice, if not of ensuring success; and how this unfortunate tendency has been almost unavoidably fostered by the ignorant and unthinking portion of the public, who are apt to look at a picture or a statue more on account of the popularity of the personage whom it represents, than for the manner in which the subject is treated. Royalty, of course, has always engaged the first place in the regards of observers of this class; as, in deference to a mistaken punctilio of etiquette, it has also too generally, both at the Academy and elsewhere, commanded the best places in the room, to the exclusion of works of real artistic merit. This is a notorious fact—one which has been made the ground of complaint both with artists and critics time out of mind; and we had hoped that, in carrying out the arrangements of the Great Exhibition of the Industry of all Nations, the Commissioners would have had the courage and the good taste to depart from a custom which would have been

> More honoured in the breach than in the observance,

giving honour where honour is due, and assigning the most prominent places in the Crystal Palace to the works of the highest intrinsic interest and merit. But not the old courtier rule of criticism has been permitted to hold its way even in this grand republic of talent and industry, and the consequence is, that three very bad equestrian performances occupy the principal positions in the midst of the transept, merely because they pretend to be portraitures of our beloved Sovereign and her Royal Consort, mounted upon their favourite chargers. Now, all this is very bad very weak. We humbly submit, that, so far from an artist having a right to claim our favour for a wretched production, because he chooses to call it an equestrian statue of the Queen, he is entitled to a double meed of rebuke and chastisement—first, for outraging the dignity of a noble art, and, secondly, for libelling the outward semblance of an exalted personage, whom we are accustomed to look upon with reverence and respect. Queen Elizabeth had a wholesome horror of having her effigy perpetrated by unskilful hands; but that was after she had grown old and ugly. Queen Victoria has no such pretence for interdicting the free exercise of every daub's fancy in plaster or upon canvass; and though she may smile in pity at the result, it would not be in keeping with her amiable and generous disposition to mark any displeasure at it. It is for the public, therefore, who wish to perpetuate none but worthy memorials of their high-minded Queen to their descendants, to raise the voice of stern condemnation against every weak and unfaithful attempt at portraiture of such a subject as soon as it is brought under their notice, and particularly so when it is ostentatiously paraded before them, with a view to further and more expensive proceedings. If Mr. James Wyatt had kept his equestrian effigies of her Majesty and Prince Albert in his studio at Paddington, for the inspection of occasional select circles of friends, if he had even been tempted to have exhibited them in the sculpture dungeon of the Royal Academy, we should have said never a word about them. But when we find them, by sheer force of interest, thrust before the astonished gaze of hundreds of thousands of men of intelligence and taste, coming from all parts of the world; when we find them, through sheer force of circumstance, inaugurated in their present "proud position" by royalty itself; and when we find, upon reference to the catalogue, that the artist's ambition is not satisfied with this, that his crude and disagreeable works are not to perish with the clay in which they are at present embodied, but that they are "designed for bronze" (the money, of course, to be raised by subscription, or vote of Parliament), we feel called upon to denounce in time the threatened job, and to engage the public to give their moral support to those whose painful duty it will one day be to refuse their sanction to it. Let us have equestrian statues of Queen Victoria and her excellent Consort, by all means, but let them be such as we may look upon without pain and humiliation. works worthy of the august originals, and of the age in which they are to be illustrious emblazonries of their patronage and example. As for the miserable productions which have called forth these remarks, we shall say no more about them at present: condemning them in toto, [illegible] with our feelings of respect for the exalted [illegible] to enter into detailed points of criticism. We have also the observations referred more specifically to the two productions by Mr. Wyatt; justice obliges us to add, however, that they may be applied with nearly equal force to Mr. Thornycroft's equestrian statue of her Majesty, which is only a little less bad than that of Mr Wyatt.

The Subjugation of Satan by the Archangel Michael" is a subject which has been attempted by two British sculptors, whose works are both in the southern transept. Mr. E. B. Stephenson has treated the subject in the more obvious manner, representing the Archangel as standing erect and triumphant over his prostrate foe. Mr. Lough, on the other hand, has represented the Champion of Heaven in a sitting posture, and, instead of regarding the Fallen Angel who is at his feet, pointing up to Heaven as at once the source of his power and the object of his reverential service. The figure is not without dignity, though we hardly think it well adapted to the occasion. It is, moreover, remarkable as a palpable adaptation of the favourite study of John the Baptist, which Raphael, Guido, and Guercino severally treated upon canvass, with very little variation of essential particulars.

Before taking leave for the present of our British contributions in sculpture, gallantry obliges us to make respectful mention of the monumental Irish cross, very beautifully executed in Caen stone, by the Hon. Harriet Ross, of Bladensburgh, Rossmervor. On the one side, in the chief compartment, is represented the Crucifixion; on the reverse the elevation of the Serpent in the Wilderness. On the arms of the Cross are groups of the Good Shepherd and the Return of the Prodigal Son; and down the standard of the Cross are the heads of the four Apostles, and of others of the Disciples. The expression of many of them is remarkable for power and devotional character; and the whole work, coming from the hands of a lady, is a marvel of execution, and may be looked upon as an extremely interesting specimen of its kind.

The works of sculpture by various Foreign artists are, as yet, not all fully displayed, and the references to them in the Catalogue are necessarily few and uncertain. We are unable, therefore, to treat them according to schools in the present notice, and must content ourselves with observing upon a few which appear more prominently in the eastern nave.

M. Simonis' gigantic performance of Godfrey de Bouillon, of which we gave an Engraving in our last, is an exhibition of considerable animal development, but has no pretensions to take rank as a work of high art. The treatment is vulgar and exaggerated; the horse and rider being equally far removed from the classic mould; whilst the elaboration of armour, and the high, uplifted banner (a thing which can never well be represented in sculpture) fall under the category of errors so ably referred to by Sir C. L. Eastlake in the passage we quoted from his writings in our last week's notice. At the base, on either side of this spacious work, are two little fanciful subjects in marble, which, though in themselves of a vulgar type, are executed with considerable finesse. The one represents a little urchin, stretched at length and at his ease, admiring the hideous physiognomy of a little Punchinello with which he is playing; in the other—so pass away the fleeting joys of childhood—we have his companion blubbering over the ruins of his toy drum, which will excessive beating he has broken. The heart-full contentment of the one, and the blatant ungovernable misery of the other, are well depicted, and have obviously been taken from nature.

Another Belgian artist, M. Geefs, has a very pleasing and clever work—a female, with most bewitching and coquettish air, cutting the claws of a lion, who, spell-bound and fascinated, submits willingly to the operation. Underneath is inscribed a couplet, which explains the moral intended to be conveyed:—

> Amour, amour! quand tu nous tiens,
> On peut bien dire, "Adieu, prudence!"

In paying a passing compliment to this *spiritual* performance, however, we would by no means be understood to allow its claims as a subject worthy of art in its highest walk

M. de Cuyper, another Belgian artist, has a marble work, representing a Canadian mother weeping for the loss of her child, and pouring the milk from her breast over its grave. What can we say of such a subject, but that it is unnatural, unhealthy, and repulsive? and yet the general attitude of the figure is graceful, its execution admirable, and the intense agony portrayed in the compressed and up-drawn lips and the tear-filled eyes is such as to touch the sympathies of all beholders. If the artist had avoided the objectionable incident which appears to have been the principal motive of his composition, had slightly draped his figure after the antique examples, and had contented himself with representing a mother simply mourning as a mother may do, over the grave of a child, with all the intensity of feeling he has thrown into his subject, he would have produced a work of the highest and most telling excellence.

Amongst other works in the middle of this avenue is a Dancing Faun, in bronze, by M. Lequesne—a figure full of spirit and life, and with an artistic excellence in the anatomical department worthy of the highest praise.

BOOKBINDING.

There is but little that can be said in praise of the contributions of the London Bookbinders, further than that they show that great advances have been made in the art during the last few years, among those who work for publishers; and that the binders in Russia and Morocco, and calf and vellum, have taken great pains, by elaborate ornamentation, to convince us that they are "masters of their profession." Remnant and Edmonds contribute a good selection of binding, including Owen Jones's stamped leather covers, and a pleasing specimen or two of "relievé" books in calf. Barrett and Co. exhibit specimens of their workmanship. Their huge bibles, with the sunk panels, gilt metal ornaments, and profuse embellishment, cannot please any one with good taste. The style of decoration on the smaller prayer-books is plagiarised from other binders. Wright, of Noel-street, sends a copy of "Sylvestre", in morocco, very finely tooled; and "Das Niebelungen Lied," in white vellum inlaid with lines of orange and purple leathers, making a tasteful pattern. Let us here, once for all, protest against the absurdity of decorating the edges of books with pictures. Maconie and Co. contribute a large bible, bound in Morocco, with a bronze ornament running round the sides; another bible, in buhlwork, and a "Beaucoup," in white vellum, inlaid, with colour. Mr. Macconie seems fond of the raised panels—a style we cannot admire. —— Evans, of Bleiwick-street, "the inventor of English illuminated binding," as he calls himself, has filled a case with examples of this wonderful art, and of the "Victoria" style of binding. Here is a copy of one of the book covers in the British Museum, very well executed in coloured leathers: the rest is mere "fancy stationer's-work." Batten, of Clapham, has a case containing richly-tooled bindings, on the "Song of the Bell," Moore's Melodies" (very good), and a "Shakspeare;" but Gothic church windows are not fit ornaments for the bookbinder's use, even on bibles and prayer-books. Orr and Co. next show books published and bound by them; some of them with good gilt ornaments. Josiah Westley has a case chiefly filled with publishers' bindings, that are certainly a great advance in style on the productions of even two years since. Binns and Goodwin, of Bath, show one specimen each—enough, but not to be pushed beyond the execution; and then we come to the large show made, by Leighton, of Brewer-street. There is a great deal of prettiness about this case, which we cannot say is particularly well carried out. In one compartment we noticed manuscript copies of old printing and old engravings which are marvellously executed, and there are some unostentatious examples of excellent binding; but who will admire the decorations of a bible, which, because it is called "King William's Bible," has the elaborate formed of cables and anchors "in honour of the Sailor King?" who cares to see "Burnet on colour," with a painter's palette on the side—mind, not a conventional ornament, but the variegated one of a palette, daubed with colour and all. Then there are "Rasselas" bound in oriental stripes; but this is so richly and well done that we will not quarrel with it; "Bacon's works" in hog-skin; and then, in better taste, "Thomson's works, with the twelve signs of the Zodiac;" and "Horatius" and "Macaulays' Lays" in classically ornamented calf. There are also some books with painting on the sides of sunk panels—good enough as far as the painting is concerned, but is it not a poor idea thus to ornament a binding? But if Messrs. Leighton's conceits are sometimes absurd, (their workmanship is excellent), what shall we say to Mr. Churton, who is blessed with a "plan for ornamenting books by era or subject"? A work on railways has what is meant to be a tunnel, plate richly worked on the side with gold lines "The Pirate and Three Cutters" is decorated with cable ornament; and "Shakspeare" with an Elizabethan architectural scroll. Surely these puerilities can hardly find patrons. We do not object to the style or the nature of a book being indicated by its binding; indeed, in many cases it is a very excellent plan—we only say, that Gothic church windows, painters' palettes, railway tunnels, and the like, are rank absurdities and not to be tolerated. Mrs. Lewis has a case of well-bound books, one on heraldry, appropriately enough ornamented with small coats of arms at the corners. Then Cundall and Addey show some examples of the morocco bindings of Mr. Hayday (who unfortunately does not himself exhibit), and an elaborate pierced metal cover, executed by Burtt and Sons, for "Choice examples of Art Workmanship." The design of this ornament—copied from an old Venetian binding of the 15th century—is very beautiful. Leighton and Son next exhibit some clever designs for bindings by Luke Limner; two bibles very creditably bound, and an elaborate cover for a small bible in stamped-gilt metal. One of the best and most honest-looking bindings in the show is contributed by Mr. Tarrant, a copy of "Sir Thomas Lawrence's Works" in orange-coloured Morocco, richly gilt, and with a little inlaying of other leathers. Clarke, of Frith street, shows a variety of good, substantial volumes, in the old "tree-marble" calf, and regular library bindings—his green and purple stainings are more curious than admirable. Mr. Bridden and Mr. Wiseman, from Cambridge, each exhibit large bibles—elaborate and creditable; and our protestant friends, send us a bible bound in white Morocco, inlaid with coloured roses, and ornamented in the centre with a gilt fountain and flowers! From other specimens from the north country, we are only able to gather that good taste has not yet been introduced to the Scotch bookbinders. Mr. Fincher, of Oxford, sends a case hardly commensurate with his reputation. Mr. Riviere, of Great Queen-street, has, perhaps, the choicest collection of all: he contributes but four books, and all are excellently well bound. "Spencer's Works" in Morocco, elegantly tooled with lines, somewhat in the "Grolier" style, among which the letters V.R. are just traceable. A "Common Prayer," in Morocco, of an old style; "Virgil," in white vellum, rather too much inlaid with colours; and a good example of "tree-marbled calf." Bone and Son have a case containing some of the best designs for cloth bindings, well carried out in all their detail. Westley and Co have a large display: among some very good cloth and Morocco examples, we find a huge bible, ornamented on the inside of the cover (which is shown to the spectator) with a Gothic church window, elaborated with a profusion of detail, all tending to prove what excellent workmen, but what wretched artists, in this instance, Messrs. Westley have employed By way of conclusion, let us direct especial attention to a bible in the "Fine Arts Court," contributed by Messrs. Nisbet, but bound by Mr. Hayday, each side exquisitely ornamented with a richly-carved panel, in box-wood, designed by Harry Rogers, and carved by his father, Mr. W. G. Rogers. This is the only binding worthy of great admiration contributed by English exhibitors. In a future Number, we must turn to this branch of art as shown in the Foreign Division.

LIGHT AND ITS APPLICATIONS.

IT forms a pleasing task for us to review the application of light; for although electricity has been made subservient to the will of the manufacturer within the last ten years, and has, therefore, the first claim upon our attention, yet some of the phenomena of light have also been adapted to the wants of man for the first time within the last few years. The vast area of the Great Building itself has taught mankind a lesson as to the mode in which the glorious light of day may be judiciously used. On entering at the South Transept a spectacle is afforded which fills the mind with wonder, and produces an overwhelming effect on the senses from its novelty, grandeur, and beauty. The Roman Emperors had their Colosseum, the Italians have St. Peter's; but, probably, the scene presented on the opening of the Exhibition has never been excelled, and perhaps can hardly have been equalled. This surpassing beauty is, in great measure, owing to the lights and shades and colours with which objects are presented to view, and which must render this Building the most attractive in the world. The Transept is most brilliantly lighted, insomuch as its noble arched roof is left open to the sky, and is not covered with calico like the remainder of the Building. Here the light is subdued by stately forest trees and tropical palms, whilst beautiful fountains add still further to the loveliness of the scene. Passing from this central spot the light becomes more subdued in every direction; and, as the eye wanders up the vistas, the three primitive colours of Sir D. Brewster, red, yellow, and blue, strike the eye by the intensity of their brightness in the foreground; but by blending in the distance, by the effect of parrallax and diminished visual angle, the whole as in nature vanishes into a neutral gray. To appreciate the genius of Owen Jones, the visitor must take his stand at the extremity of the Building, either by the eagle at the one end, or by Wilms's organ at the opposite, and then he will be enabled to examine the extraordinary scene which is presented. Looking up the nave, with its endless rows of pillars, the scene vanishes from extreme brightness into the hazy indistinctness which Turner alone can paint; and the whole produces an effect which is to architectural display what the vista of the grove and the glade of the forest is to the views presented by natural scenery. Nor must the visitor omit to notice the glare of brilliant light which crosses the nave, and appears as a little gap in the vast area, covered with cloth to modify and subdue the brilliancy of the light of day. Even with the covering of calico, too much light enters for wine effects, and various contrivances have been adopted to lessen it, and render it suitable for the display of particular objects. A dim religious light is procured by the display of the stained glass window of Bernini, of Milan. The furniture of Austria must be examined under a less powerful glare. The Mediæval Court and Sculpture Room require their objects to be illuminated in particular directions. As a scene, a mere display or pageant, the general effect is capable of affording the most intense sensual gratification; and all who witnessed the opening ceremony, declare that, for the pleasure which they received, they would not willingly have missed such intense delight. From the mere sensual gratification, we have now to pass to the higher mental effect; and in this transition, we can but feel the poet's thought when he wrote—

> So much the rather thou, celestial light,
> Shine inward, and the mind through all her powers
> Irradiate.

In viewing this Building, we have not only to consider the result which has been already obtained, but we have to study its future effect. The darkened rooms, with blanched inmates, will henceforth only exist in history; more light, more health, more comfort will be infused into our dwellings, and a new order of houses will be built.

The glass through which the light permeates in this Building is considered by some persons competent to judge as too thin; and it is a subject of regret that the rough plate-glass of Hartley, which is only one-fourth dearer, but twice as thick, has not been substituted for it. The property of the glass with which the Building is glazed has been the subject of much discussion amongst gardeners and horticulturists; and many declare, that the light passing through it burns or scorches their plants; and yet as many more as confidently state that no such result occurs. For the last two or three years we have investigated this matter with much attention, and the result of our experience is, that the burning of the plants is produced by the gardeners affording a deficiency of air, whereby the plants themselves are weakened, and become more susceptible of the influence of a hot sun. Old gardeners have been accustomed to small panes of glass and numerous apertures, whereas the great size of the sheet-glass prevents these apertures, and hence the plants require more air to be admitted.

There is a remarkable effect, which, doubtless, many of our readers have observed, and which is best noticed in the Foreign department under Zollverein. The stalls for the beautiful silks and other coloured goods are arranged under the gallery, but the cases extend back to open counters behind. The effect of this combination of the line of stalls from a lighter to a darker spot, and from that darker to a more brightly-lighted situation, is to give the effect of the presence of a looking glass; and it is only by walking through the place where the looking-glass appears to be, that its non-existence is satisfactorily demonstrated.

The whole character of the Building, the entire scene, with its bright and brilliant colours, its stately forest trees and murmuring fountains, with thousands of beautiful and happy nymphs flitting before the eye, partakes rather of the appearance of a fairy palace executed by the imagination, than a reality formed by the hands of man.

As the philosopher walks through the Building he cannot dismiss this idea from his mind, and on the opening day we heard more than one exclaim: "Is it true? Is it real, or but a dream? How shall we prove its existence?" and they found that the pageant which they witnessed by the eye had led the mind insensibly to study the nature of their own consciousness.

The effect of the Building is also heightened by looking-glasses placed at various situations at the western end of the nave. The Thames Plate Looking-glass Company has exhibited the largest plate yet made in this country, and it is intended to open a of this manufacture. Some doubts had been raised by the of the columns produced by some of the other glasses, which the exhibitors state to be owing to the manner in which they are suspended. In the transept the effect is quite painful, all the columns appearing so far out of the centre of gravity as to be tumbling down, in the fashion which Professor Piazzi Smyth delighted to show at his lectures on the structure of the Building.

It is only within the last few years that the force of light has been made directly available for the arts, in the production of pictures. Here we have very excellent examples of Daguerreotype and Calotypes. Of the former we are inclined, after a very minute and careful examination, to give to America the first place. Whether the atmosphere is better adapted to the art, or whether the preparation of Daguerreotypes have been congenial with the tastes of the people, or whether they are unfettered by the patents in force in England, certain it is that the number of exhibitors has been very great, and the quality of production superexcellent. The likenesses of various distinguished Americans, by Mr. Brady, are noble examples of this style of art. The family of Mr. Churchill is a very pretty group; and the series of views illustrating the falls of Niagara are a very appropriate example of the American industry, by Mr. Whitehurst, of Baltimore. The large specimen by Mr. Harrison are also accounted as the disrespect with which they have treated all other nations, in having applied for so large a space, and yet at last having left their space comparatively unfilled.

Whilst stating that the Americans have surpassed all nations in the production of Daguerreotypes, it must not be understood that the English are much deficient in this branch of art. Mr. Claudet has exhibited a very fine collection. Mr. Myall, who, perhaps, must be regarded as an American, has also a good display; and, upon the whole, our show is by no means discreditable to us.

With regard to calotypes, Mr. Bingham has shown some of his exquisite productions; and Mr. Field has by no means redundant in this branch of art. The specimens of Mr. Bingham and Mr. Field have surpassed the Americans, and are even better than those exhibited by any other country; though we must admit the photographic panorama of Philadelphia is a masterly production of the art. The Austrians also have exhibited many specimens of exquisite calotypes.

With respect to photographic cameras there are many exhibitors, but the folding machine of Messrs. Horne and Thornthwaite deserves the first notice. It is made with such cunning skill, that the whole box will fold into a compass not quite an inch in thickness. The backs of one of their cameras can be adjusted to different distances in perspective; and in their Talbotype contrivances two sheets of paper can be placed in a less compass than has hitherto been required for one. Mr. Willatt has also shown a camera which will pack in a small compass, which may be sometimes usefully employed. Hitherto the plates have required to be prepared in a dark chamber; but there is one contrivance presented by Mr. Thornthwaite, wherein the plate can be transferred to a chamber, in an ordinary apartment, and from thence transferred to the operating frame.

As far as the chemicals used for photography are concerned, many exhibitors have shown good examples; Messrs. Knight have sent the largest collection, but Messrs. Horne have contributed the best specimen of chloride of gold which we have ever seen.

Our readers will not look for a critical account of photographic lenses; but in answer to their inquiries we must state that we cannot examine them sufficiently to pass judgment on them. Mr. Ross, Messrs. Horne and Co., Mr. Field, Mr. Harrison, of the United States, and some of the French opticians, have exhibited under this class; but we have no means of estimating the relative excellence of their glasses.

Mr. Knight has shown an apparatus for polishing Daguerreotype plates, so that photography must be considered as well represented in all its departments. We nearly omitted to mention that Mr. Delamotte has sent a partment a collection of simple adapted to the magic lantern and prepared by photography, are shown, but no description of them is given in the present Catalogue. They are labelled "specimens of hyalotype, by Mr. Langenheim," but, if we mistake not, they are identical with those recently exhibited by Mr. F. V. Fry, of the Calotype Club, by one of Messrs. Horne and Thornthwaite's cameras. We have seen the experiments of this amateur photographist on former occasions, and the pictures which he has prepared upon glass are extremely beautiful. He washes over the glass with a mixture of weak collodion, nitrate of silver, and iodide of potassium, which forms a thin delicate sensitive pellicle, which can be treated as paper for the calotype process, washed, removed from the glass, and finally made adherent to the glass again. This process is very little known to scientific men, and should be carefully examined by all photographers. Perhaps Mr. Fry would, now the ILLUSTRATED LONDON NEWS has called attention to the subject, be kind enough to give the public an opportunity of examining a few more of these specimens. This specimen is exhibited in the case belonging to Messrs. Horne and Thornthwaite.

M. Claudet has exemplified the properties of colours to modify photographic impressions by one or two very remarkable instances. He has shown pictures of Prince Albert and the Queen; that of his Royal Highness being covered with glass of so deep a blue colour as to be invisible; whilst the likeness of her Majesty is only covered with a light yellow glass. The impression on photographic paper is sufficiently remarkable, for the picture of the prince is accurately copied, whilst that of the Queen has not given the faintest impression. M. Claudet has also shown a photograph from a series of colours, which may be very instructively studied; and also instruments for photographic experiments, which are highly interesting to all who delight in these new applications of scientific knowledge to art. To us, who have frequently seen the contrivances, the single inspection is sufficient; but again we urge upon the Executive Committee the importance of full descriptive labels, to prevent the necessity of referring to the Catalogue, even should its present defects be entirely remedied.

Of the whole articles connected with light, the self-registering contrivances of Mr. Brook are by far the most remarkable. This philosopher has shown the adaptations which he has contrived, and which are now in use in the National Observatory at Greenwich. By his instruments the course of the magnetic needle, its dip, the force of its declination and deviation are registered, day by day and hour by hour, and an example of the record may be seen near the instruments, and is well worthy a careful inspection. The record is obtained by the action of light on photographic paper, and the light employed is either the better sort of street gas or the naphthalised gas of Mr. Lowe. These instruments are thought to be of the highest possible value, and although known to the leading scientific men, yet they have not heretofore been publicly shewn. By the use of these instruments the philosopher is accurately recording all which is taking place in his absence; and it is, therefore, to him a supplemental eye, which requires no sleep, and is never disturbed by ebullitions of temper. These instruments are regarded as some of the most noble triumphs of science which have yet been devised.

The three great microscope makers of England—Ross, Smith, Powell—have each contributed, more or less, to the World's Fair; but the scientific are not agreed as to which are the best. The physiological men like Powell's; and when the Royal Society purchased an instrument, they purchased one from that maker. The chemical and botanical men prefer microscopes made by Ross; and the natural history investigators prefer Smith's. We apprehend that these three great makers are so nearly equal that there is no very essential difference between them; but we ourselves, having had an extensive experience of all these microscopes, are inclined to award to Smith and Beck the first place. We exceedingly regret that our readers have not the means of judging for themselves; and we trust that the Executive Committee will cause all these microscopes to display some beautiful object; and [illegible] which are contained in cases so small, in admirable [illegible] of the blood in young fish; and would leave the Building much edified by having read "sermons in stones" if one of the insects of Mantell or Owen could only be placed under these noble instruments, which possess whilst [illegible] cases, no more interest than a bright [illegible] or a [illegible].

Amongst the French exhibitors Chevalier is a contributor; and, as we have used his lenses for years with the best results, we doubt not that he has ably sustained his character in the specimens which he has exhibited.

Mr. Ladd has contributed a microscope, which we have only seen once, at [illegible], on which the exhibitor, instead of having to [illegible] ordinary [illegible] by means of the [illegible] manufacturer states that he requires no fine adjustment, except to the 1-12th object glass, and this must be considered as an imperfection, but further experience is still wanted to prove its excellence. Mr. Varley has shown his method of moving the stage by a ball and socket joint, which attracted so much attention a few years ago, and is so frequently employed. But, perhaps, amongst contrivances of microscopy, one of the prettiest is the parabolic condenser, with reniform diaphragm for cutting off the central rays, as shown by Mr. Smith. By this apparatus transparent objects are seen bright on a dark ground. This manufacturer has also shown Mr. White's ball and socket stage.

Mr. Varley has contributed a drawing microscope—that is, an instrument with a *camera lucida* attached, so that any uneducated person may make a drawing of natural scenery with but moderate practice It is a very good contrivance, and may be economically used.

With respect to telescopes, Mr. Ross, for size and workmanship, has contributed the finest specimen of an equatorial instrument in the Building. Some persons have confounded his name with that of the Earl of Rosse, the distinguished President of the Royal Society. The large telescope contributed by Mr. Rosse stands in the western part of the nave, surrounded by microscopes of his own manufacture. The tube is designed for a 12-inch object glass, which we need hardly say has further experience is still wanted to prove its excellence. is a very large instrument. We hear that this eminent optician has also contributed the glass at the first [illegible] whilst placed in its proper situation. So perfect a work of [illegible] is rarely examining the state of vision, and adjusting optical contrivances. The principle of the instrument is to bring the range of infinite distances, as far as the rays of light are concerned, with the scope of a few inches, within the point of distinct vision, and the [illegible] apparatus which [illegible] and, in every case of [illegible] the [illegible] the [illegible] [illegible] [illegible]

4 CROZIER HEAD. BY W. G. ROGERS

THE GEMS.

Amongst the various groups of remarkable objects in different parts of the Building, there is none more likely to attract the eyes of the fairer portion of the visitors, and none which presents more strikingly the spirit influencing all those who could contribute to render the Exhibition perfect, than the magnificent and valuable gems that are distributed here and there, and which have been so liberally sent by their owners to astonish and delight the public.

From the gigantic but somewhat rough and unhewn proper-

8. FIRE-DOG. BY MESSRS. BAILEY.

9. BLUE AND GOLD DAMASK. BY MESSRS. HOULDSWORTH AND CO.

tions of the Koh-i-noor (or Mountain of Light), exhibited by her Majesty, the diamonds and emeralds of the Indian collection, the almost equally noble and even more remarkable blue diamond of Mr. Hope, and some other single brilliants exhibited both by our great jewellers and by our neighbours on the other side of the water, we may turn, on the one hand, to the uncut gems in Class 1, and, on the other, to the grouped bouquets and other ornaments studded with smaller stones of exquisite colour and water, and in each case must be astonished at the richness of the display, and the advantages afforded in being enabled to study the appearance of such objects in the most favourable manner.

11. FIRE-PLACE. BY MESSRS BAILEY AND SON.

The most precious and remarkable stones for ornamental purposes are the diamond, the ruby, the sapphire, and the emerald. To these may be added, also, as very valuable and extremely beautiful, when of the best kind—the opal, the beryl, the topaz, and the garnet. All these are admirably represented in the Exhibition—most of them both in the rough and manufactured state. It may be well to explain to the reader the nature and value of some of them.

The diamond is beyond comparison the most commonly attractive and generally appreciated of all precious stones, chiefly owing, perhaps, to its hardness, and the way in which it reflects and almost emits light. It is a crystalline form of carbon, and is, therefore, precisely the same in composition as coal and black lead; but the particles are differently arranged, and the result is a substance the hardest in nature, having a brilliant and surpassing lustre, great transparency, and scarcely ever presented in masses larger than a walnut, and limited to one or two localities far removed from the ordinary resorts of men. Diamonds are estimated according to a certain progression that we will presently explain; but those of small size and imperfect quality are also valuable either for cutting glass, as used for this purpose by the glazier, or for grinding and preparing other and more valuable specimens of the same stone.

There are two distinct shapes of diamonds as used for ornamental purposes—the flat or rose diamond, and the brilliant or square diamond; the latter presenting a smaller surface but greater depth, and, therefore, a fuller and finer play of light, and greater brilliancy. The natural form of the crystal of diamond is an eight-sided figure, the angles being often rounded, and to this form the best cut gems approximate; but cubes, twelve-sided figures, and other varieties often occur. A collection of gems belonging to Mr. Thistlethwaite, exhibited in Class 1, and

some of the gems in Mr Tennant's collection, also in that class (Avenue S, column No. 1), will be found highly attractive in giving a notion of the hopes from which the finest brilliants are generally drawn. In the two collections, but especially the former, we not only remark all the exhibiting the natural form of diamonds, but also of most of the other gems used for ornament. They should be studied carefully by every one who wishes to appreciate fully the remarkable treasures we shall presently describe.

The diamond is generally colourless, and the finest are quite free from any speck or flaw of any kind, resembling a drop of the purest water. Varieties of colour occur, but are rare; and clear distinct shades of colour in fine diamonds of considerable size are so extremely rare, as to give a great addition to the value of such stones. Thus, the remarkable sapphire-blue diamond belonging to Mr. Hope, and most liberally exhibited by him, being of gigantic size, perfect water, great depth, and most brilliant lustre, possesses a value far greater even than it would do if of the usual appearance.

The diamonds in the Exhibition may be distinguished into several groups. There is first the "Koh-i-noor," or Mountain of Light, and the so-called "Sea of Light," both at one time the property of the East India Company, and forming a part of the spoil taken in the Sikh war, on the defeat of Runjeet Singh. The former has been presented to her Majesty, and is exhibited by her permission. The latter, with a multitude of other superb gems, are among the Indian collection on the north and south side of the nave next the transept. The Koh-i-noor is not cut into the best form for exhibiting its purity and lustre, and will, therefore, disappoint many if not all those who so anxiously press forward to examine it. This is, however, a general fault among Indian gems cut in the East, as the people of that country consider the magnitude of too great importance to be submitted to the great reduction necessary to show the beauty of the stone.

The Sea of Light, like the Mountain of Light, is not so cut as to do justice to the gem; and thus these diamonds, however valuable, yield in brilliancy and effect to the smaller but more ornamental stones exhibited by the jewellers. Mr. Hope's diamond is, however, set, and is thus shown to much advantage.

The value of diamonds depends on their weight and purity, but increases at a very rapid rate in the case of the larger stones. The weight is estimated in what are called carats, each carat being 3½ grains troy weight. There are thus rather more than 15½ carats in an ounce troy. The mode of estimating the value is by considering the price of a fine diamond of one carat as £8, and in any particular case by multiplying the weight into itself, and this product by 8. Thus, a diamond of 12 carats, or 33 grains, will be worth $12 \times 12 \times 8 = £1152$. When the weight is beyond 20 carats, the value is estimated in the same way; but the actual selling price is arbitrary. The price of rough diamonds is far less, the standard price of the carat being £2 instead of £8. Diamonds of 5 or 6 carats are very fine stones; those of 12 to 20 carats are rare: up to 100 carats they are extremely rare, and only a very few are known to be in existence whose weight exceeds 100 carats. They are found chiefly in India, but also in Borneo, Siberia, and Brazil. By far the greater number found are small, and it has been calculated that the numerical proportion of those of larger size is not very different from the relative value they possess in the market.

The cutting of diamonds is an art formerly practised in England, and the old English-cut diamonds of size that we occasionally meet with are highly valued; but, for some time past, almost the whole business of this kind has been transacted at Amsterdam. The work is effected by simple machinery, the grinding and cutting material being diamond-powder, either obtained by crushing stones of inferior quality or by rubbing one stone against another.

Diamonds are generally set in silver, and with as little to distract the attention from the lustre of the gem as the nature of the ornament will admit. Set in gold the effect is much diminished; but with rubies and sapphires there is generally nothing that can injure the lustre of the finer brilliants. Mr. Hope's diamond is set surrounded with smaller brilliants, and the effect is good

The shape of the Koh-i-noor diamond is that of a pear, or rather more oblong; and it would be much reduced in size if cut by an European diamond merchant. Its marketable value would, however, be increased, for the reason already given. It would probably become, if properly treated, one of the finest diamonds now in Europe. The Sea of Light, in the Indian collection, is a comparatively flat stone, and could be properly set only as a rose or table diamond. The surface exposed is, however, very large.

Mr. Hope's blue diamond is most superb, as well for form as colour. Its colour, especially, is unrivalled, and is that of the finest and most delicate sapphire. Its form is nearly square, and its depth considerable; but its lustre and brilliancy are beyond all description.

The rich and valuable groups of brilliants exhibited by Messrs. Hunt and Roskell, Messrs. Garrard, Messrs. Morel, and others of our principal jewellers, are not more remarkable for the extraordinary number, great size, and fine water of the gems, than for the taste with which they are grouped. The bouquets of Hunt and Roskell, and of Messrs. Morel, deserve especial notice for the elegance with which they are designed; while Messrs. Garrard's group of three suites of brilliants, with opals, rubies, and sapphires, consisting, in each case, of necklace, broach, and bracelet, will repay the careful examination of all who appreciate elegance of form and taste in arrangement, combined with the most precious and beautiful objects in nature.

The collection of brilliants exhibited by the French jewellers are, as may be supposed, at least as remarkable as those designed in London, but they hardly excel them. They include a number of stones of great beauty and excellence, including examples of all the principal gems.

Before concluding the subject of diamonds, it may be well to mention the dimensions of the most remarkable. The largest known is that of Rajah of Matan, in Borneo: it is said to weigh 300 carats, or about two ounces. That of the Emperor of Mogul is 279 carats, and resembles an egg cut in two. That of the Emperor of Russia weighs 193 carats. The Emperor of Austria has one of a yellow colour, weighing 139 carats. The Regent diamond weighs 136 carats, but is extremely valuable for its fine proportions and purity.

These are all Indian, and the largest known from Brazil weighs only 120 carats. There are very few diamonds above 100 carats besides those here noticed.

Rubies are of almost equal value with diamonds, but are composed of the substance called alumina, and bear the same relation to clay that diamond does to coal. The difference between rubies and sapphires is one of colour only, and yellow and white varieties also occur, though rarely. These gems are obtained chiefly from Pera, and are comparatively rare, owing perhaps to the difficulty of obtaining them from the authorities of the country.

Under certain circumstances, the colour, water, and lustre of the colourless rubies of India are such, that such gems may well pass for diamonds; but there is an important difference both in hardness and weight. Next to the diamond, the ruby is indeed the hardest substance in nature, but there is a marked difference. The weight of a ruby is consequently greater than that of a diamond of the same size.

In the case of rubies of fine quality, the price has been exceeded that of a diamond of equal weight. This at least is the case up to thirty carats; and thus the great value of the gigantic ruby exhibited among the Sikh spoil, may be in some degree imagined, though in its present state it would not be easy to estimate it more accurately. The rubies of smaller size and perfect water exhibited in the bouquets already referred to are well worthy of notice, as equally fine in colour and form.

Rubies sometimes exhibit a peculiar mode of light when seen in certain directions. This star has six rays, and is chiefly seen when the surface of the cut stone is rounded.

The sapphire is a blue variety of the same mineral as that which when red is called ruby. Sapphires are found chiefly in Ceylon. Like the ruby, certain stones show a particular star of light, and sometimes a play of colours varying from pink to blue. There are several sapphires of great beauty and purity among the bouquets already referred to.

The emerald, together with the beryl and aqua marine, form a group of gems of similar composition; and when of fine colour, perfect water, of large size, may be regarded as amongst the most valuable and beautiful of all precious stones. The peculiar composition of these stones is connected with the presence of a very rare earth called *glucina*, but the rich green tint of the emerald is due to the presence of oxide of chromium.

Emeralds are chiefly obtained now from Peru, but occur also in the East: they are more frequently of large size than the diamond and ruby, and are more easily cut, but the value of the finer kinds is often considerable. The gigantic crystal of emerald belonging to the Duke of Devonshire, exhibited with Mr. Tennant's goods in Class 1, and three others of very large size and beauty also exhibited in that class, will show the way in which the stone occurs; while the cut stones set clear of any jour, exhibited amongst the jewellery belonging to Runjeet Singh, and shown by the East India Company, will give an idea of the rich and lavish magnificence of the East, and also of the barbaric nature of this magnificence, since the gems are little altered from the rough state in which they occur in nature.

Among the other gems to which it is desirable to direct attention are a noble specimen of aqua marine, apparently of very pure water and fair colour, in Messrs. Hunt and Roskell's collection; a magnificent beryl in Mr. Tennant's series (Class 1), and some white topazes of great beauty from Van Diemen's Land. There are also some opals of extreme richness and fire in Messrs. Garrard's collection, which we would advise the reader to examine, and which we are sure will be admired.

AGRICULTURAL MACHINES AND IMPLEMENTS.

The collection of agricultural machines and implements will be looked on with interest, not only by tenant-farmers and the proprietors of the soil, but by the community at large

The British farmers, now deprived of the damaging cratch that hitherto weakened but did not support them, will have to exert those healthy energies which have been too long kept in abeyance; they will have to farm higher, and to increase better, and to develop to the utmost the capabilities of the soil; to economise and preserve manure; to reduce expenses to a *minimum*, and to increase the produce to a *maximum*. To effect these important objects, the agriculturist has to depend much upon the skill, inventive faculties, and unceasing attention to his wants, of the manufacturers or agricultural machines and implements. Well have the manufacturers answered the demand made upon them, for no department of British skill is better represented in the Great Exhibition than Class 9. The space devoted to this department on the south-west side of the Building is about 640 feet in length and nearly 50 feet in width. The whole of this extensive area is covered with ingenious mechanical contrivances for facilitating the various operations of agriculture, such as reclaiming swamps and bogs, and converting them into salubrious and fruitful fields; for digging, pulverising, and disintegrating the soil, so as to produce the finest tilth; for depositing manure and seed with the exactness and certainty of the human hand; for eradicating and destroying weeds; for the housing the crops with safety and dispatch; for the preparation of food for market, and the converting that produce into proper food for man and animals. In every department of these, the various operations of the farmer, will be found an infinite variety of machines, calculated to assist him in their better, quicker, or more economical performance, for every description of land, whether wet or dry, light or heavy, on the level or hilly side: every circumstance has been provided for, exhibiting an amount of ingenuity, theoretical and practical study, not exceeded in any other department in the Building

The design and construction of agricultural implements has in the last few years made rapid advances, and notwithstanding the aid to farmers who have patronised and constructed, and to the manufacturers who have invented them.

To the house of Ransome and May, of Ipswich, agriculturists are much indebted, for they were among the first who made the great move in the better construction of the implements of husbandry, by the judicious substitution of iron for wood in the frames of field implements, and in the better construction and fitting up of the working parts. A few years ago, the ordinary implements of the farm consisted only of some wooden-framed unwieldy ploughs and harrows, and an equally clumsy wooden roller; and in many old leases and agreements will be found a covenant that the landlord is to supply plough timber, by which was understood wood for the construction and repair of the tenants' stock of agricultural implements. A farmer now, glancing at the long array of beautiful machinery exhibited in Class 9, would not be slow at discovering that an unlimited quantity of plough-wood would do but little towards supplying him with a stock of such elaborately-wrought machines as those before him. A person unacquainted with the merits of the various implements here exhibited, would be sure to imagine that too great a sacrifice had been made to show, and that the machinery exhibited could never bear the rude shocks and violent strains to which this description of machinery is subjected. To foreigners this effect must be particularly striking; for, as compared with similar implements exhibited by them in their several departments, our own must appear so light as to be almost useless. The reverse of this, however, is really the case; for nearly all these implements have been subjected to the severe tests of the Royal Agricultural Society's appointed judges, whose report will hereafter be made public; and, although some will be found better than others, there will be but few that do not possess some good qualities, and scarcely any that can be considered as actual failures.

Nevertheless, it is quite true that our agricultural machinists have taken the most extraordinary and unusual means to make as brilliant an appearance as possible at this the World's Great Fair, and for this purpose they have worked exceedingly hard for some time past in painting, polishing, and varnishing their machines, to a pitch that will astonish many a farmer who makes the journey to London on this occasion, and whose associations and interests will naturally attract him more particularly to this part of the Building.

The painting agricultural implements in gaudy colours is a practice that cannot be too much condemned; it was an old plan of attracting the ignorant to buy a worthless thing. Modern makers do not make for ignorant patrons, nor do modern implements require brilliant colours to attract.

Those excellent machinists, Messrs. Hornsby, have erred in this particular point, and have much overpainted and decorated their machinery. In this peculiar occasion they may be excused; but we should advise them to abandon the practice altogether, as has been most judiciously done by Mr. Crosskill, of Beverley, whose stand of implements has a most attractive appearance, from the fact that he has used no paint whatever, the whole of his excellent machinery being varnished only, thereby exhibiting the materials and workmanship to the inspection of any one. The excellent and ingenious machinery of Messrs. Hornsby stands in no need of bright colours to render it attractive to all who know anything of the matter. The portable steam-engine, manufactured and exhibited by this firm, is one of the most beautiful pieces of machinery in the department, though exceedingly light and even elegant in appearance, and of the most delicate workmanship. The results of the trials will prove it to be one of the best high-pressure engines ever constructed, the consumption of coal being only 6 lb per horse power per hour. We shall in future Numbers give Engravings of this and several other engines, with an account of the duties done at the trials.

It was the original intention of the committee to have arranged the machines and implements into divisions, in the order in which they were used in practice, all those for performing the same operations being placed in the same division, this was found to be impracticable, and we therefore find them arranged in separate stands, on a similar plan to that usually adopted at the exhibitions of the great agricultural societies, each maker having a separate stand, where all the several implements he exhibits are placed by himself in the order he thinks best. But the space occupied by the various makers is very small compared with what they often occupy at the societies' shows, and the consequence is, that the machines they exhibit are all choice specimens, generally those of which they are themselves the inventors or sole manufacturers, or machines for which they have obtained prizes and earned a peculiar reputation. Some of the larger implement manufacturers, who would gladly have occupied 10,000 superficial feet each, found themselves rather confined in about 800 feet: they have enlarged their accommodation by erecting galleries above, upon which the lighter machinery is placed, having by these means nearly doubled the space allotted to them by the Committee.

We will first proceed to take a general survey of the machinery exhibited by the various manufacturers, and afterwards make a more careful examination of the most important implements at each exhibitor's stand. Commencing at the east end of the division on the south side, we have the first the most excellently constructed portable engines by Messrs. Tuxford, of Boston. These engines will scarcely be surpassed by any in the department: they are of the most approved construction, the cylinders being enclosed and kept warm by being placed in the smoke-box. The engine has an oscillating cylinder, and in the other it is fixed. Near to this are placed some excellent implements by Messrs. Smith, of Kettering, especially a horse hoe, with steering apparatus, and some winnowing machines. Further on we have a number of ploughs and harrows from the celebrated factory for this description of implements, of Howard, of Bedford.

The art of plough-making has been carried to great perfection by these makers, and our foreign visitors will look with considerable interest on the long light swing ploughs of this firm. Near these are some excellent machines by Clayton, Shuttleworth, and Co., including an excellent portable steam-engine. Near them is a variety of implements by Messrs. Dent, Dru, and Co., amongst which a liquid manure machine is a prominent object. Near here are placed some interesting models of farm steadings, one of which is composed entirely of galvanised corrugated iron. The stand of Messrs. Garritt and Son, of Leiston Works, near Saxmundham, occupies an important position here, closely packed with specimens of machines for which this eminent firm has become celebrated. Adjoining this is the stand of Wedlake and Co., containing highly finished specimens of horse hoes, grubbers, and their harrowing machines. Passing a variety of interesting objects, which we shall hereafter separately describe, we have an important feature in this department in the stand of Messrs Barrett, Exall, and Andrews: it contains almost every variety of agricultural implement in use, many that are in principle peculiar to this firm, such as their improved threshing-machine, made entirely of iron, with its ingenious contrivance for adjusting the concave to the drum; their patent safety horse-gear, and a valuable machine for bruising gorse, almost the only effective machine in use for that purpose. They also exhibit an excellent portable steam-engine; and on the upper floor of this stand is placed a model of a threshing barn, fitted with the necessary gear. All the implements exhibited by this firm are of remarkably good design and construction, and the workmanship of the best possible kind; but Messrs. Barrett, Exall, and Andrews have, like many other exhibitors of agricultural machinery, fallen into the error of over-finishing their work. The lathe and the planing machine have done too much towards producing an effect of bright iron: it would have been much better had all the implements of husbandry been exhibited exactly as they are supplied at ordinary times to the purchaser; though it must be admitted that the the Great Exhibition of 1851 is a peculiar case, and on this account Messrs. Barrett and Co may be excused the turning to account the magnificent their factory can afford in finishing the workmanship of another class in the north side of the Building. Having alluded to the machinery on the north side, we may observe, that our agricultural machinists would do well to examine, and take a lesson from, perhaps the most perfect piece of machinery in the whole collection—a pair of oscillating marine engines, by John Penn, of Greenwich, and observe how unostentatiously these beautiful engines are finished and exhibited.

The remainder of the space on the south side is occupied by a variety of contributions by different exhibitors, conspicuous amongst which is a machine for thorough-draining land. An Engraving of this was given in the ILLUSTRATED LONDON NEWS a week [illegible] it was tried at Uxbridge. It has had some important additions made to it since that time, and we shall enter more fully into its merits hereafter. By the same maker will be found a plough of peculiar construction, having a double mould-board, and thus effecting the object usually attained by the ordinary turn-rest plough. This is remarkable, from the fact that, in the department of Switzerland, there is exhibited as a new invention a plough of the same description, by Joseph Glaïs de Lestal, Canton de Bâle, and which shows forcibly the importance of exhibitions like the present, where persons may examine and ascertain what has been already done before they attempt to improve and invent.

Crossing to the north side, we find a most excellent apparatus for steaming and cooking food for stock, by Messrs. Stanley and Co., and another portable steam-engine by Mr. Burrell. The machinery exhibited by Mr. Burrell will attract considerable attention for its superior workmanship, and the finished manner in which it is got up. The threshing machine in this case has been painted of a dark olive colour, and varnished up in a manner much better adapted to a carriage body than a farmer's implement. Near are some utensils for the dairy, from the Vale of Aylesbury, exhibited by Mr. Jolly. They are the most beautiful things of the sort we have ever seen. In the Swiss and other Foreign departments are utensils of the same description, for which these countries are celebrated: but those who take the trouble to examine both, will say that Mr. Jolly has well sustained our reputation for the manufacture of these useful articles. A contrivance for packing hops deserves favourable notice here

We have passed over, in our progress thus far, several machines for the manufacture of drain-tiles, to which we shall hereafter pay proper attention; as also the stand of Mr. Clayton, which is located here. He exhibits one of his excellent double-action tile-machines, which ingeniously combine the vertical and horizontal action; a large number of tiles of various shapes, for tiles, and for making hollow bricks; and some excellent specimens of pipes, in a great variety of shape.

We have now arrived at one of the leading features on this side—that is, the stand of Mr. Crosskill, of Beverley. We have before alluded to the peculiar and excellent appearance of Mr. Crosskill's machinery and implements, caused by his varnishing without paint. This is a very complete stand, and comprises everything of this description, for which Mr. Crosskill's manufactory has became so justly celebrated. It contains some excellent farm machinery; a universal mill for crushing oats, beans, &c., for grading corn, and a variety of other materials; some good specimens of drills; an improved chaff-engine, for cutting straw for litter, which is a great desideratum, and one of the points which has hitherto almost baffled the ingenuity of inventors.

Mr. Crosskill also exhibits some excellent specimens of his carts and waggons, fitted with his improved wheels: of these wheels he exhibits a variety of specimens in another department; and all who take the trouble to examine this important stand will be delighted with the excellence of the specimens exhibited.

In speaking of Mr. Barrett's stand, we omitted to mention an ingenious machine for making hurdles, which is specially worthy of notice The next stand of importance is that of Messrs. Ransome and May, of Ipswich. This firm has long been celebrated for the production of machinery and implements of a superior class; and their character as manufacturers is well sustained in the excellence of those here exhibited, comprising specimens of all the most important implements now in use, and an excellent portable steam-engine. The stand of Messrs. Ransome and May, from the absence of all unnecessary brass, glitter, and showy paint, does not make so brilliant an appearance as some of its neighbours; but it will not prove the less attractive to those who are really interested in agricultural mechanics.

Near here we have some excellent specimens of chaff-engines, by Richmond and Chandler; two other portable steam-engines, and many valuable implements, and a novelty in a steam digging machine, before alluded to. The stand of Messrs. Hornsby and Son, of Spittlegate Ironworks, Grantham, is the prominent feature at this end of the class: it has, like the stands of the other large makers, a gallery above for lighter articles, and contains excellent specimens of their various field and barn machines. The drills at their stand are well worthy of attention: some recent improvements have been introduced, which have simplified them considerably, such as the application of gutta percha tubes instead of the old jointed pipes, for conveying the manure and seed, &c. from the hind to the ground; and an ingenious contrivance has been added, for preserving the level of the seed-box when the drill works on the hill side. The winnowing machine of this firm deserves notice. Their portable steam-engine, before alluded to, is here: its chief peculiarity consists in the cylinder being enclosed in the steam

chest; and an excellent plan has been adopted in constructing the governor of this engine, by placing the gun metal caps in such a manner as to receive the heavy iron balls when the engine is not in use, and prevent them from swaying about when the engine is travelling.

The machines exhibited by Smith and Co., of Stamford, will be well worthy of examination; they consist of chaff engines, haymaking machines, horse-rakes, and cultivators. Mr Smith has deservedly gained great celebrity for his powerful chaff engines; they are equal to anything of the kind exhibited. The drawing, instead of the ordinary chopping action of the knife, is much to be recommended, five feet of the knife passing through eighteen inches of the material cut. This has hitherto been almost the only machine that would effectually cut straw into lengths for litter; it cuts, cheaply and effectively, any length, from a quarter of an inch to five inches.

A iron stall, complete, with rack and manger, is exhibited here, by Messrs. Cottam and Hallen; and near it is placed a large machine, which will doubtless attract considerable attention, a specimen of this kind being seldom seen south of the Tweed; it is a complete Scotch threshing mill, with winnowing apparatus above, and fitted with elevators for raising the corn from under the shakers to the hopper above. The action of this machine is different from the ordinary English ones, as in the latter the grain is rubbed out between the drum and the concave; while in the Scotch machines it is beaten out, the straw being held between two rollers, and the beaters striking it out as they revolve. This plan was the invention of the celebrated Andrew Meikle, in 1786, and remains the same in principle to this day. Messrs. M'Cartney and Drummond, of Cumnock, Ayrshire, are the exhibitors of this interesting feature in the class.

We have now arrived at the point from which we originally started, at the east end of Class 8; and, in the slight sketch we have given, have noticed most of the remarkable contributions in this department; but we have necessarily omitted a great number of interesting objects, which we shall describe separately hereafter. Although the great bulk of the machines and implements of husbandry are placed in this class, yet there is much to interest the agriculturist in other parts of the Building, especially small machines, tools, and utensils. It will, doubtless, be observed, too, that all the steam-engines we have noticed are portable; and from this it might be inferred that this is the only description of engine applicable to agricultural purposes, and it is singular that in Class 9 only one or two specimens of fixed engines should be exhibited; but the agriculturist will be amply compensated for their absence in this class, by the variety he will find elsewhere equally well adapted to his purpose as to that to which they have been applied.

In Class 6 a number of valuable grinding-mills will be found deserving of attention, especially one exhibited by Westrup and Co. Ashby's vertical dressing-machine, and one for dressing flour in vacuum. Millington's patent smut-machine, a valuable improvement; a mill worked by levers, with the same action as is used in rowing. Samuelson's process for manufacturing oil-cake; and various specimens of millstone. by Hughes; and an improvement which will be a great boon to agriculturists in an improved form of gutter. The want of proper gutters to carry off the rain-water is a great evil which this plan will do much towards removing: it consists in forming the last eaves-tile into the shape of a gutter, ingeniously joined, and secured to the eaves-board. This specimen of roof is composed of different kinds of tiles, and a stream of water is constantly flowing over it, which effectually tests its capability for answering the intended purpose.

In Class 5 will be found some excellent varieties of pumps, adapted to agricultural purposes, for lifting or forcing liquid manure, or water; also some small fire-engines, suitable to farmeries.

In Class 28 is placed an elaborate model of Mr. Meehi's farm, at Tiptree Hall, Essex. Those who have not had an opportunity of visiting this much-talked-of farm will here find that they may make themselves acquainted with every detail of Mr. Meehi's practice. The model has been executed with great care; and, as the roofs are all moveable, the machinery and other details may be closely inspected.

The agricultural machines and implements exhibited in the foreign departments have already excited considerable attention, and they will deserve the special notice of those interested in such matters.

The largest number of contributions of this kind are in the current year allotted to the United States of America. They consist of a large number of ploughs, of various kinds, but all having one strong feature in business, being remarkably heavy in appearance, full breasted, long in the mould, and having the stilts unusually short and elevated, with the holding part inclined at a flatter angle. We shall hereafter more particularly describe implements, and endeavour to point out the differences that exist between them and those exhibited on the British side, and the objects for the purpose to which they are applied. In addition to ploughs, there are horse-hoes, grubbers, cultivators, and drills, and two specimens of remarkable-looking machines for reaping corn.

Reaping by machinery offers so many advantages, that it has occupied the attention of machinists for centuries past, and yet none have been produced that could keep their place amongst the implements necessary to the farmer. The late Mr. Smith, of Deanston, tried hard to perfect it without success. How far this production of American ingenuity will succeed, we will not pretend to judge, but it has a strong resemblance in principle to one formerly used in England, and known as Bell's patent.

In the Belgian department are a number of implements, some possessing considerable merit. They consist of the usual kinds of grubbers, landpressers, horse-hoes, drills, and some ploughs. In the department of France is a wool-cleaning machine, and some specimens of thrashing mills. Denmark exhibits a large well-made chaff-cutting engine. Saxe has sends the double plough before alluded to, and some good specimens of dairy utensils. Austria sends scythes, reaping-hooks, &c. In the department allotted to British possessions abroad, will be found some wooden framed ploughs, very similar, as may be expected, to those exhibited by the United States. In the same department are specimens of hay and manure forks, scythes, and malt shovels.

COX'S AERATED WATER APPARATUS.

The absence of mechanical contrivances usually forming part of soda-water and other aërated water apparatus, and the entire exclusion of atmospheric air, are two of the chief features in Mr Cox's invention.

The water or other liquid is impregnated with the gas in excess, by connecting the vessel which contains the sulphuric or other acid employed to generate the carbonic acid gas, with a second vessel, called a "generator," in which the gas is made, by means of a supply pipe, in such a manner as to cause an equal pressure of gas both above and below the acid. By means of a tap, any desired quantity is admitted into the generator at proper intervals, and the pressure of the gas increased to any required extent. The pressure thus obtained is made available in forcing an excess of the carbonic acid gas into the liquid to be impregnated.

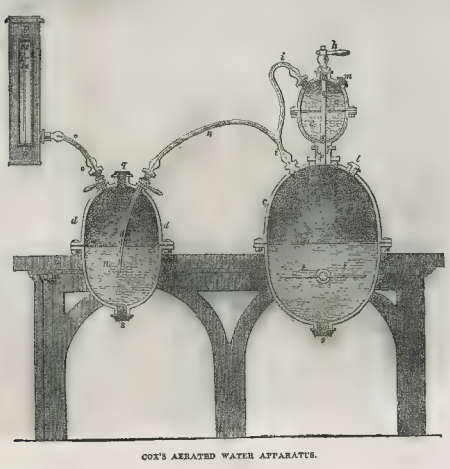
The Views represent the Gas Generator and the Purifier, made of hammered copper and tinned inside, standing on a counter or table. Each of these vessels is constructed in two parts, being connected together by means of screw-bolts passing through the flanges of each vessel. On the top of the "generator" the acid vessel is attached. This is also made of hammered copper, but, instead of being tinned within, is lined with lead, in order to resist the action of the acid. The acid is admitted into the generator through a passage, which is furnished with a proper plug, covered also with lead, the plug being moved by a handle as shewn.

In order to equalize the pressure of the gas above and below the acid, a communication is made between the vessel which contains it and the generator by means of a pipe, as shewn; and the atmospheric air is allowed to escape by means of a tap at the top of the vessel. The chalk, lime, or other alkali is introduced into the generator by an opening left for the purpose. The generator and purifier are connected together by a leaden pipe, the passage through which is opened or closed by means of a tap, from which a pipe is extended to within 4 or 5 inches of the bottom of the purifier. A pressure gauge, for the purpose of ascertaining the pressure of the gas in the purifier, is fixed in connexion therewith.

From the purifier, a branch pipe, with proper tap, leads to the tank containing the liquid to be impregnated with acid, the end of which pipe is carried to within 2 or 3 inches of the bottom of the cylinder. During the operation of mixing the gas with the lime or other alkali, the latter is kept in motion by an agitator, which is turned by hand in the ordinary way.

The *modus operandi* may be thus described. When the generator is charged with its complement of water and lime, the acid vessel with the sulphuric acid, and the purifier with the water, all the taps and openings being closed, the acid is admitted into the vessel containing the lime, which is kept in a state of agitation during the time of impregnation. The atmospheric air is forced, by the action of the acid on the lime, to the top of the vessel, whence it escapes by the tap here provided for the purpose. On this tap being closed, the whole of the generator is occupied with the gas; the gas is then admitted into the purifier, and, passing through the water therein, occupies the upper part of the vessel. From the purifier the gas is next admitted to the interior of the cylinder containing the water to be impregnated; the water being kept in a state of agitation, in order to facilitate its amalgamation with the gas.

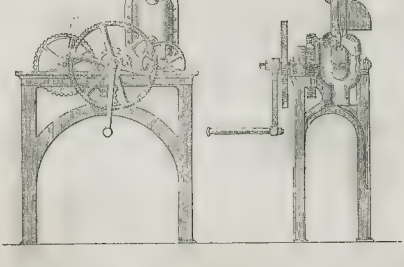
A tap of peculiar construction forms part of Mr. Cox's patented invention. It consists of a cylinder of metal, having an aperture at one end in the centre, but bored through so as to emerge eccentric to the other end. This cylinder is placed between two clips bolted together, having on their contiguous faces circular recesses, in which the cylinder is placed; one clip being connected with the *influx*, and the other with the *efflux* pipe. The opening and shutting the passage for the flow of the liquid is regulated by the position of the eccentric.



COX'S AERATED WATER APPARATUS.

APPOLD'S ROTARY PUMP.

Those of our readers who are already acquainted with the various useful inventions and philosophical contrivances of Mr. Appold, will be glad to find his Rotary, or, as it has been called, Centrifugal Pump, occupying a very good situation in that department of the Exhibition devoted to "Machinery in Motion." It is easily found, by the very conspicuous wooden pipe—more, however, in appearance like a chimney shaft—which extends to the roof of the Building; and, when in operation, the sound



APPOLD'S ROTARY PUMP.

of water rushing, as it were, from a lofty eminence, also calls the visitor's attention to the locality of the little powerful engine. Mr Appold exhibits here two pumps: the one of three inches diameter, which is driven by hand, and the other of twelve inches diameter, which is driven by Clayton's oscillating engine, having a cylinder of 8½ inches diameter, and stroke of 26 inches in length, the steam varying in density, but when we inspected the engine on Saturday last, the pressure was equal to 33 lb. on the square inch. It is to be observed that Mr. Appold's pump is at a very long distance from the boiler-house, and therefore has not the advantage of the same amount of power as those engines which are in the more westerly part of the Building. A gutta percha band, from the 8-feet fly-wheel of the steam-engine, passes to the driving wheel of the pump, which latter wheel is of 30 inches diameter. On the shaft of this wheel is a larger wheel of 46 inches diameter, from which a second band passes to a 12-inch pulley, on the spindle of the 12-inch pump or fan, which is contained in an iron case, and placed within the wooden vertical pipe already mentioned; this pipe is 7 feet 6 inches long, and 12 inches wide in the clear, and reaches from the floor to the underside of the cast iron trusses of the roof. In the front of this pipe are two wooden valves, at different heights, to show different effects; the lower one has a surface area of 576, and the upper one of 1008 superficial inches respectively. The fan is furnished with six blades, placed angularly, and the water is received or drawn into the fan by two apertures, each of 7 inches diameter, in the circular sides or discs. In the iron case which encloses this fan is an opening at top, having an area of 63 superficial inches for the eduction of the water. With the large pump of 12 inches diameter and 2 inches in width, which contains a gallon of water, a duty equal to 70 percent is effected; that is, 70 gallons of water pumped up are equal to 100. The weight of the blades which give impulse to the water is only 11¼ lb. In front of the wooden pipe is the reservoir or tank, to receive the overflowing water either from the upper or lower valve, as the case may be. For draining extensive tracts of fen or marsh land, this invention seems to claim particular attention.

DUNIN'S EXPANDING MODEL OF A MAN.

THE visitors of the Exhibition will find in the Western extremity of the Building this most singular mechanical invention of Count Dunin. The record of its manufacture is sufficiently romantic. Having early in life become involved in the cause of the insurrection of the Poles, he was banished the country, but, being desirous of again visiting his native land and enjoying the estate of his ancestors, he set to work himself to mechanical pursuits, that he might expiate his offence, real or imaginary, against the Emperor of Russia, by showing that he might be useful to the country if he were restored.

The figure represents a man five feet high, in the proportions of the Apollo Belvidere, and from that size the figure can be proportionally increased to six feet eight inches; and, as it is intended to facilitate the clothing of an army, it is so constructed as to be capable of adjustment in every part to the particular proportions of each individual. To obtain this result, the most complex contrivances are required, and the number of springs, screws, and other movements are required, and the number of springs, screws, and other movements render it a marvel of human ingenuity. The tailors regard it with admiration, but its costliness of construction renders it an instrument too expensive for them to purchase. It is a marvellous sight to see the model expand, and it is well deserving a careful inspection. The exhibition is composed of 870 framing pieces, 48 grooved steel plates, 162 wheels, 202 slides, 476 metal washers, 482 spiral springs, 704 flat plates, 197 nuts, 8500 fixing and adjusting screws, with numerous bearing pins, so that the number of pieces is upwards of 7000.

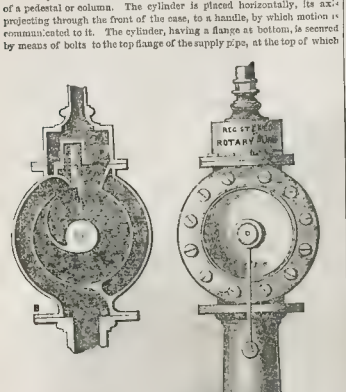
APPOLD'S ROTARY PUMP.

THE CRYSTAL PA

BY MOONLIGHT.

CLUNE'S ROTARY PUMP.

Rotary engines and rotary pumps seem, at length, to have a chance of being introduced to the mechanical world for a great variety of purposes. Among the many machines of this class which appear in the Great Exhibition, Mr. Clune's invention seems to claim notice, from the simplicity of its construction, portability, and neatness of design. It may be either placed on a bracket attached to a wall, or be fixed on the top of a pedestal or column. The cylinder is placed horizontally, its axis projecting through the front of the case, to a handle, by which motion is communicated to it. The cylinder, having a flange at bottom, is secured by means of bolts to the top flange of the supply pipe, at the top of which



CLUNE'S ROTARY PUMP.

pipe is the clack valve in a curved chamber at the bottom of the cylinder, which lends into the external channel, passing half round the cylinder, and terminating in a port at top. Behind this port is a vertical slide, or diaphragm, which acts as a stop, and slides up and down in a groove, and is enclosed in a case above the cylinder, its lower edge being faced with leather, caoutchouc, or other suitable substances. For the greater part of the revolution of the horizontal shaft of the pump, the stop rests upon a cylindrical boss surrounding the shaft, which passes through one side of the cylinder by means of a stuffing-box, its opposite end resting on a fixed bearing on the other side of the cylinder. The boss is cast with an eccentric or spiral cam, the outer end of which works in contact with the interior surface of the cylinder, wherein its sides are in contact with the ends of the cylinder. In front of the vertical slide is the delivery-port, with its valve opening out at the top of the cylinder, having a discharge-pipe for the water or other fluid to be pumped up. At each revolution of the cam, which causes the stop or diaphragm to fall, a vacuum is formed behind it, after passing the inlet-port already described; and thus a body of water is at once elevated to the cylinder through the lower valve, at the same time the water already in the cylinder in front of the eccentric is driven out through the upper clack-valve. The action of the gradually curved cam effects a smooth and easy motion on the diaphragm, and a regular discharge of the fluid is secured by the rapid rotation of the cam.

ORNAMENTAL IRON-WORK.

Whatever importance may be attached to other branches of manufacture in which the ingenious and hard-working mechanics of this country may be engaged, there are none so thoroughly national as the various departments of the iron trade; and, whether we consider it in its application to the manufacture of that machinery by and through which other departments of trade are carried on, or in its application to those utilities of life which constitutes it a distinct branch of our national industry, its value cannot be overrated. The natural advantages we possess in the ore of this material rendered it a matter of great importance that our display should be at least equal to our present position; and in this respect no disappointment can possibly occur, for, in whatever department of our hardware trade we may look, we find it amply represented. In ornamental iron-casting—a branch of trade to which our French neighbours have of late years devoted special attention in connexion with their bronze works—there was some fear that in certain points we should not stand so well as it was desirable we should do. The result, however, of the comparison is such as to set at rest any fears on this head; for, whilst we can well afford to acknowledge the excellence of the works exhibited by our French and German competitors, there is ample field for congratulation as to the continuance of our traditionary superiority in these points. For this result, however, we have to thank the last two expositions at Paris; for, at the period of that of 1844, the ornamental iron-castings produced in this country were generally of a most unsatisfactory character, and it was only from the startling fact forcing itself upon the attention of those engaged in this trade, that, whilst little or no improvement had been going on in this country, especially as regarded design as applied to this department of our national industry, our neighbours had not only been employing the best artistic talent in the production of designs for this special purpose, but had progressed in a wonderful manner in the production of iron-castings of the very best character, combining the best mechanical dexterity and, so to speak, chemical skill in the treatment of the material, so as to ensure a sharp, clear, and perfect reproduction of the model in the finished metal.

The famous castings of Berlin had long been objects of interest to our metal-workers, but only so far as they were wonderful examples of the use to which a material so unpromising as iron might be put, even as ornaments for the decoration of the person. The iron-castings of France, however, came more practically home to us; and when we found that the useful was so completely combined with the ornamental, it behoved us to take steps to meet so unexpected a result. With a field of operation before us, of which the French could not boast, in those centres of attraction, the firesides of our English homes, it was at once seen to what an extent the improvement of our metal casting could be carried in this direction alone; and in the present Exhibition there are remarkable proofs of how distinctly our manufacturers have directed their attention to the decoration of the useful rather than to the production of mere ornamental accessories, such as groups of figures, statuettes, or even vases.

It is, then, to the stoves, grates, balustrades, garden seats, and other articles, that we are to look for the real manifestation of the present position of the art of ornamental iron-casting in Britain, and not to any mere abstract productions, although there are, without doubt, many examples of such latter class of objects.

It is no easy matter to impress upon minds of a mould as unbending as that of our own race the necessity for bringing in a new element to aid in the development of the ornamental iron trade of England, and to impress upon them the fact that, in spite of all they had done, there was still much more to be done; but, as we have already said, the French exposition of 1844 effected that which no arguments, however cogent, could do; and our workers in metal saw, that, unless they bestirred themselves, and that too immediately, the more than ordinary excellence of their productions would no longer avail them, and that least of all with their own countrymen. The manufacturers of stoves and grates accordingly set to work so earnestly, that in two or three years a wonderful change had come over the spirit of their productions; and we have no hesitation in saying that some of the examples of this class in the Exhibition are far beyond anything of the kind ever before executed. Let any one carefully examine the

GRATES AND CHIMNEY-PIECES

exhibited by Messrs. Hoole, Rolson, and Hoole, of Sheffield, in which are combined an amount of excellence in design, with beauty of workmanship, far beyond anything which a few years ago could have been expected. The examples of dead polish steel, combined with bright steel and ormolu, exhibited by this house show, in design, an adaptation of tasteful classic forms in new combinations and singular appropriateness of arrangement. In one example, facing the central avenue, the ornaments of the cove supporting the shelf are very artistic, and the bas reliefs of the frieze broad and effective. The variations, too, of the same designs in different materials argue well for the resources of the manufacturer, and show thoughtful adaptation, and not mere capricious change.

Messrs. Stuart and Smith's examples are equally excellent and original, though different in style, for which, indeed, we ought to be grateful; for in nothing do we need more improvement than in that everlasting "follow-my-leader" habit which seems so inherent in some of our manufacturers. For too frequently it is found that the instant an enterprising tradesman brings out a novelty, all "the trade" are after him in full cry, until the improvement is ground to pieces by continual repetition in all possible forms. Happily this is not the case on this occasion, for every man appears to have gone for a dit tinct individuality, and has consequently succeeded in a greater or less degree. The grate in the Alhambra or Moresco style, by Messrs. Stuart and Smith, is very excellent; and the introduction of the light bronze effect with the enamel blue is a noticeable feature. The castings are of a first-rate character, and, indeed, could not possibly be surpassed. The stoves, too, are elegant and tasteful in form and ornamentation. Messrs. Yates, Haywood, and Co., Rotherham, also make a beautiful display in the avenue, near the Sculpture-room; and, on considering the works of these three houses, we believe the reputation of Sheffield may be safely left in their keeping. At the same time, there are points in which improvement may be made, to the lessening of the cost of production and the more general diffusion of a better class of manufacturing art among the people. For we hold that anything which tends to increase the price and not the excellence of a production, is an evil; whilst anything which tends to reduce the price, and at the same time preserve excellence in all its integrity, is a positive good: therefore all superfluous elaborations, in whatever form they come, whether in the shape of "shams," bronzes, or the great integrity of ormolu, are to be deprecated; and that there are such elaborations about many of the most excellent specimens, will not be denied. Now, we hold that iron, being iron, should not be left to look like itself. It gains nothing by its natural metallic grey of the dead polish, which is much lower than the beautiful contrast, the effect is infinitely superior to any of the innumerable "shams" so constantly resorted to in order to make bronze metal look like something else. These remarks, then, bring us to one of the great features of the Exhibition, as an example of iron casting,

THE COALBROOKDALE DOME

In spite of all our admiration of the skill and energy with which the Coalbrookdale Company have sustained the reputation of their house, we cannot but think that in many parts they have gone too far in their works of the "sham" bronzing just complained of. With means of production far superior, probably, to any other firm of a similar character in Europe, it is to be lamented, that, notwithstanding great excellence, without doubt, an immense amount of artistic power has not been done than we see even in the very admirable expositions before us—and that it is really an admirable display every one will agree. Let us take the great dome or garden-house in the centre, an elaboration of materials to which the inherent capabilities of cast iron are carried to an extent far beyond what might have been expected, and an amount of constructive power displayed, that might, in a small scale; but, despite these excellences, there is a lack of design, of positive intention about the work, which mars the *ensemble*, and leaves the mind dissatisfied, and we say, *Cui bono?*

This structure is supported by six pilaster-like columns of open rustic-work, the double stems of which are interlaced with ornamental details of the same character. From these stems rise branches of oak, which form arches for the support of the dome, the leaves and detail being admirable examples of casting. Each column or pilaster is surmounted with a cleverly modelled falcon as a finial; and from the centre of the dome springs a vane, which is surmounted by a figure of a winged Mercury. There are several good points in the construction of the supporting ornaments; but there are very objectionable; and of these latter we would particularly instance the scrolls at the base of the vane-shaft, as being exceedingly stiff in the curves. The wings of the crowning figure, too, are immense in size, and needlessly out of proportion. The most objectionable part of the whole, however, is the suicidal eagle, placed within the dome, and at which Mr. John Rolls's "Eagle Slayer" is supposed to have just projected the arrow which pins him to the roof. This leaves nothing to the imagination of the spectator—a great point in all art, and especially so in the higher manifestations; and thus a statue, which is admirably suggestive of vigorous exertion, from the presumed distance of the object aimed at, is brought down to the level of a vulgar bird-catcher, who gets his ornithological victim comfortably within reach, and then quietly slaughters him.

We have bestowed thus much of criticism upon this work, because, in many points, it is a remarkable one, *malgré* the mistakes, for had it not been worthy of commendation, it certainly would not have been worthy of the notice we have given it, as it becomes a warning in the production of such works may be useful, that so much is here said about it; for, as a specimen of casting, it is second to none in the Exhibition; but it would have been infinitely better to have left it in all the integrity of plain cast-iron, than to have "bronzed" it; since, as a work in bronze, some of its best points would not be so noticeable as they are in iron the casting of the oak-leaves, for instance.

The Gothic garden-seat, placed inside this structure, is a very excellent example of casting, of the adaptation of a given style of ornament to a special purpose. The Gothic details are well introduced in combination with the rustic-work which forms the basis. We might go on to notice other features of the examples shown by the Coalbrookdale Company, but must postpone them to another occasion, as it is desirable that a glance should be taken at the display in ornamental iron-casting on the Foreign side.

BERLIN IRON.

The exquisite character of the Berlin iron-castings is known and acknowledged on all sides; and the perfection to which these works may be carried in the smaller kind, if used for personal decoration, is well illustrated by the examples exhibited by A. F. Leymann, of Berlin (137). Here we find a singular contrast in the use of the same material; and few persons would be disposed to believe that there could possibly exist any similarity between the large work last quoted and the beautiful and delicately constructed articles now under consideration. Instead of massive columns, we find delicate tracery of so minute a character as to require careful examination to be understood. Fingers rings, earrings, brooches, bracelets, and caskets, all highly decorative; and the beautiful colour imparted to the work enhances its value by its tone and unpretending character.

By the side of these examples of German ingenuity and skill, are placed exquisite specimens of another kind of ornamental metal-work, which it may not be out of place to mention here, inasmuch as it is for a similar use to that of the Berlin castings just quoted: as it is to the exquisite ornaments in steel wire, the whole of which are deserving of special examination for their elaborate workmanship and the elegant taste in which they are designed and carried out. Chains, bracelets, pins, and purses in great variety show to what an extent this beautiful art may be carried in skilful hands; and we would earnestly commend this article to the consideration of the steel toy makers of Birmingham, as likely to afford them hints of a most valuable kind.

In the more useful castings we do not find so large an amount of excellence as might have been expected. Even the larger ornaments are by no means suggestive of superiority. A casting of a low panelled balustrade is very bold and effective; but many of the bronze imitations are rude, and the leading features of M. Leymann's display are certainly the exquisite ornaments already spoken of.

The raised letter-castings of Foin and Elsenring, of Augsburg, for the purpose of embossing books for the instruction of the blind, are admirable examples of the class; whilst the more ornamental specimens of A. R. Schaefer and Co., of Offenbach, display great excellence in design and workmanship, the castings being very pure and delicate. A card-basket is especially noticeable; and the beads, as examples of paper weights, are worthy of examination for their clear and well-defined casting.

Amongst the more useful articles may be instanced a steaming apparatus, by F. A. Wolff, of Hellbrun, in which the classic decorations of the iron chamber are admirably adapted to the recumbent form required. H. C. Grammans, of Rotterdam (68, Holland), exhibits two very pretty stoves, the design and casting of which are admirable. The perforated side panels are very excellent examples of modelling, and show a far greater degree of taste and skill than our neighbours the Dutch generally get credit for. An embossing roller, exhibited by Nering, Bogel, and Co., of Münster, is also a very superior specimen of skill in iron-casting. This is used for calendering Utrecht velvet.

FRENCH IRON-CASTINGS.

Of the French iron-castings we shall have much to say when they are better arranged than at present, and when returning to the consideration of those examples of British manufacture which time would not permit us to do justice to on this occasion. In order, however, that the visitor may have points of comparison, by which to judge of the relative merits of French and English iron-work, we quote such examples as may serve as illustrations of the degree of skill to which our neighbours have attained in this manufacture.

The efforts of some of the best and wisest men of France have been directed to the development of the iron trade of that country, and, in spite of difficulties of no ordinary character, there can be no doubt that immense progress has been made. It is, however, still very doubtful if the works established in various parts of that country can be made to answer as purely commercial speculations, even with the enormous amount of "protection," as it is called, afforded against the importation of British iron. Still, in the more ornamental branches of the trade, an immense progress has been made, and the beauty, not merely of design, but of workmanship and skill in casting, is such as to deserve the highest praise. We have already stated, that to the extraordinary productions of this class exhibited at the exposition of 1844, may be attributed the great improvement made in our own ornamental iron trade since that date; and though we question very much whether our neighbours have made a corresponding progress, this is quite certain—that their works are worthy of careful examination.

The balustrades of M. Boldé Murtin, of Paris, are excellent examples of their class; and a casting evidently intended for the end of a bedstead, exquisitely designed in the Italian style by an exhibitor whose name we could not ascertain in the confusion which still continues in this department of the Exhibition, is as fine an example of workmanship and adaptation of material as can be found in the Building. To do justice to this we must return to it again under more favourable circumstances. Dietrich and Sons, of Niederbronn, Lower Rhine, exhibit some excellent examples, in which bold modelling is combined with fine casting.

Of statuettes in iron and groups of figures, much could be said, and certainly not to the advantage of some of our own manufacturers, so far as regards originality of subject. For instance, we have here the very large originals of the life-size dogs exhibited by the Coalbrookdale Company. If there was anything of a very superior character in these examples, there might have been some excuse for the coincidence as some may call it, but suspicious or piracy as we should call it, but there is more. These dogs are certainly the result of some ingenious Frenchman's attempt to adapt casts from dead subjects and make them into the representation of living animals, but they are dead dogs in spite of all his efforts. One is asleep, another, even to the lifting up of his fore-paw. Now this is not art; but a caricature of it; and may be placed in the same category with the artistic effort of the village painter, whose power to express a red lion was limited, that, in order to execute a commission entrusted to him, he hit upon the expedient of painting one side of his dog, and using him as a printing *type*—thus contriving to impress the figure of the animal upon the sign-board, as a basis for future operations.

Concluding for the present our notice of the French iron-castings, we would call attention to the examples exhibited by M. Matifat, of Paris, whose large tazza in the Central Nave, and the counterpart on the other side of the transept, are both of them very fine examples of their class. This example of the whole large tazza is boldly designed and admirably executed work of large dimensions, being 8 feet in height, and 8 feet in diameter. It is in the style of Louis XIV., and is an excellent example of the bolder forms of that school of ornament. Near this a fountain, by M. André, Val D'Oade, is now being erected which promises to afford matter for future consideration, since the parts bear evidence of skill, alike in adaptation and workmanship.

There are few departments of the Exhibition to which the time of the visitor can be more profitably and more agreeably directed than the one to which we have just endeavoured to direct attention, inasmuch as there is much to please and instruct. The mastery over unpromising materials, the skill and adaptation required to be exercised in works so unyielding, the beauty of form and even of colour attained to, and the durability of the work when once executed, are subjects on which much more may be said, and on which we hope to dilate at some future period.

THE UNITED STATES.

In our account of the opening, on the 1st May, the name of J. S. Stansbury, Esq., the United States Commissioner, was accidentally omitted.

The United States make a very imposing outside show, with a space second only to France in extent, but unfortunately the performance does not come up to the promise. The space was by no means too large if each State had sent a contribution of its principal *rebuts*, or if the great Republic had lain as close to us as Ireland, so that shortcomings might have been easily amended at the last moment; We have, however, no right to reproach Brother Jonathan, for we must not forget that the United States had not only the disadvantage of the greatest distance to traverse, but of an utter want of those Government arrangements which have enabled Austria especially, France and its neighbours, and even Tunis and Egypt, to make a respectable show. They were distracted also by conflicting views as to the success and extent of the Exhibition. Besides, the chief produce of the States, fit for exhibition, consists of raw produce, which it is no one's interest to send.

There are very few of their manufactures which they could hope to sell here. American manufactures of the same kind as those exported from Europe could only be sent as a matter of curiosity by a Government organization. Private individuals seldom take such useless trouble.

In the British department, the mineral exhibitions, and some of the manufacturing machinery, have been sent up by a local subscription. Of course, this could not be carried out to any extent in those newly-settled western states about which we feel most curious.

Still there can be no doubt, that if the "States-men" had had any idea of the kind of Palace prepared to receive, and the number of gazers prepared to examine, their contributions, they would have exerted themselves to make a much greater show.

MINERALS.

California disappoints us dreadfully. We were promised specimens of the golden ore in sand and in quartz; we made machinery for gold washing and gold refining, and examples of the many precious stones in which the true El Dorado is said to abound. We have, however, as yet, nothing except a machine for crushing gold-seamed quartz, and 100 lb. of gold-silver, contributed by agents under the unpleasant locality of Old Burlington-street, London. A great lump of *zinc* occupies one conspicuous position; and, in another, a huge *mass of copper ore* from Lake Superior. One side of this Lake Superior district is, we believe, in British American, and the other is republican American territory. It is, perhaps, after the South Australian Burra Burra, the richest copper in the world. Mining, in the proper sense of the term, is scarcely needed. Ample quantities of nearly pure copper are to be obtained by simply digging. At present, however, the value of the richness of the ore is neutralized by the impediments in the way of conveyance to a market over the barren, rocky, swampy region which environs it for nearly three hundred miles.

Other minerals in great variety, including specimens of iron ore of fine steel quality, are sent, but will more properly come within the scope of a technical review of foreign and colonial minerals.

VEGETABLE PRODUCTIONS.

The most prominent among the vegetable produce is a long line of barrels of fine flour packed in the neatest of barrels, in outward appearance giving promise of that excellence for which the best brands of American flour are famed. Very naturally, however, the barrels are more attractive than the flour.

The Americans excel very much in woodwork; this may be seen in a row of remarkably neat buckets of bird's-eye maple, cedar, and all manner of fancy woods. These are articles which generally come within the designation of "Yankee notions." The industrious inhabitants of the New England States, during their long and severe winters, occupy their time in making a variety of such articles, including parts of Sam Slick's celebrated wooden clocks, and furniture, especially rocking chairs. It is with these *notions*, barrels of wheat, Indian corn, and pickled pork, that Yankee schooners travel about the West Indian Islands, the South American coast, and among our Australian possessions, bartering, chopping, changing—keeping a shop on board. Very often, the vessel itself is built, filled, and freighted by the joint-stock labour and contributions of the inhabitants of a small sea-port; the crew are nearly all shareholders of the ship and venture; and of the crew, the captain and carpenter are often the only able seamen; the rest are raw country lads—Green Mountain boys, as they are called.

INDIAN CORN.

The display of Indian corn in the ear is numerous and various. The colonisation of the western states may be said to be supported on the strength of ninety-day corn. A backwoodsman, who finds him-self too much crowded, sells off his improvements, packs up his tools and his "crop" on a waggon, and plunges into the forest. When he finds a "*location*" to his mind, he chops down trees on an acre or so, burns off the tops, and leaves the stems standing. After rolling away the timber as well as he can, I takes his hoe, not a slight concern like our horticultural implement of that name, but a stout, strong, long-handled instrument, almost as strong and heavy as an adze. With this he chops a hole in the cleared ground, drops a few grains of Indian corn, measures the length of his hoestaff, and makes another hole, and so forms four holes on a square the sides of which are about five feet in length; continues the operation without the trouble of ploughing, digging, harrowing, or raking, and feels assured that in three months a crop will be ready to feed him and his cattle, if necessary, during the winter, while he is preparing a more complete clearing. Indian corn is delicious, boiled green, eaten with butter and salt, and corn-cobs are good for smoking hams, and many other uses. The green leaves make fodder, and the ripe corn is useful and edible in a hundred ways. The knowledge of all this gives a certain additional interest to the large yellow ears

We must not forget to note, that one of the exhibitors (Mr. Stansbury) has produced a sort of Indian-corn bread, which is pronounced delicious by many who have found the ordinary preparations of that grain by no means pleasant. Indian-corn bread in the "States" is usually eaten hot.

Many specimens of tobacco are shown, but they do not attract much notice

THE VIRGINIAN CABINET.

The land of our first American colony, from which, according to popular tradition, Sir Walter Raleigh first introduced the intoxicating weed, has sent by subscription a collection—a cabinet of native ornamental wood, containing an appropriate partitions specimens of the ores, the marbles and building stones, the various kinds of wood, of grain, of tobacco, hemp, flax, and other vegetable produce of Virginia; of native silk, wool, and manufactures; cloth in cotton and cloth of different qualities.

We ought to follow this example, and prepare cabinets of the natural if not manufactured productions of the different districts of England, Scotland, and Ireland.

COTTON

Many specimens of dried plants, with the cotton of each kind, are shown, and may be compared with the specimens collected from our Indian possessions.

FURNITURE

An army of chairs constructed in a very costly manner, on a principle that enables the sitter not only to rock, but to roll or loll in almost every direction after the advance of one kind of luxury among our transatlantic brethren. These chairs, which are chiefly of iron, will not, we imagine, be allowed to go back. We must not pass by a child's chair, waggon, and velocipede combined, a toy that will go far to supersede wheelbarrows and wooden horses.

CAOUTCHOUC.

The Americans come out in great force in India-rubber, applied to an infinity of purposes, not only goloshes, which they first introduced (an immense improvement on the old clogs and boots), but portable boats, pontoons, life-buoys, hoods, and cloaks in wonderful variety. Among the last mentioned the light waterproof hoods for carriages must be admired.

CARRIAGES AND SHIPS.

But, if we were asked to fix on the manufactures in which the American are especially excel, notwithstanding that a few admirable models of clipper ships are displayed, which exhibit the intense application of one of our naval men, we should without hesitation point to the light carriages.

The Yankees do not ride for amusement; hunting, according to our notions, is almost unknown, although Washington kept what were called fox-hounds, probably southern hounds. Driving is the great resource for the spare half-hours of the wealthy citizens of the Republic; and fast trotting is the passion of all the ingenuous youth. No horses trot like American horses, many of them do not know how to gallop. Then, again, the roads in the country are very bad, and a vehicle which was not both light and strong would never get along. It is found better to have carriages ("*waggons*" they call them) that will bound over, instead of bumping against, every obstacle in a corduroy road. The tough woods of the country enable the builders to conform to these requisites.

We are sorry that our friends have not sent specimens of those excellent blue waggons which are built in such numbers for western emigrants, and especially for the overland route to California. Those exhibited are chiefly for town use.

A racing cart is a model of lightness and workmanship. The fellies of the two lofty wheels consist of only two pieces of hickory wood: it is quite strong enough to run over turf or a smooth road, but a child could pull it with one hand

We cannot admire a heavy clarence, gorgeously fitted up; but a cheek-string, which is also a speaking trumpet, is worth borrowing

A phaeton of polished native wood, without paint, is not of a graceful form, but it is well worth the study of our English coach-builders, who have been tempted by the cheapness and durability of iron to go on adding clause after clause, until our carriages are so heavy, that they are only fit for short journeys over the stones.

The high fore-wheels of these American carriages, which cannot lock under, require careful driving round corners, and offer some difficulties to getting in and out with restive horses; but still, the plan presents a great deal of valuable suggestive matter to an intelligent coach-builder. Altogether these "waggons" are the most original and striking part of the American department.

A New York saddler has sent a set of fore-horse harness of the most costly description, all mounted with solid silver. Unless among expectant Lord Mayors or recently-elected Sheriffs, he is scarcely likely to find a purchaser in this country.

The New York sleigh does not strike us as so handsome as those sent from Montreal.

THE AGRICULTURAL IMPLEMENTS

Deserve inspection. The ploughs are good; some of them economise in case of fracture, by dividing the share into three parts.

A reaping machine, similar in principle, but more elaborate than those used in Australia, is of value when labour is scarce, time of value, the corn dry, and the straw worthless. A series of prongs catch the heads of corn, cut or pull them off, and throw them into a basket, as a horse or ox marches along.

All the American tools, especially a set of axes, should be examined by our mechanics. In this department they have made great improvement. No axes are worth their room to a colonist, except those made after the American model.

MISCELLANEOUS.

Under this head may be included a variety of odd matters patchwork quilts, and ladies' fancy-work; dentistry and wigs: *a hortus siccus* of wild flowers; Daguerreotypes of great size; a few stuffed birds; and a set of furs, which are made from an animal common in North Carolina If cheap, they may make a new article of commerce.

The statues of the "Greek Slave," and "Dying Indian," and the machinery, must be properly noticed under their respective departments

In concluding this cursory view, we must ask our Transatlantic friends to try again, and do better next time.

THE ILLUSTRATIONS.

THE CRYSTAL PALACE BY MOONLIGHT.

From whatever point this fairy-like edifice is viewed, the spectator cannot fail to appreciate its graceful character. But, probably, under no influence are its long-drawn aisles and glittering roof seen to greater advantage than when illumined by the silver light of the moon The effect of the transept, the northern half, of which is shown in the Illustration, is especially beautiful; and the moon's light shining through the high-arched roof, gives the ridgy mass the *pelucid* appearance of crystal, and justifies the popular appellation of the structure. The pavilion-like architecture of the east end is also well shown in this view of the Palace; and the "tall ancestral trees" keep watch, as it were, around the stately shrine of the world's treasures.

The view is taken from the east and of the Serpentine, whose unruffled surface, reflecting the moon's rays, lends enchantment to the whole scene.

1.—COLOSSAL STATUE OF THE QUEEN, IN ZINC.

This statue, which represents our gracious Sovereign seated upon the throne, arrayed in all the attributes of Royalty, is an appropriate compliment from the Vieille Montagne Zinc Company, of France and Belgium, to this country, in commemoration of the Great Exhibition of All Nations. Its production also affords an instance of extraordinary energy, having been, we are informed, "commenced and brought to its present state within the short space of three months." The statue stands, with the pedestal, 21 feet high. The design and modelling are from the hands of M. Dantan, *aine*, of Paris; the stokings of the pedestal by M. Lemaire, architect, and executed by M. Hardouin. The statue was cast under the immediate inspection of M. Victor Paillard. Independently of all consideration as a work of portraiture, this is a remarkable production, and deserves attention

2 AND 3.—TWO PAIRS OF SILVER SALT-CELLARS. BY MORREL.

These are four very pretty figures, two boys and two girls, in the Louis Quinze style, bearing baskets of silver gilt for the salt. The design and execution are equally creditable to the producers.

CROZIER HEAD. BY ROGERS.

A beautiful specimen of wood carving, by this justly-celebrated practitioner in the art. The flowers and foliage, in high relief, are executed with a delicacy and boldness which can scarcely be surpassed.

5.—VENTILATOR. BY BIELEFELD.

One amongst many ingenious applications of *papier-maché* executed by patent machinery, to which Mr. Bielefeld has for many years successfully directed his attention.

6 WALL DECORATION. BY MORANT.

A very elaborate production of painting and sculpture-work in the Louis Quatorze style. In the centre is a female figure surrounded by foliage, with various animals in compartments, the whole inclosed within an architectural composition of marble pilasters, surmounted by a rich frieze. The capitals of the pilasters present Cupids in white, peeping forth from the richly gilt foliage.

7.—ORNAMENTAL LEATHER. BY DULUD.

M. Dulud, of the Boulevard des Italiens, Paris, who has devoted much attention to the dyeing and ornamenting of leather after the manner formerly practised at Cordova and Venice, has sent in several specimens, of which we engrave one. The colours are brilliant, and the devices in good taste.

8.—FIRE-DOG. BY MESSRS. BAILEY.

For description, see No. 11.

9.—BLUE AND GOLD DAMASK. BY HOULDSWORTH AND CO.

There is a great amount of freedom and excellent management in this specimen of silk manufacture; and though the pattern is simple and the forms are a little angular in detail, yet the result is sparkling and satisfactory. As an elegant adaptation from nature, without any straining after effects not easily produced, it may be quoted as an example. Without being crowded, the surface is well covered.

10.—CHAIR. BY JEANSELME.

M. Jeanselmé's collection of arm-chairs and *fauteuils* exhibits great variety, having regard equally to comfort and tasteful appearance. We have selected for engraving one of rather original composition, after the antique style.

11.—FIRE-PLACE. BY MESSRS. BAILEY AND SON.

Another specimen of the same art, in a different style. It is a three-stabbed register-stove; the slabs are of china richly enamelled; the outer work of Sienna and white marbles. The scroll-work above the grate is all richly gilt. On either side are two fire-dogs, of novel construction, representing gilt eagles standing on bright steel orbs; the standard beneath being also gilt. One of these dogs is represented on a large scale in figure 8.

12. CHIMNEY-PIECE BY J. VAUDRE

The design of this chimney-piece is essentially French, but at the same time so admirably adapted to the material, that the more florid characteristics of style are kept down. The caryatides are elegant and expressive, the action being free and unconstrained; and when seen under the marble shelf, which the whole is intended to support, the effect will be elegant and pleasing. As an illustration of our remarks on the iron manufacture of France, it is worthy of high commendation.

13. PANEL FURNITURE. BY LEVIEN.

The principal object in this group is an extremely elegant cabinet, in tulip-wood and buhl, with paintings on porcelain in the centre of the panels. In the back, on the right, is a lady's escritoire, in maple-wood, inlaid with tulip-wood; and on the left, a lady's work-table, of very pretty shape, and elaborately inlaid.

14.—GROUP OF PLATED WARE. BY MESSRS BRADBURY.

A salver, a cup, a goblet, and an inkstand all fine specimens of the taste and workmanship for which Sheffield is justly celebrated.

15.—FIRE-PLACE. BY FLEURY.

A very elegant production in bright steel and gold. From the initial letters and crown at the back, it would appear to have been made for a distinguished personage. The fender, an extremely rich composition of grapes and vine leaves, with a boy seated in the centre, is gilt throughout.

16. SOLITUDE.

This is one of the statuettes sent in to compete for the prizes announced by the Art Union Society.

17.—CABINET. BY TAHAN.

A piece of boudoir furniture, upon which all that good taste could suggest and art accomplish, has been lavished with an unsparing hand. It is of pear-tree wood, elaborately carved, with devices in foliage with birds. In the panels are very successful copies on porcelain of Madame Marcelle's celebrated studies after Goethe's "Mignon," the originals of which formerly belonged to the Duke of Orleans, but are now in the possession of M. Molé.

18.—QUEEN MARGARET. BY JOHN BELL.

A very pleasing statuette, produced by Messrs. Messenger and Son, from the original model by Mr. Bell.

19.—GROUP OF BOOKS. BY HANICQ.

Worthy of passing notice, as specimens of gaudy and costly bookbinding, by M. Hanicq, bookseller to the Propaganda at Mechlin.

20.—CLOCK. BY FRODSHAM.

A very elegant clock, upon a rich support by an eagle. Above the clock is an ornament, composed of a broken pillar—the work of time, and a serpent—the emblem of eternity.

21.—ARTICLES IN PLATE. BY SMITH AND NICHOLSON.

This group presents only a few of the attractive and highly-finished works in silver sent for exhibition by this old-established house, and which do equal justice to its well-earned renown and the arts of the country. In the middle is a centre-piece, composed of an apple tree, round the stem of which are four figures in dancing. To the left of it is an extremely elegant production, a centre-piece, the stem of which is composed of lilies of the valley. In the foreground is a very handsome fruit dish; on the right, a claret jug. The other articles are of equally beautiful design and workmanship.

22. ELIZABETHAN FURNITURE. BY C. J. RICHARDSON

A table and a triangular seat, boldly carved in oak, in the Elizabethan style, by Mr. Richardson.

23.—TABLE AND BOOKCASE BY G J MORANT

The table is of elegant design, and distinguished by the finest workmanship. It was made for the Duchess of Sutherland, and, we believe, from her design. The swans are painted white, the lilies and bulrushes partly gilt and partly white. The bookcase is also white and gold, and of very pretty design.

24 BROOCH. BY LATILLIN AND PATEN.

Prettily designed; the principal object a large pearl, of fine quality, upon which reclines a female figure, in oxidised silver; the rest of the composition is gold.

25.—CHIMNEY ORNAMENTS IN BRONZE. BY LEROLLE FRERES

This is a very elaborate composition, which makes a considerable step in advance of the ordinary resources of decorative art. The centre group represents the conversion of a Moor to Christianity: the dignified, earnest, and chivalrous bearing of the Christian knight, who is pointing out the truths of the Gospel, and the deeply reflective and conscientious character of the countenance of the Moor, being admirably embodied. On either side are a knight in armour, of noble mien, and a Moorish slave bearing his spoils. The accessories throughout are appropriate, being in the Moorish style. The whole is of bronze, enriched with platings in silver and gold.

THE HISTORY OF INDUSTRIAL EXHIBITIONS.

BY W. BLANCHARD JERROLD.

(Continued from page 401.)

CHAPTER IV.—*(Continued)*

THE EXHIBITIONS OF FRANCE (CONCLUDED)

PASSING over another five years, we arrive at the year 1844, and the extraordinary exertions now necessary to marshal the national manufactures into one building attest the remarkable progress which the country has made. It is the last official exposition that which Louis Philippe will preside; and before another national exhibition [illegible] his throne will be tacked, the portrait of the King (that King who now receives the report of the Baron Thénard) will be turned to the wall; and from Claremont an exiled family, now loaded with honours and the envy of Europe, will learn all that concerns the exhibition of 1849.

The official Exhibition of 1844 was the most splendid museum of a nation's industry ever gathered together. In every department there were signs of vigorous improvement Those engines which visitors to the early exhibitions laughed to scorn, now choke up the greater part of the space of the Carré Marigny; and to their gigantic power the merchants point in explanation of the splendour and cheapness of their goods Entering the building by the Royal entrance, [illegible] fleeces are seen stretching right and left. Turning to the left, the visitor at once discovered the secret of the successes of Parisian manufactures. In rows and pleasant specimens of Parisian cabinet-work of exquisite design, billard-tables, pianos, inlaid work, clocks, stamped copper, bronzes, lamps, jewellery; Sèvres china, glass, books, paper, musical instruments, all commanding foreign markets more by beauty of design than by great expenditure of material. On the opposite side of the building the splendid manufactures of Lyons, Lille, Nismes, Avignon, Metz, St. Quentin, Roubaix, Tarcoing, Rheims, Amiens, Amiens, Nailhouse, and the Seine Inférieure, are ranged. This splendid building, designed by M. Moreau, and raised within the space of [illegible] days, contained such a collection as no other country in the world of the earth could have gathered together. The number of exhibitors was 3960; and the various nature of the exhibition rendered it necessary to appoint no less than 58 jury-men. The report which these gentlemen published is a fine specimen of art in itself. It is beautifully and profusely illustrated, and more than any other French report on the same subject enables the reader to form an opinion on the merits of the particular exhibition with which it deals.

In the vast central apartment, devoted to machinery, some curious machines were exhibited. Of these, the machine with three cylinders, to grind oil colours, was not the least remarkable.

Another machine, first exhibited on this occasion, was one by means of which a telescope could be easily directed to any quarter of the heavens. This machine was called "The Comet Seeker."

Other remarkable inventions attracted attention in the great central apartment The apparatus for the distillation of salt water, which was lauded as affording security to the mariner against the evil of a lack of fresh water, was eagerly examined; and the specimens of electro-metallurgy were then novelties. Artificial manures were also in the list of curiosities. The manufacture of plate glass had been improved for astronomical investigations, and that of nitrate of soda, of sulphate of potash, of dyes and pigments, of pyrolignecus acid, and other chemical combinations, had been studied and perfected. Here stood a machine by means of which the earth could be bored to the depth of 600 metres. There were rude improvements in all kinds of agricultural implements. Side by side machines worked by steam: the one hammering a hammer weighing 6000 kilogrammes; the other a loom, which wove a hundred yards at once, and then cuts them asunder with the nicest precision; the third, a floating whistle, to warn the engineer that the boiler wants replenishing with water; the fourth, a machine for stamping coinage; the fifth, a steam apparatus for the manufacture of boilers, and other machines, moved by the great modern power, for pierring, sawing, raising, impelling, in short, for supplying, in endless ramifications, the insufficient human muscle. All these engines for converting human labour into manufactures for human use, told their own bright story in the vast galleries with which they were surrounded

Of the 3960 exhibitors on this occasion, about 2260, including those of whom honourable mention was made, and those former rewards were declined, received marks of distinction. No less than thirty-one manufacturers received the decoration of the Legion of Honour, and the jury wisely adhered to the rule of rewarding those zealous citizens whose services to national industry were not susceptible of definite exhibition.

The last exhibition of national industry took place in 1844—the year after the dethronement of Louis Philippe. The Carré de Marigny was again the site for the building, and M. Moreau was again the architect selected. The plot of ground covered on this occasion (exclusive of the vast agricultural shed) was a parallelogram of 206 metres by 160. This building was, as may be seen from a comparison of the plans, more complicated and less imposing than that of 1844. In the centre there was a quadrangle, open to the sky, where, on a mound of turf, surmounted by an elegant fountain, flowers were exhibited. The entire building was of wood, and consisted of about 45,000 pieces of timber, and was roofed with nearly 4000 tons of zinc. Mr. Digby Wyatt found fault with the extra decoration of the building, the pilasters being papered and grained to imitate oak; and *carton-pierre* trusses, painted bronze bas-reliefs, and other "shams" being plentifully scattered about. According to M. Audiguene, this vast building cost £16,000, being an advance of £950 upon the cost of the building of 1844, or 1s 2d per square foot English. All the [illegible] of exhibitors amounted to 4044, in spite of the [illegible] possible that the wholesale dismissals of the Ledru Rollin cabinet and analysis which followed the convulsions of the spring of 1848. These great manufacturing districts which were distinct features of previous exhibitions, on this occasion presented only a few specimens of their power; even Mulhouse made an insignificant figure. In the application of art to manufacture, however, the exhibition still significantly attested the pre-eminent taste of the French people. Bronzes, clocks, *papier maché*, and other productions of Parisian industry, pointed to the universal economy of gratuitous elementary drawing schools. The President of the French Republic might have referred with proper pride to the development of that system which his great uncle originated. He might have seen the hand of the Emperor in more faultless proportions—those daring originalities—those evidences of artistic culture in which the workmen show themselves to be superior to the artisans of every other country. The artistic excellences of Frenchmen alone redeemed their exhibition of 1849 from insignificance. The progress of silk cultivation was still evident, and promises of future wealth dawned in the specimens of Algerian produce grouped in one of the galleries; but, compared with the brilliant exhibition of 1844, that of 1849 was a failure. The sword had hardly fallen from the warrior-workman's hand; too many looms had been turned to barricades; the excitement to social disorder had barely been quelled, when the Ministry summoned the people from their club s to the great national bazaar. On this occasion agricultural show was added to that of manufactures, and the result of the experiment was successful in every particular

The French exhibition of 1854 will, no doubt, be on a grander and more liberal scale than any of its predecessors; and the example of England will, no doubt, lead the authorities of Paris to a different conclusion from that to which they came on this occasion, viz. not to admit the contributions of foreigners

CHAPTER V.

THE EXHIBITIONS OF BELGIUM.

THE Minister of the Interior, while presiding at the opening of a Belgian national exhibition of native industry in 1847, said truly, "The Belgian people have always been distinguished for the aptitude they have displayed for the industrial arts; for the success which has attended their manufacturing enterprises, and for the rapidity with which they have asserted an honourable rank amongst European nations." The flourishing condition of this liberal and industrious country, with its dense population and fine manufacturing towns, attests, perhaps more than any other Continental nation, the safety of relying upon the developments of

civilisation, rather than leaning, with perverse indolence or mistaken and childish pride, upon traditional institutions.

Although Belgian productions have figured in the national exhibitions, only three exhibitions exclusively Belgian have been held. Belgian contributors figured honourably in the French official exhibitions of 1801 and 1802; and in the French exhibition of 1806 they occupied a distinct and honourable rank. While Belgium was only a French province, her manufacturers, of course, competed as compatriots with French manufacturers; however, after the separation of Belgium from France and he union with Holland, at the instigation of England, her industries were exhibited at the exhibitions of the Netherland States of which she formed the southern province. The fifteen years during which the house of Nassau governed the destinies of Belgium form a melancholy epoch in the history of this country, curiously described by an old English writer as "the cockpit of Christendom." The Belgians, with their intense love of nationality and their Gallic blood, could not amalgamate with the sombre, unimaginative Dutchmen. Each saw in the other charac-

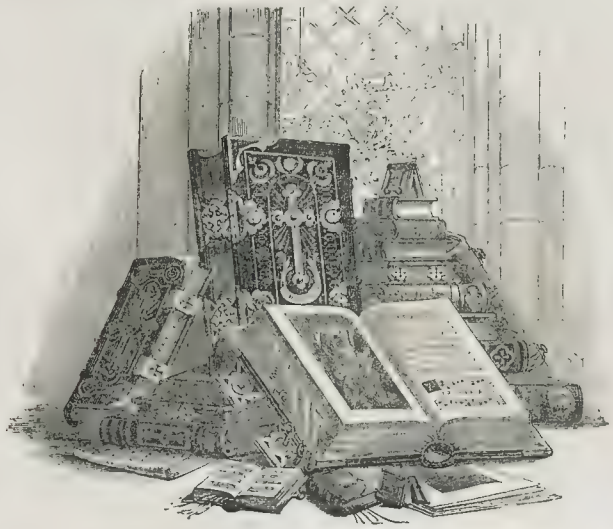
18. QUEEN MARGARET. (BY JOHN BELL), MESSRS. MESSENGER AND SON.

teristics which kept alive a settled and determined enmity. each saw that thepolicy of their respective countries required separate government. Holland, under the restrictive system of commerce, which, for the benefit of the Belgian provinces, was declared necessary, found her commerce decreasing, and that of Belgium rapidly extending—the business of Amsterdam was fast removing to the banks of the Scheldt: it was, therefore, with cordial pleasure that the Dutch and Belgians saw their governments divided—the Dutchman retreating to his table land to reconstruct, by liberal economeze, his slackened business; and the Belgian to cultivate his fields and extend his factories, under the warmth of a firmly planted national flag. The history of Belgium, for the last fifteen years, fills up the happiest page of her troublous, blood-besmeared records. Having felt the yoke of three distinct Continental tyrannies, she had now emerged from slavery, to vindicate, under the blessing of native and congenial institutions, the noble character of her children, and the fruitful capacities of her soil. Among the patriots who directed the current of popular events in the impetuous year 1830, and carried this country through the terrible dangers which attend even the most righteous civil war, M. Silvain Van der Weyer, now the representative of the Belgian nation in this country, was not the least conspicuous.

Belgium figured in four exhibitions of industry, conjointly with Holland. Of these, the first was held at Ghent, in 1820; one in Tournai, in 1824; one in Harlem, in 1825; and the last at Brussels, in 1830, while the Prince of Orange was endeavouring to quell the discontent which Belgium then openly manifested towards the house of Nassau. At the exhibition of 1820, the contributors amounted to 56 only, whereas, that of 1830, held under the disturbing influence of grave political developments, mustered 1020, of whom no less than 813 were Belgians. The exhibition of 1835, however, held at Brussels, [illegible] the first exhibition of industry exclusively Belgian. The best attempt to rally the manufacturers and agricultural farmers of Belgium, comparatively after the commotions and consequent commercial stagnation through which the liberated country had struggled, but which it had cheerfully paid for an idolised nationality, was necessarily, when compared with the last, a failure in point of numbers, and in the important signs of progress which have always marked the repetition of industrial exhibitions whenever they have been conducted on national grounds. Only 631 exhibitors figured at it; and the articles exhibited, though presenting a hopeful picture of future promise, were certainly inferior in character and excellence to the last exhibition of the Netherlands. The contrast, which, though it might be easily and fairly accounted for, did not flatter the national vanity of a people who had been told that they could not support themselves as an independent nation, raised fears and doubts in the minds of many men in authority when the official documents were issued summoning the industrial classes to send specimens of their skill to their capital in 1841. But the stride which the country had taken within the six years which intervened between the first and second Belgian exhibition, was immense and unprecedented. Progress had been small, too, it should be remembered, in the teeth of unusual commercial disasters—disasters which generally allow the labourers' tools to rust, and the workmen to starve.

The terrible commercial crisis with which the year 1838 closed, and the effect of which was so lasting, very naturally called up fears in the minds of men whose very independence was yet an experiment. It was an easy matter to fill the vast galleries of the Belgian Museum of Industry, but the manufacturers naturally dreaded, that, in spite of their titanic efforts, the deplorable disasters amid which they had laboured would divulge their sad results in the nature of their manufactures. However, in the month of February, 1840, the Chevalier de Theux de Meylandt, then Minister of the Interior, issued a Royal decree intimating that on the 18th of July, 1841, a public exhibition of national industry would be opened; and that the government of the exhibition would be confided to a commission consisting of ten members. Provincial committees were also appointed, having powers of selection and rejection over articles within their jurisdiction; and the Ministry announced that the jury would pay particular attention, in its decisions, to the utility and cheapness, as well as to the artistic merits and technical excellence, of articles exhibited. The Government further reserved to itself the power of



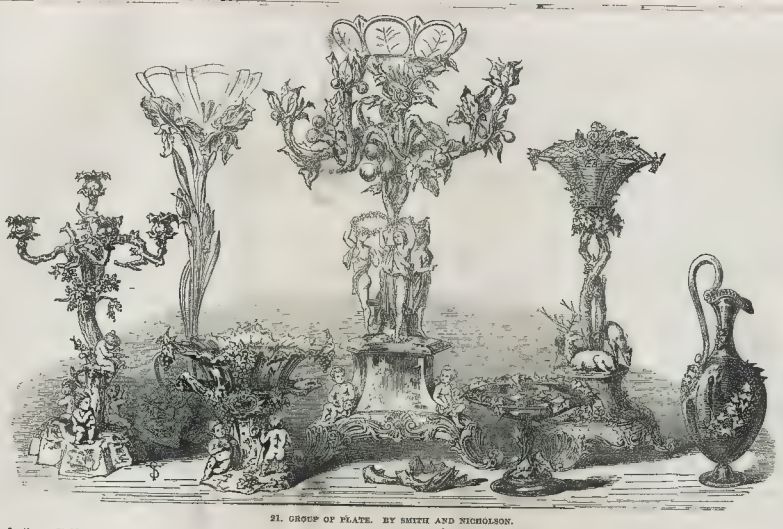
19. GROUP OF BOOKS. BY HANICQ, OF MECHLIN.

20. CLOCK. BY PRODSHAM.

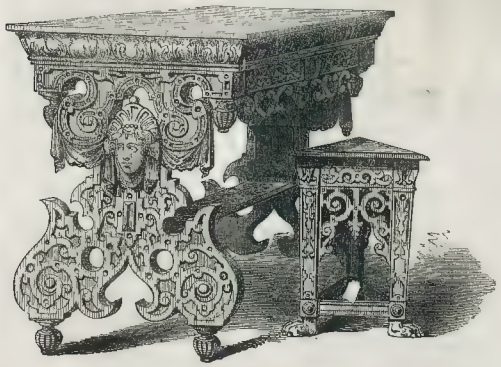
acquiring, by purchase, any articles exhibited, with the view of perfecting a national museum of industry. The expenses of carriage were defrayed by the Government. Exhibitors were invited to send the trading price of articles to the jury, and they were allowed to display the prices upon their goods in the exhibition.

Delay having taken place in the transmission or arrangement of goods, the exhibition was not ready till the 1st August, 1841, on which day M. Nothomb (the new Minister of the Interior) formally opened the galleries of the Musée Industriel to the Belgian public. On this occasion, the president of the Exhibition Committee addressed the Minister on the character of the exhibition in these hopeful words:—"You will see, sir, by the number and the variety of the products exhibited, the extension and development of Belgian industry which have marked the years which have passed over us since our last exhibition was closed. Though remarkable for many manufacturing excellences, this exhibition will be noticed chiefly for the useful nature and cheapness of the greater part of its contents. Belgium, having worked out the problem of economic production, now pauses to find channels for the profitable export of her superabundance." In reply to this address, the Minister referred to the sixty leagues of railway which had been laid down in Belgium since 1835. The object of the exhibition of 1835 was to demonstrate that Belgian industry had not perished in the struggle which had emancipated the country; but the Minister frankly owned that the country had other and brighter hopes in the exhibition upon which the doors were then falling back. In continuation, M. Nothomb warned Belgians that the brilliant bazaar, which justly flattered the national pride, by no means represented fully the industry of the country; inasmuch as many and great departments of industry—many exhaustless sources of wealth—as, for instance, coals (the production of which had lately been enormously extended), could not be represented at such an institution.

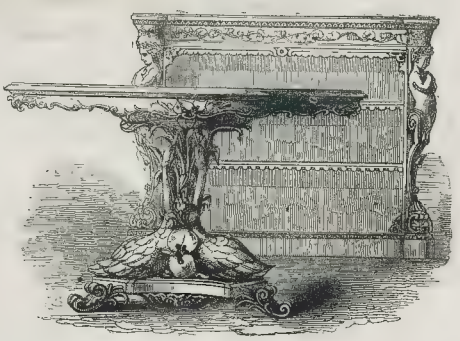
The jury who reported on this exhibition, in a preamble to their official declaration, characterised the gathering of industries as one where trials of strength were rare, where exceptional contributions were few, but where there were a vast number of articles, on the excellence of which the manufacturing prosperity of a country must rest. "We are," said the jury "the first to admire an exquisite fabric, rich and splendid lace, a model Royal equipage, or a grand palatial ornament; but we examine with more attention and interest than we devote to these achievements, those projects which are destined for the great mass of consumers. In what relative importance does the finest fabric stand to that coarse material which is to cover the bare back of the weaver?" Happily the jury preferred to see a product that would carry comfort into the homes of the people, before the lace destined to cover—the more to display—the heightened beauties of a duchess. In this they showed how truly they comprehended the spirit of the times they were approaching, and how worthy they were to enjoy the complete independence which their countrymen had established.



21. GROUP OF PLATE. BY SMITH AND NICHOLSON.



22. ELIZABETHAN FURNITURE. BY C. J. RICHARDSON.



23. TABLE AND BOOKCASE. BY G. J. MORANT.

The number of contributors to this exhibition was 875. Of these, 76 were from Anvers, 403 from Brabant, 159 from West Flanders, 136 from East Flanders, 77 from Hainault, 73 from Liege, 8 from Limbourg, 13 from Luxembourg, and 32 from Namur.

The growth and preparation of flax, which is the great industry of Belgium and particularly of East and West Flanders, had increased marvellously. The industry which had for years been worth an average of two millions sterling to the country, had been assiduously nurtured. Belgium, that in 1836 possessed only one spinning factory, boasted in 1841 no less than eight in full activity, employing forty seven thousand machines. From the Tournai factory of MM. Boucher, flax threads

24. BROOCH. BY MM LATILLIN AND PAYEN

5. CHIMNEY ORNAMENTS IN BRONZE. BY M.M. LEROLLE FRERES.

gram to the fineness of No. 300 were noticed by the jury and the manufacturer rewarded by a gold medal. The following manufactures of the [illegible] exhibited were not [illegible] regret that the manufacture of [illegible] the birth of which in Belgium they had to record in 1835, appeared to have ceased. The manufacture of [illegible] however, had been considerably extended and improved by M. Hums, who had invented and patented a loom for weaving the cotton and imported fabric. In damask linens, specimens of exhibition were [illegible] the whole manufacture that layds the spinning jenny and the Jacquard machine. Many [illegible] had begun to employ Jacquard's loom extensively, and by the adoption of this economy in labour, to place the manufactures of Courtrai in a position to cope with those of Silesia. For specimens of damask linens, MM. Pielman and Fervacke, of Ghent, and [illegible] received honourable mention. A gold medal for their specimens of spun wool. Other woollen manufacturers obtained medals on this occasion; and the Belgian cloths exhibited appear to have justified the high eulogiums which were heaped upon this fine industry.

The directors of the splendid Royal carpet manufactory of Tournai exhibited on this occasion some fine specimens of their looms, executed, after designs in the style of the renaissance, for the Sardinian Court. These specimens obtained for the manufacturers the award of a gold medal.

The cotton manufactures of Belgium, consuming an annual average quantity of cotton estimated at 7,000,000 kilogrammes, and keeping 300,000 men, and 6000 hand-looms in constant activity, and concentrating a vast industrial population around Ghent, were but very feebly represented at this exhibition. This weakness was attributed by the jury to a wish, on the part of the cotton lords, to appear objects of commiseration, and to exaggerate the decline in the cotton manufactures of the country since the year 1841.

The jury reported faithfully the successful efforts which had been lately made to establish silk manufactures in Belgium; and particularly referred to the great manufactory of Lierre, employing ninety looms with this beautiful material.

The specimens of lace exhibited attested the survival of that traditional excellence in which Belgium takes so high rank. Around Brussels, Malines, Anvers, Bruges, Mons, Ypres, Grammont, and Alost, nearly 60,000 women are engaged in the fabrication of lace. In the village schools of Flanders, and in the farm-houses, the feminine industry of which has been superseded by the spinning-jenny, women and children are taught to weave the splendid patterns of those costly webs which form about the forms of wealthy womanhood. A splendid assortment of the result of this industry was exhibited in 1841. Without entering into the relative beauties of Brussels point, of Valenciennes, and other laces, it may be interesting to notice the specimen of lace-work, representing, by means of a needle and thread, an allegorical picture of the attributes of industry, commerce, art, and science, for which a gold medal was awarded to M. Tardieu-Pollet, of Brussels.

The metallic wealth of Belgium, which, after having laboured under the disadvantages and disasters which follow rash and inspirated speculation, was beginning to bear a salutary effect upon active commerce, contributed largely to the attractions of the exhibition of 1841. The exhibitors of manufactures in metals were numerous, their products were extremely various, and decidedly indicative of a dawning prosperity. The reputation of the cannon foundry of Liege had already secured to its directors orders from many foreign powers; and the excellences of the firms of Coullet and Marcinelle, of the Society of Monceau-sur-Sambre, of the Society de Phœnix, were thought severally worthy of a gold medal. That part of the exhibition devoted to machinery was equally noticed upon by the jury with great warmth. Within ten years the manufacture of machinery in Belgium had risen from being an obscure and insignificant branch of industry, to assume the importance of a manufacturing specialty, worth an annual average sum of 18,000,000 francs.

Altogether 1124 medals, 113 silver medals, 292 bronze medals, 76 medals of honour, and 118 "mentions honorable," were accorded to exhibitors on this occasion. Crowds of foreigners flocked to the exhibition; and the interest which the various prizes were distributed, in the presence of the King and Queen, tended to give men a pleasing notion of the bonhomie which the Belgian authorities attached to the successes of industry. The loud applause which greeted a young girl belonging to one of the poor-houses of Bruges, when she advanced to receive a gold medal awarded to her by the jury, indicated that wholesome public esteem of skilled labour which other countries might well envy.

ELECTRICITY.—SUPPLEMENTAL NOTICE.

In our last notice we incidentally mentioned the adoption of the Electro-Metallurgic process of engraving embossed surfaces in copper, but they have also sent in my frames made by the electro process. As an example of the excellence of the copper, they have sent copper bars, large copper sheets, and one copper sheet rolled out to a great extent. Specimens of electro duplicates of printing surfaces have also been sent; but perhaps those which are now being prepared for the ILLUSTRATED LONDON NEWS, by Messrs. Palmer, are more curious than any further specimens exhibited in the Crystal Palace. The machine which has been described in this Journal prints in a peculiar surface, and therefore it became of great interest to give a similar curve to our large blocks which were printed in [illegible]. This has been effected most satisfactorily by Messrs. De la Rue, and we are thereby enabled to take advantage of the improved machinery employed by the *Times* newspaper.

The Ordnance have now shewn a series of the copper-plates under the maps hanging up at the extreme western end of the Building, and which should be carefully examined by all interested in the application of electricity to the multiplication of engraved plates.

We also omitted a notice of electro deposited flowers by Captain Hobson; but they are not so good as the beautiful specimens which that gentleman has contributed to the Museum of Economic Geology, and which we examined on the opening day.

With these additions we close our notice of the application of electricity, in which indeed, Russia, where the art is much practised, should send in due time a further supply for our criticism.

ENTERTAINMENT TO FOREIGN SCULPTORS.

ON Monday the first of the series of banquets appointed to take place in connexion with the Great Exhibition came off at Willis's Rooms. The artists have been foremost in the field to welcome their brethren of the foreign sculptors, who have contributed so largely to the embellishment of the Crystal Palace. It was necessary that some party should break the ice of international reserve, and who could do so more gracefully than a body of men most of whom have studied abroad, and whose pursuits peculiarly adapt them for introducing gracefully the more formidable and extensive prandial demonstrations with which this jubilee of industry will no doubt be celebrated? It is to be lamented, perhaps, that the dinner took place somewhat prematurely, and before many foreign sculptors, who are contributors, had arrived in this country; but it was probably better on the whole to select the present moment for the purpose, than to wait until the pressure of other festivities had fairly set in. The chair was taken by Sir Charles Eastlake, and the number of gentlemen assembled might be about 100.

After an excellent dinner, provided by the proprietors of the Thatched-house Tavern, the proposing, the drinking, and the acknowledgment of toasts were carried forward with great spirit and energy. The usual tributes of loyalty were paid to the Royal family, Prince Albert's share in the Exhibition being made by the president and the company a special subject of remembrance. Then came as a sentiment, "The Foreign Governments who have contributed to the peaceful union of nations, by sending works to the Exhibition." To this toast Herr Lefrew, the Prussian Commissioner, responded in French, expressing in animated terms his admiration of the manner in which England had dedicated herself to promote the glory of the peaceful arts. When the applause which his obse vations drew forth had subsided, the president gave "The health of the foreign artists who had sent contributions to the Exhibition, especially those who had [illegible] than usually [illegible] company. This, of course, was [illegible] the evening, and the whole assemblage received it with a right cordial and warm welcome. Signor Monti rose to acknowledge the compliment which had been paid to the foreign sculptors. His great work, the Amazon group, will be well remembered by all who have visited the Exhibition, and the artist, in personal appearance, is not unworthy of his production. He has a fine massive German form, and a cast of countenance eminently frank and manly. His short address he delivered with much straightforward energy, and he was loudly cheered by the company. Mr. Bessemer, the sculptor of "St. Michael and Satan," represented with great modesty of manner the French; and Signor Monti spoke on behalf of the Italian artists. Signor Monti managed to express his thanks in English, and hoped that his hosts might have their present hospitalities acknowledged to them on the banks of the Po and the Tiber. Mr. Sequeur adhered to his native language. Herr Rossi spoke in German, and in compliment to the foreigners present, the President proposed the toast in French, as the most common vehicle of communication among different countries. This gave some idea of the polyglot character of the entertainment, which was further diversified by a speech in Italian from Signor Rezzi, in acknowledgment of the toast "Rome as a School for Sculpture." Mr. Scott Russell, secretary to the Royal Commission, ably responded to the following sentiment, which was given by the chairman:—"The Great Exhibition, may it contribute to the welfare of each nation, while contributing to the friendship of all." Mr. Scott Russell warmly eulogized Herr Rietschel's merits as an artist, and his modesty of character. He stated that his talents were little appreciated even by his own countrymen, and had first been placed in their true light by the Great Exhibition. He concluded by proposing the health of Sir Charles Eastlake, their chairman, as President of the Royal Academy. Sir Charles Eastlake, in acknowledging the compliment, said that it was a subject of great regret to the members of the Royal Academy, in the case of sculptors, to speak to their annual exhibition were confined in so small and ill-lighted a place. This was loudly cheered by the company, and the chairman continued. Under advantageous light, he said, were made apparent both in the display at Westminster-hall some years ago, and in the Crystal Palace at present. This again drew forth loud cheers; and he concluded by saying that the members of the Royal Academy "lived in hopes that they would be able to enlarge the limits and improve the light of the present sculpture-room." The British artists who have contributed to the Exhibition" was the next toast proposed, and on a general call from the company it was responded to very briefly by Mr. M'Dougall. The last toast of the evening was "The Society of Arts," which Mr. Scott Russell acknowledged, and thus terminated in a most agreeable manner the first of that long series of hospitable receptions to foreign visitors with which in the eventful year we hope to see them welcomed during their sojourn among us.

The musical arrangements of the evening were excellent, and comprised an admirable performance on the harp. There was also a toastmaster, who astonished the guests as much by his professional efforts as he amused the natives present by his blunders.

THE "ILLUSTRATED LONDON NEWS" EN FRANCAIS.

A NEW *entente cordiale*!—a new specimen, never before known, of those moral hooks of steel which are fast grappling England and France in a fraternal embrace! Many are the species of *entente cordiale* we have heard and talked of. There is the *entente cordiale* of politics—the *entente cordiale* of commerce—the *entente cordiale* of art in all its phases. Now for the newest, and the strongest, and the most satisfactory *entente cordiale* of them all—the *entente cordiale* of French and English journalism!

"Give me the making of a nation's songs," said Fletcher, of Saltoun, "and who pleases shall make its laws." Had the shrewd old Scotsman lived now-a-days, he would have said, "Give me the writing of a nation's newspaper, and who pleases shall make speeches in its House of Commons." All that songs ever did, and more—leading articles will do, and better. Popular logic will be a stronger lever than popular verse; and a smashing leader will make into the heart of an abuse with ten times the effect of a smashing swinging of songs, backed by the most ten times the effect of a smashing swinging of songs, backed by the most thundering of choruses. Such being the case, the newspaper printing press, taking its due position, and assuming its due weight in the onward march of the world, every new phase of its development, every new feature which it gains, becomes a matter of profound interest and intense significance. A new phase has, then, just arisen—a new development has just become apparent. The *élite* of the Parisian press has enlisted *pro tem.* under London banners. Names of European renown appear signed to articles which have risen on the light of the first time under our own foggy sky. English and French journalism has proclaimed common cause. English presses—our to fling before the world the thoughts of French writers; English subjects, written on English ground, paid for by English money; the experiment welcomed, it is to be hoped, by both French and English enterprise and patronage.

For this, as its ultimate cause, we have to thank the Exhibition. The good which the Crystal Palace seems likely to effect, in bringing nations together, becomes more and more apparent. The relations between France and England will be in an especial manner drawn closer and twisted firmer. The obliquity of mutual hatred, become almost ingenuousness, are speeding down the inclined plane of time. Why should we detest each other? Why spend blood and treasure for our mutual injury, our mutual annoyance? Because thirty miles of salt water flow between Dover and Calais? Because we have not the honour to be neighbours any "*Oui*" or "*Non*" to say "Yes?" Another most logical argument. Because they choose a republic, and we prefer a monarchy? *Chacun à son goût.* Let us agree to differ. Let us wonder, if we cannot admire, each other's peculiarities. Let us laugh at each other's peculiarities with its tastes; let us quiz each other, argue with each other, as much as we please; but, for Heaven's sake, let us hear no more of fighting with each other.

The new feature of Anglo-Gallic journalism to which we have alluded, most of our readers will be inclined to be the edition in French of the ILLUSTRATED LONDON NEWS, which, during the Exhibition, will appear with the same regularity as the parent paper. Do not let us be misunderstood. The French journal will be the English journal translated into French, but a separate and independent illustrated newspaper, devoted, of course, mainly to the grand topic of the day, but containing the usual weekly *resumé* of intelligence and information, lively and amusing articles, and characterised by an ample supply of elaborate articles, tales and sketches in dashing off-hand, *intime* style—the work of the most distinguished and the most ready and brilliant writers of the Parisian press.

It is certainly not usual for one newspaper to review another. It is certainly still less usual for one newspaper critically to notice what may be called a twin journal, springing from the same source with itself, nourished by the same enterprise, as founded by the same liberality. But this is a time for departure from the usual, which are anything but. This is a time of experiment and of novelty. This is a time for jerking the wheels of society clear from the old ruts. This is a time for breaking from the ancient jog-trot into a new path for travelling and pranking and dashing into new ways; and so, taking advantage of the Saturnalia, availing ourselves of the license of an exceptional time and exceptional doings, of new social phases and new standards of measurement, we proceed to give an account of the first FRENCH ILLUSTRATED LONDON NEWS in the columns of its English brother.

The pencils as well as the pens of Paris have been employed on the new French Journal, printed by English types, and founded by English enterprise. An Hogarth or a Johannot—the film tracer of so many mighty minds, the pictorial interpreter in chief to the shades of Le Sage and Cervantes—leads the way—the Angel of Peace conducting the representatives of all nations—and all tongues to the great fane which England has erected to receive them. The remaining illustrations are all connected with the great subject-matter of the fane and some of them original, others shared with the columns of the London Journal. But it is the literary department of the new enterprise which principally commands attention. Besides all the ordinary features of the weekly journal, over and above the general news of both sides of the Channel; besides intelligence from the General Assembly and from the House of Commons; besides the reports and rumours, and *on dits* of London politics and French politics; the movements of Buckingham Palace and the movements of the Elysée, dressed up and set forth so as to appeal to both French and English readers—a great portion of the Journal is devoted to matter particularly interesting and instructive to the crowds of foreign visitors who throng our streets. With excellent tact and judgment, and perfect appreciation of their countrymen's wants and wishes, the conductors of the ILLUSTRATED LONDON NEWS EN FRANCAIS are in progress of preparing a series of articles on the common phases of our social life, on our amusements, our peculiarities, our habits of business and pleasure, on the thousand and one points, in fact, on which a foreigner has no need of being enlightened, so as to enable him to see as much as possible of his hosts, and to understand as much as possible of what he does see. The article on the Turf, for example, will give a clue to names, things, and usages, which would otherwise puzzle many a stranger; it upon the subject of ordinaries, or public dining-houses, will be understood, a more dry abstract of hackney coach regulations, but a piquant essay on London cabs and cabmen, omnibuses and omnibus conductors, is another paper as useful as it is amusing. Then our amusements are to be analysed, and a good notion of our principal theatrical entertainments is conveyed by comparing them with those Parisian artists, whom in style of playing, or, line of character—they most resemble. Still, those are the minor and subsidiary features of the new Journal. Its strong point is the original articles by celebrated writers for the Parisian press, which occupy so large a portion of its columns. French journalism, our readers are aware, differs widely in principle and in system from ours. What is considered by the contributors of our neighbours utterly repudiate it. With us, the journal becomes celebrated, the individual writer is unheard of; with the French, the individual writer is, comparatively speaking, everything, and the journal nothing. Hence the pictures which in the paints within it. We think most of the thing, the abstract notion of a newspaper; they think most of the man, the concrete individual who inspires it. It follows necessarily, that the English public is seldom or never aware of the identity of their daily or weekly instructors. The French public know the names of their journalists, just as well as those of their journals. Sparking at the foot of a thousand articles, there daily glitter the names of the most sparkling and witty writers of France. The public know them and hail them. They hold social rank and literary fame. Thus are the quick thinking minds and quick writing hands, which urge on the grand machinery of periodical and fugitive literature; and from the head-roll in question at least four names have been selected to grace the columns of the ILLUSTRATED LONDON NEWS EN FRANCAIS.

First comes ALPHONSE KARR, with the first instalment of a brightly fanciful tale, full at once of playfulness and tenderness, of sparkle and sentiment. Karr is the author of many novels and *nouvellettes*, characterised by a delicate play of fancy and an extreme fondness for introducing the brightest phases and most imaginative moods of rural life; but he is also an intrepid satirist—witness "Les Guêpes"—and a powerful delineator of the darker shades of city existence. From a charming marine retirement near Havre, he sends a pleasant and playful paper, L'Ermite de St. Adresse." M. EMILE PERSONIL, a gentleman long and well known for his pungent and startling romances, written under the pungent and startling signature of "Old Nick," passes in review the present social condition of England—sketches her press, narrates its manners, touches off a spicy version of the story of Mr. Paxton's obligations to the celebrated *Victoria regia*, and winds up by a spirited exhortation to our poets to be up and doing in the cause and in honour of the Crystal Palace. M. Forgues is an ardent student of English literature, and is thoroughly versed in English habits of thought and action. Keeping his pseudonyme of "Old Nick" for his romances, he signs his own name to his articles in the *National*, the foreign department of which he is under his charge, and his [illegible] of which testifies to his acquirements in that most intricate and most shifting of studies, the international politics and relations of Europe. M. MARY is the third of our borrowed luminaries—a gentleman famed in France in whatever department of letters. He has been, and is still, journaliste, *savant*, poet, satirist, and dramatist; and on the present occasion, like his friend Karr, has opened one of those peculiarly easy and graceful styles of writing, that delicately shaded humour and nice appreciation of character which have won him many of his well-earned laurels.

JULES JANIN, the well-known "J. J.," the dramatic critic of the *Journal des Débats*, the "Prince of Feuilletons," the trenchant, the witty, the sparkling, the gay, the acute, the *débonnaire* Jules Janin, has not, could not have been overlooked. Wherever the French tongue is known—wherever a French paper penetrates—"J. J." reigns supreme over the domain of lively and piquant criticism. But he can create as well as criticise. His sketches and *nouvellettes* are amongst the most graceful, airy, and sparkling things in French literature. His style is peculiarly rich in quips and cranks and jeux with the most fantastic combinations of the picturesque and the graphic. He treats his words as a juggler does his balls; flings them hither and thither; dashes them into all sorts of fantastic figures; now keeps them in the air with a glittering shower of sparks; now builds sparkling towers and pyramids with the eternally falling and rising morsels of wonder-working metal. It is this wonderful power of expression, backed by a bright and living fancy, and a continuous flow of rich spirits, which has made Janin's enormous reputation. It is almost impossible to translate him, so as to convey anything but a maimed and lifeless idea of the exquisite original; a fact, which a perusal of his thoroughly characteristic and fanciful article on the Exhibition—so full of sparkle, gaiety, and grace—will very amply confirm.

Under these bright auspices, then, the ILLUSTRATED LONDON NEWS EN FRANCAIS has commenced its career. Its supreme direction has been confided to a gentleman, long resident in London, perfectly understanding us, thoroughly appreciating us, eager to place before the eyes of his countrymen our good qualities in their best point of view, anxious to do us thorough justice, to help Frenchmen to know what England really is, and not what she has been reported to be; convinced with us, in fact, that England and France have only to become enlightened acquaintances to remain firm friends.

There are hundreds of thousands of people in this country anxious to learn French—to practise their knowledge of French—to make French household words, not to be painfully decyphered on state occasions, like Egyptian hieroglyphics, but to be readily, and easily, and thoroughly comprehended—up at a glance—read by those who run. By such might not a French Illustrated Newspaper be hailed as a godsend? How many family circles are there in which, by such a medium, daily tasks would be converted into pleasures? At present there is no French family newspaper; no French newspaper which addresses English tastes, appeals to English proprieties, claiming entrance as a friend, as harmless as it is amusing in the household circle. Certain peculiarities of our neighbours, reflecting certain phases of French society, and French politics, which do not to the same extent, or in the same form, exist amongst ourselves, have naturally operated, amongst other and even still more extensive causes, to prevent a general reception of French newspapers in English family society. Let such objections be got rid of, as they may be got rid of in the manner indicated, and then who shall say that the best conductor of literature, eager for summoning us to practise our French, the most pleasant teacher and the most agreeable agent, may not be a French newspaper addressed to English readers? So much for the start of the ILLUSTRATED LONDON NEWS EN FRANCAIS.

THE "ILLUSTRATED LONDON NEWS" IN GERMAN.—Most of our readers are aware, that, with the ILLUSTRATED LONDON NEWS, a German illustrated Journal has also been started—the Gallic and the Germanic nationalities springing from the same resolute determination to signalise the present occasion in the annals of journalism. To some extent, French is a universal language. It is the tongue of courts, of diplomacy, of educated society, of everywhere, but so German. Spoken as many, of educated society, of everywhere, but so German. Spoken as it is over a great extent of the European continent, it still wants the omnipresence of French. It is territorial in its limits. It stays at home, or only wanders in scanty and scattered patches over the world. The German, however, the proprietors of the ILLUSTRATED LONDON NEWS felt that this was not the time for doing things by halves. The vast extent of territory embraced in the general name of Germany has sent forth its swarms of visitors to this, at the moment the focus of the world; and it was deemed a matter of courtesy, and of good augury of future friendship and future intercourse, that they should be greeted in the words of their own tongue. From London they may have the satisfaction of despatching home accounts of all they saw and heard, in familiar type and native idiom. The same watchful care of compilation, the same adaptation of means to an end, which, it is hoped, has been found to characterise the French journal, will be recognised in the columns of its Teutonic brother. It has been the aim of the projectors of the scheme, to make the present occasion for ever memorable in the annals, not only of English, but of European journalism; to make the Thames mingle its waters not only with the Seine but with the Rhine; and to send forth to the world accounts of the World's Industrial Congress, in words which will be as well understood at Berlin and Vienna, as at Paris or Brussels.

* M. M. Brialmont, "L'Industrie au Belgique."

NEW BOOKS, &c.

Now ready at all the Libraries, in 3 vols.,

THE HON. Mrs. NORTON'S NEW NOVEL,
STUART OF DUNLEATH:
A Story of the Present Time.
Also, by the same Author,
CALEB FIELD. A TALE.
By Authoress of "Memoirs of Mont ainly," "Ellen Cor-
COMYN, and Co., Publishers, 2 Great Marlborough-street.

Now ready, at all the Libraries, in 3 vols.,

MRS. TROLLOPE'S NEW NOVEL.
SECOND LOVE, or, BEAUTY and INTELLECT.
"A work of great interest. It will be anxiously read and enjoyed."
—The present work will not sustain the reputation of its gifted author. No one can read it without feeling the deepest interest; many will derive from it a better lesson than any formal homilies could convey."—
The Spectator.
T. C. NEWBY, 72, Mortimer-street, Cavendish-square.

THE JACOBITES IN HUNGARY; or, The Conspiracy of the Abbot.
A Tale of Austrian Oppression.
By FRANZ HERLOSSOHN, late Under-Secretary of State, &c.
"A tale of powerful interest and deep excitement, each one of the characters being drawn in strong colours, and standing out in bold relief."—Observer.
"A new view of the Hungarian character."—Britannia.
CHAPMAN and HALL, 186, Strand.

NEW WORK EDITED BY ELIOT WARBURTON, ESQ.
Now ready in 2 vols 8vo, with Portraits, 30s bound,
MEMOIRS of HORACE WALPOLE and his CONTEMPORARIES.
Edited by ELIOT WARBURTON, Esq.,
Author of "The Crescent and the Cross," &c.
"The work is full of interest, and will be read with avidity."—Times.
"Mr. Warburton has done his part well. The whole work is one of amusing and exciting interest from beginning to end."—Morning Post.
"A necessary addition to the library of every Englishman."—Britannia.
CHAPMAN and HALL, 186, Strand.

Now ready, 12 great Map s brought down to the present time, 30s bound,
MR. RICHARD BRADSHAW'S NEW "HISTORY OF VENICE."
Now ready, Part I. of
EXAMPLES of the ARCHITECTURE of VENICE: Selected and Drawn to Measurement from the Edifices of that City, from the Fifth to the Seventeenth Century," "Seven Lamps of Architecture," "Modern Painters," &c. Contains four very large Plates each Measuring 3 feet by 2 feet, from Photographs, and ten Engravings on Wood, with Descriptive Text. Price, Eight Shillings, in Cover. Index Proofs, Atlas Folio, price Two Guineas.
London: SMITH, ELDER and Co., 65, Cornhill.

THE BRITISH NOBILITY.
FOREIGN and other VISITORS to the Country, desirous of obtaining Information upon the Rank and Nobility, will find in Mr. GEORGE EARLE and BARONETAGE, published under the Royal authority a full and distinct account of the highest classes, with their families and collateral connexions. Being corrected by the Nobility the accuracy of the Work may be depended upon.
Published by Messrs. SAUNDERS and OTLEY, Public Library, Conduit street; and to be had of the Booksellers in town and country, or by post on order.

Just published, price 6s.

from this hour, in shine or show'r, We'll learn to live a - part: I rul'd the earth ere you were born; I cast you from my heart."
ritard.
f

Second Verse.

And Trade lost temper in his pride.
He utter'd words of scorn;
"You do not know the ways of men:
Amid your sheep and corn
You doze away the busy day,
Nor think how minutes run:
Go, put your shoulder to your work,
And do as I have done.
You've all the earth to yield you wealth,
Both corn and pasture land,
I only ask a counting-house,
And room whereon to stand.
And from this hour, in shine or shower,
I'll learn to live alone;
I'll do without you well enough—
The world shall be my own!"

Third Verse.

And thus they wrangled night and day.
Unfair, like angry men,
Till things went wrong between them both,
And would not right again.
But growing wiser in distress,
Each grasp'd the other's hand—
"'Twas wrong," said Spade, "to rail at Trade,
He loves me in the land."
And Trade as freely own'd his fault—
"I've been unjust," he said,
"To quarrel with the good old man
Who grows my daily bread.
Long may we flourish, Trade and Spade,
In city and in plain!
The people starve while we dispute,
We must not part again."

Fourth Verse.

And all the people sang for joy,
To see their good accord,
While Spade assembled all his sons,
And plied his plenteous board.
He fed them on the best of fare—
Untax'd the foaming ale—
And pray'd, in England's happy shore
That Trade might never fail.
And busy Trade sent fleets of ships
To every sea and strand,
And built his mills and factories
O'er all the prosperous land.
And so we'll sing God save the Queen,
And long may Brother Spade,
For sake of both the rich and poor,
Unite with Brother Trade!

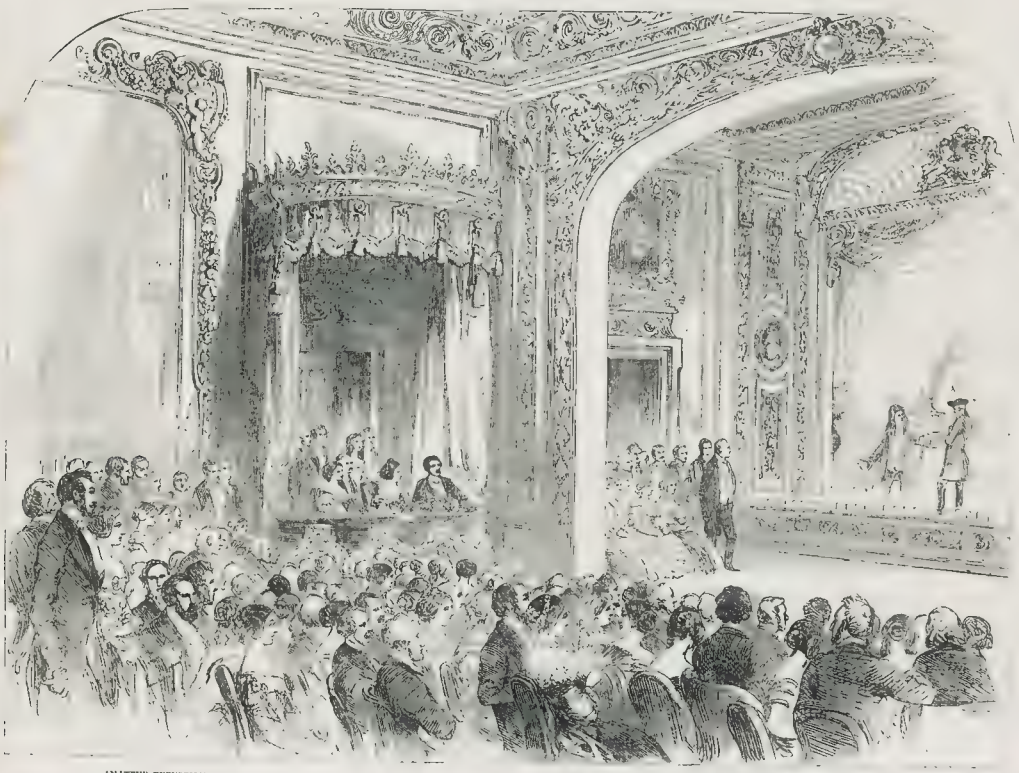
THE COPYRIGHT QUESTION.

The Courts of Law have been for some time engaged in the discussion of a question of public importance, in reference to the right of foreign authors to hold or to dispose of the creation of their own brains. We are of opinion that the copyright which an author is entitled to hold in the productions which he creates by his wit, his learning, and his genius, regards not the author alone, or any one country of the brotherhood of Christendom, but the civilisation of which he himself is the product, and that it affects the enjoyment, as well as the improvement, of all nations that exercise the art of printing. In all the civilised countries of the world which possess a literature, a copyright has been conceded to their own subjects for a term more or less extended; and within the last few years, the Legislature of Great Britain has not only re-considered the question as regards the production of books, and granted a further interest in their own works to authors and their heirs, executors, administrators, and assigns, but has extended and simplified the enforcement of a similar protection to designers and inventors.

But the question, unfortunately, has not been entirely set at rest, nd a great deal yet remains to be done. There is no concert among the nations of the world to do justice to each other, and to the genius which is the advantage and the ornament of them all. The works of French writers are reprinted as soon as published, by the literary traders of Brussels; and all the markets of the world, France alone excepted, are supplied at a cheap rate with the productions of French genius, to the benefit of the Brussels printers and booksellers, but not to that of the French authors, without whom there could have been no property in these books, or, more correctly speaking, without whom no such books could have existed. The same system has operated to the disadvantage of the authors of Great Britain and the United States. New books by popular English authors have a large sale in America, but no portion of the profits arising from that sale falls into the pockets of the men by whose learning and talent those books were created. The same wrong is inflicted in England upon American authors, who publish their books in their own cities. The English trade republishes their works, if they are new and good for anything, as soon as they are issued, and the writer on the other side of the Atlantic reaps no reward for the popular delight in his works, and that appreciation of his genius which exists upon this.

The three greatest nations in the world—the nations which march at the very head and front of all humanity—are alike interested in this question; but either for want of a thorough comprehension of its importance on the part of the men who guide their affairs, or from the pressure of matters that appear to be more immediately urgent, scarcely anything has been done by either of them for the protection of literary men, and the consequent encouragement of literature. Whatever has been done has been local and partial. Good books are of no country. They are the heritage of the world, and there can be no doubt that the world would enjoy more of the valuable commodity if it would recognise the claims of those who write them, and foster genius instead of allowing it to be crushed. If there be living Homers, or Virgils, or Shakspeares, or Miltons, or Corneilles, or Le Sages, now in the world, it is surely for the interest of the world that these men should be enabled to earn their bread and their independence by that literary labour for which nature has endowed them with the requisite gifts. Genius is cosmopolitan. Indeed, the principle of an international copyright is so generally conceded, that even the booksellers of Belgium, France, the United States, and Great Britain, who make it their business to reprint the popular books of other countries, for which there is no copyright out of the narrow locality in which they were first issued, admit the advantage which would accrue to literature from a better and juster system. But while the law is in its present defective state, they argue that they may as well take advantage of the absence of all protection as their neighbours. They assert not in justification, but in extenuation, that if one bookseller more moral than another, should refrain from republishing works for which he had paid no compensation to the foreign author, he would not check the system, but merely allow the be-



AMATEUR PERFORMANCE OF SIR EDWARD BULWER LYTTON'S NEW COMEDY, BEFORE HER MAJESTY AND PRINCE ALBERT, AT DEVONSHIRE-HOUSE.—(SEE NEXT PAGE.)

nefits to flow into the till of a rival trader not hampered with his scruples. But at this period in the history of nations new and generous ideas have taken root. The Great Exhibition of Arts and Industry has brought men together in a better spirit; and, perhaps, it is not too much to hope, that, amid other civilising and ennobling results for which we may have to thank the industrial gathering of 1851, an international copyright may be included.

In the meantime, and praying for that day, in the interest of readers as well as of writers, we are glad to see that a late remarkable decision of the Court of Exchequer on the interesting question of Copyright has been reconsidered. It may be remembered that some time ago, one of the judges of that high tribunal decided that there was no literary copyright in this country for a foreigner, and that, consequently, an English subject purchasing a book or manuscript of such foreigner, could not acquire a right through him. The vendor having no right, could transfer none. The question arose upon a musical, and not upon a literary copyright; but the same reasoning applies to both species of intellectual property. Let us take the well-known case of the illustrious American writer, Mr. Washington Irving. That gentleman having put down upon paper his until then unspoken and unwritten ideas, and having thereby called into existence this thing, commodity, or book, had no property in it, because he was a foreigner, and the English publisher to whom he sold it had bought what the author had no right to sell. It was, consequently, decided that the English publisher might be deprived of his purchase by any other who chose to enter into competition with him. Strange judgments are occasionally given, and strange things occasionally happen in our Law Courts, but anything more strange than this it is difficult to imagine. If Mr. Washington Irving, foreigner as he is, had come over to this country with a horse, or a cow, or a bale of cotton, or even a pound of American cheese, the law of England would have punished any man, whether English or foreign, who robbed him of any one of these things; and if he had sold the horse or cow, the cotton or the cheese, to any man who traded in such articles, the right of the purchaser to hold and enjoy, or to re-vend, would have been enforced, if need were, by the whole weight, authority, and majesty of the English law. But the Court held that there was no such property in a for igner's book. If it had been an Englishman's book, the English law, as laid down in the Exchequer, would have treated the book like any other commodity produced by the skill or acquired by the industry of an Englishman; and if it had been a foreigner's watch, it would have been in like manner protected. The Copyright Act, it was gravely alleged, was passed for the encouragement of English, and not of foreign writers; and, therefore, all the booksellers of England were at liberty to make what profits they could out of the brains of foreign authors, even although they spoke and wrote the English language. This decision, involving, as it did, the fate of many literary, dramatic, and musical works, was too monstrous to be endured; and the case of Boosey *v.* Jeffreys, in which it had been given, was therefore brought under the review of the Court of Queen's Bench on Saturday last, and again on Tuesday. The two issues raised were, first, whether there could be any copyright for a foreigner in this country, or whether such a right could be vested in any person who purchased of that foreigner? and, secondly, whether there could be any assignment by a foreigner of a portion of the copyright to be confined to Great Britain? The noble and learned Chief Justice—himself an author of high repute, and noted for his sturdy common sense as a lawyer and a man—took a view of the case on both issues the reverse of that entertained by the Court of Exchequer, and one in strict accordance with common justice and reason. The feeling of the whole Bench was no less liberality, and the result is that the Court of Queen's Bench has virtually decided both issues in the affirmative by directing a new trial, and thereby cleared from the question a mass of absurdity as well as injustice.

The decision does not directly affect the greater question of an international copyright; but indirectly and especially, as between this country and the United States of America, it will be of essential service, in preparing the way for an arrangement worthy of these kindred nations.

THE GUILD OF LITERATURE AND ART.

THE comedy written by Sir Edward Bulwer Lytton in aid of the foundation of this noble institution, has been played at Devonshire House with the greatest success. Not the least incident occurred to shade what is Isle Druly-Lane manager might, in his own Thespian way, have called "the blaze of triumph" that attended "Not so bad as we seem; or, many sides to a Character." From the first moment that the scheme was made known to her Majesty and Prince Albert, both the Queen and the Prince manifested the liveliest interest in its success. The cordiality bestowed upon the endeavours of the amateur company by these excellent personages has been seconded in the most princely manner by the Duke of Devonshire. With a munificence that has made the name of his Grace a proverb for liberality, accompanied with the widest judgment and the most delicate fueling, he dedicated his mansion to the cause of Literature and Art. His house was for many days, it may be said, in possession of the amateurs; and the noble hospitality with which he entertained the distinguished audience of Friday week could not be exceeded even in Devonshire House

The play began at half past nine—her Majesty, Prince Albert, and Prince and Princess Royal of Prussia, occupying the Royal box, a most beautiful structure erected for the occasion. The seats were filled by the most illustrious for rank and genius. There was the Duchess of Sutherland, a veritable Koh-i-noor; there was the "Iron Duke," in his best temper; there was Macaulay, Chevalier Bunsen, Van der Weyer—themselves authors; in fact all the highest representatives of the rank, beauty, and genius of this wonderful England, and her foreign Ambassadors.

It is not our intention to enter upon a description of the play, so fully treated by our morning contemporaries—a play that has already passed into the hands of all the reading world. The play is, in the best possible taste, dedicated to the Duke of Devonshire, "in token of the earnest gratitude, both of author and performers, for the genial and noble sympathy which has befriended their exertions in the cause of their brotherhood." Further, writes Sir Edward, "the debt that we can but feebly acknowledge, may those who come after us seek to repay; and may each loftier cultivator of art and letters, whose the institution established under your auspices may shelter from care and penury, see on its corner-stone your princely name—and penetrate to distant times the affectionate homage it commences from ourselves. It is hoped that we can alone render worthy the tribute which my own name as author, and *in the names of my companions the performers* of the play first represented at Devonshire House, I now offer to your Grace, with every sentiment that can deepen and endear the respect and admiration" of the author, and we may on our own part add, of every man whose heart responds to the claims, the exalted and ennobling claims, of art and literature

We append as a document what must be a piece of literary and artistic history the *dramatis personæ*:—

MEN.	
The Duke of Middlesex	Peers attached to the son of James II., commonly called the Earl Protender
The Earl of Loftus	
Lord Wilmot, a young man at the head of the *mode*, more than a century ago, son to Lord Loftus	Mr. Charles Dickens.
Mr Shadowly Softhead, a young gentleman from the City, friend and double to Lord Wilmot	Mr. Douglas Jerrold.
Mr. Hardman, a rising Member of Parliament, and adherent to sir Robert Walpole	Mr. John Forster.
Sir Geoffrey Thornside, a gentleman of good family and estate	Mr. Mark Lemon.
Mr. Goodenough Easy, in business, highly respectable, and a friend of Sir Geoffrey	Mr. E. W. Topham.
Lord Le Trimmer, Sir Thomas Lund, Colonel Flint, Mr. Jacob Tonson, a Bookseller	Frequenters of Will's Coffee-house
Smart, Valet to Lord Wilmot	Mr. Wilkie Collins.
Hodge, Servant to Sir Geoffrey Thornside	Mr. John Tenniel
Paddy O'Sullivan, Mr. Fallen's Landlord	Mr. Robert Bell.
Mr. David Fallen, Grub-street, Author and Pamphleteer	Mr. Augustus Egg, A.R.A.
Lord Strongbow, Sir John Brute, Coffee-House Loungers, Drawers, Newsmen, Watchmen, &c. &c.	
WOMEN.	
Lucy, daughter to Sir Geoffrey Thornside	Mrs. Compton.
Barbara, daughter to Mr.	Miss Ellen Chaplin.

The Silent Lady of Deadman's Lane.

The Royal party paid the deepest attention to the progress of the play; her Majesty frequently leading the applause. And when the certain fell upon the three hours' triumph, her Majesty rose in her box, and by the most cordial demonstration of approval, "commanded" (for such may be the word) the re-appearance of all the actors, again to receive the Royal approval of their efforts. Nor did the Queen and Prince merely bestow applause. Her Majesty took seventeen places for herself, visitors, and suite; and, further, as a joint contribution of herself and the Prince, headed the list of subscriptions with £150, making the sum total of £225. It is said that the receipts of the night exceed £1000. Another representation at Devonshire House takes place on Tuesday, the admission being £2. The Duke throws open his house, and a ball will follow the comedy, and a new farce written for the occasion, called Mr. Nightingale's Diary," a farce in which Charles Dickens and Mark Lemon have principal characters. Both these gentlemen are admirable actors. It is by no means amateur playing with them. Dickens seizes the strong points of a character, bringing them out as effectively upon the stage as his pen undyingly marks them upon paper Lemon has all the ease of a finished performer, with a capital relish for comedy and broad farce.

It has been rumoured that the Company of Guild and Literature will act one night in the City, under the patronage of the Lord Mayor and Corporation. This would be worthy of the Mayor and Prince merchants of that city which distanced all competitors in its offer for the autograph of Shakspeare—an immortal bit of writing, we hope, more endurable than London Stone

It must be very satisfactory to the gentlemen engaged in this noble endeavour to receive, as they have received, such general sympathy and commendation. Of course, there are a few snarlers. But when experiment has flushed into success (for what a chasm is in success!) sneers will brighten finto smiles, and "Pooh-pooh" swell into "Hurrah!" It would, however, be well of these cold-water critics, before they question the motives of the amateur company, to ask of themselves, if, in the whole course of their existence, they have ever devoted one tithe of the time (and time is generally the only capital of authors and artists) to the same ennobling object as that which, for weeks past and weeks to come, has diverted, and must divert, the attention of the amateurs from the exercise of their daily employment?

However, as we have said, magical is success. A few small dull folks who now sputter into the Guild *in posse*, will be ready to kiss the "corner-stone" of the visible fabric. And that "corner-stone," truly says the author of the comedy devoted to its erection, *must* bear on it "the princely name" of Devonshire.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Revision of the Constitution continues to occupy all minds in political circles both in Paris and the provinces, to the exclusion of almost every other topic. In the provinces, indeed, great excitement prevails on the subject in consequence of the exertions made by political partisans to get up a numerous supply of petitions to the Assembly in favour of the Revision, while in the capital the leading journals take a very decided tone for or against the movement. The *Constitutionnel*, for instance, is indignant at this open manifestation of assurance, for it is purely republican that every city, town, and village through France will rise in favour of a prolongation of Louis Napoleon's powers. On the other hand, the *Journal des Débats* offers resistance to the proposition, and threatens to meet any attack upon the Republic in the same way as the attacks of M. Polignac and his colleagues were met in 1830.

The Legitimists, it is affirmed, intend to move a resolution to the effect that a Constituent Assembly be called to revise the Constitution with a view to a restoration of the Monarchy. Such a bold declaration, the Legitimists think, will be sufficient to arouse the Orleanists from their lethargy in favour of a Henri V. The central committee of the Electoral Union, at its meeting on Monday, decided 170 to 3, that, in accordance with the wishes of the district committees, a petition should be signed and presented to the Assembly in favour of a Revision of the Constitution.

M. de Lamartine has expressed himself much dissatisfied with the proceedings of the Legitimists, in their endeavours to restore a monarchical form of government. He reminds them of the history of the 18th Fructidor, when the Directory not only expelled 53 representatives from the Assembly, but transported sixteen to the colonies; and intimates pretty distinctly that the Legitimists may expect the same punishment, should they endeavour to overthrow the Republic.

In the Assembly, on Tuesday, M. Esquiros moved for a Committee of Inquiry into the condition of the political prisoners confined at Belle Isle-en-Mer, where an *émeute* among the prisoners had lately taken place, which resulted in Barbes an Blanqui, and other notorious revolutionists being removed to close confinement. M. Esquiros said, that, if a committee were granted him, he would satisfactorily prove that those prisoners were not only ill-fed, but treated in many respects with cruel and unjustifiable severity.

M Faucher opposed the motion, because an inquiry had already taken place into the general state of prisons, that of Belle Isle-en-Mer among the rest, which it was shown that the food of the inmates was superior to that received by the French soldiers, and that every care and comfort were taken of them, having regard, of course, to the punishment due to violated law and offended justice

A long discussion followed, which ended in the adoption of the order of the day.

The Paris *Moniteur* announces that the Minister of Justice has been charged with the portfolio of Finance, during the temporary absence of M. Fould.

The Customs' receipt for April last amounted to 600,000f. above those of the corresponding month of 1850.

PORTUGAL.

In the early part of the week there came accounts, and France, that the utmost anarchy prevailed throughout Portugal.

Advices direct from Lisbon to the 12th instant have since been received, which do not bear out those accounts. No tumult whatever had occurred; and nothing had taken place to disturb the general tranquillity beyond the terrorish excitement occasioned by the sudden elevation of the Duke of Saldanha to power Extensive preparations were in progress to give the Duke an enthusiastic reception upon his arrival in the capital, which was almost hourly expected.

UNITED STATES.

Advices to the 10th inst. have been received from New York, from which we learn that at Charleston, a "Free Soil Rights Association Convention," at which 40 associations were represented, and 431 delegates present, had been organized, to take into consideration the question of adherence to the Union or secession from it. After due deliberation, the Convention had expressed an opinion in favour of secession, but referred the whole matter to the legislature, which body will not meet until November next, when probably the State Parliament will touch secession on the head.

A telegraphic communication from Pittsburgh announces the destruction, by fire, of the cathedral in that city.

The contemplated expedition to Cuba had been given up, and the parties concerned in it had returned to their families. Gonzales, one of the leaders in the former enterprise, had been arrested.

From California the accounts are to the 1st ult. The steamer *Georgre* had brought to New York 1,900,000 dollars on freight, and a very large number of passengers. The export of gold dust for the month of March was estimated at over 5,000,000 dollars. The news from the mines is more encouraging than it has been for some time past. Heavy rains had fallen, which quite elated the miners, who had spent the winter in gathering gold dust, which they could not wash for want of water.

A novel importation has been made into San Francisco, the steam-ship *Ohio* having brought to that port upwards of 100 cats. They cost at the port of embarkation about 50c. per head, and sold at San Francisco for 10 dollars to 20 dollars each.

CANADA.

We have advices from Toronto to the 2d inst. The intention of the Home Government to reduce official salaries had been received with satisfaction. The salaries of the Chief Justices and judges were to be reduced to £800 and £600 sterling, and of the heads of departments to £800 each per annum; the salary of the Governor-General is to be borne by the Imperial Treasury; but, on the other hand, the colony is to sustain the cost of the troops deemed necessary, and also of the Rideau Canal.

WEST INDIES.

Intelligence from Havannah to the 1st instant states that the greatest excitement existed there in relation to the news of the expected invasion; many persons had been imprisoned on suspicion, and among them three priests for preaching seditious sermons. One person said to have been sent over by Lopez, to obtain pilots for the expedition, had been executed after undergoing the torture. The Captain-General was taking every precaution against an invasion; lookouts were stationed along the coast, and vessels of war were kept cruising between San Antonio and Havannah. One of those vessels, the *Cuba*, had got ashore on the Colorados.

According to advices from Jamaica, *viâ* New York, dated May 1, the cholera had re-appeared in some districts of the colony.

The insurrection in Hayti against Faustin I. had been effectually suppressed.

INDIA

Intelligence to the 17th ult., from Bombay, communicates the probability of Lord Dalhousie retiring shortly from the office of Governor-General, and his being succeeded by the Marquis of Normanby

Disturbances and robberies were still rife at Peshawur.

The kingdom of Oude is at present in a state of anarchy, little inferior to that usually prevailing in the Nizam's dominions. In the latter the N zam still contained his own Minister, with the attention, it is presumed, at making out of the revenues a private purse for himself in case of his being deposed. Soraj-ool-Mouk is intriguing for the Ministry, apparently with some chance of success

The Ganges Company's steamer *Paina* was lost near Bullia on the 29th of March.

Mr. Fortune, the natura.ist, had arrived at Calcutta from China with upwards of 20,000 tea plants for the use of the Himalayan nurseries, Kemaon and Gurhwall. The Assam Tea Company's plantations are also rapidly increasing, and there is little doubt that in a few years tea will be extensively produced in India.

Funds to the extent of £3300 are said to have been discovered in the Bengal Military Orphan Fund.

At Bombay there is an unusual amount of public works. The railway works are progressing favourably. A breakwater is being constructed in connexion with the dockyard. Tanks and wells are being sunk in all directions, and between 3000 and 4000 workmen are employed by the Board of Conservancy in carrying out municipal improvements.

CHINA.

The accounts from Hong Kong are to March 30th. Chuy-Apoo, the imputed murderer of Captain Da Costa and Lieutenant Dwyer, in February, 1840, was tried on the 10th of March, when the jury returned a verdict of manslaughter, and he was sentenced by the judge to transportation for life. On the night of the 27th, however, he succeeded in strangling himself.

Considerable shipments of Chinese coolies still continue to be made to the west coast of America and to the Sandwich Islands.

We learn from Canton that two American gentlemen, returning from an excursion about six miles beyond the city, had been attacked, severely beaten, and robbed of their valuables and outer garments.

The Governor-General of Manilla (Spanish colony) had left that settlement, with a force of about 5000 men, for the purpose of visiting the Soolee Archipelago, for the purpose of destroying the pirates which infested those parts. Accounts from Manilla state, that, on the 28th January, an attack had been made by the Governor-General on the force at Soolee, which resulted in their capture, together with 140 pieces artillery and other munitions of war. The British and many of the inhabitants had fled to the interior. The loss on their side is not stated. That of the attacking force was about 120 killed and wounded. The defences of the island have been demolished, and the surrounding country laid waste. The Spanish authorities do not intend to retain possession of the island.

AUSTRALIA

The advices from the Australian colonies by the India mail are highly important. A meeting of delegates from all the colonies had been held at Melbourne, on the 27th of January last, when an association was formed, called "The Australian League," the object of which is sufficiently described in the following solemn engagement subscribed to by the members:—

"1. That they engage not to employ any person hereafter arriving under sentence of transportation for crime committed in Europe.

"2. That they will use all the powers they possess, official, electoral, and legislative, to prevent the establishment of English prisons within their bound; that they will refuse to assent to any project to facilitate the administration of such penal systems; and that they will seek for the repeal of all regulations, and the removal of all establishments for such purpose.

"3 That, from the list of January, 1852, they will refuse all dealings, intercourse, and fellowship (so far as may be consistent with religious or natura. obligations) with any and all colonists who may be found advocating or endeavouring to procure the transportation of British convicts to the Australasian colonies.

"4. And, lastly, That they solemnly engage with each other, to support by their advice, their money, and their countenance, all who may suffer in the lawful promotion of this cause; and that they will never dissolve this league until the transportation of convicts to these colonies shall entirely cease."

LAW INTELLIGENCE.

BOOSEY *v.* JEFFREYS. COPYRIGHT.

On Tuesday, in the EXCHEQUER CHAMBER, at the Sitting in Error, before Lord Campbell and Justices Patteson, Maule, Coleridge, Cresswell, and Talfourd, judgment was delivered by Lord Campbell in this case, which has excited much attention in the literary and musica. world. From the statement of his Lordship on the occasion, we glean the following facts:—"The well-known opera of "LA Sonnambula" was composed by Bellini, at Milan in February, 1831; on the 18th of that month, Bellini, duly complying with all the formalities required by the law of Milan, assigned his copyright in the opera to Signor Riccordi, a Milanese; in June of the same year Riccordi came over to this country, and assigned the copyright to Boosey. Boosey, in 1833, published the pianoforte arrangement, and, in 1841, purchased by Boosey in London on the 10th of the same month, *it never having been before published either in this or any other country*. The action, against the result of which the present motion was sought to be obtained, was brought by the plaintiff Boosey against the defendant Jeffreys for "pirating and using" a cavatina from this celebrated work, and was tried originally before Lord Cranworth, then Baron Rolfe, in the Court of Exchequer, and its decision founded on the 3rd section of the original Copyright Act, 8 Anne, c. 19, s. 34, was adverse to the plaintiff's claim. "The object," said the Court of Exchequer on the occasion, "of the Legislature was to encourage the importation of foreign books, and their first publication in England as a benefit to this country, but to promote the cultivation of the intellect of its own subjects; and, as the act of Anne expressly states, to encourage learned men to compose and write useful books, by giving them as a reward the monopoly of their works for a certain period, dating from their first publication. We, therefore, hold that a foreigner, by sending his book here first publishing the works in Great Britain, acquires no copyright."
